<handShift> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<handShift> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<handShift> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<handShift> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<handShift> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<handShift> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<handShift> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<handShift> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<handShift> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<handShift> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<handShift> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<handShift> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<handShift> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<handShift> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<handShift> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<handShift> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<handShift> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<handShift> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<handShift> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<handShift> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<handShift> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<handShift> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<handShift> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<handShift> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<handShift> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<handShift> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<handShift> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<handShift> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<handShift> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<handShift> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<handShift> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<handShift> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<handShift> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<handShift> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<handShift> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<handShift> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<handShift> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<handShift> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<handShift> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<handShift> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<handShift> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<handShift> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<handShift> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<handShift> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<handShift> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<handShift> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<handShift> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<handShift> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<handShift> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<handShift> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<handShift> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<handShift> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<handShift> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<handShift> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<handShift> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<handShift> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<handShift> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<handShift> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<handShift> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<handShift> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<handShift> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<handShift> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<handShift> → model.transcriptionLike → <unclear>

## May Contain

– (<handShift> may not have child elements)

## Remarks

The character attribute describes characteristics of the hand, particularly those related to the quality of the writing, e.g., shaky, thick, regular. A description of the tint or type of ink, e.g., brown or the writing medium, e.g., pencil, may be placed in the medium attribute. The new hand may be identified using the new attribute, while the previous hand may be recorded in the old attribute. The resp attribute contains an ID reference to an element containing the name of the editor or transcriber responsible for identifying the change of hand. The cert attribute signifies the degree of certainty ascribed to the identification of the new hand.

The model of this element is based on the [handShift](#) element of the Text Encoding Initiative (TEI).

## Constraints

@new attribute should have content.

The value in @new should correspond to the @xml:id attribute of a hand element.

@old attribute should have content.

The value in @old should correspond to the @xml:id attribute of a hand element.

## Declaration

```

<elementSpec ident="handShift" module="MEI.edittrans">

## <harm>

(harmony) – An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

### Referenced in chapters

[10.2.1.1 Interpreted Chord Data in scoreDef](#), [10.2.1.3 Indications of Harmony in the Music Text](#)

### Module

[MEI.harmony](#)

### Attributes

**@chordref** (*optional*) Contains a reference to a <[chordDef](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<harm> → [att.harm.log](#) → @chordref

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<harm> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<harm> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<harm> → [att.common](#) → [att.linkin](#) → @corresp

**@dots ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<harm> → [att.harm.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<harm> → [att.harm.ges](#) → [att.duration.ges](#) → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<harm> → [att.harm.vis](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<harm> → [att.harm.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<harm> → [att.harm.vis](#) → [att.visualOffset2.to](#) → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<harm> → [att.harm.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<harm> → [att.harm.vis](#) → [att.extender](#) → @extender

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<harm> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<harm> → [att.common](#) → [att.linked](#) → @follows

**@form** (*optional*) Indicates to what degree the harmonic label is supported by the notation. Allowed values are: "**explicit**" (*The notation contains all the notes necessary for the harmonic label, , the notes "D F# A" for the harmonic label "D".*), "**implied**" (*The harmonic label relies on notes implied, but not actually present, in the notation, , the notes "D F# C" for the harmonic label "D7". The note "A" is missing from the notation, but can be implied.*)

<harm> → [att.harm.anl](#) → @form

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<harm> → [att.harm.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@inth** (*optional*) Encodes the harmonic interval between pitches occurring at the same time. One or more values from [data.INTERVAL.HARMONIC](#), separated by spaces.

<harm> → [att.harm.anl](#) → [att.intervalHarmonic](#) → @inth

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<harm> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<harm> → att.harm.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<harm> → att.harm.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to

[data.FONTSCALE](#).

<harm> → att.harm.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<harm> → att.harm.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<harm> → att.harm.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<harm> → att.harm.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<harm> → att.harm.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<harm> → att.harm.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<harm> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<harm> → att.harm.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<harm> → att.harm.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<harm> → att.harm.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<harm> → att.harm.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.linkin → @prev

**@rendgrid** (*optional*) Describes how the harmonic indication should be rendered. Allowed values are: "grid" (*Chord tablature grid.*), "gridtext" (*Chord tablature grid and the element's textual content.*), "text" (*Textual content of the element.*)

<harm> → att.harm.vis → @rendgrid

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<harm> → att.harm.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<harm> → att.harm.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<harm> → att.harm.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<harm> → att.harm.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<harm> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<harm> → att.harm.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<harm> → att.harm.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<harm> → att.harm.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<harm> → att.harm.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<harm> → att.harm.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<harm> → att.harm.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<harm> → att.harm.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<harm> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<harm> → att.harm.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <[when](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<harm> → att.harm.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<harm> → att.harm.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<harm> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<harm> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<harm> → att.harm.vis → att.xy → @y

## Member of

[model.harmLike](#) Groups elements that record indications of harmony.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeume → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeume → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<harm> → model.harmLike → model.controlEventLike.harmony → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<harm> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<harm> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<harm> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<harm> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<harm> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<harm> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<harm> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<harm> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<harm> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<harm> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<harm> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<harm> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<harm> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<harm> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<harm> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<harm> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<harm> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<harm> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<harm> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<harm> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<harm> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<harm> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<harm> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<harm> → model.textPhraseLike.limited → <extent>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<harm> → model.figbassLike → <fb>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<harm> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<harm> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<harm> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<harm> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<harm> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<harm> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<harm> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<harm> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<harm> → [model.textPhraseLike.limited](#) → [model.lbLike](#) → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<harm> → [model.graphicPrimitiveLike](#) → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<harm> → [model.textPhraseLike.limited](#) → [model.msInLine](#) → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<harm> → [model.textPhraseLike.limited](#) → [model.msInLine](#) → <locusGrp>

**<name>** Proper noun or noun phrase.

<harm> → [model.textPhraseLike.limited](#) → [model.nameLike](#) → <name>

**<num>** Numeric information in any form.

<harm> → [model.textPhraseLike.limited](#) → [model.measurementLike](#) → [model.numLike](#) → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<harm> → [model.transcriptionLike](#) → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<harm> → [model.textPhraseLike.limited](#) → [model.nameLike.label](#) → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<harm> → [model.textPhraseLike.limited](#) → [model.nameLike](#) → [model.nameLike.agent](#) → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<harm> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<harm> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<harm> → [model.textPhraseLike.limited](#) → [model.locrefLike](#) → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<harm> → [model.textPhraseLike.limited](#) → [model.qLike](#) → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<harm> → [model.textPhraseLike.limited](#) → [model.locrefLike](#) → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<harm> → [model.transcriptionLike](#) → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<harm> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → [model.geogNamePart](#) → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<harm> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<harm> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<harm> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<harm> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<harm> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<harm> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<harm> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<harm> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<harm> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<harm> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<harm> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<harm> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<harm> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<harm> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<harm> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<harm> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<harm> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<harm> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<harm> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<harm> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<harm> → model.textPhraseLike.limited → model.msiInline → <watermark>

**<width>** Description of the horizontal size of an object.

<harm> → model.textPhraseLike.limited → model.dimLike → <width>

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## <harpPedal>

(harp pedal) – Harp pedal diagram.

### Referenced in chapters

[4.3.6.2 Harp Pedals](#)

### Module

[MEI.cmn](#)

### Attributes

**@a (optional)** Indicates the pedal setting for the harp's A strings. Allowed values are: "f" (Flat.), "n" (Natural.), "s" (Sharp.)

<harpPedal> → [att.harpPedal.log](#) → @a

**@altsym (optional)** Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <symbolDef> element elsewhere in the document. Value conforms to [data.URI](#).

<harpPedal> → [att.harpPedal.vis](#) → [att.altsym](#) → @altsym

**@b (optional)** Indicates the pedal setting for the harp's B strings. Allowed values are: "f" (Flat.), "n" (Natural.), "s" (Sharp.)

<harpPedal> → [att.harpPedal.log](#) → @b

**@c (optional)** Indicates the pedal setting for the harp's C strings. Allowed values are: "f" (Flat.), "n" (Natural.), "s" (Sharp.)

<harpPedal> → [att.harpPedal.log](#) → @c

**@class (optional)** Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color (optional)** Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<harpPedal> → [att.harpPedal.vis](#) → [att.color](#) → @color

**@copyof (optional)** Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<harpPedal> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp (optional)** Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → [att.common](#) → [att.linkin](#) → @corresp

**@d (optional)** Indicates the pedal setting for the harp's D strings. Allowed values are: "f" (Flat.), "n" (Natural.), "s" (Sharp.)

<harpPedal> → [att.harpPedal.log](#) → @d

**@dots.ges (optional)** Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<harpPedal> → [att.harpPedal.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur.ges (optional)** Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<harpPedal> → att.harpPedal.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<harpPedal> → att.harpPedal.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<harpPedal> → att.harpPedal.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<harpPedal> → att.harpPedal.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a [token](#).

<harpPedal> → att.harpPedal.ges → att.duration.ges → @dur.recip

**@e** (*optional*) Indicates the pedal setting for the harp's E strings. Allowed values are: "f" (*Flat*), "n" (*Natural*), "s" (*Sharp*).

<harpPedal> → att.harpPedal.log → @e

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<harpPedal> → att.harpPedal.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "all" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "one" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "none" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<harpPedal> → att.harpPedal.log → att.controlEvent → att.targetEval → @evaluate

**@f** (*optional*) Indicates the pedal setting for the harp's F strings. Allowed values are: "f" (*Flat*), "n" (*Natural*), "s" (*Sharp*.)

<harpPedal> → att.harpPedal.log → @f

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linking → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<harpPedal> → att.harpPedal.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<harpPedal> → att.harpPedal.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<harpPedal> → att.harpPedal.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<harpPedal> → att.harpPedal.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<harpPedal> → att.harpPedal.vis → att.typography → @fontweight

**@g** (*optional*) Indicates the pedal setting for the harp's G strings. Allowed values are: "**f**" (*Flat.*), "**n**" (*Natural.*), "**s**" (*Sharp.*)

<harpPedal> → att.harpPedal.log → @g

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<harpPedal> → att.harpPedal.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<harpPedal> → att.harpPedal.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<harpPedal> → att.harpPedal.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<harpPedal> → att.harpPedal.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<harpPedal> → att.harpPedal.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<harpPedal> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<harpPedal> → att.harpPedal.log → att.controlEvent → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<harpPedal> → att.harpPedal.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<harpPedal> → att.harpPedal.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<harpPedal> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<harpPedal> → att.harpPedal.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<harpPedal> → att.harpPedal.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<harpPedal> → att.harpPedal.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.harpPedal.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<harpPedal> → att.harpPedal.log → att.controlEvent → att.staffIdent → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<harpPedal> → att.harpPedal.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<harpPedal> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<harpPedal> → att.harpPedal.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<harpPedal> → [att.harpPedal.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<harpPedal> → [att.harpPedal.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<harpPedal> → [att.harpPedal.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<harpPedal> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<harpPedal> → [att.harpPedal.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<harpPedal> → [att.harpPedal.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<harpPedal> → [att.harpPedal.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<harpPedal> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<harpPedal> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<harpPedal> → [att.harpPedal.vis](#) → [att.xy](#) → @y

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<harpPedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<harpPedal> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<harpPedal> → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<harpPedal> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<harpPedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<harpPedal> may not have child elements)

## Remarks

The starting point of the harp pedal diagram may be indicated by either a tstamp, tstamp.ges, tstamp.real or startid attribute. It is a semantic error not to specify a starting point attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

## <head>

(heading) – Contains any heading, for example, the title of a section of text, or the heading of a list.

### Referenced in chapters

[2.1.4 General Text Structure Elements](#), [3.4.1.6 Source Description](#), [3.6.7.2 Instrumentation](#), [3.7 Encoding Sources in MEI](#), [9.1.1 Organizing Text into Divisions](#), [9.2.4 Lists](#), [9.2.7 Poetry](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<head> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<head> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<head> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<head> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<head> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<head> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMOKEN](#), separated by spaces.

<head> → [att.common](#) → [att.typed](#) → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<head> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<head> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<head> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<head> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<head> → [att.xy](#) → @y

## Member of

[model.headLike](#) Groups elements used to provide a heading at the start of a text division or other markup component.

## Contained By

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<head> → model.headLike → <acquisition>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<head> → model.headLike → <annot>

**<applInfo>** Groups information about applications which have acted upon the MEI file.

<head> → model.headLike → <applInfo>

**<argument>** Contains a formal list or prose description of topics addressed.

<head> → model.headLike → <argument>

**<biblList>** List of bibliographic references.

<head> → model.headLike → <biblList>

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.

<head> → elements having head as direct children → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.

<head> → elements having head as direct children → <bindingDesc>

**<castList>** Contains a single cast list or dramatis personae.

<head> → model.headLike → <castList>

**<classDecls>** Groups information which describes the nature or topic of an entity.

<head> → model.headLike → <classDecls>

**<classification>** Groups information which describes the nature or topic of an entity.

<head> → model.headLike → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<head> → model.headLike → <componentList>

**<contents>** List of the material contained within a resource.

<head> → model.headLike → <contents>

**<correction>** States how and under what circumstances corrections have been made in the text.

<head> → model.headLike → <correction>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<head> → model.headLike → <creation>

**<decoDesc>** Contains a description of the decoration of an item.

<head> → elements having head as direct children → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<head> → elements having head as direct children → <decoNote>

**<dedication>** Contains a dedicatory statement.

<head> → model.headLike → <dedication>

**<div>** Major structural division of text, such as a preface, chapter or section.

<head> → model.headLike → <div>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<head> → [model.headLike](#) → <editionStmt>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<head> → [model.headLike](#) → <editorialDecl>

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<head> → [model.headLike](#) → <encodingDesc>

**<event>** Contains a free-text event description.

<head> → [model.headLike](#) → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<head> → [model.headLike](#) → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<head> → [model.headLike](#) → <exhibHist>

**<expression>** Intellectual or artistic realization of a work.

<head> → [model.headLike](#) → <expression>

**<expressionList>** Gathers bibliographic expression entities.

<head> → [model.headLike](#) → <expressionList>

**<handList>** Container for one or more hand elements.

<head> → [model.headLike](#) → <handList>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<head> → [model.headLike](#) → <history>

**<incip>** The opening music and/or words of a musical or textual work.

<head> → [model.headLike](#) → <incip>

**<incipText>** Opening words of a musical composition.

<head> → [model.headLike](#) → <incipText>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

<head> → [model.headLike](#) → <interpretation>

**<item>** Single instance or exemplar of a source/manifestation.

<head> → [model.headLike](#) → <item>

**<itemList>** Gathers bibliographic item entities.

<head> → [model.headLike](#) → <itemList>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

<head> → [model.headLike](#) → <langUsage>

**<layoutDesc>** Collects layout descriptions.

<head> → elements having head as direct children → <layoutDesc>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<head> → [model.headLike](#) → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<head> → model.headLike → <list>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<head> → model.headLike → <manifestation>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

<head> → model.headLike → <manifestationList>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

<head> → model.headLike → <normalization>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<head> → model.headLike → <notesStmt>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

<head> → model.headLike → <perfMedium>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<head> → model.headLike → <perfResList>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<head> → model.headLike → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<head> → model.headLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

<head> → model.headLike → <price>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

<head> → model.headLike → <projectDesc>

**<provenance>** The record of ownership or custodianship of an item.

<head> → model.headLike → <provenance>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<head> → model.headLike → <pubStmt>

**<relationList>** Gathers relation elements.

<head> → model.headLike → <relationList>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<head> → model.headLike → <respStmt>

**<revisionDesc>** Container for information about alterations that have been made to an MEI file.

<head> → model.headLike → <revisionDesc>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

<head> → model.headLike → <samplingDecl>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<head> → elements having head as direct children → <scriptDesc>

**<seal>** A single seal or similar attachment.

<head> → elements having head as direct children → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<head> → elements having head as direct children → <sealDesc>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

<head> → model.headLike → <segmentation>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<head> → model.headLike → <seriesStmt>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

<head> → model.headLike → <source>

**<sourceDesc>** A container for the descriptions of the source(s) used in the creation of the electronic file.

<head> → model.headLike → <sourceDesc>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

<head> → model.headLike → <stdVals>

**<support>** Provides a description of the physical support material of a written item.

<head> → elements having head as direct children → <support>

**<supportDesc>** Groups elements describing the physical support material of an item.

<head> → elements having head as direct children → <supportDesc>

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

<head> → model.headLike → <tagsDecl>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

<head> → model.headLike → <taxonomy>

**<termList>** Collection of text phrases which describe a resource.

<head> → model.headLike → <termList>

**<titlePage>** Contains a transcription of the title page of a text.

<head> → model.headLike → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<head> → model.headLike → <titleStmt>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<head> → model.headLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<head> → model.headLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<head> → elements having head as direct children → <typeDesc>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<head> → model.headLike → <work>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.

<head> → model.headLike → <workList>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<head> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<head> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<head> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<head> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<head> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<head> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<head> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<head> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<head> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<head> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<head> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<head> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<head> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<head> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<head> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<head> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<head> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

One or more <head> elements usually identify the parent element and/or its purpose.

The model of this element is based on the [head](#) element of the Encoded Archival Description (EAD), the [head](#) element of the Text Encoding Initiative (TEI), and the [head](#) element of HTML.

## Declaration

DEVELOPMENT  
VERSION

# <height>

Description of the vertical size of an object.

## Module

[MEI.shared](#)

## Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<height> → [att.bibl](#) → @analog

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<height> → [att.quantity](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<height> → [att.quantity](#) → [att.ranging](#) → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<height> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<height> → [att.quantity](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<height> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<height> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<height> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<height> → [att.common](#) → [att.labelled](#) → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<height> → [att.quantity](#) → [att.ranging](#) → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<height> → [att.quantity](#) → [att.ranging](#) → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<height> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.linking → @prev

**@quantity** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<height> → att.quantity → @quantity

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<height> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<height> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<height> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "**byte**" (Byte.), "**char**" (Character.), "**cm**" (Centimeter.), "**deg**" (Degree.), "**in**" (Inch.), "**issue**" (Serial issue.), "**ft**" (Foot.), "**m**" (Meter.), "**mm**" (Millimeter.), "**page**" (Page.), "**pc**" (Pica.), "**pt**" (Point.), "**px**" (Pixel.), "**rad**" (Radian.), "**record**" (Record.), "**vol**" (Serial volume.), "**vu**" (MEI virtual unit.)

<height> → att.quantity → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<height> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<height> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<height> → att.lang → @xml:lang

## Member of

[model.dimLike](#) Groups elements which describe a measurement forming part of the physical dimensions of an object.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<height> → model.dimLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<height> → model.dimLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<height> → model.dimLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<height> → model.dimLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<height> → model.dimLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<height> → model.dimLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<height> → model.dimLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<height> → model.dimLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<height> → model.dimLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<height> → model.dimLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<height> → model.dimLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<height> → model.dimLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<height> → model.dimLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<height> → model.dimLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<height> → model.dimLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<height> → model.dimLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<height> → model.dimLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<height> → model.dimLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<height> → model.dimLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<height> → model.dimLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<height> → model.dimLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<height> → model.dimLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<height> → model.dimLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<height> → model.dimLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<height> → model.dimLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<height> → model.dimLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraContentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<height> → model.dimLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<height> → model.dimLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<height> → model.dimLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<height> → model.dimLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<height> → model.dimLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<height> → model.dimLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<height> → model.dimLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<height> → model.dimLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<height> → model.dimLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<height> → model.dimLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<height> → model.dimLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<height> → model.dimLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<height> → model.dimLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<height> → model.dimLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<height> → model.dimLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<height> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<height> → model.dimLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<height> → model.dimLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<height> → model.dimLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<height> → model.dimLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<height> → model.dimLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<height> → model.dimLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<height> → model.dimLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<height> → model.dimLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<height> → model.dimLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<height> → model.dimLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<height> → model.dimLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<height> → model.dimLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<height> → model.dimLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<height> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<height> → model.dimLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<height> → model.dimLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<height> → model.dimLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<height> → model.dimLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<height> → model.dimLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<height> → model.dimLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<height> → model.dimLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<height> → model.dimLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<height> → model.dimLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<height> → model.dimLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<height> → model.dimLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<height> → model.dimLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<height> → model.dimLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<height> → model.dimLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<height> → model.dimLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<height> → model.dimLike → model.textPhraseLike.limited → <supportDesc>

**<syI>** Individual lyric syllable.

<height> → model.dimLike → model.textPhraseLike.limited → <syI>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<height> → model.dimLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<height> → model.dimLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<height> → model.dimLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<height> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<height> → model.dimLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<height> → model.dimLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<height> → model.dimLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<height> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<height> → model.dimLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<height> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<height> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<height> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<height> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<height> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<height> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<height> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<height> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<height> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<height> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<height> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<height> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<height> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<height> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<height> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<height> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<height> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<height> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<height> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<height> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<height> → model.textPhraseLike.limited → model.mslInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<height> → model.textPhraseLike.limited → model.mslInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<height> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<height> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<height> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<height> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<height> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<height> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<height> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<height> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<height> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<height> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<height> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<height> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<height> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<height> → model.textPhraseLike.limited → model.mslInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<height> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<height> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<height> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<height> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<height> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<height> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<height> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<height> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<height> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<height> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<height> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<height> → model.textPhraseLike.limited → model.dimLike → <width>

## <heraldry>

Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<heraldry> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<heraldry> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<heraldry> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<heraldry> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<heraldry> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<heraldry> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<heraldry> → [att.common](#) → [att.type](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<heraldry> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<heraldry> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<heraldry> → [att.lang](#) → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<heraldry> → [model.msInline](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<heraldry> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<heraldry> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<heraldry> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<heraldry> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<heraldry> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<heraldry> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<heraldry> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<heraldry> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<heraldry> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<heraldry> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<heraldry> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<heraldry> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<heraldry> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<heraldry> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<heraldry> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<heraldry> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<heraldry> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<heraldry> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<heraldry> → model.msInLine → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<heraldry> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<heraldry> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<heraldry> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<heraldry> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<heraldry> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<heraldry> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<heraldry> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<heraldry> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<heraldry> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<heraldry> → model.msInline → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<heraldry> → model.msInline → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<heraldry> → model.msInline → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<heraldry> → model.msInline → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<heraldry> → model.msInline → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<heraldry> → model.msInline → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<heraldry> → model.msInline → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<heraldry> → model.msInline → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<heraldry> → model.msInline → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<heraldry> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<heraldry> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<heraldry> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<heraldry> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<heraldry> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<heraldry> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<heraldry> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<heraldry> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<heraldry> → model.msInLine → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<heraldry> → model.msInLine → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<heraldry> → model.msInLine → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<heraldry> → model.msInLine → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<heraldry> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<heraldry> → model.msInLine → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<heraldry> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<heraldry> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<heraldry> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<heraldry> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<heraldry> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [heraldry](#) element of the Text Encoding Initiative (TEI).

## Constraints

The heraldry element may only appear as a descendant of the physDesc element.

## Declaration

```
<elementSpec ident="heraldry" module="MEI.msDesc">

## <hex>

Arbitrary MIDI data in hexadecimal form.

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<hex> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<hex> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<hex> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<hex> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\i][\n\c]+)"**, separated by spaces.

<hex> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<hex> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<hex> → att.midi.event → att.staffident → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<hex> → att.common → att.linkin → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<hex> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<hex> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<hex> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<hex> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<hex> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<hex> → att.common → att.basic → att.id → @xml:id

## Member of

(hex isn't member of any model class)

## Contained By

**<midi>** Container for elements that contain information useful when generating MIDI output.

<hex> → elements having hex as direct children → <midi>

## May Contain

### Remarks

The element's content must be wrapped in a CDATA section to avoid parsing errors.

### Declaration

```
<elementSpec ident="hex" module="MEI.midi">
  <desc xml:lang="en">Arbitrary MIDI data in hexadecimal form.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.midi.event"/>
  </classes>
  <content>
    <rng:text/>
  </content>
  <remarks xml:lang="en">
    <p>The element's content must be wrapped in a CDATA section to avoid parsing errors.</p>
  </remarks>
</elementSpec>
```

## <hispanTick>

Hispanic tick.

### Referenced in chapters

[6.4.1 Elements](#)

### Module

[MEI.neumes](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<hispanTick> → [att.hispanTick.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<hispanTick> → [att.hispanTick.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<hispanTick> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → [att.common](#) → [att.linked](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<hispanTick> → [att.hispanTick.vis](#) → [att.enclosingChars](#) → @enclose

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<hispanTick> → [att.hispanTick.log](#) → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<hispanTick> → att.hispanTick.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<hispanTick> → att.hispanTick.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<hispanTick> → att.hispanTick.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<hispanTick> → att.hispanTick.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<hispanTick> → att.hispanTick.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*).

<hispanTick> → att.hispanTick.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<hispanTick> → att.hispanTick.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<hispanTick> → att.hispanTick.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<hispanTick> → att.hispanTick.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<hispanTick> → att.hispanTick.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<hispanTick> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<hispanTick> → att.hispanTick.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<hispanTick> → att.hispanTick.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<hispanTick> → att.hispanTick.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<hispanTick> → att.hispanTick.vis → att.staffLoc → @loc

**@on (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<hispanTick> → att.common → att.nNumberLike → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.linking → @next

**@part (optional)** Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<hispanTick> → att.hispanTick.log → att.partIdent → @part

**@partstaff (optional)** Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<hispanTick> → att.hispanTick.log → att.partIdent → @partstaff

**@place (recommended)** Captures the placement of the tick mark with respect to the neume or neume component with which it is associated. Value conforms to [data.EVENTREL](#).

<hispanTick> → att.hispanTick.vis → @place

**@plist (optional)** When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.hispanTick.log → att.plist → @plist

**@precedes (optional)** Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.linking → @precedes

**@prev (optional)** Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.linking → @prev

**@resp (optional)** Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.responsibility → @resp

**@sameas (optional)** Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.linking → @sameas

**@staff (recommended)** Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<hispanTick> → att.hispanTick.log → att.staffIdent → @staff

**@synch (optional)** Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<hispanTick> → att.common → att.linkin → @synch

**@tilt** (*recommended*) Direction toward which the mark points. Value conforms to [data.COMPASSDIRECTION](#).

<hispanTick> → att.hispanTick.vis → @tilt

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NM TOKEN](#), separated by spaces.

<hispanTick> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<hispanTick> → att.hispanTick.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<hispanTick> → att.hispanTick.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<hispanTick> → att.hispanTick.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<hispanTick> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<hispanTick> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<hispanTick> → att.hispanTick.vis → att.xy → @y

## Member of

[model.neumeModifierLike](#) Groups elements that modify neume-like features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<hispanTick> → [model.neumeModifierLike](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<hispanTick> → [model.neumeModifierLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<hispanTick> → [model.neumeModifierLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<hispanTick> → model.neumeModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.  
 <hispanTick> → model.neumeModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.  
 <hispanTick> → model.neumeModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.  
 <hispanTick> → model.neumeModifierLike → <nc>

**<ncGrp>** Collection of one or more neume components.  
 <hispanTick> → model.neumeModifierLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.  
 <hispanTick> → model.neumeModifierLike → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.  
 <hispanTick> → model.neumeModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.  
 <hispanTick> → model.neumeModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.  
 <hispanTick> → model.neumeModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.  
 <hispanTick> → model.neumeModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.  
 <hispanTick> → model.neumeModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.  
 <hispanTick> → model.neumeModifierLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.  
 <hispanTick> → model.neumeModifierLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.  
 <hispanTick> → model.neumeModifierLike → <unclear>

## May Contain

– (<hispanTick> may not have child elements)

## Declaration

```
<elementSpec ident="hispanTick" module="MEI.neumes">

</classes>
<content>
  <rng:empty/>
</content>
</elementSpec>
```

## <history>

Provides a container for information about the history of a resource other than the circumstances of its creation.

### Referenced in chapters

[3.6 Work Description](#), [3.6.5 Work History](#), [3.6.8 Audience and Context](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<history> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<history> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<history> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<history> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<history> → [att.common](#) → [att.linkin](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<history> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<history> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<history> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<history> → elements having history as direct children → [<expression>](#)

**<item>** Single instance or exemplar of a source/manifestation.

<history> → elements having history as direct children → [<item>](#)

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<history> → elements having history as direct children → [<manifestation>](#)

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<history> → [model.physDescPart](#) → [<physDesc>](#)

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<history> → elements having history as direct children → [<physLoc>](#)

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<history> → elements having history as direct children → [<work>](#)

## May Contain

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<history> → direct children → <acquisition>

**<biblList>** List of bibliographic references.

<history> → model.textComponentLike → model.listLike → <biblList>

**<castList>** Contains a single cast list or *dramatis personae*.

<history> → model.textComponentLike → model.listLike → <castList>

**<div>** Major structural division of text, such as a preface, chapter or section.

<history> → model.divLike → <div>

**<eventList>** Contains historical information given as a sequence of significant past events.

<history> → model.textComponentLike → model.listLike → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<history> → direct children → <exhibHist>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<history> → model.headLike → <head>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<history> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<history> → model.textComponentLike → model.listLike → <list>

**<p>** One or more text phrases that form a logical prose passage.

<history> → model.textComponentLike → model.pLike → <p>

**<provenance>** The record of ownership or custodianship of an item.

<history> → direct children → <provenance>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<history> → model.textComponentLike → model.quoteLike → <quote>

**<table>** Contains text displayed in tabular form.

<history> → model.textComponentLike → model.tableLike → <table>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<history> → direct children → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<history> → direct children → <treatSched>

## Remarks

To facilitate efficient data interchange, basic information about the circumstances surrounding the creation of bibliographic resources should be recorded within the **<creation>** element, while the record of ownership and custody should be captured within the history element.

## Constraints

The elements acquisition, provenance, exhibHist, treatHist and treatSched are not permitted at the work or expression level and are only permitted at the manifestation level, if the manifestation is a manifestation singleton.

## Declaration

DEVELOPMENT  
VERSION

## <identifier>

An alpha-numeric string that establishes the identity of the described material.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#), [3.4.1.4 Series Statement](#), [3.6 Work Description](#), [3.6.1 Work Identification](#), [3.7 Encoding Sources in MEI](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<identifier> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<identifier> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
 <identifier> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<identifier> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<identifier> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<identifier> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<identifier> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<identifier> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<identifier> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<identifier> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<identifier> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<identifier> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<identifier> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<identifier> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<identifier> → att.common → att.basic → att.id → @xml:id

## Member of

[model.identifierLike](#) Groups identifier-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<identifier> → elements having identifier as direct children → <analytic>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <biblScope>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<identifier> → elements having identifier as direct children → <biblStruct>

**<bindingDesc>** Describes the present and former bindings of an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<identifier> → model.identifierLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<expression>** Intellectual or artistic realization of a work.

<identifier> → model.identifierLike → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<item>** Single instance or exemplar of a source/manifestation.

<identifier> → model.identifierLike → <item>

**<I>** Contains a single line of text within a line group.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <lyricist>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<identifier> → model.identifierLike → <manifestation>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<identifier> → model.identifierLike → <monogr>

**<name>** Proper noun or noun phrase.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <pgHead>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<identifier> → model.identifierLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<identifier> → model.identifierLike → model.pubStmtPart → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<identifier> → model.identifierLike → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<identifier> → model.identifierLike → <seriesStmt>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<identifier> → model.identifierLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<identifier> → model.identifierLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<identifier> → model.identifierLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<identifier> → model.identifierLike → model.titlePagePart → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<identifier> → model.identifierLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<identifier> → model.identifierLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<identifier> → model.identifierLike → model.textPhraseLike.limited → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<identifier> → model.identifierLike → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<identifier> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<identifier> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<identifier> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<identifier> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<identifier> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<identifier> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogNa

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<identifier> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<identifier> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<identifier> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<identifier> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<identifier> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<identifier> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<identifier> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<identifier> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<identifier> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<identifier> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Examples include an International Standard Book/Music Number, Library of Congress Control Number, publisher's number, a personal identification number, an entry in a bibliography or catalog, etc. The type attribute may be used to indicate the system from which the identifier was derived.

## Declaration

```

<elementSpec ident="identifier" module="MEI.shared">
  <desc xml:lang="en">An alpha-numeric string that establishes the identity of the described
  material.</desc>

## <imprimatur>

Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<imprimatur> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linked → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.metadataPointing → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<imprimatur> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<imprimatur> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<imprimatur> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<imprimatur> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<imprimatur> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<imprimatur> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<imprimatur> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<imprimatur> → att.lang → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<titlePage>** Contains a transcription of the title page of a text.

<imprimatur> → [model.titlePagePart](#) → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<imprimatur> → [model.paracontentPart](#) → [model.textPhraseLike](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<add>** Marks an addition to the text.

<imprimatur> → [model.paracontentPart](#) → [model.transcriptionLike](#) → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<imprimatur> → model paracontentPart → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<imprimatur> → model paracontentPart → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<imprimatur> → model paracontentPart → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<imprimatur> → model paracontentPart → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<imprimatur> → model paracontentPart → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<imprimatur> → model paracontentPart → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<imprimatur> → model.paracontentPart → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.jurisdiction

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<imprimatur> → model.paracontentPart → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<imprimatur> → model.paracontentPart → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<imprimatur> → model paracontentPart → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<imprimatur> → model paracontentPart → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<imprimatur> → model paracontentPart → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<imprimatur> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repo

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settleme

**<sic>** Contains apparently incorrect or inaccurate material.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<imprimatur> → model.paracontentPart → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<imprimatur> → model.paracontentPart → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<imprimatur> → model.paracontentPart → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<imprimatur> → model.paracontentPart → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<imprimatur> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **imprimatur** element of the Text Encoding Initiative (TEI).

## Declaration

```

## <imprint>

Information relating to the publication or distribution of a bibliographic item.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<imprint> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<imprint> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<imprint> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<imprint> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<imprint> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<imprint> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<imprint> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<imprint> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<imprint> → [model.biblPart](#) → <bibl>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<imprint> → elements having imprint as direct children → <monogr>

**<titlePage>** Contains a transcription of the title page of a text.

<imprint> → [model.titlePagePart](#) → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<imprint> → [model.textPhraseLike](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<add>** Marks an addition to the text.

<imprint> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

<imprint> → model.imprintPart → <availability>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<imprint> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<imprint> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<imprint> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<imprint> → model.imprintPart → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<imprint> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<imprint> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<imprint> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<imprint> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<pubPlace>** Name of the place where a bibliographic item was published.

<imprint> → model.imprintPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<imprint> → model.imprintPart → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<imprint> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<imprint> → direct children → <respStmt>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<imprint> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<imprint> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<imprint> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<imprint> → model.transcriptionLike → <unclear>

**<unpub>** Used to explicitly indicate that a bibliographic resource is unpublished.

<imprint> → model.imprintPart → <unpub>

**<watermark>** Contains a description of a watermark or similar device.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<imprint> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [imprint](#) element of the Text Encoding Initiative (TEI).

## <incip>

(incipit) – The opening music and/or words of a musical or textual work.

### Referenced in chapters

[3.6 Work Description](#), [3.6.2 Incipits](#), [14.4 SVG](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<incip> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<incip> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<incip> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<incip> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<incip> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<incip> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<incip> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<incip> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.incipLike](#) Groups elements used to represent a textual or musical incipit.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<incip> → [model.incipLike](#) → [model.workIdent](#) → <expression>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<incip> → [model.incipLike](#) → [model.physDescPart](#) → <physDesc>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<incip> → [model.incipLike](#) → [model.workIdent](#) → <work>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<incip> → [model.annotLike](#) → <annot>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<incip> → direct children → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<incip> → direct children → <clefGrp>

**<graphic>** Indicates the location of an inline graphic.

<incip> → model.graphicLike → <graphic>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<incip> → model.headLike → <head>

**<incipCode>** Incipit coded in a non-XML, plain text format, such as Plaine & Easie Code.

<incip> → direct children → <incipCode>

**<incipText>** Opening words of a musical composition.

<incip> → direct children → <incipText>

**<key>** Key captures information about tonal center and mode.

<incip> → direct children → <key>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

<incip> → direct children → <mensuration>

**<meter>** Captures information about the time signature within bibliographic descriptions.

<incip> → direct children → <meter>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<incip> → direct children → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<incip> → direct children → <perfResList>

**<role>** Name of a dramatic role, as given in a cast list.

<incip> → direct children → <role>

**<score>** Full score view of the musical content.

<incip> → model.scoreLike → <score>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<incip> → direct children → <tempo>

## Remarks

The <incipText> element may be used to capture a text incipit, while <score> is available to provide an MEI-encoded musical incipit. Images of an incipit may be referenced using the <graphic> element. An incipit encoded in a text format other than MEI may be placed in the <incipCode> element.

DEVELOPMENT  
VERSION

## <incipCode>

Incipit coded in a non-XML, plain text format, such as Plaine & Easie Code.

### Referenced in chapters

[3.6.2 Incipits](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<incipCode> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<incipCode> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<incipCode> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<incipCode> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<incipCode> → [att.common](#) → [att.linking](#) → @follows

**@form** (*optional*) Form of the encoded incipit. Allowed values are: "**plaineAndEasie**" (*Plaine & Easie Code.*), "**humdrumKern**" (\*\**kern representation of the Humdrum format.*), "**parsons**" (*Parsons code.*)

<incipCode> → direct children → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<incipCode> → [att.common](#) → [att.labelled](#) → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<incipCode> → [att.internetMedia](#) → @mimetype

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<incipCode> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incipCode> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<incipCode> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<incipCode> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<incipCode> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<incipCode> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<incipCode> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<incipCode> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<incipCode> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

`<incipCode>` → `att.common` → `att.basic` → `att.id` → `@xml:id`

**@xml:space** (*optional*) Allows one to signal to an application whether an element's white space is "significant". The behavior of `xml:space` cascades to all descendant elements, but it can be turned off locally by setting the `xml:space` attribute to the value "default". Allowed values are: "**default**" (*Allows the application to handle white space as necessary. Not including an `xml:space` attribute produces the same result as using the default value.*), "**preserve**" (*Instructs the application to maintain white space "as-is", suggesting that it might have meaning.*)

`<incipCode>` → `att.whitespace` → `@xml:space`

## Member of

(`incipCode` isn't member of any model class)

## Contained By

**<incip>** The opening music and/or words of a musical or textual work.

`<incipCode>` → elements having `incipCode` as direct children → `<incip>`

## May Contain

### Constraints

`incipCode` must have a `form` or `mimetype` attribute.

## Declaration

```
<elementSpec ident="incipCode" module="MEI.header">
  <desc xml:lang="en">Incipit coded in a non-XML, plain text format, such as Plaine & Easie
  Code.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.bibl"/>
    <memberOf key="att.internetMedia"/>
    <memberOf key="att.pointing"/>
    <memberOf key="att.whitespace"/>

## <incipText>

Opening words of a musical composition.

### Referenced in chapters

[3.6.2 Incipits](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<incipText> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<incipText> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<incipText> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<incipText> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<incipText> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<incipText> → [att.common](#) → [att.labelled](#) → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<incipText> → [att.internetMedia](#) → @mimetype

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<incipText> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incipText> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<incipText> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<incipText> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<incipText> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<incipText> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<incipText> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<incipText> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<incipText> → att.pointing → @targettype

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<incipText> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<incipText> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<incipText> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<incipText> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<incipText> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<incipText> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<incipText> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<incipText> → [att.lang](#) → @xml:lang

## Member of

(incipText isn't member of any model class)

## Contained By

**<incip>** The opening music and/or words of a musical or textual work.

<incipText> → elements having incipText as direct children → <incip>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<incipText> → [model.headLike](#) → <head>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<incipText> → [model.lgLike](#) → <lg>

**<p>** One or more text phrases that form a logical prose passage.

<incipText> → [model.pLike](#) → <p>

## Declaration

DEVELOPMENT  
VERSION

## <inscription>

An inscription added to an item, such as a bookplate, a note designating the item as a gift, and/or the author's signature.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<inscription> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<inscription> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<inscription> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<inscription> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<inscription> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<inscription> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<inscription> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<inscription> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<inscription> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<inscription> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<inscription> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<inscription> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<inscription> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<inscription> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<inscription> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<inscription> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<inscription> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <watermark>

<width> Description of the horizontal size of an object.

<inscription> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

## <instrDef>

(instrument definition) – MIDI instrument declaration.

### Referenced in chapters

[14.5.2 Recording General MIDI Instrumentation](#)

### Module

[MEI.midi](#)

### Attributes

**@azimuth** (*optional*) The lateral or left-to-right plane. Value conforms to [data.DEGREES](#).

<instrDef> → [att.instrDef.ges](#) → [att.soundLocation](#) → @azimuth

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<instrDef> → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<instrDef> → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<instrDef> → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<instrDef> → [att.metadataPointing](#) → @decls

**@elevation** (*optional*) The above-to-below axis. Value conforms to [data.DEGREES](#).

<instrDef> → [att.instrDef.ges](#) → [att.soundLocation](#) → @elevation

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<instrDef> → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<instrDef> → [att.labelled](#) → @label

**@midi.channel** (*optional*) Records a MIDI channel value. Value conforms to [data.MIDICHANNEL](#).

<instrDef> → [att.instrDef.ges](#) → [att.channelized](#) → @midi.channel

**@midi.duty** (*optional*) Specifies the 'on' part of the duty cycle as a percentage of a note's duration. Value conforms to [data.PERCENT.LIMITED](#).

<instrDef> → [att.instrDef.ges](#) → [att.channelized](#) → @midi.duty

**@midi.instrname** (*optional*) Provides a General MIDI label for the MIDI instrument. Value conforms to [data.MIDINAMES](#).

<instrDef> → [att.instrDef.ges](#) → [att.midilnstrument](#) → @midi.instrname

**@midi.instrnum** (*optional*) Captures the General MIDI instrument number. Use an integer for a 0-based value. An integer preceded by "in" indicates a 1-based value. Value conforms to [data.MIDIValue](#).

<instrDef> → att.instrDef.ges → att.midilInstrument → @midi.instrnum

**@midi.pan** (*optional*) Sets the instrument's position in a stereo field. MIDI values of 0 and 1 both pan left, 127 or 128 pans right, and 63 or 64 pans to the center. Positive percentage values pan to the right, negative ones to the left. 0% is centered. Value conforms to [data.MIDIValue\\_PAN](#).

<instrDef> → att.instrDef.ges → att.midilInstrument → @midi.pan

**@midi.patchname** (*optional*) Records a non-General MIDI patch/instrument name. Value is a [NMToken](#).

<instrDef> → att.instrDef.ges → att.midilInstrument → @midi.patchname

**@midi.patchnum** (*optional*) Records a non-General MIDI patch/instrument number. Value conforms to [data.MIDIValue](#).

<instrDef> → att.instrDef.ges → att.midilInstrument → @midi.patchnum

**@midi.port** (*optional*) Sets the MIDI port value. Value conforms to [data.MIDIValue\\_NAME](#).

<instrDef> → att.instrDef.ges → att.channelized → @midi.port

**@midi.track** (*optional*) Sets the MIDI track. Value is a positive integer.

<instrDef> → att.instrDef.ges → att.channelized → @midi.track

**@midi.volume** (*optional*) Sets the instrument's volume. Value conforms to [data.MIDIValue\\_Percent](#).

<instrDef> → att.instrDef.ges → att.midilInstrument → @midi.volume

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<instrDef> → att.nInteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<instrDef> → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<instrDef> → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<instrDef> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<instrDef> → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.instrDefLike](#) Groups elements used to declare a MIDI instrument.

## Contained By

**<instrGrp>** Collects MIDI instrument definitions.

<instrDef> → [model.instrDefLike](#) → <instrGrp>

**<layerDef>** Container for layer meta-information.

<instrDef> → [model.instrDefLike](#) → <layerDef>

**<staffDef>** Container for staff meta-information.

<instrDef> → [model.instrDefLike](#) → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<instrDef> → [model.instrDefLike](#) → <staffGrp>

## May Contain

- (<instrDef> may not have child elements)

## Remarks

This element provides a starting or default instrument declaration for a staff, a group of staves, or a layer. Following scoreDef, staffDef, layerDef, or MIDI prog elements may then change the instrument as necessary.

## Declaration

```
<elementSpec ident="instrDef" module="MEI.midi">
  <gloss versionDate="2022-05-18" xml:lang="en">instrument definition</gloss>

</remarks>
</elementSpec>
```

## <instrGrp>

(instrument group) – Collects MIDI instrument definitions.

### Module

MEI.midi

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<instrGrp> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<instrGrp> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<instrGrp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<instrGrp> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<instrGrp> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<instrGrp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<instrGrp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(instrGrp isn't member of any model class)

## Contained By

**<scoreDef>** Container for score meta-information.

<instrGrp> → elements having instrGrp as direct children → <scoreDef>

## May Contain

**<instrDef>** MIDI instrument declaration.

<instrGrp> → [model.instrDefLike](#) → <instrDef>

## Declaration

```
<elementSpec ident="instrGrp" module="MEI.midi">
  <gloss versionDate="2022-05-18" xml:lang="en">instrument group</gloss>
  <desc xml:lang="en">Collects MIDI instrument definitions.</desc>

    <rng:oneOrMore>
      <rng:ref name="model.instrDefLike"/>
    </rng:oneOrMore>
  </content>
</elementSpec>
```

## <interpretation>

Describes the scope of any analytic or interpretive information added to the transcription of the music.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<interpretation> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<interpretation> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.dataPointin](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<interpretation> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<interpretation> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<interpretation> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<interpretation> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<interpretation> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<interpretation> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<interpretation> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<interpretation> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<interpretation> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<interpretation> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<interpretation> → att.lang → @xml:lang

## Member of

[model.editorialDeclPart](#) Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

## Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<interpretation> → model.editorialDeclPart → <editorialDecl>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<interpretation> → model.headLike → <head>

**<p>** One or more text phrases that form a logical prose passage.

<interpretation> → model.pLike → <p>

## Remarks

The model of this element is based on the [interpretation](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="interpretation" module="MEI.header">
  <desc xml:lang="en">Describes the scope of any analytic or interpretive information added
  to the transcription of the music.</desc>

    Encoding Initiative (TEI).</p>
  </remarks>
</elementSpec>
```

## <item>

Single instance or exemplar of a source/manifestation.

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#), [3.6.12 Classification](#), [3.7 Encoding Sources in MEI](#), [3.8.2 Including non-MEI Metadata in MEI files](#), [9.2.4 Lists](#)

### Module

[MEI.frbr](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<item> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<item> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
 <item> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<item> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<item> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<item> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<item> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<item> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<item> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<item> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<item> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<item> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<item> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<item> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<item> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "onLoad" (*Load the target resource(s) immediately.*), "onRequest" (*Load the target resource(s) upon user request.*), "none" (*Do not permit loading of the target resource(s).*), "other" (*Behavior other than allowed by the other values of this attribute.*)

<item> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<item> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "new" (*Open in a new window.*), "replace" (*Load the referenced resource in the same window.*), "embed" (*Embed the referenced resource at the point of the link.*), "none" (*Do not permit traversal to the referenced resource.*), "other" (*Behavior other than permitted by the other values of this attribute.*)

<item> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<item> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<item> → att.common → att.basic → att.id → @xml:id

## Member of

[model.itemLike](#) Collects FRBR item-like elements.

## Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<item> → [model.itemLike](#) → <componentList>

**<itemList>** Gathers bibliographic item entities.

<item> → [model.itemLike](#) → <itemList>

## May Contain

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

<item> → direct children → <availability>

**<classification>** Groups information which describes the nature or topic of an entity.

<item> → direct children → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<item> → direct children → <componentList>

**<extMeta>** Provides a container element for non-MEI metadata formats.

<item> → direct children → <extMeta>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<item> → [model.headLike](#) → <head>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<item> → direct children → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<item> → model.identifierLike → <identifier>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<item> → direct children → <notesStmt>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<item> → direct children → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<item> → direct children → <physLoc>

**<relationList>** Gathers relation elements.

<item> → direct children → <relationList>

## Declaration

```

<elementSpec ident="item" module="MEI.frbr">
  <desc xml:lang="en">Single instance or exemplar of a source/manifestation.</desc>

## <itemList>

Gathers bibliographic item entities.

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.frbr](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<itemList> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<itemList> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<itemList> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<itemList> → [att.common](#) → [att.linkin](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<itemList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<itemList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<itemList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(itemList isn't member of any model class)

## Contained By

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<itemList> → elements having itemList as direct children → <manifestation>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<itemList> → [model.headLike](#) → <head>

**<item>** Single instance or exemplar of a source/manifestation.

<itemList> → [model.itemLike](#) → <item>

## Declaration

```
<elementSpec ident="itemList" module="MEI.frbr">
  <desc xml:lang="en">Gathers bibliographic item entities.</desc>
  <classes>
    <memberOf key="att.common"/>
  </classes>

DEVELOPMENT  
VERSION

## <key>

Key captures information about tonal center and mode.

### Referenced in chapters

[3.6 Work Description](#), [3.6.2 Incipits](#), [3.6.3 Key, Tempo, and Meter](#), [4.2.3 Special cases in staff definitions](#)

### Module

[MEI.header](#)

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<key> → [att.accidental](#) → @accid

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<key> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<key> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<key> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<key> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<key> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<key> → [att.common](#) → [att.labelled](#) → @label

**@mode** (*optional*) Indicates major, minor, or other tonality. Value conforms to [data.MODE](#).

<key> → direct children → @mode

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<key> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<key> → [att.common](#) → [att.linkin](#) → @next

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

<key> → [att.pitch](#) → @pname

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<key> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<key> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<key> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<key> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<key> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<key> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<key> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<key> → att.common → att.basic → att.id → @xml:id

## Member of

[model.workIdent](#) Groups elements that assist in the identification of a work.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<key> → [model.workIdent](#) → <expression>

**<incip>** The opening music and/or words of a musical or textual work.

<key> → elements having key as direct children → <incip>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<key> → [model.workIdent](#) → <work>

## May Contain

## Remarks

This element is used exclusively within bibliographic descriptions. Do not confuse this element with <keySig>, which is used within the body of an MEI file to record this data.

## Declaration

```
<elementSpec ident="key" module="MEI.header">

```

## <keyAccid>

(key accidental) – Accidental in a key signature.

### Referenced in chapters

[2.2.1 Score and Parts](#), [2.2.4.1 Key Signatures and Clefs](#), [4.2.2 Defining Score Parameters for CMN](#)

### Module

[MEI.shared](#)

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACCIDENTAL.WRITTEN](#).

<keyAccid> → [att.keyAccid.log](#) → [att.accidental](#) → @accid

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<keyAccid> → [att.keyAccid.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<keyAccid> → [att.keyAccid.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<keyAccid> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → [att.common](#) → [att.linking](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<keyAccid> → [att.keyAccid.vis](#) → [att.enclosingChars](#) → @enclose

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → [att.common](#) → [att.linking](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<keyAccid> → [att.keyAccid.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<keyAccid> → [att.keyAccid.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<keyAccid> → att.keyAccid.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<keyAccid> → att.keyAccid.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<keyAccid> → att.keyAccid.vis → att.typography → @fontweight

**@form** (*optional*) Specifies whether enharmonic (written) values or implicit ("perform-able") values are allowed. Allowed values are: "**implicit**" (*Only performed values (sharp, flat, natural) allowed.*), "**explicit**" (*All enharmonic (written) values allowed.*)

<keyAccid> → direct children → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout.*)

<keyAccid> → att.keyAccid.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<keyAccid> → att.keyAccid.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<keyAccid> → att.keyAccid.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<keyAccid> → att.keyAccid.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<keyAccid> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<keyAccid> → att.keyAccid.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<keyAccid> → att.keyAccid.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<keyAccid> → att.keyAccid.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<keyAccid> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.linked → @next

**@oct** (*optional*) Captures written octave information. Value conforms to [data.OCTAVE](#).

<keyAccid> → att.keyAccid.log → att.pitched → att.octave → @oct

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

<keyAccid> → att.keyAccid.log → att.pitched → att.pitch → @pname

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<keyAccid> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<keyAccid> → att.common → att.typed → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<keyAccid> → att.keyAccid.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<keyAccid> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<keyAccid> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<keyAccid> → att.keyAccid.vis → att.xy → @y

## Member of

[model.keyAccidLike](#) Groups elements that represent accidentals in a key signature.

## Contained By

**<add>** Marks an addition to the text.

<keyAccid> → model.keyAccidLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<keyAccid> → model.keyAccidLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<keyAccid> → model.keyAccidLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<keyAccid> → model.keyAccidLike → <del>

**<keySig>** Written key signature.

<keyAccid> → model.keyAccidLike → <keySig>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<keyAccid> → model.keyAccidLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<keyAccid> → model.keyAccidLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<keyAccid> → model.keyAccidLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<keyAccid> → model.keyAccidLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<keyAccid> → model.keyAccidLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<keyAccid> → model.keyAccidLike → <unclear>

## May Contain

– (<keyAccid> may not have child elements)

## Remarks

It is a semantic error not to provide one of the following: the x and y pair of attributes, the pname and oct pair of attributes, or the loc attribute.

## Constraints

One of the following is required: @x and @y attribute pair, @pname attribute, or @loc attribute.

## Declaration

```

## <keySig>

(key signature) – Written key signature.

### Referenced in chapters

[2.2.1 Score and Parts](#), [2.2.4.1 Key Signatures and Clefs](#), [3.6.3 Key, Tempo, and Meter](#), [4.2.2 Defining Score Parameters for CMN](#)

### Module

[MEI.shared](#)

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).  
`<keySig> → att.keySig.anl → att.accidental → @accid`

**@cancelaccid** (*optional*) Determines where cautionary accidentals should be displayed at a key change. Value conforms to [data.CANCELACCID](#).

`<keySig> → att.keySig.vis → @cancelaccid`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<keySig> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<keySig> → att.keySig.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<keySig> → att.common → att.linking → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<keySig> → att.common → att.linking → @corresp`

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<keySig> → att.facsimile → @facs`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<keySig> → att.common → att.linking → @follows`

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

`<keySig> → att.common → att.labelled → @label`

**@mode** (*optional*) Indicates major, minor, or other tonality. Value conforms to [data.MODE](#).

`<keySig> → att.keySig.anl → @mode`

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<keySig> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.linked → @next

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

<keySig> → att.keySig.anl → att.pitch → @pname

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.linked → @sameas

**@sig** (*optional*) Written key signature. One or more values from [data.KEYFIFTHS](#), separated by spaces.

<keySig> → att.keySig.log → @sig

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<keySig> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<keySig> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<keySig> → att.keySig.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<keySig> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<keySig> → att.common → att.basic → att.id → @xml:id

## Member of

[model.keySigLike](#) Groups elements that have the same function as a key signature.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<keySig> → model.keySigLike → model.eventLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<keySig> → model.keySigLike → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<keySig> → model.keySigLike → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <restore>

**<scoreDef>** Container for score meta-information.

<keySig> → model.keySigLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <sic>

**<staffDef>** Container for staff meta-information.

<keySig> → model.keySigLike → model.staffDefPart → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<keySig> → model.keySigLike → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<keySig> → model.keySigLike → model.eventLike → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<keySig> → model.transcriptionLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<keySig> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<keySig> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<keySig> → model.transcriptionLike → <del>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<keySig> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<keySig> → model.transcriptionLike → <handShift>

**<keyAccid>** Accidental in a key signature.

<keySig> → model.keyAccidLike → <keyAccid>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<keySig> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<keySig> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<keySig> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<keySig> → model.transcriptionLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<keySig> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<keySig> → model.transcriptionLike → <unclear>

## Constraints

If the @oct attribute appears on any keyAccid element, it must be provided on all keyAccid elements. Only keyAccid elements are allowed here.

## Declaration

```

## <|>

(line of text) – Contains a single line of text within a line group.

### Referenced in chapters

[8.4 Vocally Performed Text Encoded Separately](#), [9.2.7 Poetry](#)

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<|> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<|> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<|> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<|> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<|> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<|> → [att.common](#) → [att.responsibility](#) → @resp

**@rhythm** (*optional*) Used to specify a rhythm for the lyric syllables that differs from that of the notes on the staff, e.g., '4,4,4,4' when the rhythm of the notes is '4.,8,4.,8'. Value is plain text.

<|> → direct children → @rhythm

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<|> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<|> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<|> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<|> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<|> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<|> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<|> → [att.lang](#) → @xml:lang

## Member of

[model.ILike](#) Groups elements representing metrical components such as verse lines.

## Contained By

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<|> → [model.ILike](#) → <lg>

**<sp>** Contains an individual speech in a performance text.

<|> → [model.ILike](#) → <sp>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<|> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<|> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<|> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<|> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<|> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<|> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<|> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<|> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<|> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<|> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<|> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<|> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<|> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<|> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<|> → model.syllLike → <syl>

**<symbol>** A reference to a previously defined symbol.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<|> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<|> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<|> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Do not confuse this element with the [line](#) element, which is used for graphical lines that occur in music notation.

The model of this element is based on the [l](#) element of the Text Encoding Initiative (TEI).

## <label>

A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

### Referenced in chapters

[2.2.1 Score and Parts](#), [3.6.9 Work Contents](#), [4.2.2 Defining Score Parameters for CMN](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<label> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<label> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<label> → att.common → att.labelled → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<label> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<label> → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<label> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<label> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<label> → att.common → att.attributed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<label> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<label> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<label> → att.lang → @xml:lang

## Member of

[model.labelLike](#) Groups elements used to assign a label to other parts of a document.

## Contained By

**<biblList>** List of bibliographic references.

<label> → elements having label as direct children → <biblList>

**<catRel>** Contains the name of a related category.

<label> → elements having label as direct children → <catRel>

**<category>** Contains an individual descriptive category in a user-defined taxonomy, possibly nested within a superordinate category.

<label> → elements having label as direct children → <category>

**<contents>** List of the material contained within a resource.

<label> → elements having label as direct children → <contents>

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

<label> → model.labelLike → <grpSym>

**<handList>** Container for one or more hand elements.

<label> → elements having label as direct children → <handList>

**<layerDef>** Container for layer meta-information.

<label> → model.labelLike → <layerDef>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<label> → elements having label as direct children → <list>

**<staffDef>** Container for staff meta-information.

<label> → model.labelLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<label> → model.labelLike → <staffGrp>

**<termList>** Collection of text phrases which describe a resource.

<label> → elements having label as direct children → <termList>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<label> → elements having label as direct children → <verse>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<label> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<label> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<label> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<label> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<label> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<label> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<label> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<label> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<label> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<label> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<label> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<label> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<label> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<label> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<label> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<label> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<label> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<label> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<label> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<label> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<label> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<label> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<label> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<label> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<label> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<label> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<label> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<label> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<label> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<label> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<label> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<label> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<label> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<label> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<label> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<label> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<label> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<label> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<label> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<label> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<label> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<label> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<label> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<label> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<label> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<label> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<label> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<label> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<label> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<label> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<label> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<label> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<label> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<label> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<label> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<label> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<label> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<label> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<label> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<label> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<label> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<label> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **label** element of the Text Encoding Initiative (TEI).

Don't confuse this element, which is used to capture labelling text appearing in the document, with the **label** attribute, which records text to be used to generate a designation for the element to which it's attached, a "tool tip" or prefatory text, for example.

## Declaration

```

<elementSpec ident="label" module="MEI.shared">

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<labelAbbr> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<labelAbbr> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<labelAbbr> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<labelAbbr> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<labelAbbr> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<labelAbbr> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<labelAbbr> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<labelAbbr> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<labelAbbr> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<labelAbbr> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<labelAbbr> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<labelAbbr> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<labelAbbr> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<labelAbbr> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<labelAbbr> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<labelAbbr> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<labelAbbr> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<labelAbbr> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<labelAbbr> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<labelAbbr> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<labelAbbr> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<labelAbbr> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<labelAbbr> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<labelAbbr> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<labelAbbr> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<labelAbbr> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<labelAbbr> → model.textPhraseLike.limited → model.mslnline → <locusGrp>

**<name>** Proper noun or noun phrase.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<labelAbbr> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<labelAbbr> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<labelAbbr> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<labelAbbr> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<labelAbbr> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<labelAbbr> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<labelAbbr> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<labelAbbr> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<labelAbbr> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<labelAbbr> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<labelAbbr> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<labelAbbr> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<labelAbbr> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<labelAbbr> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<labelAbbr> → model.textPhraseLike.limited → model.renderLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<labelAbbr> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<labelAbbr> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<labelAbbr> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<labelAbbr> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<labelAbbr> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<labelAbbr> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<labelAbbr> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<labelAbbr> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<labelAbbr> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<labelAbbr> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<labelAbbr> → model.textPhraseLike.limited → model.dimLike → <width>

## <langUsage>

(language usage) – Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

### Referenced in chapters

[3.4.1.5 Notes Statement](#), [3.6 Work Description](#), [3.6.6 Language Usage](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<langUsage> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<langUsage> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<langUsage> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<langUsage> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<langUsage> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<langUsage> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<langUsage> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<langUsage> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<langUsage> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<langUsage> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<langUsage> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<langUsage> → att.common → att.basic → att.id → @xml:id

## Member of

(langUsage isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<langUsage> → elements having langUsage as direct children → <expression>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<langUsage> → elements having langUsage as direct children → <manifestation>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<langUsage> → elements having langUsage as direct children → <work>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<langUsage> → model.headLike → <head>

**<language>** Description of a language used in the document.

<langUsage> → direct children → <language>

## Remarks

The model of this element is based on the [langUsage](#) element of the Text Encoding Initiative (TEI).

## Declaration

# <language>

Description of a language used in the document.

## Referenced in chapters

[3.6.6 Language Usage](#)

## Module

[MEI.header](#)

## Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<language> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<language> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<language> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<language> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<language> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<language> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<language> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<language> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<language> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<language> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<language> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<language> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<language> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<language> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<language> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<language> → att.lang → @xml:lang

## Member of

(language isn't member of any model class)

## Contained By

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

<language> → elements having language as direct children → <langUsage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<language> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<language> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<language> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<language> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<language> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<language> → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<language> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<language> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<language> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<language> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<language> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<language> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<language> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<language> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<language> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<language> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<language> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<language> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<language> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<language> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<language> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<language> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<language> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<language> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<language> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<language> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<language> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<language> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<language> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<language> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<language> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<language> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<language> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<language> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<language> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<language> → model.textPhraseLike.limited → model.mslInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<language> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<language> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<language> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<language> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<language> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<language> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<language> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<language> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<language> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<language> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<language> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<language> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

A textual element may be related to this element by setting its `xml:lang` attribute, which normally takes the form of a code drawn from a coded list, such as ISO639-2b, to the same value as this element's `codedval` attribute. The name and web location of the authorizing list may be encoded in the `auth` attribute and the `auth.uri` attribute, respectively.

The model of this element is based on the `language` element of the Text Encoding Initiative (TEI) and the `language` element of the Encoded Archival Description (EAD).

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<layer> → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<layer> → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<layer> → [att.linked](#) → @corresp

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

<layer> → [att.layer.log](#) → @cue

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<layer> → [att.metadataPointing](#) → @decls

**@def** (*optional*) Provides a mechanism for linking the layer to a layerDef element. Value conforms to [data.URI](#).

<layer> → [att.layer.log](#) → @def

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<layer> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<layer> → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<layer> → att.labelled → @label

**@metcon** (*optional*) Indicates the relationship between the content of a staff or layer and the prevailing meter. Allowed values are: "**c**" (*Complete*; , *conformant with the prevailing meter.*), "**i**" (*Incomplete*; , *not enough beats.*), "**o**" (*Overfull*; , *too many beats.*)

<layer> → att.layer.log → att.meterConformance → @metcon

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<layer> → att.nInteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layer> → att.linkng → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<layer> → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layer> → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<layer> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<layer> → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<layer> → att.linkng → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<layer> → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<layer> → att.layer.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<layer> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

`<layer> → att.basic → att.id → @xml:id`

### Member of

`model.layerLike` Groups elements that function as notational layers within a staff.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <abbr>`

**<add>** Marks an addition to the text.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <add>`

**<corr>** Contains the correct form of an apparent erroneous passage.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <corr>`

**<damage>** Contains an area of damage to the physical medium.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <del>`

**<expan>** Contains the expansion of an abbreviation.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <expan>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

`<layer> → model.layerLike → model.rdgPart.music → model.rdgPart → <lem>`

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

`<layer> → model.layerLike → model.staffPart → <oStaff>`

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <orig>`

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

`<layer> → model.layerLike → <ossia>`

**<rdg>** (reading) – Contains a single reading within a textual variation.

`<layer> → model.layerLike → model.rdgPart.music → model.rdgPart → <rdg>`

**<reg>** Contains material which has been regularized or normalized in some sense.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <reg>`

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <restore>`

**<sic>** Contains apparently incorrect or inaccurate material.

`<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <sic>`

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<layer> → model.layerLike → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<layer> → model.layerLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<accid>** Records a temporary alteration to the pitch of a note.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<layer> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<layer> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<layer> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<layer> → model.appLike → <app>

**<artic>** An indication of how to play a note or chord.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<bTrem>** A rapid alternation on a single pitch or chord.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<layer> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<cb>** An empty formatting element that forces text to begin in a new column.

<layer> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<layer> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<layer> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<layer> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<layer> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<layer> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<layer> → model.transcriptionLike → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<layer> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<layer> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<layer> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<layer> → model.transcriptionLike → <del>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<layer> → direct children → <divLine>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<layer> → model.transcriptionLike → <gap>

**<graceGrp>** A container for a sequence of grace notes.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<halfmRpt>** A half-measure repeat in any meter.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<layer> → model.transcriptionLike → <handShift>

**<keySig>** Written key signature.

<layer> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<layer> → model.graphicPrimitiveLike → <line>

**<mRest>** Complete measure rest in any meter.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<meterSig>** Written meter signature.

<layer> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<layer> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<neume>** Sign representing one or more musical pitches.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<layer> → model.layerPart → model.eventLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<layer> → model.transcriptionLike → <orig>

**<pad>** An indication of extra visual space between notational elements.

<layer> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<layer> → model.milestoneLike.music → model.pbLike → <pb>

**<proport>** Description of note duration as arithmetic ratio.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<reg>** Contains material which has been regularized or normalized in some sense.

<layer> → model.transcriptionLike → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<layer> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<layer> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<layer> → model.milestoneLike.music → <sb>

**<sic>** Contains apparently incorrect or inaccurate material.

<layer> → model.transcriptionLike → <sic>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<layer> → model.layerPart → model.eventLike → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<layer> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<layer> → model.transcriptionLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<layer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<layer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<layer> → model.transcriptionLike → <unclear>

## Remarks

The term 'layer' is used instead of 'voice' in order to avoid confusion between 'voice' and 'voice leading' and 'voicing'. The def attribute may be used to create a connection with a **<layerDef>** element where logical and visual information about the layer is recorded. Alternatively, the n attribute may be used as a reference to a **<layerDef>** element with the same value in its n attribute. If neither def nor n attributes are present, then encoding order of the layers is presumed to match the encoding order of the layer definitions.

## <layerDef>

(layer definition) – Container for layer meta-information.

### Referenced in chapters

[2.2.1 Score and Parts](#), [4.2.1 The Role of the Measure Element](#), [4.2.2 Defining Score Parameters for CMN](#),  
[4.2.3 Special cases in staff definitions](#), [4.3.1 Beams](#), [11.1.3 Variants in Score Definitions](#)

### Module

[MEI.shared](#)

### Attributes

**@beam.color** (*optional*) Color of beams, including those associated with tuplets. Value conforms to [data.COLOR](#).

<layerDef> → [att.layerDef.vis](#) → [att.beaming.vis](#) → @beam.color

**@beam.group** (*optional*) Provides an example of how automated beaming (including secondary beams) is to be performed. Value is plain text.

<layerDef> → [att.layerDef.log](#) → [att.layerDef.log.cmn](#) → [att.beaming.log](#) → @beam.group

**@beam.rend** (*optional*) Encodes whether a beam is "feathered" and in which direction. Allowed values are: "**acc**" (*Beam lines grow farther apart from left to right.*), "**rit**" (*Beam lines grow closer together from left to right.*), "**norm**" (*Beam lines are equally-spaced over the entire length of the beam.*)

<layerDef> → [att.layerDef.vis](#) → [att.beaming.vis](#) → @beam.rend

**@beam.rests** (*optional*) Indicates whether automatically-drawn beams should include rests shorter than a quarter note duration. Value conforms to [data.BOOLEAN](#).

<layerDef> → [att.layerDef.log](#) → [att.layerDef.log.cmn](#) → [att.beaming.log](#) → @beam.rests

**@beam.slope** (*optional*) Captures beam slope. Value is a decimal number.

<layerDef> → [att.layerDef.vis](#) → [att.beaming.vis](#) → @beam.slope

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<layerDef> → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.metadataPointing](#) → @decls

**@dur.default** (*optional*) Contains a default duration in those situations when the first note, rest, chord, etc. in a measure does not have a duration specified. Value conforms to [data.DURATION](#).

<layerDef> → [att.layerDef.log](#) → [att.duration.default](#) → @dur.default

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @follows

**@instr** (*optional*) Provides a way of pointing to a MIDI instrument definition. It must contain the ID of an <instrDef> element elsewhere in the document. Value conforms to [data.URI](#).

<layerDef> → [att.layerDef.ges](#) → [att.instrumentIdent](#) → @instr

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<layerDef> → [att.labelled](#) → @label

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<layerDef> → [att.nInteger](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @next

**@num.default** (*optional*) Along with numbase.default, describes the default duration as a ratio. num.default is the first value in the ratio. Value is a positive integer.

<layerDef> → [att.layerDef.log](#) → [att.duration.default](#) → @num.default

**@numbase.default** (*optional*) Along with num.default, describes the default duration as a ratio. numbase.default is the second value in the ratio. Value is a positive integer.

<layerDef> → [att.layerDef.log](#) → [att.duration.default](#) → @numbase.default

**@oct.default** (*optional*) Contains a default octave specification for use when the first note, rest, chord, etc. in a measure does not have an octave value specified. Value conforms to [data.OCTAVE](#).

<layerDef> → [att.layerDef.log](#) → [att.octaveDefault](#) → @oct.default

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<layerDef> → [att.linking](#) → @synch

**@text.fam** (*optional*) Provides a default value for the font family name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTFAMILY](#).

<layerDef> → [att.layerDef.vis](#) → [att.textStyle](#) → @text.fam

**@text.name** (*optional*) Provides a default value for the font name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTNAME](#).

<layerDef> → [att.layerDef.vis](#) → [att.textStyle](#) → @text.name

**@text.size** (*optional*) Provides a default value for the font size of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSIZE](#).

<layerDef> → [att.layerDef.vis](#) → [att.textStyle](#) → @text.size

**@text.style** (*optional*) Provides a default value for the font style of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSTYLE](#).

<layerDef> → [att.layerDef.vis](#) → [att.textStyle](#) → @text.style

**@text.weight** (*optional*) Provides a default value for the font weight for text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTWEIGHT](#).

<layerDef> → [att.layerDef.vis](#) → [att.textStyle](#) → @text.weight

**@trans.diat** (*optional*) Records the amount of diatonic pitch shift, e.g., C to C♯ = 0, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<layerDef> → [att.layerDef.log](#) → [att.transposition](#) → @trans.diat

**@trans.semi** (*optional*) Records the amount of pitch shift in semitones, e.g., C to C♯ = 1, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<layerDef> → [att.layerDef.log](#) → [att.transposition](#) → @trans.semi

**@tune.Hz** (*optional*) Holds a value for cycles per second, i.e., Hertz, for a tuning reference pitch. Value is a decimal number.

<layerDef> → [att.layerDef.ges](#) → [att.tuning](#) → @tune.Hz

**@tune.pname** (*optional*) Holds the pitch name of a tuning reference pitch, i.e., the central tone of a tuning system. Value conforms to [data.PITCHNAME](#).

<layerDef> → [att.layerDef.ges](#) → [att.tuning](#) → @tune.pname

**@tune.temper** (*optional*) Provides an indication of the tuning system, just, for example. Value conforms to [data.TEMPERAMENT](#).

<layerDef> → [att.layerDef.ges](#) → [att.tuning](#) → @tune.temper

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<layerDef> → [att.typed](#) → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<layerDef> → [att.layerDef.vis](#) → [att.visibility](#) → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<layerDef> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<layerDef> → `att.basic` → `att.id` → `@xml:id`

### Member of

`model.layerDefLike` Groups elements that permit declaration of layer properties.

### Contained By

**<staffDef>** Container for staff meta-information.

<layerDef> → `model.layerDefLike` → <staffDef>

### May Contain

**<ambitus>** Range of a voice, instrument or piece.

<layerDef> → direct children → <ambitus>

**<instrDef>** MIDI instrument declaration.

<layerDef> → `model.instrDefLike` → <instrDef>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the `label` attribute.

<layerDef> → `model.labelLike` → <label>

**<labelAbbr>** A label on the pages following the first.

<layerDef> → `model.labelLike` → <labelAbbr>

**<meterSig>** Written meter signature.

<layerDef> → `model.meterSigLike` → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<layerDef> → `model.meterSigLike` → <meterSigGrp>

### Declaration

```

## <layout>

Describes how text is laid out on the page, including information about any ruling, pricking, or other evidence of page-preparation techniques.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<layout> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@cols** (*optional*) Specifies the number of columns per page. One or two values of datatype [nonNegativeInteger](#), separated by a space.

<layout> → direct children → @cols

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<layout> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linked](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<layout> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<layout> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.responsibility](#) → @resp

**@ruledlines** (*optional*) Specifies the number of ruled text lines per column. One or two values of datatype **nonNegativeInteger**, separated by a space.

<layout> → direct children → @ruledlines

**@ruledstaves** (*optional*) Specifies the number of ruled staves per column. One or two values of datatype **nonNegativeInteger**, separated by a space.

<layout> → direct children → @ruledstaves

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<layout> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<layout> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<layout> → [att.common](#) → [att.typed](#) → @type

**@writtenlines** (*optional*) Specifies the number of written text lines per column. One or two values of datatype **nonNegativeInteger**, separated by a space.

<layout> → direct children → @writtenlines

**@writtenstaves** (*optional*) Specifies the number of written staves per column. One or two values of datatype **nonNegativeInteger**, separated by a space.

<layout> → direct children → @writtenstaves

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<layout> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<layout> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<layout> → [att.lang](#) → @xml:lang

## Member of

(layout isn't member of any model class)

**Contained By**

**<layoutDesc>** Collects layout descriptions.

<layout> → elements having layout as direct children → <layoutDesc>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<layout> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<layout> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<layout> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<layout> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

- <styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>
- <symbol>** A reference to a previously defined symbol.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>
- <term>** Keyword or phrase which describes a resource.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>
- <title>** Title of a bibliographic entity.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>
- <watermark>** Contains a description of a watermark or similar device.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <watermark>
- <width>** Description of the horizontal size of an object.  
 <layout> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [layout](#) element of the Text Encoding Initiative (TEI).

VERSION

## <layoutDesc>

(layout description) – Collects layout descriptions.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<layoutDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<layoutDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<layoutDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<layoutDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<layoutDesc> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<layoutDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<layoutDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<layoutDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<layoutDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<layoutDesc> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<layoutDesc> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<layoutDesc> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<layoutDesc> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<layoutDesc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<layoutDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<layoutDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<layoutDesc> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<layoutDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<layoutDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<layoutDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<layoutDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<layoutDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<layoutDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<layoutDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<layoutDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<layoutDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<layoutDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<layoutDesc> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<layoutDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<layout>** Describes how text is laid out on the page, including information about any ruling, pricking, or other evidence of page-preparation techniques.

<layoutDesc> → direct children → <layout>

**<lb>** An empty formatting element that forces text to begin on a new line.

<layoutDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<layoutDesc> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<layoutDesc> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<layoutDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<layoutDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<layoutDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<layoutDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<layoutDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<layoutDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<layoutDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<layoutDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<layoutDesc> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<layoutDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<layoutDesc> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<layoutDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<layoutDesc> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<layoutDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<layoutDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<layoutDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<layoutDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<layoutDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<layoutDesc> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<layoutDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [layoutDesc](#) element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <lb>

(line beginning) – An empty formatting element that forces text to begin on a new line.

### Referenced in chapters

[2.1.4 General Text Structure Elements](#), [3.7.1 Title Pages](#), [8.3 Vocally Performed Text Encoded Within Notes](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<lb> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linked → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<lb> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<lb> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<lb> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<lb> → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<lb> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<lb> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<lb> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<lb> → att.common → att.basic → att.id → @xml:id

## Member of

[model.lbLike](#) Groups elements that function like line beginnings.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<lb> → model.lbLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<lb> → model.lbLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

<lb> → model.lbLike → <altId>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<lb> → model.lbLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<lb> → model.lbLike → model.milestoneLike.text → <argument>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<lb> → model.lbLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<lb> → model.lbLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<lb> → model.lbLike → model.textPhraseLike.limited → <author>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<lb> → model.lbLike → model.milestoneLike.text → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<lb> → model.lbLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<lb> → model.lbLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<lb> → model.lbLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<lb> → model.lbLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<lb> → model.lbLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<lb> → model.lbLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<lb> → model.lbLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<lb> → model.lbLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<lb> → model.lbLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<lb> → model.lbLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<lb> → model.lbLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<lb> → model.lbLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<lb> → model.lbLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<lb> → model.lbLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<lb> → model.lbLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<lb> → model.lbLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<lb> → model.IbLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<lb> → model.IbLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<lb> → model.IbLike → model.milestoneLike.text → <div>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<lb> → model.IbLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<lb> → model.IbLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<lb> → model.IbLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<lb> → model.IbLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<lb> → model.IbLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<lb> → model.IbLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<lb> → model.IbLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<lb> → model.IbLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

<lb> → model.IbLike → model.milestoneLike.text → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<lb> → model.IbLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<lb> → model.IbLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<lb> → model.IbLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<lb> → model.IbLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<lb> → model.IbLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<lb> → model.IbLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<lb> → model.IbLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<lb> → model.IbLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<lb> → model.IbLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<lb> → model.IbLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<lb> → model.IbLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<lb> → model.IbLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<lb> → model.IbLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<lb> → model.IbLike → model.textPhraseLike.limited → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on <measure> does not adequately capture the appearance or placement of the measure number/label.

<lb> → model.IbLike → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<lb> → model.IbLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<lb> → model.IbLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<lb> → model.IbLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<lb> → model.IbLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<lb> → model.IbLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<lb> → model.IbLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<lb> → model.IbLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<lb> → model.IbLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<lb> → model.IbLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<lb> → model.IbLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<lb> → model.IbLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<lb> → model.IbLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<lb> → model.IbLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<lb> → model.IbLike → <reh>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<lb> → model.IbLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<lb> → model.IbLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<lb> → model.IbLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<lb> → model.IbLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<lb> → model.IbLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<lb> → model.IbLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<lb> → model.IbLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<lb> → model.IbLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<lb> → model.IbLike → model.milestoneLike.text → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<lb> → model.IbLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<lb> → model.IbLike → model.textPhraseLike.limited → <soundChan>

**<sp>** Contains an individual speech in a performance text.

<lb> → model.IbLike → model.milestoneLike.text → <sp>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<lb> → model.IbLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<lb> → model.IbLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<lb> → model.IbLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<lb> → model.IbLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<lb> → model.IbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<lb> → model.IbLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<lb> → model.IbLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<lb> → model.IbLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<lb> → model.IbLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<lb> → model.IbLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<lb> → model.IbLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<lb> → model.IbLike → model.milestoneLike.text → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<lb> → model.IbLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<lb> → model.IbLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<lb> → model.lbLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<lb> → model.lbLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<lb> → model.lbLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<lb> → model.lbLike → <volta>

**<width>** Description of the horizontal size of an object.

<lb> → model.lbLike → model.textPhraseLike.limited → <width>

## May Contain

- (</b> may not have child elements)

## Remarks

The n attribute should be used to record a number associated with this textual line. See comment on <verse> element for description of func attribute. Do not confuse this element with the <sb> element, which performs a similar function for musical notation.

The model of this element is based on the **lb** element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <lem>

(lemma) – Contains the lemma, or base text, of a textual variation.

### Referenced in chapters

2.1.2.2 Content of Musical Divisions, 11.1.1 General Usage, 11.1.2 Variants in Musical Content

### Module

MEI.critapp

### Attributes

**@cause** (*optional*) Classifies the cause for the variant reading, according to any appropriate typology of possible origins. Value is a [NMTOKEN](#).

<lem> → [att.crit](#) → @cause

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<lem> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<lem> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<lem> → [att.common](#) → [att.linkin](#) → @corresp

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<lem> → [att.targetEval](#) → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<lem> → [att.common](#) → [att.linkin](#) → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a [<hand>](#) element declared in the header. Value conforms to [data.URI](#).

<lem> → [att.crit](#) → [att.handIdent](#) → @hand

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<lem> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<lem> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.linkin → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<lem> → att.crit → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<lem> → att.crit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<lem> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<lem> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<lem> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<lem> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<lem> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<lem> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<lem> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<lem> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<lem> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(lem isn't member of any model class)

## Contained By

**<app>** (apparatus) – Contains one or more alternative encodings.

<lem> → elements having lem as direct children → <app>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<lem> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<lem> → [model.layerPart](#) → [model.layerPart.mensuralAndNeumes](#) → [model.noteModifierLike](#) → <accid>

**<add>** Marks an addition to the text.

<lem> → [model.transcriptionLike](#) → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<lem> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<lem> → [model.graphicPrimitiveLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<lem> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<lem> → [model.appLike](#) → <app>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<lem> → [model.rdgPart](#) → [model.rdgPart.music](#) → [model.controlEventLike.cmn](#) → <arpeg>

**<artic>** An indication of how to play a note or chord.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<lem> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<lem> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<lem> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<lem> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<lem> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<lem> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<lem> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<lem> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<lem> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<lem> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<lem> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<lem> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<lem> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<lem> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<lem> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<expansion>** Indicates how a section may be programmatically expanded into its 'through-composed' form.

<lem> → direct children → <expansion>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<lem> → model.fLike → <f>

**<ftrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <ftrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<lem> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName →

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<lem> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<hispanTick>** Hispanic tick.

<lem> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keySig>** Written key signature.

<lem> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<lem> → model.rdgPart → model.rdgPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<lem> → model.graphicPrimitiveLike → <line>

**<liquefent>** Liquescent.

<lem> → model.neumeComponentModifierLike → <liquefent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msnline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msnline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<lem> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<lem> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<lem> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<lem> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<lem> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<lem> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<lem> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<lem> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<lem> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<lem> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<lem> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<lem> → model.rdgPart → model.rdgPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<lem> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repo>

**<rest>** A non-sounding event found in the source being transcribed.

<lem> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<lem> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<lem> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<lem> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<lem> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<lem> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<lem> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<lem> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<lem> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<lem> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<lem> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<lem> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<lem> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<lem> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<lem> → model.rdgPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<lem> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<lem> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<lem> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<lem> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<lem> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<lem> → model.rdgPart → model.rdgPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<lem> → model.rdgPart → model.rdgPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msnline → <watermark>

**<width>** Description of the horizontal size of an object.

<lem> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The **<lem>** element may also be used, under some circumstances, to record the base text of the source edition, to mark the readings of a base witness, to indicate the preference of an editor or encoder for a particular reading, or to make clear, in cases of ambiguity, precisely which portion of the main text the variation applies to. Those who prefer to work without the notion of a base text may prefer not to use it at all. An integer indicating the position of this reading in a sequence, when there is reason to presume a sequence of the variant readings, may be captured in the seq attribute.

In no case should <lem> contain elements that would not otherwise be permitted to occur within the parent of its own <app> ancestor. For example, when used as a descendent of <verse>, <lem> should only contain those elements allowed within <verse>.

The model of this element is based on the `lem` element of the Text Encoding Initiative (TEI).

## <lg>

(line group) – May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

### Referenced in chapters

[2.1.4 General Text Structure Elements](#), [3.7.1 Title Pages](#), [8.4 Vocally Performed Text Encoded Separately](#),  
[9.2.3.1 Figure Captions and Descriptions](#), [9.2.7 Poetry](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<lg> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<lg> → att.metadataPointing → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<lg> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<lg> → att.lyrics.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<lg> → att.lyrics.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<lg> → att.lyrics.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<lg> → att.lyrics.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<lg> → att.lyrics.vis → att.typography → @fontweight

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<lg> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<lg> → att.lyrics.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

<lg> → att.lyrics.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<lg> → att.lyrics.vis → att.typography → @lineheight

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<lg> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<lg> → att.lyrics.log → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<lg> → att.lyrics.log → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<lg> → att.lyrics.vis → att.placementRelStaff → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<lg> → att.lyrics.log → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<lg> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<lg> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<lg> → att.common → att.type → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *facs* attribute. Value is a decimal number.

<lg> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<lg> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each *id* attribute within a document must have a unique value. Value is a valid [xml:id](#).

<lg> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose *id* attribute is the same as the language tag's value. Value is a [language](#).

<lg> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *facs* attribute. Value is a decimal number.

<lg> → att.xy → @y

## Member of

[model.lgLike](#) Groups elements that have a line-grouping function.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<lg> → model.lgLike → model.textComponentLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<lg> → model.lgLike → model.textComponentLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<dedication>** Contains a dedicatory statement.

<lg> → model.lgLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<lg> → model.lgLike → model.textComponentLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<lg> → model.lgLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<lg> → model.lgLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<lg> → model.lgLike → model.textComponentLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<lg> → model.lgLike → model.paracontentPart → <imprimatur>

**<incipText>** Opening words of a musical composition.

<lg> → model.lgLike → <incipText>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<lg> → model.lgLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<lg> → model.lgLike → <lg>

**<li>** Single item in a <list>.

<lg> → model.lgLike → model.textComponentLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<lg> → model.lgLike → model.paracontentPart → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<lg> → model.lgLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<lg> → model.lgLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<lg> → model.lgLike → model.textComponentLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<lg> → model.lgLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<lg> → model.lgLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<sp>** Contains an individual speech in a performance text.

<lg> → model.lgLike → <sp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<lg> → model.lgLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<lg> → model.lgLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<lg> → model.lgLike → model.textComponentLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<lg> → model.lgLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<lg> → model.headLike → <head>

**<lg>** Contains a single line of text within a line group.

<lg> → model.llLike → <l>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<lg> → model.lgLLike → <lg>

## Remarks

The model of this element is based on the [lg](#) element of the Text Encoding Initiative (TEI).

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<li> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<li> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<li> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<li> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<li> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<li> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<li> → att.common → att.type → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<li> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<li> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<li> → att.lang → @xml:lang

## Member of

(li isn't member of any model class)

## Contained By

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<li> → elements having li as direct children → <list>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<li> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<i> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<i> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<i> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<i> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<i> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<i> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<i> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<li> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<li> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<li> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<li> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<li> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<li> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<li> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<i> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<i> → model.textComponentLike → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<i> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<i> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<i> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<i> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<li> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<li> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<li> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<li> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<li> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<li> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<li> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<li> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<li> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<li> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **item** elements of the Encoded Archival Description (EAD), the **item** element of the Text Encoding Initiative (TEI), and the **li** element of HTML.

DEVELOPMENT  
VERSION

## <librettist>

Person or organization who is a writer of the text of an opera, oratorio, etc.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<librettist> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<librettist> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<librettist> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<librettist> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<librettist> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<librettist> → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<librettist> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<librettist> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<librettist> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<librettist> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<librettist> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<librettist> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<librettist> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<librettist> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<librettist> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<librettist> → att.lang → @xml:lang

## Member of

[model.respLikePart](#) Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

## Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<librettist> → [model.respLikePart](#) → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<librettist> → [model.respLikePart](#) → [model.respLike](#) → [model.biblPart](#) → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<librettist> → [model.respLikePart](#) → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<librettist> → [model.respLikePart](#) → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<librettist> → [model.respLikePart](#) → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<librettist> → [model.respLikePart](#) → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<librettist> → [model.respLikePart](#) → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<librettist> → [model.respLikePart](#) → [model.titlePagePart](#) → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<librettist> → [model.respLikePart](#) → [model.respLike](#) → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<librettist> → [model.respLikePart](#) → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<librettist> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<librettist> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<librettist> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<librettist> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<librettist> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<librettist> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<librettist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<librettist> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<librettist> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<librettist> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<librettist> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<librettist> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<librettist> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<librettist> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<librettist> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<librettist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<librettist> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<librettist> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<librettist> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<librettist> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<librettist> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<librettist> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<librettist> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<librettist> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<librettist> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<librettist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<librettist> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<librettist> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<librettist> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<librettist> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<librettist> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<librettist> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<librettist> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<librettist> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<librettist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<librettist> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<librettist> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<librettist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<librettist> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<librettist> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<librettist> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<librettist> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<librettist> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<librettist> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<librettist> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<librettist> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<librettist> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<librettist> → model.textPhraseLike.limited → model.dimLike → <width>

DEVELOPMENT  
VERSION

# <ligature>

A mensural notation symbol that combines two or more notes into a single sign.

## Referenced in chapters

[5.4 Ligatures](#)

## Module

[MEI.mensural](#)

## Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<ligature> → [att.ligature.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ligature> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#) → @follows

**@form** (*optional*) Provides an indication of the function of the ligature. Value conforms to [data.LIGATUREFORM](#).

<ligature> → [att.ligature.vis](#) → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ligature> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ligature> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#)g → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#)g → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#)g → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ligature> → [att.common](#) → [att.linkin](#)g → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<ligature> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ligature> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ligature> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.eventLike.mensural](#) Groups event elements that occur in the mensural repertoire.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ligature> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<ligature> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ligature> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<ligature> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<ligature> → model.eventLike.mensural → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ligature> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<ligature> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<ligature> → model.appLike → <app>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<ligature> → model.eventLike → <barLine>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<ligature> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<ligature> → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<ligature> → [model.eventLike](#) → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<ligature> → [model.eventLike](#) → <clefGrp>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ligature> → [model.transcriptionLike](#) → <corr>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<ligature> → [model.eventLike](#) → <custos>

**<damage>** Contains an area of damage to the physical medium.

<ligature> → [model.transcriptionLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ligature> → [model.transcriptionLike](#) → <del>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<ligature> → [model.eventLike.neumes](#) → <divLine>

**<dot>** Dot of augmentation or division.

<ligature> → [model.eventLike.mensural](#) → <dot>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<ligature> → [model.transcriptionLike](#) → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<ligature> → [model.transcriptionLike](#) → <handShift>

**<keySig>** Written key signature.

<ligature> → [model.eventLike](#) → [model.keySigLike](#) → <keySig>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<ligature> → [model.eventLike.mensural](#) → <ligature>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<ligature> → [model.eventLike.mensural](#) → <mensur>

**<meterSig>** Written meter signature.

<ligature> → [model.eventLike](#) → [model.meterSigLike](#) → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<ligature> → [model.eventLike](#) → [model.meterSigLike](#) → <meterSigGrp>

**<neume>** Sign representing one or more musical pitches.

<ligature> → [model.eventLike.neumes](#) → <neume>

**<note>** A single pitched event.

<ligature> → [model.eventLike](#) → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ligature> → model.transcriptionLike → <orig>

**<pad>** An indication of extra visual space between notational elements.

<ligature> → model.eventLike → <pad>

**<proport>** Description of note duration as arithmetic ratio.

<ligature> → model.eventLike.mensural → <proport>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ligature> → model.transcriptionLike → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<ligature> → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ligature> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<ligature> → model.transcriptionLike → <sic>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<ligature> → model.eventLike → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<ligature> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ligature> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ligature> → model.transcriptionLike → <unclear>

## Remarks

The rhythmic meaning of the components of a ligature is typically contextual, not absolute; therefore, an interpretative duration may be encoded on each of the components using either the dur.ges attribute or the num and numbase attribute pair. The <ligature> element should **not** be used for brackets in modern notation that indicate notes that were part of a ligature in the original source.

## Declaration

```
<elementSpec ident="ligature" module="MEI.mensural">

```

## <line>

A visual line that cannot be represented by a more specific; i.e., semantic, element.

### Referenced in chapters

[2.4.1.1 Elements](#), [2.4.2 Uses of the Usersymbols Module](#), [2.4.2.2 Elements Without Semantic Implications](#)

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<line> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<line> → [att.line.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<line> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<line> → [att.common](#) → [att.linkin](#) → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<line> → [att.line.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip** value. Value is a [token](#).

<line> → [att.line.ges](#) → [att.duration.ges](#) → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → [att.line.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<line> → [att.line.log](#) → [att.startEndId](#) → @endid

**@endsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<line> → [att.line.vis](#) → @endsym

**@endsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<line> → [att.line.vis](#) → @endsym.size

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<line> → [att.line.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.to](#) → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → [att.line.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.vo](#) → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<line> → [att.line.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facscs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<line> → [att.facsimile](#) → @facscs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<line> → [att.common](#) → [att.linkin](#) → @follows

**@form** (*optional*) Visual form of the line. Value conforms to [data.LINEFORM](#).

<line> → [att.line.vis](#) → @form

**@func** (*recommended*) Indicates the function of the line. Allowed values are: "**coloration**" (*Indicates coloration in material transcribed from a source originally in mensural notation.*), "**ligature**" (*Marks a ligature in material transcribed from a source originally in mensural notation.*), "**unknown**" (*The function of the line is unknown.*)

<line> → [att.line.log](#) → @func

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → [att.line.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<line> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<line> → att.line.log → att.controlEvent → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<line> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<line> → att.line.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<line> → att.line.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<line> → att.line.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<line> → att.line.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<line> → att.line.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → att.line.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<line> → att.line.log → att.startEndId → att.startId → @startid

**@startsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<line> → att.line.vis → @startsym

**@startsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<line> → att.line.vis → @startsym.size

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<line> → att.line.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → att.line.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<line> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<line> → att.line.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<line> → att.line.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<line> → att.line.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<line> → att.line.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<line> → att.line.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<line> → att.line.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<line> → [att.line.ges](#) → [att.timestamp2.ges](#) → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<line> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<line> → [att.line.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<line> → [att.line.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@width** (*optional*) Width of the line. Value conforms to [data.LINEWIDTH](#).

<line> → [att.line.vis](#) → @width

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<line> → [att.line.vis](#) → [att.xy](#) → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<line> → [att.line.vis](#) → [att.xy2](#) → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<line> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<line> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<line> → [att.line.vis](#) → [att.xy](#) → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<line> → [att.line.vis](#) → [att.xy2](#) → @y2

## Member of

[model.graphicPrimitiveLike](#) Groups elements that function as drawing primitives.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<line> → [model.graphicPrimitiveLike](#) → <abbr>

**<add>** Marks an addition to the text.

<line> → model.graphicPrimitiveLike → <add>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<line> → model.graphicPrimitiveLike → <attacca>

**<corr>** Contains the correct form of an apparent erroneous passage.

<line> → model.graphicPrimitiveLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<line> → model.graphicPrimitiveLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<line> → model.graphicPrimitiveLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<line> → model.graphicPrimitiveLike → <dir>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<line> → model.graphicPrimitiveLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

<line> → model.graphicPrimitiveLike → <expan>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<line> → model.graphicPrimitiveLike → <harm>

**<layer>** An independent stream of events on a staff.

<line> → model.graphicPrimitiveLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<line> → model.graphicPrimitiveLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<line> → model.graphicPrimitiveLike → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

<line> → model.graphicPrimitiveLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<line> → model.graphicPrimitiveLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<line> → model.graphicPrimitiveLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<line> → model.graphicPrimitiveLike → <ornam>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<line> → model.graphicPrimitiveLike → <part>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<line> → model.graphicPrimitiveLike → <pgDesc>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<line> → model.graphicPrimitiveLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<line> → model.graphicPrimitiveLike → <reg>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<line> → model.graphicPrimitiveLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<line> → model.graphicPrimitiveLike → <restore>

**<score>** Full score view of the musical content.

<line> → model.graphicPrimitiveLike → <score>

**<section>** Segment of music data.

<line> → model.graphicPrimitiveLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<line> → model.graphicPrimitiveLike → <sic>

**<signifLet>** Significantive letter(s).

<line> → model.graphicPrimitiveLike → <signifLet>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<line> → model.graphicPrimitiveLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<line> → model.graphicPrimitiveLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<line> → model.graphicPrimitiveLike → <syllable>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<line> → model.graphicPrimitiveLike → <symbolDef>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<line> → model.graphicPrimitiveLike → <tempo>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<line> → model.graphicPrimitiveLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<line> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<line> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<line> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<line> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<line> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<line> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<line> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<line> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<line> → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<line> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<line> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<line> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<line> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<line> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<line> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<line> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<line> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<line> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<line> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<line> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<line> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<line> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<line> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<line> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<line> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<line> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<line> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<line> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<line> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<line> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<line> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<line> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<line> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<line> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<line> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<line> → model.textPhraseLike.limited → model.msinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<line> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<line> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<line> → model.textPhraseLike.limited → model.msinline → <signatures>

**<stack>** An inline table with a single column.

<line> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<line> → model.textPhraseLike.limited → model.msinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<line> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<line> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<line> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<line> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<line> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<line> → model.textPhraseLike.limited → model.msinline → <watermark>

**<width>** Description of the horizontal size of an object.

<line> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The starting point of the line may be identified in absolute output coordinate terms using the x and y attributes. The attributes in the att.visualOffset class may be used to record horizontal, vertical, or time offsets from these absolute coordinates or from the location of the element reference in the startid attribute. Similarly, the terminal point of the line may be recorded using the x2 and y2 attributes. Attributes in the att.visualOffset2 class maybe used to record the offsets of the ending point. Textual content of the <line> element, e.g., 'gliss.', may be rendered with the line. The appearance of the line is captured in the color, form and width attributes.

## Constraints

When used in the symbolDef context, must have either a startid attribute or x and y attributes.

When used in the symbolDef context, must have either an endid attribute or both x2 and y2 attributes.

When used in the score context, must have a startid, tstamp, tstamp.ges or tstamp.real attribute or both x and y attributes.

When used in the score context, must have an endid, dur, dur.ges, or tstamp2 attribute or both x2 and y2 attributes.

[MEI.neumes](#)

## Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<liquescent> → [att.liquescent.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<liquescent> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<liquescent> → [att.liquescent.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<liquescent> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<liquescent> → [att.common](#) → [att.linked](#) → @corresp

**@curve** (*optional*) Records direction of curvature. Allowed values are: "**a**" (*Anti-clockwise curvature.*), "**c**" (*Clockwise curvature.*)

<liquescent> → [att.liquescent.vis](#) → @curve

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<liquescent> → [att.liquescent.vis](#) → [att.enclosingChars](#) → @enclose

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<liquescent> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<liquescent> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<liquescent> → [att.liquescent.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<liquescent> → [att.liquescent.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<liquescent> → [att.liquescent.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<liquescent> → [att.liquescent.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<liquescent> → [att.liquescent.vis](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<liquescent> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<liquescent> → [att.liquescent.vis](#) → [att.typography](#) → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<liquescent> → [att.liquescent.vis](#) → [att.staffLoc](#) → @loc

**@looped** (*optional*) Indicates whether curve is closed. Value conforms to [data.BOOLEAN](#).

<liquescent> → [att.liquescent.vis](#) → @looped

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<liquescent> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<liquescent> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<liquescent> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<liquescent> → att.liquescent.vis → att.visibility → @visible

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<liquescent> → att.liquescent.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<liquescent> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<liquescent> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<liquescent> → att.liquescent.vis → att.xy → @y

## Member of

[model.neumeComponentModifierLike](#) Groups elements that modify neume components.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<liquescent> → [model.neumeComponentModifierLike](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<liquescent> → [model.neumeComponentModifierLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<liquescent> → [model.neumeComponentModifierLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<liquescent> → [model.neumeComponentModifierLike](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<liquescent> → [model.neumeComponentModifierLike](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<liquescent> → [model.neumeComponentModifierLike](#) → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<liquescent> → [model.neumeComponentModifierLike](#) → <nc>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<liquescent> → [model.neumeComponentModifierLike](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<liquescent> → [model.neumeComponentModifierLike](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<liquescent> → [model.neumeComponentModifierLike](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<liquescent> → [model.neumeComponentModifierLike](#) → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<liquescent> → [model.neumeComponentModifierLike](#) → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<liquescent> → [model.neumeComponentModifierLike](#) → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<liquescent> → [model.neumeComponentModifierLike](#) → <unclear>

### May Contain

– (<liquescent> may not have child elements)

## <list>

A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

### Referenced in chapters

[3.7.1 Title Pages](#), [9.1.2.1 Front Matter](#), [9.2.3.1 Figure Captions and Descriptions](#), [9.2.4 Lists](#), [13.2.1 Pointers and References](#)

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<list> → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<list> → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<list> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linked](#) → @follows

**@form** (*optional*) Used to indicate the format of a list. In a simple list, [<li>](#) elements are not numbered or bulleted. In a marked list, the sequence of the list items is not critical, and a bullet, box, dash, or other character is displayed at the start of each [<item>](#). In an ordered list, the sequence of the items is important, and each [<li>](#) is lettered or numbered. Style sheet functions should be used to specify the mark or numeration system for each [<li>](#). Allowed values are: "**simple**" (*Items are not numbered or bulleted.*), "**marked**" (*Bullet, box, dash, or other character is displayed before each item.*), "**ordered**" (*Each item is numbered or lettered.*)

<list> → direct children → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<list> → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<list> → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<list> → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<list> → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<list> → [att.lang](#) → @translit

**@type** (*optional*) Captures the nature of the content of a list. Allowed values are: "**gloss**" (*Each list item glosses some term or concept, which is given by a label element preceding the list item.*), "**index**" (*Each list item is an entry in an index such as the alphabetical topical index at the back of a print volume.*), "**instructions**" (*Each list item is a step in a sequence of instructions, as in a recipe.*), "**litany**" (*Each list item is one of a sequence of petitions, supplications or invocations, typically in a religious ritual.*), "**syllogism**" (*Each list item is part of an argument consisting of two or more propositions and a final conclusion derived from them.*)

<list> → direct children → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<list> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<list> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each [id](#) attribute within a document must have a unique value. Value is a valid [xml:id](#).

<list> → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose [id](#) attribute is the same as the language tag's value. Value is a [language](#).

<list> → att.lang → @xml:lang

**@y (optional)** Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<list> → att.xy → @y

## Member of

model.listLike Groups list-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<list> → model.listLike → model.textComponentLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<list> → model.listLike → model.textComponentLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<dedication>** Contains a dedicatory statement.

<list> → model.listLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<list> → model.listLike → model.textComponentLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<list> → model.listLike → model.paraccontentPart → <epigraph>

**<event>** Contains a free-text event description.

<list> → elements having list as direct children → <event>

**<expan>** Contains the expansion of an abbreviation.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<list> → model.listLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<list> → model.listLike → model.textComponentLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<list> → model.listLike → model.paracontentPart → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<list> → model.listLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<list> → model.listLike → model.textComponentLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<list> → model.listLike → model.paracontentPart → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<list> → model.listLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<list> → model.listLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<list> → model.listLike → model.textComponentLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<list> → model.listLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<list> → model.listLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<sp>** Contains an individual speech in a performance text.

<list> → elements having list as direct children → <sp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<list> → model.listLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<list> → model.listLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<list> → model.listLike → model.textComponentLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<list> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<list> → model.headLike → <head>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<list> → direct children → <label>

**<li>** Single item in a <list>.

<list> → direct children → <li>

## Remarks

The model of this element is based on the [list](#) element of the Encoded Archival Description (EAD), the [list](#) element of the Text Encoding Initiative (TEI), and the respective elements of HTML.

## Constraints

In a list of type "gloss" all items must be immediately preceded by a label.

## <locus>

Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

### Referenced in chapters

[3.4.1.6 Source Description](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<locus> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<locus> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linking](#) → @follows

**@from** (*optional*) Specifies the starting point of the location in a normalized form. Value conforms to [data.WORD](#).

<locus> → direct children → @from

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<locus> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<locus> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linked](#) → @sameas

**@scheme** (*optional*) Identifies the foliation scheme in terms of which the location is being specified by pointing to some foliation element defining it, or to some other equivalent resource. Value conforms to [data.URI](#).

<locus> → direct children → @scheme

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<locus> → [att.common](#) → [att.linked](#) → @synch

**@to** (*optional*) Specifies the end-point of the location in a normalized form. Value conforms to [data.WORD](#).

<locus> → direct children → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<locus> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<locus> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<locus> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<locus> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<locus> → [att.lang](#) → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<locus> → model.msInline → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<locus> → model.msInline → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<locus> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<locus> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<locus> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<locus> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<locus> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<locus> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<locus> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<locus> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<locus> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<locus> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<locus> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<locus> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<locus> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<locus> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<locus> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<locus> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<locus> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<locus> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<locus> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<locus> → model.msInline → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<locus> → model.msInline → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<locus> → model.msInline → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<locus> → model.msInline → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<locus> → model.msInline → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<locus> → model.msInline → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<locus> → model.msInline → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<locus> → model.msInline → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<locus> → model.msInline → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<locus> → model.msInline → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<locus> → model.msInline → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<locus> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<locus> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<locus> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<locus> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<locus> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<locus> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<locus> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<locus> → model.msInLine → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<locus> → model.msInLine → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<locus> → model.msInLine → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<locus> → model.msInLine → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<locus> → model.msInLine → model.textPhraseLike.limited → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<locus> → elements having locus as direct children → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<locus> → elements having locus as direct children → <locusGrp>

**<lyricist>** Person or organization who is a writer of the text of a song.

<locus> → model.msInLine → model.textPhraseLike.limited → <lyricist>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<locus> → elements having locus as direct children → <manifestation>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<locus> → model.msInLine → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<locus> → model.msInLine → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<locus> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<locus> → model.msInLine → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<locus> → model.msInLine → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<locus> → model.msInLine → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<locus> → model.msInLine → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<locus> → model.msInLine → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<locus> → model.msInLine → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<locus> → model.msInLine → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<locus> → model.msInLine → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<locus> → model.msInLine → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<locus> → model.msInLine → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<locus> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<locus> → model.msInLine → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<locus> → model.msInLine → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<locus> → model.msInLine → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<locus> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<locus> → model.msInLine → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<locus> → model.msInLine → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<locus> → model.msInLine → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<locus> → model.msInLine → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<locus> → model.msInLine → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<locus> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<locus> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<locus> → model.msInLine → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<locus> → model.msInLine → model.textPhraseLike.limited → <soundChan>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

<locus> → elements having locus as direct children → <source>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<locus> → model.msInLine → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<locus> → model.msInline → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<locus> → model.msInline → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<locus> → model.msInline → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<locus> → model.msInline → model.textPhraseLike.limited → <supportDesc>

**<syll>** Individual lyric syllable.

<locus> → model.msInline → model.textPhraseLike.limited → <syll>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<locus> → model.msInline → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<locus> → model.msInline → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<locus> → model.msInline → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<locus> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<locus> → model.msInline → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<locus> → model.msInline → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<locus> → model.msInline → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<locus> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<locus> → model.msInline → model.textPhraseLike.limited → <width>

## May Contain

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<locus> → direct children → <locus>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<locus> → direct children → <rend>

**<symbol>** A reference to a previously defined symbol.

<locus> → direct children → <symbol>

## Remarks

The model of this element is based on the **locus** element of the Text Encoding Initiative (TEI).

## Constraints

The locus element may only appear as a descendant of a physDesc element, a contentItem element, or a source element that is a component of another source or work.

## <locusGrp>

(locus group) – Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

### Referenced in chapters

[3.4.1.6 Source Description](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<locusGrp> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<locusGrp> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<locusGrp> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<locusGrp> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linking](#) → @sameas

**@scheme** (*optional*) Identifies the foliation scheme in terms of which the location is being specified by pointing to some foliation element defining it, or to some other equivalent resource. Value conforms to [data.URI](#).

<locusGrp> → direct children → @scheme

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<locusGrp> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<locusGrp> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<locusGrp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<locusGrp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<locusGrp> → [att.lang](#) → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<locusGrp> → [model.msInline](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<locusGrp> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<locusGrp> → model.msInline → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <lyricist>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<locusGrp> → elements having locusGrp as direct children → <manifestation>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<locusGrp> → model.msInline → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<locusGrp> → model.msInline → model.textPhraseLike.limited → <soundChan>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

<locusGrp> → elements having locusGrp as direct children → <source>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<locusGrp> → model.msInline → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<locusGrp> → model.msInline → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<locusGrp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<locusGrp> → model.msInline → model.textPhraseLike.limited → <width>

## May Contain

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<locusGrp> → direct children → <locus>

## Remarks

The model of this element is based on the [locusGrp](#) element of the Text Encoding Initiative (TEI).

## Constraints

The locusGrp element may only appear as a descendant of a physDesc element, a contentItem element, or a source element that is a component of another source or work.

## Declaration

DEVELOPMENT  
VERSION

## <lv>

(laissez vibrer) – A "tie-like" indication that a note should ring beyond its written duration.

### Module

[MEI.cmn](#)

### Attributes

**@bezier** (*optional*) Records the placement of Bezier control points as a series of pairs of space-separated values; e.g., 19 45 -32 118. One or more values, each consisting of a sequence of **decimal** and **decimal** sub-values.

<lv> → [att.lv.vis](#) → [att.curvature](#) → @bezier

**@bulge** (*optional*) Describes a curve as one or more pairs of values with respect to an imaginary line connecting the starting and ending points of the curve. The first value captures a distance to the left (positive value) or right (negative value) of the line, expressed in virtual units. The second value of each pair represents a point along the line, expressed as a percentage of the line's length. N.B. An MEI virtual unit (vu) is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. One or more of **decimal**.

<lv> → [att.lv.vis](#) → [att.curvature](#) → @bulge

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<lv> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<lv> → [att.lv.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<lv> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<lv> → [att.common](#) → [att.linked](#) → @corresp

**@curvedir** (*optional*) Describes a curve with a generic term indicating the direction of curvature. Allowed values are: "**above**" (*Upward curve.*), "**below**" (*Downward curve.*), "**mixed**" (*A "meandering" curve, both above and below the items it pertains to.*)

<lv> → [att.lv.vis](#) → [att.curvature](#) → @curvedir

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → [att.lv.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<lv> → [att.lv.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<lv> → att.lv.vis → att.visualOffset2 → att.visualOffset2.to → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → att.lv.vis → att.visualOffset2 → att.visualOffset2.vo → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<lv> → att.lv.log → att.controlEvent → att.targetEval → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<lv> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → att.lv.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<lv> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<lv> → att.lv.log → att.controlEvent → att.layerIdent → @layer

**@lform** (*optional*) Describes the line style of a curve. Value conforms to [data.LINEFORM](#).

<lv> → att.lv.vis → att.curveRend → @lform

**@lwidth** (*optional*) Width of a curved line. Value conforms to [data.LINEWIDTH](#).

<lv> → att.lv.vis → att.curveRend → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<lv> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<lv> → att.lv.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<lv> → att.lv.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<lv> → att.lv.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<lv> → att.lv.log → att.controlEvent → att.staffIdent → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → att.lv.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<lv> → att.lv.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<lv> → att.lv.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → att.lv.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<lv> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<lv> → att.lv.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<lv> → att.lv.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<lv> → att.lv.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<lv> → att.lv.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<lv> → att.lv.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<lv> → att.lv.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<lv> → att.lv.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<lv> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<lv> → att.lv.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<lv> → att.lv.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<lv> → att.lv.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<lv> → att.lv.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<lv> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<lv> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<lv> → att.lv.vis → att.xy → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<lv> → att.lv.vis → att.xy2 → @y2

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<lv> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<lv> → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<lv> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<lv> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<lv> → direct children → <curve>

## Remarks

The lv element captures the graphical, "tie-like" symbol. Any associated text, such as "l.v.", must be captured using a **<dir>** element.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

The visual attributes of the lv element (@bezier, @bulge, @curvedir, @lform, @lwidth, @ho, @startho, @endho, @to, @startto, @endto, @vo, @startvo, @endvo, @x, @y, @x2, and @y2) will be overridden by visual attributes of the contained curve elements.

## Declaration

## <lyricist>

Person or organization who is a writer of the text of a song.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6 Work Description](#), [3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<lyricist> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<lyricist> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<lyricist> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<lyricist> → [att.evidence](#) → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<lyricist> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<lyricist> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<lyricist> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<lyricist> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<lyricist> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<lyricist> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<lyricist> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<lyricist> → [att.lang](#) → @xml:lang

## Member of

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<lyricist> → model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<lyricist> → model.respLikePart → model.respLike → model.biblPart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<lyricist> → model.respLikePart → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<lyricist> → model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<lyricist> → model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<lyricist> → model.respLikePart → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<lyricist> → model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<lyricist> → model.respLikePart → model.titlePagePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<lyricist> → model.respLikePart → model.respLike → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<lyricist> → model.respLikePart → <work>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<lyricist> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<lyricist> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<lyricist> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<lyricist> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<lyricist> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<lyricist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<lyricist> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<lyricist> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<lyricist> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<lyricist> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<lyricist> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<lyricist> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<lyricist> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<lyricist> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<lyricist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<lyricist> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<lyricist> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<lyricist> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<lyricist> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<lyricist> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<lyricist> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<lyricist> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<lyricist> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<lyricist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<lyricist> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<lyricist> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<lyricist> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<lyricist> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<lyricist> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<lyricist> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<lyricist> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<lyricist> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<lyricist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<lyricist> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<lyricist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<lyricist> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<lyricist> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<lyricist> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<lyricist> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<lyricist> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<lyricist> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<lyricist> → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<lyricist> → model.textPhraseLike.limited → model.dimLike → <width>

## <mNum>

(measure number) – Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on [<measure>](#) does not adequately capture the appearance or placement of the measure number/label.

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mNum> → [att.mNum.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mNum> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linking](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @fontweight

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mNum> → [att.mNum.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mNum> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mNum> → [att.mNum.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mNum> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linked](#) → @next

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<mNum> → [att.mNum.vis](#) → [att.placementRelStaff](#) → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mNum> → [att.common](#) → [att.linked](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<mNum> → [att.mNum.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<mNum> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<mNum> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mNum> → [att.mNum.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<mNum> → [att.mNum.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mNum> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mNum> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<mNum> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<mNum> → [att.mNum.vis](#) → [att.xy](#) → @y

## Member of

(mNum isn't member of any model class)

## Contained By

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<mNum> → elements having mNum as direct children → <measure>

## May Contain

**<lb>** An empty formatting element that forces text to begin on a new line.

<mNum> → [model.lbLike](#) → <lb>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<mNum> → model.rendLike → <rend>

**<stack>** An inline table with a single column.

<mNum> → model.rendLike → <stack>

## Remarks

<mNum> uses a subset of model.textPhraseLike.limited.

## Declaration

```
<elementSpec ident="mNum" module="MEI.cmn">
  <gloss versionDate="2022-05-18" xml:lang="en">measure number</gloss>
  <desc xml:lang="en">Designation, name, or label for a measure, often but not always
  consisting of digits. Use this element when the
    <att>n</att>
  attribute on
    <gi scheme="MEI">measure</gi>
  does not adequately capture the appearance or placement of the measure number/
  label.</desc>

## <mRest>

(measure rest) – Complete measure rest in any meter.

### Referenced in chapters

[4.2.5.3 Rests](#), [4.2.5.3.1 Measure Rests](#), [4.2.5.3.3 Empty Measures](#), [4.3.10.2 Measure-Level Repetition Symbols](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mRest> → att.mRest.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mRest> → att.mRest.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mRest> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linkin → @corresp

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

<mRest> → att.mRest.log → att.cue → @cue

**@cutout** (*optional*) "Cut-out" style. Allowed values are: "**cutout**" (*The staff lines should not be drawn.*)

<mRest> → att.mRest.vis → att.cutout → @cutout

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<mRest> → att.mRest.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<mRest> → att.mRest.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration.

Value conforms to [data.DURATION.GESTURAL](#).

<mRest> → att.mRest.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<mRest> → att.mRest.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<mRest> → att.mRest.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<mRest> → att.mRest.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip value**. Value is a [token](#).

<mRest> → att.mRest.ges → att.duration.ges → @dur.recip

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.facsimile → @facs

**@fermata** (*optional*) Indicates the attachment of a fermata to this element. If visual information about the fermata needs to be recorded, then a [<fermata>](#) element should be employed instead. Value conforms to [data.STAFFREL.basic](#).

<mRest> → att.mRest.anl → att.fermataPresent → @fermata

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linking → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mRest> → att.mRest.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mRest> → att.mRest.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mRest> → att.mRest.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mRest> → att.mRest.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mRest> → att.mRest.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<mRest> → att.mRest.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mRest> → att.mRest.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mRest> → att.mRest.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mRest> → att.mRest.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mRest> → att.mRest.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mRest> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<mRest> → att.mRest.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<mRest> → att.mRest.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mRest> → att.mRest.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<mRest> → att.mRest.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mRest> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linked → @next

**@oloc** (*optional*) Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

<mRest> → att.mRest.vis → att.staffLoc.pitched → @oloc

**@ploc** (*optional*) Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

<mRest> → att.mRest.vis → att.staffLoc.pitched → @ploc

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<mRest> → att.mRest.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mRest> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<mRest> → att.mRest.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRest> → att.mRest.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRest> → att.mRest.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<mRest> → att.mRest.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mRest> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<mRest> → att.mRest.vis → att.visibility → @visible

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mRest> → att.mRest.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<mRest> → att.mRest.log → att.event → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<mRest> → att.mRest.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mRest> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<mRest> → `att.common` → `att.basic` → `att.id` → `@xml:id`

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<mRest> → `att.mRest.vis` → `att.xy` → `@y`

## Member of

`model.eventLike.measureFilling` Groups events that completely fill a CMN measure.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<abbr>`

**<add>** Marks an addition to the text.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<add>`

**<corr>** Contains the correct form of an apparent erroneous passage.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<corr>`

**<damage>** Contains an area of damage to the physical medium.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<del>`

**<expan>** Contains the expansion of an abbreviation.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<expan>`

**<layer>** An independent stream of events on a staff.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<layer>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<lem>`

**<oLayer>** A layer that contains an alternative to material in another layer.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<oLayer>`

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<orig>`

**<rdg>** (reading) – Contains a single reading within a textual variation.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<rdg>`

**<reg>** Contains material which has been regularized or normalized in some sense.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<reg>`

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<mRest> → `model.eventLike.measureFilling` → `model.layerPart.cmn` → `model.layerPart` → `<restore>`

**<sic>** Contains apparently incorrect or inaccurate material.

<mRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

- (<mRest> may not have child elements)

## Remarks

Automatically-generated numbering of consecutive measures of rest may be controlled via the multi.number attribute on the **<scoreDef>** or **<staffDef>** elements.

## Declaration

```
<elementSpec ident="mRest" module="MEI.cmn">
  <gloss versionDate="2022-05-18" xml:lang="en">measure rest</gloss>

## <mRpt>

(measure repeat) – An indication that the previous measure should be repeated.

### Referenced in chapters

[4.3.10.2 Measure-Level Repetition Symbols](#), [11.2.1.1 Instructions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mRpt> → [att.mRpt.vis](#) → [att.altsym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mRpt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mRpt> → [att.mRpt.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mRpt> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mRpt> → [att.common](#) → [att.linked](#) → @corresp

**@expand** (*optional*) Indicates whether to render a repeat symbol or the source material to which it refers. A value of 'true' renders the source material, while 'false' displays the repeat symbol. Value conforms to [data.BOOLEAN](#).

<mRpt> → [att.mRpt.vis](#) → [att.expandable](#) → @expand

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt> → [att.common](#) → [att.linked](#) → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mRpt> → [att.mRpt.vis](#) → [att.typography](#) → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mRpt> → [att.mRpt.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mRpt> → att.mRpt.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mRpt> → att.mRpt.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mRpt> → att.mRpt.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*)

<mRpt> → att.mRpt.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mRpt> → att.mRpt.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mRpt> → att.mRpt.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mRpt> → att.mRpt.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mRpt> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<mRpt> → att.mRpt.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<mRpt> → att.mRpt.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mRpt> → att.mRpt.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mRpt> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.linked → @next

**@num** (*optional*) Records a number or count accompanying a notational feature. Value is a positive integer.

<mRpt> → att.mRpt.log → att.numbered → @num

**@num.place** (*optional*) States where the tuplet number will be placed in relation to the note heads. Value conforms to [data.STAFFREL.basic](#).

<mRpt> → att.mRpt.vis → att.numberPlacement → @num.place

**@num.visible** (*optional*) Determines if the tuplet number is visible. Value conforms to [data.BOOLEAN](#).

<mRpt> → att.mRpt.vis → att.numberPlacement → @num.visible

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<mRpt> → att.mRpt.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt> → att.common → att.linking → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRpt> → att.mRpt.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRpt> → att.mRpt.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<mRpt> → att.mRpt.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mRpt> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <[when](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<mRpt> → att.mRpt.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mRpt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

`<mRpt> → att.common → att.basic → att.id → @xml:id`

### Member of

`model.eventLike.measureFilling` Groups events that completely fill a CMN measure.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <abbr>`

**<add>** Marks an addition to the text.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <add>`

**<corr>** Contains the correct form of an apparent erroneous passage.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <corr>`

**<damage>** Contains an area of damage to the physical medium.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <del>`

**<expan>** Contains the expansion of an abbreviation.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <expan>`

**<layer>** An independent stream of events on a staff.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <layer>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <lem>`

**<oLayer>** A layer that contains an alternative to material in another layer.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <oLayer>`

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <orig>`

**<rdg>** (reading) – Contains a single reading within a textual variation.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <rdg>`

**<reg>** Contains material which has been regularized or normalized in some sense.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <reg>`

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <restore>`

**<sic>** Contains apparently incorrect or inaccurate material.

`<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>`

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

– (<mRpt> may not have child elements)

## Remarks

The automated numbering of consecutive measures of rest may be controlled via the multi.number attribute on the <scoreDef> or <staffDef> elements.

## Declaration

```

<elementSpec ident="mRpt" module="MEI.cmn">

## <mRpt2>

(2-measure repeat) – An indication that the previous two measures should be repeated.

### Referenced in chapters

[4.3.10.2 Measure-Level Repetition Symbols](#), [11.2.1.1 Instructions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<mRpt2> → att.mRpt2.vis → att.altsym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<mRpt2> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<mRpt2> → att.mRpt2.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<mRpt2> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<mRpt2> → att.common → att.linked → @corresp`

**@expand** (*optional*) Indicates whether to render a repeat symbol or the source material to which it refers. A value of 'true' renders the source material, while 'false' displays the repeat symbol. Value conforms to [data.BOOLEAN](#).

`<mRpt2> → att.mRpt2.vis → att.expandable → @expand`

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<mRpt2> → att.facsimile → @facsimile`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<mRpt2> → att.common → att.linked → @follows`

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

`<mRpt2> → att.mRpt2.vis → att.typography → @fontfamily`

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

`<mRpt2> → att.mRpt2.vis → att.typography → @fontname`

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mRpt2> → att.mRpt2.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mRpt2> → att.mRpt2.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mRpt2> → att.mRpt2.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*).

<mRpt2> → att.mRpt2.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mRpt2> → att.mRpt2.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mRpt2> → att.mRpt2.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mRpt2> → att.mRpt2.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mRpt2> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<mRpt2> → att.mRpt2.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

<mRpt2> → att.mRpt2.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mRpt2> → att.mRpt2.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mRpt2> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<mRpt2> → att.mRpt2.log → att.event → att.staffid → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mRpt2> → att.common → att.linkin → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRpt2> → att.mRpt2.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mRpt2> → att.mRpt2.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<mRpt2> → att.mRpt2.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mRpt2> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<mRpt2> → att.mRpt2.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mRpt2> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mRpt2> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.measureFilling](#) Groups events that completely fill a CMN measure.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mRpt2> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

## <mSpace>

(measure space) – A measure containing only empty space in any meter.

### Referenced in chapters

[4.2.5.3 Rests](#), [4.2.5.3.3 Empty Measures](#), [11.2.1.1 Instructions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mSpace> → [att.mSpace.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mSpace> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mSpace> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mSpace> → [att.common](#) → [att.linked](#) → @corresp

**@cutout** (*optional*) "Cut-out" style. Allowed values are: "**cutout**" (*The staff lines should not be drawn.*)

<mSpace> → [att.mSpace.vis](#) → [att.cutout](#) → @cutout

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<mSpace> → [att.mSpace.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<mSpace> → [att.mSpace.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<mSpace> → [att.mSpace.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<mSpace> → [att.mSpace.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<mSpace> → [att.mSpace.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<mSpace> → [att.mSpace.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a token.

<mSpace> → att.mSpace.ges → att.duration.ges → @dur.recip

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from data.URI, separated by spaces.

<mSpace> → att.facsimile → @facs

**@fermata** (*optional*) Indicates the attachment of a fermata to this element. If visual information about the fermata needs to be recorded, then a <fermata> element should be employed instead. Value conforms to data.STAFFREL.basic.

<mSpace> → att.mSpace.anl → att.fermataPresent → @fermata

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mSpace> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype positiveInteger, separated by spaces.

<mSpace> → att.mSpace.log → att.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<mSpace> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<mSpace> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype positiveInteger, separated by spaces.

<mSpace> → att.mSpace.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mSpace> → [att.common](#) → [att.linking](#) → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mSpace> → [att.mSpace.log](#) → [att.event](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mSpace> → [att.mSpace.log](#) → [att.event](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<mSpace> → [att.mSpace.log](#) → [att.event](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mSpace> → [att.common](#) → [att.typed](#) → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mSpace> → [att.mSpace.log](#) → [att.event](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<mSpace> → [att.mSpace.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mSpace> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<mSpace> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<mSpace> → [att.mSpace.vis](#) → [att.xy](#) → @y

## Member of

[model.eventLike.measureFilling](#) Groups events that completely fill a CMN measure.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<mSpace> → [model.eventLike.measureFilling](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<mSpace> → [model.eventLike.measureFilling](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mSpace> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

- (<mSpace> may not have child elements)

## Remarks

The automated numbering of consecutive measures of space may be controlled via the multi.number attribute on the **<scoreDef>** or **<staffDef>** elements.

## Declaration

```
<elementSpec ident="mSpace" module="MEI.cmnn">
  <gloss versionDate="2022-05-18" xml:lang="en">measure space</gloss>

```

## <manifestation>

A bibliographic description of a physical embodiment of an expression of a work.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.5.1 FRBR Entities in MEI](#), [3.6.12 Classification](#), [3.7 Encoding Sources in MEI](#), [3.8.2 Including non-MEI Metadata in MEI files](#), [12.1.1 Elements of the Facsimile Module](#)

### Module

[MEI.frbr](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<manifestation> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<manifestation> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<manifestation> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<manifestation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<manifestation> → [att.authorized](#) → [att.canonical](#) → @codedval

**@comptype** (*optional*) Allowed values are: "**constituent**" (*A physical and logical part of entity.*), "**boundwith**" (*A physical, but not logical component of the entity, usually included as part of the binding process.*), "**separated**" (*A logical component of the entity physically held elsewhere.*)

<manifestation> → [att.componentType](#) → @comptype

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<manifestation> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<manifestation> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<manifestation> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<manifestation> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<manifestation> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<manifestation> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @prev

**@recordtype** Allowed values are: "**a**" (*Language material.*), "**c**" (*Notated music.*), "**d**" (*Manuscript notated music.*), "**e**" (*Non-manuscript cartographic material.*), "**f**" (*Manuscript cartographic material.*), "**g**" (*Projected medium.*), "**i**" (*Nonmusical sound recording.*), "**j**" (*Musical sound recording.*), "**k**" (*Two-dimensional nonprojectable graphic.*), "**m**" (*Computer file.*), "**o**" (*Kit.*), "**p**" (*Mixed materials.*), "**r**" (*Three-dimensional artifact or naturally occurring object.*), "**t**" (*Manuscript language material.*)

<manifestation> → att.recordType → @recordtype

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @sameas

**@singleton** Indicates the manifestation is a unique physical object. Value conforms to [data.BOOLEAN](#).

<manifestation> → direct children → @singleton

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<manifestation> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<manifestation> → [att.pointing](#) → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<manifestation> → [att.pointing](#) → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<manifestation> → [att.common](#) → [att.typed](#) → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<manifestation> → [att.pointing](#) → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<manifestation> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<manifestation> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<manifestation> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<manifestation> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.manifestationLike](#) Collects FRBR manifestation-like elements.

## Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<manifestation> → [model.manifestationLike](#) → <componentList>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

<manifestation> → [model.manifestationLike](#) → <manifestationList>

## May Contain

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

<manifestation> → macro.bibldescPart → <availability>

**<biblList>** List of bibliographic references.

<manifestation> → direct children → <biblList>

**<classification>** Groups information which describes the nature or topic of an entity.

<manifestation> → direct children → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<manifestation> → direct children → <componentList>

**<contents>** List of the material contained within a resource.

<manifestation> → direct children → <contents>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<manifestation> → direct children → <creation>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<manifestation> → macro.bibldescPart → <editionStmt>

**<extMeta>** Provides a container element for non-MEI metadata formats.

<manifestation> → direct children → <extMeta>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<manifestation> → model.headLike → <head>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<manifestation> → direct children → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<manifestation> → model.identifierLike → <identifier>

**<itemList>** Gathers bibliographic item entities.

<manifestation> → direct children → <itemList>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

<manifestation> → direct children → <langUsage>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<manifestation> → direct children → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<manifestation> → direct children → <locusGrp>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<manifestation> → direct children → <notesStmt>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<manifestation> → macro.bibldescPart → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<manifestation> → macro.bibldescPart → <physLoc>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<manifestation> → macro.bibldescPart → <pubStmt>

**<relationList>** Gathers relation elements.

<manifestation> → direct children → <relationList>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<manifestation> → macro.bibldescPart → <seriesStmt>

**<titleStmt>** Container for title and responsibility meta-data.

<manifestation> → direct children → <titleStmt>

## Constraints

Item children are not permitted when @singleton equals "true".

Availability is only permitted when @singleton equals "true".

## Declaration

## Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<manifestationList> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<manifestationList> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<manifestationList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<manifestationList> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<manifestationList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<manifestationList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<manifestationList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(manifestationList isn't member of any model class)

## Contained By

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<manifestationList> → elements having manifestationList as direct children → <meiHead>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<manifestationList> → [model.headLike](#) → <head>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<manifestationList> → [model.manifestationLike](#) → <manifestation>

MEI.midi

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<marker> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<marker> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<marker> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<marker> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<marker> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<marker> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<marker> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<marker> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "%all|#[\n\d][\n\c]+"**, separated by spaces.

<marker> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "%all|\d+(-\d+)?"**, separated by spaces.

<marker> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<marker> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<marker> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<marker> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<marker> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<marker> → att.midi.event → att.staffid → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from data.URI, separated by spaces.

<marker> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<marker> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to data.BEAT.

<marker> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to data.BEAT.

<marker> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to data.ISOTIME.

<marker> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<marker> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to data.URI.

<marker> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<marker> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<marker> → [att.lang](#) → @xml:lang

### Member of

(marker isn't member of any model class)

### Contained By

**<midi>** Container for elements that contain information useful when generating MIDI output.

<marker> → elements having marker as direct children → <midi>

## <mdiv>

(musical division) – Contains a subdivision of the body of a musical text.

### Referenced in chapters

[2.1.2.1 Divisions of the Body](#), [2.1.2.2 Content of Musical Divisions](#), [4.3.9.1 Tempo changes and other directives](#), [6.4.1 Elements](#), [9.1.2.1 Front Matter](#)

### Module

[MEI.shared](#)

### Attributes

**@attacca**Indicates that the performance of the next musical division should begin immediately following this one. Value conforms to [data.BOOLEAN](#).

<mdiv> → [att.mdiv.ges](#) → @attacca

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mdiv> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mdiv> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mdiv> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<mdiv> → [att.metadataPointing](#) → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mdiv> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mdiv> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mdiv> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mdiv> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mdiv> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mdiv> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<mdiv> → att.mdiv.log → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mdiv> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mdiv> → att.common → att.basic → att.id → @xml:id

## Member of

[model.mdivLike](#) Groups elements used to represent generic structural divisions of music notation.

## Contained By

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

<mdiv> → [model.mdivLike](#) → <body>

**<mdiv>** Contains a subdivision of the body of a musical text.

<mdiv> → [model.mdivLike](#) → <mdiv>

## May Contain

**<mdiv>** Contains a subdivision of the body of a musical text.

<mdiv> → model.mdivLike → <mdiv>

**<parts>** Provides a container for performers' parts.

<mdiv> → model.partsLike → <parts>

**<score>** Full score view of the musical content.

<mdiv> → model.scoreLike → <score>

## Remarks

The **<mdiv>** element may contain one or both of 2 possible views of the music. The score view is the traditional full and open score while the parts view contains each performer's view of the score; that is, his part. These 2 views are necessary because it is not always possible or desirable to generate one from the other. The **<score>** and **<parts>** elements are placed here and not directly within the **<body>** element because score and part characteristics may change from **<mdiv>** to **<mdiv>**. For example, the 2nd movement of a symphony may require different performing forces (and therefore different score and part layout) than the other movements. The **<mdiv>** element may be recursively nested in order to represent music which exhibits this kind of structure. For example, an opera is normally divided into acts, which are in turn divided into scenes.

## <measure>

Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [2.1.2.2 Content of Musical Divisions](#), [4.2.1 The Role of the Measure Element](#), [4.2.2 Defining Score Parameters for CMN](#), [4.2.4 Re-definition of Score Parameters](#), [4.2.5.3.1 Measure Rests](#), [4.3.2 Ties, Slurs and Phrase Marks](#), [4.3.3 Dynamics in CMN](#), [4.3.4 Triplets](#), [4.3.6.2 Harp Pedals](#), [4.3.6.3 Piano Pedal](#), [4.3.7 Ossia](#), [4.3.9.1 Tempo changes and other directives](#), [4.4.1 Encoding Common To All Ornaments](#), [5.5 Music Data Organization](#), [8.1 Vocal Text](#), [10.1.1 General Relationships Between Elements](#), [10.1.3 Metrical Conformance](#), [11.1.3 Variants in Score Definitions](#), [11.3.3 Encoding Metatexts](#), [12.1.1 Elements of the Facsimile Module](#), [14.5.3 Recording MIDI Event Data](#)

### Module

[MEI.cmn](#)

### Attributes

**@bar.len** (*optional*) States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

<measure> → [att.measure.vis](#) → [att.barring](#) → @bar.len

**@bar.method** (*optional*) Records the method of barring. Value conforms to [data.BARMETHOD](#).

<measure> → [att.measure.vis](#) → [att.barring](#) → @bar.method

**@bar.place** (*optional*) Denotes the staff location of bar lines, if the length is non-standard; that is, not equal to 2 times (the number of staff lines - 1). Value conforms to [data.STAFFLOC](#).

<measure> → [att.measure.vis](#) → [att.barring](#) → @bar.place

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<measure> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@control** (*optional*) Indicates whether or not a bar line is "controlling"; that is, if it indicates a point of alignment across all the parts. Bar lines within a score are usually controlling; that is, they "line up". Bar lines within parts may or may not be controlling. When applied to <measure>, this attribute indicates the nature of the right bar line but not the left. Value conforms to [data.BOOLEAN](#).

<measure> → [att.measure.log](#) → [att.meterConformance.bar](#) → @control

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<measure> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<measure> → [att.common](#) → [att.linked](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<measure> → att.metadataPointing → @decls

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<measure> → att.targetEval → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<measure> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linked → @follows

**@join** (*optional*) Used for linking visually separate entities that form a single logical entity, for example, multiple slurs broken across a system break that form a single musical phrase. Also used to indicate a measure which metrically completes the current one. Record the identifiers of the separately encoded components, excluding the one carrying the attribute. One or more values from [data.URI](#), separated by spaces.

<measure> → att.measure.anl → att.joined → @join

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<measure> → att.common → att.labelled → @label

**@left** (*optional*) Indicates the visual rendition of the left bar line. It is present here only for facilitation of translation from legacy encodings which use it. Usually, it can be safely ignored. Value conforms to [data.BARRENDITION](#).

<measure> → att.measure.log → @left

**@metcon** (*optional*) Indicates the relationship between the content of a measure and the prevailing meter. Value conforms to [data.BOOLEAN](#).

<measure> → att.measure.log → att.meterConformance.bar → @metcon

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<measure> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.responsibility → @resp

**@right** (*optional*) Indicates the function of the right bar line and is structurally important. Value conforms to [data.BARRENDITION](#).

<measure> → att.measure.log → @right

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<measure> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<measure> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<measure> → att.pointing → @targettype

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<measure> → att.measure.ges → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<measure> → att.measure.ges → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<measure> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<measure> → att.measure.log → att.alignment → @when

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<measure> → att.measure.vis → att.width → @width

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<measure> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<measure> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<measure> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<measure> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<measure> → att.common → att.basic → att.id → @xml:id

## Member of

[model.measureLike](#) Groups CMN measure-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <abbr>

**<add>** Marks an addition to the text.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<measure> → model.measureLike → model.sectionPart.cmn → <ending>

**<expan>** Contains the expansion of an abbreviation.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <restore>

**<section>** Segment of music data.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<measure> → model.measureLike → model.sectionPart.cmn → model.sectionPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<measure> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<measure> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<measure> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<measure> → model.appLike → <app>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<measure> → model.measurePart → model.controlEventLike.cmn → <arpeg>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<measure> → model.measurePart → model.controlEventLike.cmn → <attacca>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<measure> → model.measurePart → model.controlEventLike.cmn → <beamSpan>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<measure> → model.measurePart → model.controlEventLike → <bend>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<measure> → model.measurePart → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<measure> → model.measurePart → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<measure> → model.measurePart → model.controlEventLike → <caesura>

**<cb>** An empty formatting element that forces text to begin in a new column.

<measure> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<measure> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<measure> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<measure> → model.transcriptionLike → <corr>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<measure> → model.measurePart → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<measure> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<measure> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<measure> → model.transcriptionLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<measure> → model.measurePart → model.controlEventLike → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<measure> → model.measurePart → model.controlEventLike → <dynam>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<measure> → model.measurePart → model.controlEventLike.cmn → <fermata>

**<fing>** finger – An individual finger in a fingering indication.

<measure> → model.measurePart → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<measure> → model.measurePart → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<measure> → model.transcriptionLike → <gap>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<measure> → model.measurePart → model.controlEventLike → <gliss>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<measure> → model.measurePart → model.controlEventLike.cmn → <hairpin>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<measure> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<measure> → model.measurePart → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<measure> → model.measurePart → model.controlEventLike.cmn → <harpPedal>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<measure> → model.graphicPrimitiveLike → <line>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<measure> → model.measurePart → model.controlEventLike.cmn → <lv>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on <measure> does not adequately capture the appearance or placement of the measure number/label.

<measure> → direct children → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<measure> → model.measurePart → model.controlEventLike → <metaMark>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<measure> → model.measurePart → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<measure> → model.measurePart → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<measure> → model.measurePart → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<measure> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<measure> → model.measurePart → model.controlEventLike → <ornam>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<measure> → model.measurePart → model.ossiaLike → <ossia>

**<pb>** An empty formatting element that forces text to begin on a new page.

<measure> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<measure> → model.measurePart → model.controlEventLike.cmn → <pedal>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<measure> → model.measurePart → model.controlEventLike → <phrase>

**<reg>** Contains material which has been regularized or normalized in some sense.

<measure> → model.transcriptionLike → <reg>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<measure> → model.measurePart → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<measure> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<measure> → model.relationLike → <relationList>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<measure> → model.measurePart → model.controlEventLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<measure> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<measure> → model.milestoneLike.music → <sb>

**<sic>** Contains apparently incorrect or inaccurate material.

<measure> → model.transcriptionLike → <sic>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<measure> → model.measurePart → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<measure> → model.measurePart → model.controlEventLike → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<measure> → model.measurePart → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<measure> → model.staffDefLike → <staffDef>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<measure> → model.measurePart → model.controlEventLike → model.stageDirLike → <stageDir>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<measure> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<measure> → model.transcriptionLike → <supplied>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<measure> → model.measurePart → model.controlEventLike → <tempo>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<measure> → model.measurePart → model.controlEventLike.cmn → <tie>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<measure> → model.measurePart → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tupletSpan>** Alternative element for encoding tuples, especially useful for tuples that extend across bar lines.

<measure> → model.measurePart → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<measure> → model.measurePart → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<measure> → model.transcriptionLike → <unclear>

## Remarks

In MEI, the <measure> element is a grouping mechanism for events and control events. Pointing attributes make it possible to connect this element to other internal or external entities, such as media objects or annotations. The width attribute may be used to capture the width of the measure for interchange with music printing systems that utilize this information for printing.

## Declaration

```

## <mei>

Contains a single MEI-conformant document, consisting of an MEI header and a musical text, either in isolation or as part of an meiCorpus element.

### Referenced in chapters

[1.2.4 MEI Profiles](#), [2.1.1 Document Root Elements](#), [3.8.5.1 Corpus Module Overview](#)

### Module

[MEI.shared](#)

### Attributes

**@meiversion** (*optional*) Specifies a generic MEI version label. Allowed values are: "5.0.0-dev"  
(*Development version of MEI 5.0.0*)

<mei> → [att.meiVersion](#) → @meiversion

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mei> → [att.responsibility](#) → @resp

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mei> → [att.id](#) → @xml:id

### Member of

(mei isn't member of any model class)

### Contained By

**<meiCorpus>** A group of related MEI documents, consisting of a header for the group, and one or more <mei> elements, each with its own complete header.

<mei> → elements having mei as direct children → <meiCorpus>

### May Contain

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.  
<mei> → direct children → <meiHead>

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

<mei> → direct children → <music>

### Remarks

The <mei> element defines an instance of a document encoded with the MEI schema. It is the document element for a single document containing a header and data. The name of this element should not be changed by any customization in order to assure an absolute minimum level of MEI compliance.

### Constraints

The values in @staff must correspond to @n attribute of a staffDef element.

## Declaration

## <meiCorpus>

(MEI corpus) – A group of related MEI documents, consisting of a header for the group, and one or more <mei> elements, each with its own complete header.

### Referenced in chapters

[1.2.4 MEI Profiles](#), [2.1.1 Document Root Elements](#), [3.8.5.1 Corpus Module Overview](#)

### Module

[MEI.corpus](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<meiCorpus> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<meiCorpus> → att.common → att.labelled → @label

**@meiversion** (*optional*) Specifies a generic MEI version label. Allowed values are: "**5.0.0-dev**" (*Development version of MEI 5.0.0*)

<meiCorpus> → att.meiVersion → @meiversion

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<meiCorpus> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<meiCorpus> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<meiCorpus> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<meiCorpus> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<meiCorpus> → att.common → att.basic → att.id → @xml:id

## Member of

[model.startLike.corpus](#) Groups elements that may be document elements when the corpus module is invoked.

## Contained By

### May Contain

**<mei>** Contains a single MEI-conformant document, consisting of an MEI header and a musical text, either in isolation or as part of an meiCorpus element.

<meiCorpus> → direct children → <mei>

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<meiCorpus> → direct children → <meiHead>

## Remarks

The model of this element is based on the [teiCorpus](#) element of the Text Encoding Initiative (TEI). The MEI instances making up the corpus may be related in a number of ways, for example, by composer, by similar instrumentation, by holding institution, etc. This element's name should not be changed in order to assure an absolute minimum level of MEI compliance.

## Declaration

```
<elementSpec ident="meiCorpus" module="MEI.corpus">

## <meiHead>

(MEI header) – Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

### Referenced in chapters

[1.2.4 MEI Profiles](#), [2.1.1 Document Root Elements](#), [3.2 Structure of the MEI Header](#), [3.4.1.5 Notes Statement](#), [3.8.1.1 Independent MEI Headers](#), [3.8.2 Including non-MEI Metadata in MEI files](#), [3.8.4 Header Elements and their Relationship to Other Bibliographic Standards](#), [3.8.5.1 Corpus Module Overview](#), [4.4.1.1 Overriding Default Resolutions](#), [12.2.1 Overview](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<meiHead> → [att.bibl](#) → @analog

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<meiHead> → [att.labelled](#) → @label

**@meiversion** (*optional*) Specifies a generic MEI version label. Allowed values are: "**5.0.0-dev**" (*Development version of MEI 5.0.0*)

<meiHead> → [att.meiVersion](#) → @meiversion

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<meiHead> → [att.responsibility](#) → @resp

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<meiHead> → [att.lang](#) → @translit

**@type** (*optional*) Specifies the kind of document to which the header is attached, for example whether it is a corpus or individual text. Allowed values are: "**music**" (*Header is attached to a music document.*), "**corpus**" (*Header is attached to a corpus.*), "**independent**" (*Header is independent; , not attached to either a music or a corpus document.*)

<meiHead> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<meiHead> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<meiHead> → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<meiHead> → [att.lang](#) → @xml:lang

## Member of

[model.startLike.header](#) Groups elements that may be document elements when the header module is invoked.

## Contained By

**<mei>** Contains a single MEI-conformant document, consisting of an MEI header and a musical text, either in isolation or as part of an meiCorpus element.

<meiHead> → elements having meiHead as direct children → <mei>

**<meiCorpus>** A group of related MEI documents, consisting of a header for the group, and one or more <mei> elements, each with its own complete header.

<meiHead> → elements having meiHead as direct children → <meiCorpus>

## May Contain

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

<meiHead> → direct children → <altId>

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<meiHead> → direct children → <encodingDesc>

**<extMeta>** Provides a container element for non-MEI metadata formats.

<meiHead> → direct children → <extMeta>

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<meiHead> → direct children → <fileDesc>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

<meiHead> → direct children → <manifestationList>

**<revisionDesc>** Container for information about alterations that have been made to an MEI file.

<meiHead> → direct children → <revisionDesc>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.

<meiHead> → direct children → <workList>

## Remarks

In order to encourage uniformity in the provision of metadata across document types, this element is modelled on an element in the Text Encoding Initiative (TEI) standard. This information is often essential in a machine-readable environment. Five sub-elements must be encoded in the following order: <altId>(optional), <fileDesc>(required), <encodingDesc>(optional), <workList>(optional), and <revisionDesc>(optional). These elements and their sub-elements provide: a unique identifier for the MEI file, bibliographic information

about the MEI file and its sources, information about the encoding process, information about the creation of the work being encoded, and statements regarding significant revisions of the file. The `xml:lang` attribute may be used to indicate the language in which the metadata content of the header is provided.

## Constraints

The `meiHead` type attribute can have the value 'music' only when the document element is "mei".  
The `meiHead` type attribute can have the value 'corpus' only when the document element is "meiCorpus".  
The `meiHead` type attribute can have the value 'independent' only when the document element is "meiHead".

## Declaration

## <mensur>

(mensuration) – Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

### Referenced in chapters

[5.2 Mensuration](#), [5.2.1 Change in mensuration](#)

### Module

[MEI.mensural](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mensur> → att.mensur.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mensur> → att.mensur.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mensur> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @corresp

**@divisio** (*optional*) Describes the divisions of the breve in use in 14th-century Italy. Value conforms to [data.DIVISIO](#).

<mensur> → att.mensur.log → att.mensural.shared → @divisio

**@dot** (*optional*) Specifies whether a dot is to be added to the base symbol. Value conforms to [data.BOOLEAN](#).

<mensur> → att.mensur.vis → @dot

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mensur> → att.mensur.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mensur> → att.mensur.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mensur> → [att.mensur.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mensur> → [att.mensur.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mensur> → [att.mensur.vis](#) → [att.typography](#) → @fontweight

**@form** (*optional*) Indicates whether the base symbol is written vertically or horizontally. Allowed values are: "**horizontal**" (*Horizontally oriented.*), "**vertical**" (*Vertically oriented.*)

<mensur> → [att.mensur.vis](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<mensur> → [att.mensur.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mensur> → [att.mensur.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mensur> → [att.mensur.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mensur> → [att.mensur.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mensur> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<mensur> → [att.mensur.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mensur> → [att.mensur.vis](#) → [att.typography](#) → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<mensur> → [att.mensur.vis](#) → [att.staffLoc](#) → @loc

**@modusmaior** (*optional*) Describes the maxima-long relationship. Value conforms to [data.MODUSMAIOR](#).

<mensur> → [att.mensur.log](#) → [att.mensural.shared](#) → @modusmaior

**@modusminor** (*optional*) Describes the long-breve relationship. Value conforms to [data.MODUSMINOR](#).

<mensur> → [att.mensur.log](#) → [att.mensural.shared](#) → @modusminor

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mensur> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<mensur> → att.mensur.log → att.duration.ratio → @num

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<mensur> → att.mensur.log → att.duration.ratio → @numbase

**@orient** (*optional*) Describes the rotation or reflection of the base symbol. Value conforms to [data.ORIENTATION](#).

<mensur> → att.mensur.vis → @orient

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @prev

**@prolatio** (*optional*) Describes the semibreve-minim relationship. Value conforms to [data.PROLATIO](#).

<mensur> → att.mensur.log → att.mensural.shared → @prolatio

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @sameas

**@sign** (*optional*) The base symbol in the mensuration sign/time signature of mensural notation. Value conforms to [data.MENSURATIONSIGN](#).

<mensur> → att.mensur.vis → @sign

**@slash** (*optional*) Indicates the number of slashes present. Value conforms to [data.SLASH](#).

<mensur> → att.mensur.vis → att.slashCount → @slash

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mensur> → att.common → att.linked → @synch

**@tempus** (*optional*) Describes the breve-semibreve relationship. Value conforms to [data.TEMPUS](#).

<mensur> → att.mensur.log → att.mensural.shared → @tempus

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mensur> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mensur> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mensur> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.mensural](#) Groups event elements that occur in the mensural repertoire.

[model.staffDefPart.mensural](#) Groups elements that may appear in the declaration of staff features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<mensur> → model.eventLike.mensural → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<staffDef>** Container for staff meta-information.

<mensur> → model.staffDefPart.mensural → model.staffDefPart → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mensur> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

- (<mensur> may not have child elements)

## Remarks

The <mensur> element is provided for the encoding of mensural notation. The slash attribute indicates the number lines added to the mensuration sign. For example, one slash is added for what we now call 'alla breve'.

## Declaration

```

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mensuration> → att.mensur.vis → att.altSym → @altsym

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<mensuration> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mensuration> → att.mensur.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mensuration> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @corresp

**@divisio** (*optional*) Describes the divisions of the breve in use in 14th-century Italy. Value conforms to [data.DIVISIO](#).

<mensuration> → att.mensur.log → att.mensural.shared → @divisio

**@dot** (*optional*) Specifies whether a dot is to be added to the base symbol. Value conforms to [data.BOOLEAN](#).

<mensuration> → att.mensur.vis → @dot

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mensuration> → att.mensur.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mensuration> → att.mensur.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mensuration> → att.mensur.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mensuration> → att.mensur.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mensuration> → att.mensur.vis → att.typography → @fontweight

**@form** (*optional*) Indicates whether the base symbol is written vertically or horizontally. Allowed values are: "**horizontal**" (*Horizontally oriented.*), "**vertical**" (*Vertically oriented.*)

<mensuration> → att.mensur.vis → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<mensuration> → att.mensur.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mensuration> → att.mensur.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mensuration> → att.mensur.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mensuration> → att.mensur.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mensuration> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<mensuration> → att.mensur.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mensuration> → att.mensur.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<mensuration> → att.mensur.vis → att.staffLoc → @loc

**@modusmaior** (*optional*) Describes the maxima-long relationship. Value conforms to [data.MODUSMAIOR](#).

<mensuration> → att.mensur.log → att.mensural.shared → @modusmaior

**@modusminor** (*optional*) Describes the long-breve relationship. Value conforms to [data.MODUSMINOR](#).

<mensuration> → att.mensur.log → att.mensural.shared → @modusminor

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mensuration> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<mensuration> → att.mensur.log → att.duration.ratio → @num

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<mensuration> → att.mensur.log → att.duration.ratio → @numbase

**@orient** (*optional*) Describes the rotation or reflection of the base symbol. Value conforms to [data.ORIENTATION](#).

<mensuration> → att.mensur.vis → @orient

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @prev

**@prolatio** (*optional*) Describes the semibreve-minim relationship. Value conforms to [data.PROLATIO](#).

<mensuration> → att.mensur.log → att.mensural.shared → @prolatio

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @sameas

**@sign** (*optional*) The base symbol in the mensuration sign/time signature of mensural notation. Value conforms to [data.MENSURATIONSIGN](#).

<mensuration> → att.mensur.vis → @sign

**@slash** (*optional*) Indicates the number of slashes present. Value conforms to [data.SLASH](#).

<mensuration> → att.mensur.vis → att.slashCount → @slash

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mensuration> → att.common → att.linkin → @synch

**@tempus** (*optional*) Describes the breve-semibreve relationship. Value conforms to [data.TEMPUS](#).

<mensuration> → att.mensur.log → att.mensural.shared → @tempus

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<mensuration> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mensuration> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mensuration> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mensuration> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<mensuration> → att.lang → @xml:lang

## Member of

[model.workIdent](#) Groups elements that assist in the identification of a work.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<mensuration> → [model.workIdent](#) → <expression>

**<incip>** The opening music and/or words of a musical or textual work.

<mensuration> → elements having mensuration as direct children → <incip>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<mensuration> → [model.workIdent](#) → <work>

## May Contain

### Declaration

```

DEVELOPMENT  
VERSION

## <metaMark>

A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

### Referenced in chapters

[11.3.3 Encoding Metatexts](#)

### Module

[MEI.edittrans](#)

### Attributes

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<metaMark> → att.metaMark.log → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<metaMark> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.metaMark.log → att.trans → att.metadataPointing → @decls

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<metaMark> → att.metaMark.ges → att.duration.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<metaMark> → att.metaMark.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<metaMark> → att.metaMark.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<metaMark> → att.metaMark.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<metaMark> → att.metaMark.ges → att.duration.ges → @dur.real

**@dur.recip** (optional) Duration as an optionally dotted Humdrum \*\*recip value. Value is a token.

<metaMark> → att.metaMark.ges → att.duration.ges → @dur.recip

**@endid** (optional) Indicates the final element in a sequence of events to which the feature applies. Value conforms to data.URI.

<metaMark> → att.metaMark.log → att.startEndId → @endid

**@evaluate** (optional) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "all" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "one" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "none" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<metaMark> → att.metaMark.log → att.controlEvent → att.targetEval → @evaluate

**@evidence** (optional) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<metaMark> → att.metaMark.log → att.edit → att.evidence → @evidence

**@facsimile** (optional) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from data.URI, separated by spaces.

<metaMark> → att.facsimile → @facsimile

**@follows** (optional) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from data.URI, separated by spaces.

<metaMark> → att.common → att.linking → @follows

**@function** Describes the purpose of the metaMark. Allowed values are: "confirmation" (*confirmation of a previous textual decision; , cancellation of a deleted passage in a different writing medium.*), "addition" (*denoted material is to be inserted in the musical text.*), "deletion" (*denoted material is no longer part of the musical text.*), "substitution" (*denoted material is replaced, either by the musical text pointed at with the @target attribute or the musical content of the metaMark element itself.*), "clarification" (*attempt to clarify a potentially illegible or otherwise unclear part of the musical text.*), "question" (*marks a section of the musical text which is to be considered further.*), "investigation" (*marks a section of the musical text as an investigation of the consequences of certain compositional decisions or potential alternatives.*), "restoration" (*declares a formerly cancelled part of the musical text as valid again.*), "navigation" (*clarification of the reading order of the musical text.*)

<metaMark> → direct children → @function

**@hand** (optional) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to data.URI.

<metaMark> → att.metaMark.log → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to data.BOOLEAN or unknown.

<metaMark> → att.metaMark.log → att.trans → att.geneticState → @instant

**@label** (optional) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<metaMark> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<metaMark> → att.metaMark.log → att.controlEvent → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<metaMark> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<metaMark> → att.metaMark.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<metaMark> → att.metaMark.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<metaMark> → att.metaMark.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.metaMark.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linked → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<metaMark> → att.metaMark.log → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.metaMark.log → att.edit → att.source → @source

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<metaMark> → att.metaMark.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<metaMark> → att.metaMark.log → att.startEndId → att.startId → @startid

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.metaMark.log → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<metaMark> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<metaMark> → att.pointing → @targettype

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<metaMark> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<metaMark> → att.metaMark.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<metaMark> → att.metaMark.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<metaMark> → att.metaMark.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<metaMark> → att.metaMark.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<metaMark> → att.metaMark.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<metaMark> → att.metaMark.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<metaMark> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<metaMark> → att.metaMark.log → att.controlEvent → att.alignment → @when

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<metaMark> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<metaMark> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<metaMark> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<metaMark> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<metaMark> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<metaMark> → att.lang → @xml:lang

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<metaMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<metaMark> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<metaMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<metaMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<metaMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<metaMark> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<metaMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<metaMark> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<metaMark> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<metaMark> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<metaMark> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<metaMark> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<metaMark> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<metaMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<metaMark> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<metaMark> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<metaMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<metaMark> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<metaMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<metaMark> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<metaMark> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicataire>** Entity to whom a creative work is formally offered.

<metaMark> → model.textPhraseLike.limited → <dedicataire>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<metaMark> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<metaMark> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<metaMark> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<metaMark> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<metaMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<metaMark> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<metaMark> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<metaMark> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<metaMark> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<metaMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<metaMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<metaMark> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<metaMark> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<metaMark> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<metaMark> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<metaMark> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<metaMark> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<metaMark> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<metaMark> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<metaMark> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<metaMark> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<metaMark> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<metaMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<metaMark> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<metaMark> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<metaMark> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<metaMark> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<metaMark> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<metaMark> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<metaMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<metaMark> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<metaMark> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<metaMark> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<metaMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<metaMark> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<metaMark> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<section>** Segment of music data.

<metaMark> → [model.sectionLike](#) → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<metaMark> → [model.textPhraseLike.limited](#) → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<metaMark> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → [model.geogNamePart](#) → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<metaMark> → [model.transcriptionLike](#) → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<metaMark> → [model.textPhraseLike.limited](#) → [model.mslInline](#) → <signatures>

**<stack>** An inline table with a single column.

<metaMark> → [model.textPhraseLike.limited](#) → [model.rendLike](#) → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<metaMark> → [model.textPhraseLike.limited](#) → [model.mslInline](#) → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<metaMark> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<metaMark> → [model.textPhraseLike.limited](#) → [model.nameLike.label](#) → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<metaMark> → [model.editLike](#) → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<metaMark> → [model.transcriptionLike](#) → <supplied>

**<symbol>** A reference to a previously defined symbol.

<metaMark> → [model.textPhraseLike.limited](#) → <symbol>

**<term>** Keyword or phrase which describes a resource.

<metaMark> → [model.textPhraseLike.limited](#) → <term>

**<title>** Title of a bibliographic entity.

<metaMark> → [model.textPhraseLike.limited](#) → [model.titleLike](#) → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<metaMark> → [model.transcriptionLike](#) → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<metaMark> → [model.textPhraseLike.limited](#) → [model.mslInline](#) → <watermark>

**<width>** Description of the horizontal size of an object.

<metaMark> → [model.textPhraseLike.limited](#) → [model.dimLike](#) → <width>

## Remarks

This element is used to encode [explicit metatexts](#) as defined by the Beethovens Werkstatt project.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real

## Declaration

```

<elementSpec ident="metaMark" module="MEI.edittrans">

## <metaText>

MIDI text meta-event.

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<metaText> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<metaText> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<metaText> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<metaText> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\i][\n\c]+)"**, separated by spaces.

<metaText> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<metaText> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<metaText> → att.midi.event → att.staffIden → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<metaText> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<metaText> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<metaText> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<metaText> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<metaText> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<metaText> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<metaText> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<metaText> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<metaText> → [att.lang](#) → @xml:lang

### Member of

(metaText isn't member of any model class)

### Contained By

**<midi>** Container for elements that contain information useful when generating MIDI output.

<metaText> → elements having metaText as direct children → <midi>

### May Contain

#### Declaration

```
<elementSpec ident="metaText" module="MEI.midi">
  <desc xml:lang="en">MIDI text meta-event.</desc>

    <memberOf key="att.common"/>
    <memberOf key="att.lang"/>
    <memberOf key="att.midi.event"/>
  </classes>
  <content>
    <rng:text/>
  </content>
</elementSpec>
```

## <meter>

Captures information about the time signature within bibliographic descriptions.

### Referenced in chapters

[3.6 Work Description](#), [3.6.2 Incipits](#), [3.6.3 Key, Tempo, and Meter](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<meter> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<meter> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linkin](#) → @corresp

**@count** (*optional*) Captures the number of beats in a measure, that is, the top number of the meter signature. It must contain a decimal number or an expression that evaluates to a decimal number, such as 2+3 or 3\*2. Value is plain text.

<meter> → [att.meterSig.log](#) → @count

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<meter> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<meter> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linking](#) → @sameas

**@sym** (*optional*) Indicates the use of a meter symbol instead of a numeric meter signature, that is, 'C' for common time or 'C' with a slash for cut time. Value conforms to [data.METERSIGN](#).

<meter> → [att.meterSig.log](#) → @sym

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<meter> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<meter> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<meter> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Contains the number indicating the beat unit, that is, the bottom number of the meter signature. Value is a decimal number.

<meter> → [att.meterSig.log](#) → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<meter> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<meter> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<meter> → [att.lang](#) → @xml:lang

## Member of

[model.workIdent](#) Groups elements that assist in the identification of a work.

## Contained By

[<expression>](#) Intellectual or artistic realization of a work.

<meter> → model.workIdent → <expression>

**<incip>** The opening music and/or words of a musical or textual work.

<meter> → elements having meter as direct children → <incip>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<meter> → model.workIdent → <work>

## May Contain

### Remarks

This element is used exclusively within bibliographic descriptions. Do not confuse <meter> with the <meterSig> or <meterSigGrp> or attributes used by staffDef and scoreDef to record this data within the body of an MEI file.

### Declaration

```
<elementSpec ident="meter" module="MEI.header">
  <desc xml:lang="en">Captures information about the time signature within bibliographic

```

## <meterSig>

(meter signature) – Written meter signature.

### Referenced in chapters

[4.2.2 Defining Score Parameters for CMN](#), [4.2.3 Special cases in staff definitions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<meterSig> → att.meterSig.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<meterSig> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<meterSig> → att.meterSig.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<meterSig> → att.common → att.linkin → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<meterSig> → att.common → att.linkin → @corresp`

**@count** (*optional*) Captures the number of beats in a measure, that is, the top number of the meter signature. It must contain a decimal number or an expression that evaluates to a decimal number, such as 2+3 or 3\*2. Value is plain text.

`<meterSig> → att.meterSig.log → @count`

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

`<meterSig> → att.meterSig.vis → att.enclosingChars → @enclose`

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<meterSig> → att.facsimile → @facsimile`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<meterSig> → att.common → att.linkin → @follows`

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

`<meterSig> → att.meterSig.vis → att.typography → @fontfamily`

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<meterSig> → att.meterSig.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<meterSig> → att.meterSig.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<meterSig> → att.meterSig.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<meterSig> → att.meterSig.vis → att.typography → @fontweight

**@form** (*optional*) Contains an indication of how the meter signature should be rendered. Value conforms to [data.METERFORM](#).

<meterSig> → att.meterSig.vis → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<meterSig> → att.meterSig.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<meterSig> → att.meterSig.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<meterSig> → att.meterSig.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Value conforms to [data.URI](#).

<meterSig> → att.meterSig.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<meterSig> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<meterSig> → att.meterSig.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<meterSig> → att.meterSig.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<meterSig> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.linkin → @sameas

**@sym** (*optional*) Indicates the use of a meter symbol instead of a numeric meter signature, that is, 'C' for common time or 'C' with a slash for cut time. Value conforms to [data.METERSIGN](#).

<meterSig> → att.meterSig.log → @sym

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<meterSig> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<meterSig> → att.common → att.typed → @type

**@unit** (*optional*) Contains the number indicating the beat unit, that is, the bottom number of the meter signature. Value is a decimal number.

<meterSig> → att.meterSig.log → @unit

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<meterSig> → att.meterSig.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<meterSig> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<meterSig> → att.common → att.basic → att.id → @xml:id

## Member of

[model.meterSigLike](#) Groups elements that represent a meter signature.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<meterSig> → model.meterSigLike → model.eventLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<meterSig> → model.meterSigLike → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <layer>

**<layerDef>** Container for layer meta-information.

<meterSig> → model.meterSigLike → <layerDef>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<meterSig> → model.meterSigLike → model.eventLike → <ligature>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<meterSig> → elements having meterSig as direct children → <meterSigGrp>

**<oLayer>** A layer that contains an alternative to material in another layer.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <restore>

**<scoreDef>** Container for score meta-information.

<meterSig> → model.meterSigLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <sic>

**<staffDef>** Container for staff meta-information.

<meterSig> → model.meterSigLike → model.staffDefPart → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<meterSig> → model.meterSigLike → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<meterSig> → model.meterSigLike → model.eventLike → model.layerPart → <unclear>

## May Contain

– (<meterSig> may not have child elements)

## Declaration

```

## <meterSigGrp>

(meter signature group) – Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

### Referenced in chapters

[4.2.2 Defining Score Parameters for CMN](#)

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<meterSigGrp> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → att.common → att.linkin → @follows

**@func** (*required*) Function of the meter signature group. Allowed values are: "**alternating**" (*Meter signatures apply to alternating measures.*), "**interchanging**" (*Meter signatures are interchangeable, 3/4 and 6/8.*), "**mixed**" (*Meter signatures with different unit values are used to express a complex metrical pattern that is not expressible using traditional means, such as 2/4+1/8.*), "**other**" (*Meter signatures in a relationship not covered by the values alternating, interchanging or mixed.*)

<meterSigGrp> → att.meterSigGrp.log → @func

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<meterSigGrp> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<meterSigGrp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → [att.common](#) → [att.linkng](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → [att.common](#) → [att.linkng](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → [att.common](#) → [att.linkng](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<meterSigGrp> → [att.common](#) → [att.linkng](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<meterSigGrp> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<meterSigGrp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<meterSigGrp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.meterSigLike](#) Groups elements that represent a meter signature.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<meterSigGrp> → [model.meterSigLike](#) → [model.eventLike](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<meterSigGrp> → [model.meterSigLike](#) → [model.eventLike](#) → [model.layerPart](#) → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<meterSigGrp> → [model.meterSigLike](#) → [model.eventLike](#) → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<meterSigGrp> → [model.meterSigLike](#) → [model.eventLike](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<meterSigGrp> → model.meterSigLike → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <layer>

**<layerDef>** Container for layer meta-information.

<meterSigGrp> → model.meterSigLike → <layerDef>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<meterSigGrp> → model.meterSigLike → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <restore>

**<scoreDef>** Container for score meta-information.

<meterSigGrp> → model.meterSigLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <sic>

**<staffDef>** Container for staff meta-information.

<meterSigGrp> → model.meterSigLike → model.staffDefPart → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<meterSigGrp> → model.meterSigLike → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<meterSigGrp> → model.meterSigLike → model.eventLike → model.layerPart → <unclear>

## May Contain

**<meterSig>** Written meter signature.

<meterSigGrp> → direct children → <meterSig>

## Constraints

meterSigGrp must have at least 2 child meterSig elements.

## Declaration

```

<elementSpec ident="meterSigGrp" module="MEI.cmn">

## <midi>

Container for elements that contain information useful when generating MIDI output.

### Referenced in chapters

[14.5.3 Recording MIDI Event Data](#)

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.typed → att.classest → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<midi> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<midi> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<midi> → att.midi.log → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<midi> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linkin → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<midi> → att.midi.log → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<midi> → att.midi.log → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<midi> → att.midi.log → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<midi> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<midi> → att.common → att.type → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<midi> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<midi> → att.common → att.basic → att.id → @xml:id

## Member of

[model.midiLike](#) Groups elements which group MIDI-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<midi> → model.midiLike → model.measurePart → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<midi> → model.midiLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<midi> → model.midiLike → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

**<cc>** MIDI parameter/control change.

<midi> → direct children → <cc>

**<chan>** MIDI channel assignment.

<midi> → direct children → <chan>

**<chanPr>** MIDI channel pressure/after touch.

<midi> → direct children → <chanPr>

**<cue>** MIDI cue point.

<midi> → direct children → <cue>

**<hex>** Arbitrary MIDI data in hexadecimal form.

<midi> → direct children → <hex>

**<marker>** MIDI marker meta-event.

<midi> → direct children → <marker>

**<metaText>** MIDI text meta-event.

<midi> → direct children → <metaText>

**<noteOff>** MIDI note-off event.

<midi> → direct children → <noteOff>

**<noteOn>** MIDI note-on event.

<midi> → direct children → <noteOn>

**<port>** MIDI port.

<midi> → direct children → <port>

**<prog>** MIDI program change.

<midi> → direct children → <prog>

**<seqNum>** MIDI sequence number.

<midi> → direct children → <seqNum>

**<trkName>** MIDI track/sequence name.

<midi> → direct children → <trkName>

**<vel>** MIDI Note-on/off velocity.

<midi> → direct children → <vel>

## Remarks

The label attribute can be used to differentiate between multiple MIDI data streams, e.g., quantized/unquantized, straight/swing, ornamented/as notated, etc.

## Declaration

```

## <monogr>

(monograph level) – Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<monogr> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<monogr> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<monogr> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<monogr> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<monogr> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<monogr> → [att.targetEval](#) → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<monogr> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<monogr> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<monogr> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.linked → @prev

**@recordtype** Allowed values are: "**a**" (*Language material.*), "**c**" (*Notated music.*), "**d**" (*Manuscript notated music.*), "**e**" (*Non-manuscript cartographic material.*), "**f**" (*Manuscript cartographic material.*), "**g**" (*Projected medium.*), "**i**" (*Nonmusical sound recording.*), "**j**" (*Musical sound recording.*), "**k**" (*Two-dimensional nonprojectable graphic.*), "**m**" (*Computer file.*), "**o**" (*Kit.*), "**p**" (*Mixed materials.*), "**r**" (*Three-dimensional artifact or naturally occurring object.*), "**t**" (*Manuscript language material.*.)

<monogr> → att.recordType → @recordtype

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<monogr> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<monogr> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<monogr> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<monogr> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<monogr> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<monogr> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "new" (*Open in a new window.*), "replace" (*Load the referenced resource in the same window.*), "embed" (*Embed the referenced resource at the point of the link.*), "none" (*Do not permit traversal to the referenced resource.*), "other" (*Behavior other than permitted by the other values of this attribute.*)

<monogr> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<monogr> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<monogr> → att.common → att.basic → att.id → @xml:id

## Member of

(monogr isn't member of any model class)

## Contained By

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<monogr> → elements having monogr as direct children → <biblStruct>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<monogr> → model.annotLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<monogr> → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<monogr> → model.respLikePart → <author>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<monogr> → direct children → <biblScope>

**<composer>** The name of the creator of the intellectual content of a musical work.

<monogr> → model.respLikePart → <composer>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<monogr> → model.respLikePart → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<monogr> → direct children → <corpName>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<monogr> → [model.editionLike](#) → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<monogr> → direct children → <editor>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<monogr> → [model.respLikePart](#) → <editor>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<monogr> → direct children → <extent>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<monogr> → [model.respLikePart](#) → <funder>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<monogr> → [model.identifierLike](#) → <identifier>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<monogr> → direct children → <imprint>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<monogr> → [model.respLikePart](#) → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<monogr> → [model.respLikePart](#) → <lyricist>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<monogr> → direct children → <respStmt>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<monogr> → [model.respLikePart](#) → <sponsor>

**<title>** Title of a bibliographic entity.

<monogr> → [model.titleLike](#) → <title>

## <mordent>

An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

### Referenced in chapters

[4.4.2 Mordents](#)

### Module

[MEI.cmnOrnaments](#)

### Attributes

**@accidlower** (*optional*) Records the written accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<mordent> → [att.mordent.log](#) → [att.ornamentAccid](#) → @accidlower

**@accidlower.ges** (*optional*) Records the sounding accidental associated with a lower neighboring note.

Value conforms to [data.ACIDENTAL.GESTURAL](#).

<mordent> → [att.mordent.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidlower.ges

**@accidupper** (*optional*) Records the written accidental associated with an upper neighboring note.

Value conforms to [data.ACIDENTAL.WRITTEN](#).

<mordent> → [att.mordent.log](#) → [att.ornamentAccid](#) → @accidupper

**@accidupper.ges** (*optional*) Records the sounding accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<mordent> → [att.mordent.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidupper.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [symbolDef](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mordent> → [att.mordent.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<mordent> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<mordent> → [att.mordent.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<mordent> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<mordent> → [att.common](#) → [att.linked](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<mordent> → [att.mordent.vis](#) → [att.enclosingChars](#) → @enclose

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<mordent> → att.mordent.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<mordent> → att.mordent.log → att.controlEvent → att.targetEval → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.linked → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<mordent> → att.mordent.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<mordent> → att.mordent.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<mordent> → att.mordent.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<mordent> → att.mordent.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<mordent> → att.mordent.vis → att.typography → @fontweight

**@form** (*optional*) Records semantic meaning, i.e., intended performance, of the mordent. The altsym, glyph.name, or glyph.num attributes may be used to specify the appropriate symbol. Allowed values are: "**lower**" (*Starts with the written note, followed by its lower neighbor, with a return to the written note. In modern practice, this is called an "inverted mordent" and indicated by a short wavy line with a vertical line through it.*), "**upper**" (*Starts with the written note, followed by its upper neighbor, with a return to the principal note. In modern practice, the symbol lacks the vertical line used for the inverted form.*)

<mordent> → att.mordent.log → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<mordent> → att.mordent.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<mordent> → att.mordent.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<mordent> → [att.mordent.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<mordent> → [att.mordent.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mordent> → [att.mordent.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<mordent> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<mordent> → [att.mordent.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<mordent> → [att.mordent.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<mordent> → [att.mordent.vis](#) → [att.typography](#) → @lineheight

**@long** (*optional*) When set to 'true', a double or long mordent, sometimes called a "pincé double", consisting of 5 notes, is indicated. Value conforms to [data.BOOLEAN](#).

<mordent> → [att.mordent.log](#) → @long

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<mordent> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mordent> → [att.common](#) → [att.linked](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\ij][\c]+)"**, separated by spaces.

<mordent> → [att.mordent.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<mordent> → [att.mordent.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<mordent> → att.mordent.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.mordent.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<mordent> → att.mordent.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<mordent> → att.mordent.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<mordent> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<mordent> → att.mordent.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mordent> → att.mordent.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<mordent> → att.mordent.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<mordent> → att.mordent.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<mordent> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<mordent> → [att.mordent.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<mordent> → [att.mordent.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<mordent> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<mordent> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.ornamentLike.cmn](#) Groups CMN ornament elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<mordent> → [model.ornamentLike.cmn](#) → [model.controlEventLike.cmn](#) → [model.measurePart](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<mordent> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<mordent> may not have child elements)

## Remarks

The starting point of the mordent may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute. It is a semantic error not to specify one of these attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```
<elementSpec ident="mordent" module="MEI.cmnOrnaments">

## <multiRest>

(multiple rest) – Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

### Referenced in chapters

[4.2.5.3 Rests](#), [4.2.5.3.2 Multiple-Measure Rests](#), [4.3.10.2 Measure-Level Repetition Symbols](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<multiRest> → att.multiRest.vis → att.altSym → @altsym

**@block** (*optional*) The block attribute controls whether the multimeasure rest should be rendered as a block rest or as church rests ("Kirchenpausen"), that are combinations of longa, breve and semibreve rests. Value conforms to [data.BOOLEAN](#).

<multiRest> → att.multiRest.vis → @block

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<multiRest> → att.multiRest.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<multiRest> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<multiRest> → att.multiRest.ges → att.duration.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<multiRest> → att.multiRest.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<multiRest> → att.multiRest.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<multiRest> → att.multiRest.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<multiRest> → att.multiRest.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip value**. Value is a [token](#).

<multiRest> → att.multiRest.ges → att.duration.ges → @dur.recip

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<multiRest> → att.multiRest.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<multiRest> → att.multiRest.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<multiRest> → att.multiRest.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<multiRest> → att.multiRest.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<multiRest> → att.multiRest.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<multiRest> → att.multiRest.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<multiRest> → att.multiRest.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<multiRest> → att.multiRest.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Value conforms to [data.URI](#).

<multiRest> → att.multiRest.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<multiRest> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<multiRest> → att.multiRest.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<multiRest> → att.multiRest.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<multiRest> → att.multiRest.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<multiRest> → att.multiRest.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<multiRest> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linked → @next

**@num** (*optional*) Records a number or count accompanying a notational feature. Value is a positive integer.

<multiRest> → att.multiRest.log → att.numbered → @num

**@num.place** (*optional*) States where the tuplet number will be placed in relation to the note heads. Value conforms to [data.STAFFREL.basic](#).

<multiRest> → att.multiRest.vis → att.numberPlacement → @num.place

**@num.visible** (*optional*) Determines if the tuplet number is visible. Value conforms to [data.BOOLEAN](#).

<multiRest> → att.multiRest.vis → att.numberPlacement → @num.visible

**@oloc** (*optional*) Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

<multiRest> → att.multiRest.vis → att.staffLoc.pitched → @oloc

**@ploc** (*optional*) Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

<multiRest> → att.multiRest.vis → att.staffLoc.pitched → @ploc

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<multiRest> → att.multiRest.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<multiRest> → att.common → att.linkng → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<multiRest> → att.multiRest.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<multiRest> → att.multiRest.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<multiRest> → att.multiRest.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<multiRest> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<multiRest> → att.multiRest.log → att.event → att.alignment → @when

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<multiRest> → att.multiRest.vis → att.width → @width

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<multiRest> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<multiRest> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.measureFilling](#) Groups events that completely fill a CMN measure.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<multiRest> → [model.eventLike.measureFilling](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<multiRest> → [model.eventLike.measureFilling](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<multiRest> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

## <multiRpt>

(multiple repeat) – Multiple repeated measures.

### Referenced in chapters

[4.3.10.2 Measure-Level Repetition Symbols](#), [11.2.1.1 Instructions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<multiRpt> → [att.multiRpt.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<multiRpt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<multiRpt> → [att.multiRpt.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<multiRpt> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<multiRpt> → [att.common](#) → [att.linked](#) → @corresp

**@expand** (*optional*) Indicates whether to render a repeat symbol or the source material to which it refers. A value of 'true' renders the source material, while 'false' displays the repeat symbol. Value conforms to [data.BOOLEAN](#).

<multiRpt> → [att.multiRpt.vis](#) → [att.expandable](#) → @expand

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<multiRpt> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<multiRpt> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<multiRpt> → [att.multiRpt.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<multiRpt> → [att.multiRpt.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<multiRpt> → att.multiRpt.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to data.FONTSTYLE.

<multiRpt> → att.multiRpt.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to data.FONTWEIGHT.

<multiRpt> → att.multiRpt.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<multiRpt> → att.multiRpt.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<multiRpt> → att.multiRpt.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to data.HEXNUM.

<multiRpt> → att.multiRpt.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to data.URI.

<multiRpt> → att.multiRpt.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<multiRpt> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<multiRpt> → att.multiRpt.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to data.MEASUREMENTTYPOGRAPHYSIGNED.

<multiRpt> → att.multiRpt.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either data.MEASUREMENTTYPOGRAPHYUNSIGNED or data.PERCENT.

<multiRpt> → att.multiRpt.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<multiRpt> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.linked → @next

**@num** (*optional*) Records a number or count accompanying a notational feature. Value is a positive integer.

<multiRpt> → att.multiRpt.log → att.numbered → @num

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.linkng → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<multiRpt> → att.multiRpt.log → att.event → att.staffidnt → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from data.URI, separated by spaces.

<multiRpt> → att.common → att.linkng → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to data.BEAT.

<multiRpt> → att.multiRpt.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to data.BEAT.

<multiRpt> → att.multiRpt.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to data.ISOTIME.

<multiRpt> → att.multiRpt.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<multiRpt> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to data.URI.

<multiRpt> → att.multiRpt.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to data.URI.

<multiRpt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid xml:id.

<multiRpt> → att.common → att.basic → att.id → @xml:id

## Member of

model.eventLike.measureFilling Groups events that completely fill a CMN measure.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<multiRpt> → model.eventLike.measureFilling → model.layerPart.cmn → model.layerPart → <unclear>

**May Contain**

– (<multiRpt> may not have child elements)

## Remarks

In modern publishing practice, repeats of more than two measures should be written out using repeat signs. This element, however, is provided for handling non-standard practices often found in manuscript. The num attribute records the number of measures to be repeated.

## Declaration

```
<elementSpec ident="multiRpt" module="MEI.cmn">
  <gloss versionDate="2022-05-18" xml:lang="en">multiple repeat</gloss>

```

## <music>

Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

### Referenced in chapters

[1.2.4 MEI Profiles](#), [2.1.1 Document Root Elements](#), [2.1.2 General Music Structure Elements](#), [3.8.5.1 Corpus Module Overview](#), [9.2.1 Paragraphs](#), [11.3.1 Encoding Genetic States](#), [12.1.1 Elements of the Facsimile Module](#), [12.2.1 Overview](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<music> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<music> → att.metadataPointing → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<music> → att.common → att.labelled → @label

**@meiversion** (*optional*) Specifies a generic MEI version label. Allowed values are: "**5.0.0-dev**" (*Development version of MEI 5.0.0*)

<music> → att.meiVersion → @meiversion

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<music> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<music> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<music> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<music> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<music> → att.common → att.basic → att.id → @xml:id

## Member of

(music isn't member of any model class)

## Contained By

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

<music> → elements having music as direct children → <group>

**<mei>** Contains a single MEI-conformant document, consisting of an MEI header and a musical text, either in isolation or as part of an meiCorpus element.

<music> → elements having music as direct children → <mei>

## May Contain

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<music> → macro.musicPart → model.backLike → <back>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<music> → macro.musicPart → model.backLike → <back>

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

<music> → macro.musicPart → <body>

**<facsimile>** Contains a representation of a written source in the form of a set of images rather than as transcribed or encoded text.

<music> → model.resourceLike → <facsimile>

**<front>** Bundles prefatory text found before the start of the musical text.

<music> → macro.musicPart → model.frontLike → <front>

**<front>** Bundles prefatory text found before the start of the musical text.

<music> → macro.musicPart → model.frontLike → <front>

**<genDesc>** (genetic description) - Bundles information about the textual development of a work.

<music> → model.resourceLike → <genDesc>

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

<music> → macro.musicPart → <group>

**<performance>** A presentation of one or more musical works.

<music> → model.resourceLike → <performance>

## Declaration

```

## <name>

Proper noun or noun phrase.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [9.2.8 Names](#), [11.2.2 Apparent Errors](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<name> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<name> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<name> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<name> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<name> → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<name> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<name> → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<name> → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<name> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<name> → att.edit → att.evidence → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.  
<name> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.  
<name> → att.linked → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<name> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<name> → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<name> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<name> → att.linked → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<name> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<name> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<name> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<name> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<name> → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<name> → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<name> → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<name> → [att.name](#) → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<name> → [att.linking](#) → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<name> → [att.edit](#) → [att.source](#) → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<name> → [att.name](#) → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<name> → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<name> → [att.lang](#) → @translit

**@type** (*optional*) Characterizes the name in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**person**" (*A personal name.*), "**corporation**" (*Name of a corporate body.*), "**location**" (*Name of a location.*), "**process**" (*Name of a process or software application.*), "**style**" (*Name of a musical style; , form, genre, technique, etc.*), "**time**" (*Name of a period of time.*)

<name> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<name> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<name> → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<name> → [att.lang](#) → @xml:lang

## Member of

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

[model.nameLike](#) Groups elements that contain names.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<name> → model.nameLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<name> → model.nameLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<name> → model.nameLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<application>** Provides information about an application which has acted upon the current document.

<name> → elements having name as direct children → <application>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<name> → model.nameLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<name> → model.nameLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<name> → model.nameLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<name> → model.nameLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<name> → model.nameLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<name> → model.nameLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<name> → model.nameLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<name> → model.nameLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<name> → model.nameLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<name> → model.nameLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<name> → model.nameLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<name> → model.nameLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<name> → model.nameLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<name> → model.nameLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<name> → model.nameLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<name> → model.nameLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<name> → model.nameLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<name> → model.nameLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<name> → model.nameLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<name> → model.nameLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<name> → model.nameLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<name> → model.nameLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<name> → model.nameLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<name> → model.eventPart → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<name> → elements having name as direct children → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<name> → model.nameLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<name> → model.nameLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<name> → model.nameLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<name> → model.nameLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<name> → model.nameLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<name> → model.nameLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<name> → model.nameLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<name> → model.nameLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<name> → model.nameLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<name> → model.nameLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<name> → model.nameLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<name> → model.nameLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<name> → model.nameLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<name> → model.nameLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<name> → model.nameLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<name> → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<name> → model.nameLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<name> → model.nameLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<name> → model.nameLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<name> → model.nameLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<name> → model.nameLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<name> → model.nameLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<name> → model.nameLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<name> → model.nameLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<name> → model.nameLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<name> → model.nameLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<name> → model.nameLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<name> → model.nameLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<name> → model.nameLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<name> → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<name> → model.nameLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<name> → model.nameLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<name> → model.nameLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<name> → model.nameLike → model.textPhraseLike.limited → <resp>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<name> → elements having name as direct children → <respStmt>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<name> → model.nameLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<name> → model.nameLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<name> → model.nameLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<name> → model.nameLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<name> → model.nameLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<name> → model.nameLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<name> → model.nameLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<name> → model.nameLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<name> → model.nameLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<name> → model.nameLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<name> → model.nameLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<name> → model.nameLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<name> → model.nameLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<name> → model.nameLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<name> → model.nameLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<name> → model.nameLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<name> → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<name> → model.nameLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<name> → model.nameLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<name> → model.nameLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<name> → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<name> → model.nameLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<name> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<name> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<name> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<name> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<name> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<name> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<name> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<name> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<name> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<name> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<name> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<name> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<name> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<name> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<name> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<name> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<name> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Contains the name of an entity that is difficult to tag more specifically, for example, as a <corpName>, <geogName>, <persName>, or <title>. The <name> element may be used in place of the more specific elements when it is not known what kind of name is being described or when a high degree of precision is not necessary. For example, the <name> element might be used when it is not clear whether the name "Bach" refers to a person or a geographic feature. The <name> element may be used for an individual, such as 'Henry VIII, King of England'; a corporate body, such as 'The Beatles'; a geographical place; an expanse of time, such as 'The Romantic Era'; or a mechanical (often generative) process. When name parts are needed, <name> sub-elements are recommended. The recommended values for the type attribute are: person, corporation, location, period, and process. Dates associated with the name (not necessarily the same as those pertaining to the entity described by the name) may be recorded using startdate, enddate, notbefore, notafter, and isodate attributes. The name of the list from which a controlled value is taken, such as the Thesaurus of Geographic Names (TGN) or Library of Congress Name Authority File (LCNAF), and its electronically-available location may be recorded using the auth and auth.uri attributes.

The model of this element is based on the **name** element of the Encoded Archival Description (EAD).

## Constraints

Recommended practice is to use name elements to capture sub-parts of a generic name.

## <nameLink>

(name link) – Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<nameLink> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<nameLink> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<nameLink> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<nameLink> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<nameLink> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<nameLink> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<nameLink> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<nameLink> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<nameLink> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<nameLink> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<nameLink> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<nameLink> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<nameLink> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<nameLink> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<nameLink> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<nameLink> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<nameLink> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<nameLink> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<nameLink> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<nameLink> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<nameLink> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<nameLink> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<nameLink> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<nameLink> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<nameLink> → att.lang → @xml:lang

## Member of

[model.persNamePart](#) Groups elements which form part of a personal name.

## Contained By

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<nameLink> → elements having nameLink as direct children → <famName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<nameLink> → model.persNamePart → <persName>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<nameLink> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<nameLink> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<nameLink> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<nameLink> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<nameLink> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<nameLink> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<nameLink> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<nameLink> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<nameLink> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<nameLink> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<nameLink> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<nameLink> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<nameLink> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<nameLink> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<nameLink> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<nameLink> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [nameLink](#) element of the Text Encoding Initiative (TEI).

## <namespace>

Supplies the formal name of the namespace to which the elements documented by its children belong.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<namespace> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<namespace> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<namespace> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<namespace> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<namespace> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<namespace> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<namespace> → [att.common](#) → [att.nNumberLike](#) → @n

**@name** (*required*) Formal namespace identifier; that is, a uniform resource identifier (URI). Value conforms to [data.URI](#).

<namespace> → direct children → @name

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<namespace> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<namespace> → [att.common](#) → [att.linkin](#) → @precedes

**@prefix** (*optional*) Prefix associated with the formal identifier. Value conforms to [data.NMOKEN](#).

<namespace> → direct children → @prefix

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<namespace> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<namespace> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<namespace> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<namespace> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<namespace> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<namespace> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<namespace> → att.common → att.basic → att.id → @xml:id

## Member of

(namespace isn't member of any model class)

## Contained By

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

<namespace> → elements having namespace as direct children → <tagsDecl>

## May Contain

**<attUsage>** Documents the usage of a specific attribute of the element.

<namespace> → direct children → <attUsage>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<namespace> → direct children → <desc>

**<tagUsage>** Documents the usage of a specific element within the document.

<namespace> → direct children → <tagUsage>

## Remarks

The model of this element is based on the [namespace](#) element of the Text Encoding Initiative (TEI).

## <nc>

Sign representing a single pitched event, although the exact pitch may not be known.

### Referenced in chapters

[6.1.1 Basic four elements](#), [6.4.1 Elements](#), [6.4.2 Neume component attributes](#), [6.5 Bibliographic References](#), [10.1.2.6 Solmization](#)

### Module

[MEI.neumes](#)

### Attributes

**@accid.ges** (*optional*) Records the performed pitch inflection. Value conforms to [data.ACCIDENTAL.GESTURAL](#).

<nc> → att.nc.ges → att.accidental.ges → @accid.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<nc> → att.nc.vis → att.altSym → @altsym

**@angled** (*optional*) Value conforms to [data.BOOLEAN](#).

<nc> → att.nc.vis → att.ncForm → @angled

**@artic.ges** (*optional*) Records performed articulation that differs from the written value. One or more values from [data.ARTICULATION](#), separated by spaces.

<nc> → att.nc.ges → att.articulation.ges → @artic.ges

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<nc> → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<nc> → att.nc.vis → att.color → @color

**@con** (*optional*) Connection to the previous component within the same neume; this attribute should not be used for the first component of a neume. Allowed values are: "g" (*Gapped; not connected.*), "l" (*Looped.*), "e" (*Extended.*)

<nc> → att.nc.vis → att.ncForm → @con

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<nc> → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linked → @corresp

**@curve** (*optional*) Records direction of curvature. Allowed values are: "a" (*Anti-clockwise curvature.*), "c" (*Clockwise curvature.*)

<nc> → att.nc.vis → att.ncForm → @curve

**@deg** (*optional*) Captures scale degree information using Humdrum \*\*deg syntax -- an optional indicator of melodic approach (^ = ascending approach, v = descending approach), a scale degree value (1 = tonic ... 7 = leading tone), and an optional indication of chromatic alteration, 1, v7, ^1, or v5+, for example. The amount of chromatic alteration is not indicated. Value conforms to [data.SCALEDEGREE](#).

<nc> → att.nc.anl → att.harmonicFunction → @deg

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<nc> → att.nc.ges → att.duration.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<nc> → att.nc.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<nc> → att.nc.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<nc> → att.nc.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<nc> → att.nc.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a [token](#).

<nc> → att.nc.ges → att.duration.ges → @dur.recip

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<nc> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linking → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<nc> → att.nc.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<nc> → att.nc.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<nc> → att.nc.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<nc> → att.nc.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<nc> → att.nc.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<nc> → att.nc.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<nc> → att.nc.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<nc> → att.nc.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<nc> → att.nc.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<nc> → att.nc.vis → att.visualOffset.ho → @ho

**@hooked** (*optional*) Pen stroke has an extension; specific to Hispanic notation. Value conforms to [data.BOOLEAN](#).

<nc> → att.nc.vis → att.ncForm → @hooked

**@instr** (*optional*) Provides a way of pointing to a MIDI instrument definition. It must contain the ID of an `<instrDef>` element elsewhere in the document. Value conforms to [data.URI](#).

<nc> → att.nc.ges → att.instrumentIdent → @instr

**@intm** (*optional*) Encodes the melodic interval from the previous pitch. The value may be a general directional indication (u, d, s, etc.), an indication of diatonic interval direction, quality, and size, or a precise numeric value in half steps. Value conforms to [data.INTERVAL.MELODIC](#).

<nc> → att.nc.anl → att.intervalMelodic → @intm

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<nc> → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<nc> → att.nc.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<nc> → att.nc.vis → att.typography → @letterspacing

**@ligated** (*optional*) Indicates participation in a ligature. Value conforms to [data.BOOLEAN](#).

<nc> → att.nc.vis → att.ncForm → @ligated

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<nc> → att.nc.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<nc> → att.nc.vis → att.staffLoc → @loc

**@mfunc** (*optional*) Describes melodic function using [Humdrum \\*\\*embel syntax](#). Value conforms to [data.MELODICFUNCTION](#).

<nc> → att.nc.anl → att.melodicFunction → @mfunc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<nc> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linkin → @next

**@oct** (*optional*) Captures written octave information. Value must either conform to **a non-negative integer no larger than 9** or **a string matching the following regular expression: "unknown"**.

<nc> → att.nc.log → @oct

**@oct.ges** (*optional*) Records performed octave information that differs from the written value. Value conforms to [data.OCTAVE](#).

<nc> → att.nc.ges → @oct.ges

**@pclass** (*optional*) Holds pitch class information. Value conforms to [data.PITCHCLASS](#).

<nc> → att.nc.anl → att.pitchClass → @pclass

**@pname** (*optional*) Contains a written pitch name. Value is a [token](#).

<nc> → att.nc.log → @pname

**@pname.ges** (*optional*) Contains a performed pitch name that differs from the written value. Value conforms to [data.PITCHNAME.GESTURAL](#).

<nc> → att.nc.ges → @pname.ges

**@pnum** (*optional*) Holds a pitch-to-number mapping, a base-40 or MIDI note number, for example. Value conforms to [data.PITCHNUMBER](#).

<nc> → att.nc.ges → @pnum

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linkin → @prev

**@psolfa** (*optional*) Contains sol-fa designation, e.g., do, re, mi, etc., in either a fixed or movable Do system. Value is a [NMTOKEN](#).

<nc> → att.nc.anl → att.solfa → @psolfa

**@rella** (*optional*) Length of the pen stroke relative to the previous component within the same neume; this attribute should not be used for the first component of a neume. Allowed values are: "**I**" (*Longer.*), "**s**" (*Shorter.*)

<nc> → att.nc.vis → att.ncForm → @rella

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<nc> → att.responsibility → @resp

**@s-shape** (*optional*) Direction of the initial direction for an s-shaped pen stroke; i.e., "w" for the standard letter S, "e" for its mirror image, "s" for the letter S turned 90-degrees anti-clockwise, and "n" for its mirror image. Value conforms to [data.COMPASSDIRECTION.basic](#).

<nc> → att.nc.vis → att.ncForm → @s-shape

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<nc> → att.nc.log → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<nc> → att.linkin → @synch

**@tilt** (*optional*) Direction of the pen stroke. Value conforms to [data.COMPASSDIRECTION](#).

<nc> → att.nc.vis → att.ncForm → @tilt

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**apostropha**", "**bistropha**", "**climacus**", "**clivis**", "**oriscus**", "**pes**", "**pessubpunctis**", "**orrectus**", "**orrectusflexus**", "**pressusmaior**", "**pressusmaior**", "**pressusminor**", "**pressusminor**", "**punctum**", "**quilisma**", "**scandicus**", "**strophicus**", "**torculus**", "**torculusresupinus**", "**tristropha**", "**virga**", "**virgastrata**"

<nc> → direct children → @type

**@vel** (*optional*) MIDI Note-on/off velocity. Value conforms to [data.MIDIVALUE](#).

<nc> → att.nc.ges → att.midiVelocity → @vel

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<nc> → att.nc.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<nc> → att.nc.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *facs* attribute. Value is a decimal number.

<nc> → att.nc.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<nc> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each *id* attribute within a document must have a unique value. Value is a valid [xml:id](#).

<nc> → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<nc> → `att.nc.vis` → `att.xy` → @y

#### Member of

`model.neumePart` Groups elements that may occur within a neume.

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<nc> → `model.neumePart` → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<nc> → `model.neumePart` → <corr>

**<damage>** Contains an area of damage to the physical medium.

<nc> → `model.neumePart` → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<nc> → `model.neumePart` → <del>

**<expan>** Contains the expansion of an abbreviation.

<nc> → `model.neumePart` → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<nc> → `model.neumePart` → <lem>

**<ncGrp>** Collection of one or more neume components.

<nc> → elements having nc as direct children → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<nc> → `model.neumePart` → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<nc> → `model.neumePart` → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<nc> → `model.neumePart` → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<nc> → `model.neumePart` → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<nc> → `model.neumePart` → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<nc> → `model.neumePart` → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<nc> → `model.neumePart` → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<nc> → model.neumePart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<nc> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<nc> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<nc> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<nc> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<nc> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<nc> → model.transcriptionLike → <del>

**<episema>** Episema.

<nc> → model.neumeModifierLike → <episema>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<nc> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<nc> → model.transcriptionLike → <handShift>

**<hispanTick>** Hispanic tick.

<nc> → model.neumeModifierLike → <hispanTick>

**<liquefiant>** Liquescent.

<nc> → model.neumeComponentModifierLike → <liquefiant>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<nc> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<nc> → model.neumeComponentModifierLike → <oriscus>

**<quilisma>** Quilisma.

<nc> → model.neumeComponentModifierLike → <quilisma>

**<reg>** Contains material which has been regularized or normalized in some sense.

<nc> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<nc> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<nc> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<nc> → model.neumeModifierLike → <signifLet>

**<strophicus>** Strophicus.

<nc> → model.neumeComponentModifierLike → <strophicus>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<nc> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<nc> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<nc> → model.transcriptionLike → <unclear>

## <ncGrp>

Collection of one or more neume components.

### Referenced in chapters

[6.4.1 Elements](#)

### Module

[MEI.neumes](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ncGrp> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → [att.common](#) → [att.linkin](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<ncGrp> → [att.ncGrp.vis](#) → [att.typography](#) → @fontweight

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<ncGrp> → att.ncGrp.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ncGrp> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<ncGrp> → att.ncGrp.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<ncGrp> → att.ncGrp.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<ncGrp> → att.ncGrp.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<ncGrp> → att.ncGrp.vis → att.staffLoc → @loc

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ncGrp> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<ncGrp> → att.ncGrp.log → att.staffIdent → @staff

**@syl** (*optional*) Holds an associated sung text syllable. Value is plain text.

<ncGrp> → att.ncGrp.log → att.sylText → @syl

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ncGrp> → att.common → att.linking → @synch

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<ncGrp> → att.ncGrp.ges → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<ncGrp> → att.ncGrp.ges → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<ncGrp> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<ncGrp> → att.ncGrp.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<ncGrp> → att.ncGrp.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<ncGrp> → att.ncGrp.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ncGrp> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<ncGrp> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<ncGrp> → att.ncGrp.vis → att.xy → @y

## Member of

[model.neumePart](#) Groups elements that may occur within a neume.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ncGrp> → [model.neumePart](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ncGrp> → model.neumePart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<ncGrp> → model.neumePart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ncGrp> → model.neumePart → <del>

**<expan>** Contains the expansion of an abbreviation.

<ncGrp> → model.neumePart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ncGrp> → model.neumePart → <lem>

**<ncGrp>** Collection of one or more neume components.

<ncGrp> → elements having ncGrp as direct children → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<ncGrp> → model.neumePart → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ncGrp> → model.neumePart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ncGrp> → model.neumePart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ncGrp> → model.neumePart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ncGrp> → model.neumePart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<ncGrp> → model.neumePart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ncGrp> → model.neumePart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ncGrp> → model.neumePart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<ncGrp> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<ncGrp> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<ncGrp> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ncGrp> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<ncGrp> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ncGrp> → model.transcriptionLike → <del>

**<episema>** Episema.

<ncGrp> → model.neumeModifierLike → <episema>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<ncGrp> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<ncGrp> → model.transcriptionLike → <handShift>

**<hispanTick>** Hispanic tick.

<ncGrp> → model.neumeModifierLike → <hispanTick>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<ncGrp> → direct children → <nc>

**<ncGrp>** Collection of one or more neume components.

<ncGrp> → direct children → <ncGrp>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ncGrp> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ncGrp> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ncGrp> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<ncGrp> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<ncGrp> → model.neumeModifierLike → <signifLet>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<ncGrp> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ncGrp> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ncGrp> → model.transcriptionLike → <unclear>

## <neume>

Sign representing one or more musical pitches.

### Referenced in chapters

[6.1.1 Basic four elements](#), [6.4.1 Elements](#)

### Module

[MEI.neumes](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<neume> → [att.neume.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<neume> → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<neume> → [att.neume.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<neume> → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<neume> → [att.linked](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<neume> → [att.neume.vis](#) → [att.enclosingChars](#) → @enclose

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<neume> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<neume> → [att.linked](#) → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<neume> → [att.neume.vis](#) → [att.typography](#) → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<neume> → [att.neume.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<neume> → att.neume.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to data.FONTSTYLE.

<neume> → att.neume.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to data.FONTWEIGHT.

<neume> → att.neume.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*)

<neume> → att.neume.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<neume> → att.neume.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to data.HEXNUM.

<neume> → att.neume.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to data.URI.

<neume> → att.neume.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to data.MEASUREMENTSIGNED.

<neume> → att.neume.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<neume> → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype positiveInteger, separated by spaces.

<neume> → att.neume.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to data.MEASUREMENTTYPOGRAPHYSIGNED.

<neume> → att.neume.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either data.MEASUREMENTTYPOGRAPHYUNSIGNED or data.PERCENT.

<neume> → att.neume.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to data.STAFFLOC.

<neume> → att.neume.vis → att.staffLoc → @loc

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<neume> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<neume> → att.linkning → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<neume> → att.linkning → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<neume> → att.linkning → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<neume> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<neume> → att.linkning → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<neume> → att.neume.log → att.staffident → @staff

**@syl** (*optional*) Holds an associated sung text syllable. Value is plain text.

<neume> → att.neume.log → att.sylText → @syl

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<neume> → att.linkning → @synch

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<neume> → att.neume.ges → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<neume> → att.neume.ges → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**apostropha**", "**bistropha**", "**climacus**", "**clivis**", "**oriscus**", "**pes**", "**pessubpunctis**", "**porrectus**", "**porrectusflexus**", "**pressusmaior**", "**pressusmaior**", "**pressusminor**", "**pressusminor**", "**punctum**", "**quilisma**", "**scandicus**", "**strophicus**", "**torculus**", "**torculusresupinus**", "**tristropha**", "**virga**", "**virgastrata**"

<neume> → direct children → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<neume> → att.neume.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<neume> → att.neume.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<neume> → `att.neume.vis` → `att.xy` → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<neume> → `att.basic` → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<neume> → `att.basic` → `att.id` → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<neume> → `att.neume.vis` → `att.xy` → @y

## Member of

`model.eventLike.neumes` Groups event elements that occur in the neume repertoire.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <abbr>

**<add>** Marks an addition to the text.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <corr>

**<damage>** Contains an area of damage to the physical medium.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <del>

**<expan>** Contains the expansion of an abbreviation.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <expan>

**<layer>** An independent stream of events on a staff.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<neume> → `model.eventLike.neumes` → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<neume> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<neume> → model.eventLike.neumes → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<neume> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<neume> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<neume> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<neume> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<neume> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<neume> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<neume> → model.transcriptionLike → <del>

**<episema>** Episema.

<neume> → model.neumeModifierLike → <episema>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<neume> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<neume> → model.transcriptionLike → <handShift>

**<hispanTick>** Hispanic tick.

<neume> → model.neumeModifierLike → <hispanTick>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<neume> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<neume> → model.neumePart → <ncGrp>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<neume> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<neume> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<neume> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<neume> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<neume> → model.neumeModifierLike → <signifLet>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<neume> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<neume> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<neume> → model.transcriptionLike → <unclear>

DEVELOPMENT  
VERSION

## <normalization>

Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<normalization> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<normalization> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<normalization> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<normalization> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<normalization> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<normalization> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<normalization> → [att.common](#) → [att.labelled](#) → @label

**@method** (*optional*) Indicates the method employed to mark corrections and normalizations. Allowed values are: "**silent**" (*Corrections and normalizations made silently.*), "**tags**" (*Corrections and normalizations indicated using elements.*)

<normalization> → [att.regularMethod](#) → @method

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<normalization> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<normalization> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<normalization> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<normalization> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<normalization> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<normalization> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<normalization> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<normalization> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<normalization> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<normalization> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<normalization> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<normalization> → att.lang → @xml:lang

## Member of

[model.editorialDeclPart](#) Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

## Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<normalization> → [model.editorialDeclPart](#) → <editorialDecl>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<normalization> → model.headLike → <head>

**<p>** One or more text phrases that form a logical prose passage.

<normalization> → model.pLike → <p>

## Remarks

The model of this element is based on the [normalization](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="normalization" module="MEI.header">

### Module

[MEI.shared](#)

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACCIDENTAL.WRITTEN](#).

<note> → [att.note.anl](#) → [att.accidental](#) → @accid

**@accid.ges** (*optional*) Records the performed pitch inflection. Value conforms to [data.ACCIDENTAL.GESTURAL](#).

<note> → [att.note.ges](#) → [att.accidental.ges](#) → @accid.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<note> → [att.note.vis](#) → [att.altSym](#) → @altsym

**@artic** (*optional*) Encodes the written articulation(s). Articulations are normally encoded in order from the note head outward; that is, away from the stem. See additional notes at [att.vis.note](#). Only articulations should be encoded in the artic attribute; for example, fingerings should be encoded using the [<fing>](#) element. One or more values from [data.ARTICULATION](#), separated by spaces.

<note> → [att.note.anl](#) → [att.articulation](#) → @artic

**@artic.ges** (*optional*) Records performed articulation that differs from the written value. One or more values from [data.ARTICULATION](#), separated by spaces.

<note> → [att.note.ges](#) → [att.articulation.ges](#) → @artic.ges

**@beam** (*optional*) Indicates that this event is "under a beam". One or more values from [data.BEAM](#), separated by spaces.

<note> → [att.note.anl](#) → [att.note.anl.cmn](#) → [att.beamPresent](#) → @beam

**@breaksec** (*optional*) Presence of this attribute indicates that the secondary beam should be broken following this note/chord. The value of the attribute records the number of beams which should remain unbroken. Value is a positive integer.

<note> → [att.note.vis](#) → [att.note.vis.cmn](#) → [att.beamSecondary](#) → @breaksec

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<note> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<note> → att.note.vis → att.color → @color

**@colored** (*optional*) Indicates this feature is 'colored'; that is, it is a participant in a change in rhythmic values. In mensural notation, coloration is indicated by colored notes (red, black, etc.) where void notes would otherwise occur. In CMN, coloration is indicated by an inverse color; that is, the note head is void when it would otherwise be filled and vice versa. Value conforms to [data.BOOLEAN](#).

<note> → att.note.log → att.coloration → @colored

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<note> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linkin → @corresp

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

<note> → att.note.log → att.cue → @cue

**@deg** (*optional*) Captures scale degree information using [Humdrum \\*\\*deg syntax](#) -- an optional indicator of melodic approach (^ = ascending approach, v = descending approach), a scale degree value (1 = tonic ... 7 = leading tone), and an optional indication of chromatic alteration, 1, v7, ^1, or v5+, for example. The amount of chromatic alteration is not indicated. Value conforms to [data.SCALEDEGREE](#).

<note> → att.note.anl → att.harmonicFunction → @deg

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

<note> → att.note.log → att.augmentDots → @dots

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<note> → att.note.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the [data.DURATION](#) datatype. Value conforms to [data.DURATION](#).

<note> → att.note.log → att.duration.log → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<note> → att.note.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<note> → att.note.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<note> → att.note.ges → att.duration.ges → @dur.ppq

**@dur.quality** (*recommended*) Encodes the durational quality of a mensural note using the values provided by the [data.DURQUALITY.mensural](#) datatype (i.e., the perfect / imperfect / altered / major / minor / duplex quality of a note). Value conforms to [data.DURQUALITY.mensural](#).

<note> → att.note.log → att.duration.quality → @dur.quality

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<note> → att.note.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a token.

<note> → att.note.ges → att.duration.ges → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<note> → att.note.vis → att.enclosingChars → @enclose

**@extremis** (*optional*) Indicates an extreme, indefinite performed pitch. Allowed values are: "highest" (*Highest note the performer can play.*), "lowest" (*Lowest note the performer can play.*)

<note> → att.note.ges → @extremis

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<note> → att.facsimile → @facs

**@fermata** (*optional*) Indicates the attachment of a fermata to this element. If visual information about the fermata needs to be recorded, then a <fermata> element should be employed instead. Value conforms to [data.STAFFREL.basic](#).

<note> → att.note.anl → att.fermataPresent → @fermata

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linked → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<note> → att.note.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<note> → att.note.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<note> → att.note.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<note> → att.note.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<note> → att.note.vis → att.typography → @fontweight

**@gliss** (*optional*) Indicates that this element participates in a glissando. If visual information about the glissando needs to be recorded, then a <gliss> element should be employed instead. Value conforms to [data.GLISSANDO](#).

<note> → att.note.anl → att.note.anl.cmn → att.glissPresent → @gliss

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<note> → att.note.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<note> → att.note.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<note> → att.note.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<note> → att.note.vis → att.extSym → att.extSym.auth → @glyph.uri

**@grace** (*optional*) Marks a note or chord as a "grace" (without a definite performed duration) and records from which other note/chord it should "steal" time. Value conforms to [data.GRACE](#).

<note> → att.note.log → att.note.log.cmn → att.graced → @grace

**@grace.time** (*optional*) Records the amount of time to be "stolen" from a non-grace note/chord. Value conforms to [data.PERCENT](#).

<note> → att.note.log → att.note.log.cmn → att.graced → @grace.time

**@head.altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [symbolDef](#) element elsewhere in the document. Value conforms to [data.URI](#).

<note> → att.note.vis → att.noteHeads → @head.altsym

**@head.auth** (*optional*) A name or label associated with the controlled vocabulary from which a numerical value of head.shape is taken. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<note> → att.note.vis → att.noteHeads → @head.auth

**@head.color** (*optional*) Captures the overall color of a notehead. Value conforms to [data.COLOR](#).

<note> → att.note.vis → att.noteHeads → @head.color

**@head.fill** (*optional*) Describes how/if the notehead is filled. Value conforms to [data.FILL](#).

<note> → att.note.vis → att.noteHeads → @head.fill

**@head.fillcolor** (*optional*) Captures the fill color of a notehead if different from the overall note color. Value conforms to [data.COLOR](#).

<note> → att.note.vis → att.noteHeads → @head.fillcolor

**@head.mod** (*optional*) Records any additional symbols applied to the notehead. One or more values from [data.NOTEHEADMODIFIER](#), separated by spaces.

<note> → att.note.vis → att.noteHeads → @head.mod

**@head.rotation** (*optional*) Describes rotation applied to the basic notehead shape. A positive value rotates the notehead in a counter-clockwise fashion, while negative values produce clockwise rotation. Value conforms to [data.ROTATION](#).

<note> → att.note.vis → att.noteHeads → @head.rotation

**@head.shape** (*optional*) Used to override the head shape normally used for the given duration. Value conforms to [data.HEADSHAPE](#).

<note> → att.note.vis → att.noteHeads → @head.shape

**@head.visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<note> → att.note.vis → att.noteHeads → @head.visible

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<note> → att.note.vis → att.visualOffset.ho → @ho

**@instr** (*optional*) Provides a way of pointing to a MIDI instrument definition. It must contain the ID of an <instrDef> element elsewhere in the document. Value conforms to [data.URI](#).

<note> → att.note.ges → att.instrumentIdent → @instr

**@intm** (*optional*) Encodes the melodic interval from the previous pitch. The value may be a general directional indication (u, d, s, etc.), an indication of diatonic interval direction, quality, and size, or a precise numeric value in half steps. Value conforms to [data.INTERVAL.MELODIC](#).

<note> → att.note.anl → att.intervalMelodic → @intm

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<note> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<note> → att.note.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<note> → att.note.vis → att.typography → @letterspacing

**@lig** (*optional*) Indicates this element's participation in a ligature. Value conforms to [data.LIGATUREFORM](#).

<note> → att.note.vis → att.note.vis.mensural → @lig

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<note> → att.note.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<note> → att.note.vis → att.staffLoc → @loc

**@lv** (*optional*) Indicates the attachment of an l.v. (laissez vibrer) sign to this element. Value conforms to [data.BOOLEAN](#).

<note> → att.note.anl → att.note.anl.cmn → att.lvPresent → @lv

**@mfunc** (*optional*) Describes melodic function using [Humdrum \\*\\*embel syntax](#). Value conforms to [data.MELODICFUNCTION](#).

<note> → att.note.anl → att.melodicFunction → @mfunc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<note> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linked → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<note> → att.note.ges → att.note.ges.mensural → att.duration.ratio → @num

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<note> → att.note.ges → att.note.ges.mensural → att.duration.ratio → @numbase

**@oct** (*optional*) Captures written octave information. Value conforms to [data.OCTAVE](#).

<note> → att.note.log → att.pitched → att.octave → @oct

**@oct.ges** (*optional*) Records performed octave information that differs from the written value. Value conforms to [data.OCTAVE](#).

<note> → att.note.ges → @oct.ges

**@ornam** (*optional*) Indicates that this element has an attached ornament. If visual information about the ornament is needed, then one of the elements that represents an ornament (mordent, trill, or turn) should be employed. One or more values from [data.ORNAM.cmn](#), separated by spaces.

<note> → att.note.anl → att.note.anl.cmn → att.ornamPresent → @ornam

**@pclass** (*optional*) Holds pitch class information. Value conforms to [data.PITCHCLASS](#).

<note> → att.note.anl → att.pitchClass → @pclass

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

<note> → att.note.log → att.pitched → att.pitch → @pname

**@pname.ges** (*optional*) Contains a performed pitch name that differs from the written value. Value conforms to [data.PITCHNAME.GESTURAL](#).

<note> → att.note.ges → @pname.ges

**@pnum** (*optional*) Holds a pitch-to-number mapping, a base-40 or MIDI note number, for example. Value conforms to [data.PITCHNUMBER](#).

<note> → att.note.ges → @pnum

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linked → @prev

**@psolfa** (*optional*) Contains sol-fa designation, e.g., do, re, mi, etc., in either a fixed or movable Do system. Value is a [NMOKEN](#).

<note> → att.note.anl → att.solfa → @psolfa

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linked → @sameas

**@slur** (*optional*) Indicates that this element participates in a slur. If visual information about the slur needs to be recorded, then a <slur> element should be employed. One or more values from [data.SLUR](#), separated by spaces.

<note> → att.note.anl → att.note.anl.cmn → att.slurPresent → @slur

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<note> → att.note.log → att.event → att.staffIdent → @staff

**@stem.dir** (*optional*) Describes the direction of a stem. Value conforms to [data.STEMDIRECTION](#).

<note> → att.note.vis → att.stems → @stem.dir

**@stem.form** (*optional*) Records the form of the stem. Value conforms to [data.STEMFORM.mensural](#).

<note> → att.note.vis → att.stems → att.stems.mensural → @stem.form

**@stem.len** (*optional*) Encodes the stem length. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<note> → att.note.vis → att.stems → @stem.len

**@stem.mod** (*optional*) Encodes any stem "modifiers"; that is, symbols rendered on the stem, such as tremolo or Sprechstimme indicators. Value conforms to [data.STEMMODIFIER](#).

<note> → att.note.vis → att.stems → @stem.mod

**@stem.pos** (*optional*) Records the position of the stem in relation to the note head(s). Value conforms to [data.STEMPOSITION](#).

<note> → att.note.vis → att.stems → @stem.pos

**@stem.sameas** (*optional*) Points to a note element in a different layer whose stem is shared. The linked notes should be rendered like a chord though they are part of different layers. Value conforms to [data.URI](#).

<note> → att.note.vis → att.stems → @stem.sameas

**@stem.visible** (*optional*) Determines whether a stem should be displayed. Value conforms to [data.BOOLEAN](#).

<note> → att.note.vis → att.stems → @stem.visible

**@stem.with** (*optional*) Contains an indication of which staff a note or chord that logically belongs to the current staff should be visually placed on; that is, the one above or the one below. Value conforms to [data.NEIGHBORINGLAYER](#).

<note> → att.note.vis → att.stems → att.stems.cmn → @stem.with

**@stem.x** (*optional*) Records the output x coordinate of the stem's attachment point. Value is a decimal number.

<note> → att.note.vis → att.stems → @stem.x

**@stem.y** (*optional*) Records the output y coordinate of the stem's attachment point. Value is a decimal number.

<note> → att.note.vis → att.stems → @stem.y

**@syl** (*optional*) Holds an associated sung text syllable. Value is plain text.

<note> → att.note.anl → att.note.anl.cmn → att.sylText → @syl

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<note> → att.common → att.linking → @synch

**@tab.fing** (*optional*) Indicates which finger, if any, should be used to play an individual string. The index, middle, ring, and little fingers are represented by the values 1-4, while t is for the thumb. The values x and o indicate muffled and open strings, respectively. Value conforms to [data.FINGER.FRET](#).

<note> → att.note.ges → att.stringtab → @tab.fing

**@tab.fret** (*optional*) Records the location at which a string should be stopped against a fret. Value conforms to [data.FRETNUMBER](#).

<note> → att.note.ges → att.stringtab → @tab.fret

**@tab.string** (*optional*) Records which string is to be played. Value conforms to [data.STRINGNUMBER](#).

<note> → att.note.ges → att.stringtab → @tab.string

**@tie** (*optional*) Indicates that this element participates in a tie. If visual information about the tie needs to be recorded, then a <tie> element should be employed. One or more values from [data.TIE](#), separated by spaces.

<note> → att.note.anl → att.note.anl.cmn → att.tiePresent → @tie

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<note> → att.note.vis → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<note> → att.note.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<note> → att.note.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<note> → att.note.log → att.event → att.timestamp.ges → @tstamp.real

**@tuple** (*optional*) Indicates that this feature participates in a tuplet. If visual information about the tuplet needs to be recorded, then a <tuplet> element should be employed. One or more values from [data.TUPLET](#), separated by spaces.

<note> → att.note.anl → att.note.anl.cmn → att.tupletPresent → @tuple

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<note> → att.common → att.typed → @type

**@vel** (*optional*) MIDI Note-on/off velocity. Value conforms to [data.MIDIVALUE](#).

<note> → att.note.ges → att.midiVelocity → @vel

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<note> → att.note.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<note> → att.note.log → att.event → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<note> → `att.note.vis` → `att.xy` → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<note> → `att.common` → `att.basic` → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<note> → `att.common` → `att.basic` → `att.id` → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<note> → `att.note.vis` → `att.xy` → @y

## Member of

[model.chordPart](#) Groups elements that may appear as part of the content of a chord element.

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<note> → `model.eventLike` → `model.layerPart` → <abbr>

**<add>** Marks an addition to the text.

<note> → `model.eventLike` → `model.layerPart` → <add>

**<bTrem>** A rapid alternation on a single pitch or chord.

<note> → elements having note as direct children → <bTrem>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<note> → `model.eventLike` → <beam>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<note> → `model.chordPart` → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.

<note> → `model.eventLike` → `model.layerPart` → <corr>

**<damage>** Contains an area of damage to the physical medium.

<note> → `model.eventLike` → `model.layerPart` → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<note> → `model.eventLike` → `model.layerPart` → <del>

**<expan>** Contains the expansion of an abbreviation.

<note> → `model.eventLike` → `model.layerPart` → <expan>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<note> → elements having note as direct children → <fTrem>

**<graceGrp>** A container for a sequence of grace notes.

<note> → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<note> → model.eventLike → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<note> → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<note> → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<note> → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<note> → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<note> → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<note> → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<note> → model.eventLike → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<note> → model.eventLike → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<note> → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<note> → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<note> → model.eventLike → model.layerPart → <unclear>

## May Contain

**<accid>** Records a temporary alteration to the pitch of a note.

<note> → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<note> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<note> → model.appLike → <app>

**<artic>** An indication of how to play a note or chord.

<note> → model.noteModifierLike → <artic>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<note> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<note> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<note> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<note> → model.transcriptionLike → <del>

**<dot>** Dot of augmentation or division.

<note> → model.noteModifierLike → <dot>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<note> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<note> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<note> → model.transcriptionLike → <orig>

**<plica>** Plica

<note> → direct children → <plica>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<note> → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<note> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<note> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<note> → model.transcriptionLike → <sic>

**<stem>** A stem element.

<note> → direct children → <stem>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<note> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<note> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<note> → model.sylLike → <syl>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<note> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<note> → model.verseLike → <verse>

## Remarks

The **<accid>** and **<artic>** sub-elements may be used instead of the note element's attributes when accid and artic represent first-class objects, e.g., when they require attributes, such as x and y location attributes. Similarly, the **<syl>** sub-element may be used instead of the syl attribute. The verse sub-element may be used to group text syllables by verse. The colored attribute may be used to indicate coloration. In the mensural repertoire, coloration is a temporary change in the underlying mensuration from perfect to imperfect. In the CMN repertoire, coloration is an inversion of the note head's normal rendition, that is, the note head is void when it would otherwise be filled and vice versa. Do not confuse this with visual color.

## <noteOff>

MIDI note-off event.

### Referenced in chapters

[14.5.3 Recording MIDI Event Data](#)

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.typed → att.clasped → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<noteOff> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<noteOff> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<noteOff> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<noteOff> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @next

**@num** (*required*) MIDI number in the range set by [data.MIDIVALE](#). Value conforms to [data.MIDIVALE](#).

<noteOff> → att.midiNumber → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\w][\w]+)"**, separated by spaces.

<noteOff> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<noteOff> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<noteOff> → att.midi.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<noteOff> → att.common → att.linked → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<noteOff> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<noteOff> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<noteOff> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<noteOff> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<noteOff> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<noteOff> → att.common → att.basic → att.id → @xml:id

**Member of**

(noteOff isn't member of any model class)

**Contained By**

**<midi>** Container for elements that contain information useful when generating MIDI output.

<noteOff> → elements having noteOff as direct children → <midi>

**May Contain**

- (<noteOff> may not have child elements)

**Declaration**

## <noteOn>

MIDI note-on event.

### Referenced in chapters

[14.5.3 Recording MIDI Event Data](#)

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.typed → att.classt → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<noteOn> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<noteOn> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<noteOn> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<noteOn> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linkin → @next

**@num** (*required*) MIDI number in the range set by [data.MIDIVALE](#). Value conforms to [data.MIDIVALE](#).

<noteOn> → att.midiNumber → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\w][\w]+)"**, separated by spaces.

<noteOn> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<noteOn> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<noteOn> → att.midi.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<noteOn> → att.common → att.linked → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<noteOn> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<noteOn> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<noteOn> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<noteOn> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<noteOn> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<noteOn> → att.common → att.basic → att.id → @xml:id

### Member of

(noteOn isn't member of any model class)

### Contained By

**<midi>** Container for elements that contain information useful when generating MIDI output.  
<noteOn> → elements having noteOn as direct children → <midi>

### May Contain

- (<noteOn> may not have child elements)

### Declaration

```
<elementSpec ident="noteOn" module="MEI.midi">
  <desc xml:lang="en">MIDI note-on event.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.midi.event"/>
    <memberOf key="att.midiNumber"/>
  </classes>
  <content>
    <rng:empty/>
  </content>
</elementSpec>
```

## <notesStmt>

(notes statement)- Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

### Referenced in chapters

[3.4.1 File Description](#), [3.4.1.5 Notes Statement](#), [3.6 Work Description](#), [3.6.11 Notes Statement](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<notesStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<notesStmt> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<notesStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<notesStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<notesStmt> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<notesStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<notesStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<notesStmt> → att.common → att.basic → att.id → @xml:id

## Member of

(notesStmt isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<notesStmt> → elements having notesStmt as direct children → <expression>

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<notesStmt> → elements having notesStmt as direct children → <fileDesc>

**<item>** Single instance or exemplar of a source/manifestation.

<notesStmt> → elements having notesStmt as direct children → <item>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<notesStmt> → elements having notesStmt as direct children → <manifestation>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<notesStmt> → elements having notesStmt as direct children → <work>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<notesStmt> → [model.annotLike](#) → <annot>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<notesStmt> → [model.headLike](#) → <head>

## Remarks

The model of this element is based on the [notesStmt](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="notesStmt" module="MEI.header">
  <desc xml:lang="en">(notes statement)– Collects any notes providing information about a

    Initiative (TEI).</p>
  </remarks>
</elementSpec>
```

## <num>

(number) – Numeric information in any form.

### Referenced in chapters

[9.2.10 Numbers](#)

### Module

[MEI.shared](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<num> → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<num> → [att.ranging](#) → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<num> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<num> → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<num> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<num> → [att.common](#) → [att.linking](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<num> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<num> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<num> → [att.common](#) → [att.labelled](#) → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<num> → [att.ranging](#) → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<num> → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.URI](#).

<num> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<num> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<num> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<num> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<num> → att.measurement → @unit

**@value** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<num> → direct children → @value

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<num> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<num> → `att.common` → `att.basic` → `att.id` → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<num> → `att.lang` → @xml:lang

## Member of

[model.numLike](#) Groups elements that denote a number or a quantity.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → `model.editTransPart.text` → `model.editTransPart` → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <actor>

**<add>** Marks an addition to the text.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → `model.editTransPart.text` → `model.editTransPart` → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → `model.textPhraseLike` → <addName>

**<addrLine>** Single line of a postal address.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → `model.textPhraseLike` → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → `model.textPhraseLike` → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<num> → `model.numLike` → `model.measurementLike` → `model.textPhraseLike.limited` → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <extent>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile",

"Moderato", "J=60", "Moderato J =60").

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<num> → model.numLike → model.measurementLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<num> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<num> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<num> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<num> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<num> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<num> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<num> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<num> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<num> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<num> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<num> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<num> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<num> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<num> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<num> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<num> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<num> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Use this element only when it is necessary to display a number in a special way or to identify it with a type attribute.

DEVELOPMENT  
VERSION

## <oLayer>

(ossia layer) – A layer that contains an alternative to material in another layer.

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<oLayer> → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linkin](#) → @corresp

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

<oLayer> → [att.layer.log](#) → [att.cue](#) → @cue

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.metadataPointing](#) → @decls

**@def** (*optional*) Provides a mechanism for linking the layer to a layerDef element. Value conforms to [data.URI](#).

<oLayer> → [att.layer.log](#) → @def

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<oLayer> → [att.labelled](#) → @label

**@metcon** (*optional*) Indicates the relationship between the content of a staff or layer and the prevailing meter. Allowed values are: "**c**" (*Complete*; , *conformant with the prevailing meter.*), "**i**" (*Incomplete*; , *not enough beats.*), "**o**" (*Overfull*; , *too many beats.*)

<oLayer> → [att.layer.log](#) → [att.meterConformance](#) → @metcon

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<oLayer> → [att.nInteger](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<oLayer> → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<oLayer> → [att.typed](#) → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<oLayer> → [att.layer.vis](#) → [att.visibility](#) → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<oLayer> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<oLayer> → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(oLayer isn't member of any model class)

## Contained By

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<oLayer> → elements having oLayer as direct children → <ossia>

## May Contain

**<accid>** Records a temporary alteration to the pitch of a note.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<oLayer> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<oLayer> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<oLayer> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<oLayer> → model.appLike → <app>

**<artic>** An indication of how to play a note or chord.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<bTrem>** A rapid alternation on a single pitch or chord.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<oLayer> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<cb>** An empty formatting element that forces text to begin in a new column.

<oLayer> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<oLayer> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<oLayer> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<oLayer> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<oLayer> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<oLayer> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<oLayer> → model.transcriptionLike → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<oLayer> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<oLayer> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<oLayer> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<oLayer> → model.transcriptionLike → <del>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<oLayer> → model.transcriptionLike → <gap>

**<graceGrp>** A container for a sequence of grace notes.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<halfmRpt>** A half-measure repeat in any meter.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<oLayer> → model.transcriptionLike → <handShift>

**<keySig>** Written key signature.

<oLayer> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<oLayer> → model.graphicPrimitiveLike → <line>

**<mRest>** Complete measure rest in any meter.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<meterSig>** Written meter signature.

<oLayer> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<oLayer> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<neume>** Sign representing one or more musical pitches.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<oLayer> → model.layerPart → model.eventLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<oLayer> → model.transcriptionLike → <orig>

**<pad>** An indication of extra visual space between notational elements.

<oLayer> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<oLayer> → model.milestoneLike.music → model.pbLike → <pb>

**<proport>** Description of note duration as arithmetic ratio.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<reg>** Contains material which has been regularized or normalized in some sense.

<oLayer> → model.transcriptionLike → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<oLayer> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<oLayer> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<oLayer> → model.milestoneLike.music → <sb>

**<sic>** Contains apparently incorrect or inaccurate material.

<oLayer> → model.transcriptionLike → <sic>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<oLayer> → model.layerPart → model.eventLike → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<oLayer> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<oLayer> → model.transcriptionLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<oLayer> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<oLayer> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<oLayer> → model.transcriptionLike → <unclear>

DEVELOPMENT  
VERSION

## <oStaff>

(ossia staff) – A staff that holds an alternative passage which may be played instead of the original material.

### Module

MEI.cmn

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<oStaff> → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linked → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.metadataPointing → @decls

**@def** (*optional*) Provides a mechanism for linking the staff to a staffDef element. Value conforms to [data.URI](#).

<oStaff> → att.staff.log → @def

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<oStaff> → att.labelled → @label

**@metcon** (*optional*) Indicates the relationship between the content of a staff or layer and the prevailing meter. Allowed values are: "**c**" (*Complete*; , *conformant with the prevailing meter*.), "**i**" (*Incomplete*; , *not enough beats*.), "**o**" (*Overfull*; , *too many beats*.)

<oStaff> → att.staff.log → att.meterConformance → @metcon

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<oStaff> → att.nInteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<oStaff> → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<oStaff> → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<oStaff> → att.staff.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<oStaff> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<oStaff> → att.basic → att.id → @xml:id

## Member of

(oStaff isn't member of any model class)

## Contained By

**<oSSIA>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<oStaff> → elements having oStaff as direct children → <oSSIA>

## May Contain

**<add>** Marks an addition to the text.

<oStaff> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<oStaff> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<oStaff> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<oStaff> → model.appLike → <app>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <bend>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <caesura>

**<cb>** An empty formatting element that forces text to begin in a new column.

<oStaff> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<oStaff> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<oStaff> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<oStaff> → model.transcriptionLike → <corr>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<oStaff> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<oStaff> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<oStaff> → model.transcriptionLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <dynam>

**<fing>** finger – An individual finger in a fingering indication.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<oStaff> → model.transcriptionLike → <gap>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <gliss>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<oStaff> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.controlEventLike.harmon

**<layer>** An independent stream of events on a staff.

<oStaff> → model.staffPart → model.layerLike → <layer>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<oStaff> → model.graphicPrimitiveLike → <line>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <metaMark>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<oStaff> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <ornam>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<oStaff> → model.staffPart → model.ossiaLike → <ossia>

**<pb>** An empty formatting element that forces text to begin on a new page.

<oStaff> → model.milestoneLike.music → model.pbLike → <pb>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <phrase>

**<reg>** Contains material which has been regularized or normalized in some sense.

<oStaff> → model.transcriptionLike → <reg>

**<relation>** Describes a relationship or linkage amongst entities.

<oStaff> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<oStaff> → model.relationLike → <relationList>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<oStaff> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<oStaff> → model.milestoneLike.music → <sb>

**<sic>** Contains apparently incorrect or inaccurate material.

<oStaff> → model.transcriptionLike → <sic>

**<sp>** Contains an individual speech in a performance text.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <sp>

**<staffDef>** Container for staff meta-information.

<oStaff> → model.staffDefLike → <staffDef>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.stageDirLike → <stageDir>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<oStaff> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<oStaff> → model.transcriptionLike → <supplied>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<oStaff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <tempo>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<oStaff> → model.transcriptionLike → <unclear>

## <octave>

An indication that a passage should be performed one or more octaves above or below its written pitch.

### Referenced in chapters

[4.3.5 Articulation and Performance Instructions in CMN](#), [4.3.5.5 Octave Shift](#)

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@coll** (*optional*) Indicates whether the octave displacement should be performed simultaneously with the written notes, i.e., "coll' ottava". Unlike other octave signs which are indicated by broken lines, coll' ottava typically uses an unbroken line or a series of longer broken lines, ending with a short vertical stroke. See Read, p. 47-48. Allowed values are: "**coll**" (*Coll' ottava (with the octave).*)

<octave> → [att.octave.log](#) → @coll

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<octave> → [att.common](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<octave> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.linked](#) → @corresp

**@dis** (*optional*) Records the amount of octave displacement. Value conforms to [data.OCTAVE.DIS](#).

<octave> → [att.octave.log](#) → [att.octaveDisplacement](#) → @dis

**@dis.place** (*optional*) Records the direction of octave displacement. Value conforms to [data.STAFFREL.basic](#).

<octave> → [att.octave.log](#) → [att.octaveDisplacement](#) → @dis.place

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<octave> → [att.octave.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<octave> → [att.octave.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<octave> → [att.octave.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<octave> → att.octave.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<octave> → att.octave.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<octave> → att.octave.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum [\\*\\*recip value](#). Value is a [token](#).

<octave> → att.octave.ges → att.duration.ges → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<octave> → att.octave.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<octave> → att.octave.log → att.startEndid → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<octave> → att.octave.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<octave> → att.octave.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<octave> → att.octave.vis → att.extender → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<octave> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<octave> → att.common → att.linking → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<octave> → att.octave.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<octave> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<octave> → att.octave.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<octave> → att.octave.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<octave> → att.octave.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<octave> → att.octave.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<octave> → att.octave.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<octave> → att.octave.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<octave> → att.octave.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<octave> → att.octave.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<octave> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<octave> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<octave> → att.octave.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<octave> → att.octave.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<octave> → att.octave.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<octave> → [att.octave.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<octave> → [att.octave.vis](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<octave> → [att.octave.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<octave> → [att.octave.vis](#) → [att.visualOffset2.to](#) → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<octave> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<octave> → [att.octave.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<octave> → [att.octave.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<octave> → [att.octave.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<octave> → [att.octave.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<octave> → att.octave.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<octave> → att.octave.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<octave> → att.octave.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<octave> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<octave> → att.octave.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<octave> → att.octave.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<octave> → att.octave.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<octave> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<octave> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<octave> → att.octave.vis → att.xy → @y

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<octave> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<octave> → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<octave> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<octave> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<octave> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<octave> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<octave> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<octave> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<octave> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<octave> → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<octave> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<octave> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<octave> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<octave> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<octave> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<octave> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<octave> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<octave> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<octave> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<octave> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<octave> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<octave> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<octave> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<octave> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<octave> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<octave> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<octave> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<octave> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<octave> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<octave> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<octave> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<octave> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<octave> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<octave> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<octave> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<octave> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<octave> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<octave> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<octave> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<octave> → model.textPhraseLike.limited → model.mslnline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<octave> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<octave> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<octave> → model.textPhraseLike.limited → model.mslnline → <signatures>

**<stack>** An inline table with a single column.

<octave> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<octave> → model.textPhraseLike.limited → model.mslnline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<octave> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<octave> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<octave> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<octave> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<octave> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<octave> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<octave> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The dis and dis.place attributes record the amount and direction of displacement, respectively. The lform and lwidth attributes capture the appearance of the continuation line associated with the octave displacement. The starting point of the octave displacement may be indicated by either a startid, tstamp,

tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute. Also, note that the dur attribute is not required because the octave displacement can be visually instantaneous.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

## Declaration

```

## <orig>

(original) – Contains material which is marked as following the original, rather than being normalized or corrected.

### Referenced in chapters

[4.4.3.1 Special Cases](#), [11.2 Editorial Markup](#), [11.2.3 Regularization and Normalization](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<orig> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<orig> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<orig> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<orig> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<orig> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

**"conjecture"** (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<orig> → [att.edit](#) → [att.evidence](#) → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<orig> → [att.extent](#) → @extent

**@facscs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.facsimile](#) → @facscs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<orig> → [att.common](#) → [att.labelled](#) → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<orig> → [att.extent](#) → [att.ranging](#) → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<orig> → [att.extent](#) → [att.ranging](#) → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<orig> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.edit](#) → [att.source](#) → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<orig> → [att.common](#) → [att.linking](#) → @synch

**@translit** (optional) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<orig> → [att.lang](#) → @translit

**@type** (optional) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<orig> → [att.common](#) → [att.typed](#) → @type

**@unit** (optional) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<orig> → [att.extent](#) → [att.measurement](#) → @unit

**@xml:base** (optional) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<orig> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (optional) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<orig> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (optional) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<orig> → [att.lang](#) → @xml:lang

## Member of

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<orig> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<orig> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<orig> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<orig> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<orig> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<orig> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<orig> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<orig> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<orig> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<orig> → model.transcriptionLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<orig> → model.choicePart → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<orig> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<orig> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<orig> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<orig> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<orig> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<orig> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<orig> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<orig> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<orig> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<orig> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<orig> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<orig> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<orig> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<orig> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<orig> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<orig> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<orig> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<orig> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<orig> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<orig> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<orig> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<orig> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<orig> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<orig> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<orig> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<orig> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<orig> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<orig> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<orig> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<orig> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<orig> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<orig> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<orig> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<orig> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<orig> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<orig> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<orig> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<orig> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<orig> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<orig> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<orig> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<orig> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<orig> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<orig> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<orig> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<orig> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<orig> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<orig> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<orig> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<orig> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<orig> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<orig> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<orig> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<orig> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<orig> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<orig> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<orig> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<orig> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<orig> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<orig> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<orig> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<orig> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<orig> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<orig> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<orig> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<orig> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<orig> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<orig> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<orig> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<orig> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<orig> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<orig> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<orig> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<orig> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<orig> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<orig> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<orig> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<orig> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<orig> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<orig> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<orig> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<orig> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<orig> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<orig> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<orig> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<orig> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<orig> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<orig> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<orig> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<orig> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<orig> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<orig> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<orig> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<orig> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or *dramatis personae*.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<orig> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<orig> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<orig> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<orig> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<orig> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<orig> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<orig> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<orig> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<orig> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<orig> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<orig> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<orig> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<orig> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<orig> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<orig> → model.fLike → <f>

**<ftrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <ftrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<orig> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geo

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<orig> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <heraldry>

**<hispanTick>** Hispanic tick.

<orig> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<orig> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<orig> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<orig> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<orig> → model.graphicPrimitiveLike → <line>

**<liquefent>** Liquescent.

<orig> → model.neumeComponentModifierLike → <liquefent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<orig> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<orig> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<orig> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<orig> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<orig> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<orig> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<orig> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<orig> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<orig> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<orig> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<orig> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<orig> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<orig> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike

**<rest>** A non-sounding event found in the source being transcribed.

<orig> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<orig> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<orig> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<orig> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<orig> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<orig> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<orig> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<orig> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.renderLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<orig> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<orig> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<orig> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<orig> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<orig> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<orig> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<orig> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<orig> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<orig> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<orig> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<orig> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<orig> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<orig> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<orig> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<orig> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

This element will often be combined with a regularized form within a choice element. The editor(s) responsible for asserting that the material is original may be recorded in the resp attribute. The value of resp must point to one or more identifiers declared in the document header. The cert attribute signifies the degree of certainty ascribed to the transcription of the original text.

In no case should `<orig>` contain elements that would not otherwise be permitted to occur within the parent of its own `<app>` ancestor. For example, when used as a descendent of `<verse>`, `<orig>` should only contain those elements allowed within `<verse>`.

The model of this element is based on the `orig` element of the Text Encoding Initiative (TEI).

## <oriscus>

Oriscus.

### Referenced in chapters

[6.4.1 Elements](#)

### Module

[MEI.neumes](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<oriscus> → att.oriscus.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<oriscus> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<oriscus> → att.oriscus.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<oriscus> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<oriscus> → att.common → att.linked → @corresp`

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

`<oriscus> → att.oriscus.vis → att.enclosingChars → @enclose`

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<oriscus> → att.facsimile → @facsimile`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<oriscus> → att.common → att.linked → @follows`

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

`<oriscus> → att.oriscus.vis → att.typography → @fontfamily`

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

`<oriscus> → att.oriscus.vis → att.typography → @fontname`

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<oriscus> → att.oriscus.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to data.FONTSTYLE.

<oriscus> → att.oriscus.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to data.FONTWEIGHT.

<oriscus> → att.oriscus.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*)

<oriscus> → att.oriscus.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<oriscus> → att.oriscus.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to data.HEXNUM.

<oriscus> → att.oriscus.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to data.URI.

<oriscus> → att.oriscus.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to data.MEASUREMENTSIGNED.

<oriscus> → att.oriscus.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<oriscus> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to data.MEASUREMENTTYPOGRAPHYSIGNED.

<oriscus> → att.oriscus.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either data.MEASUREMENTTYPOGRAPHYUNSIGNED or data.PERCENT.

<oriscus> → att.oriscus.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to data.STAFFLOC.

<oriscus> → att.oriscus.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<oriscus> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<oriscus> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from data.URI, separated by spaces.

<oriscus> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<oriscus> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<oriscus> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<oriscus> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<oriscus> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<oriscus> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<oriscus> → att.oriscus.vis → att.visibility → @visible

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<oriscus> → att.oriscus.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<oriscus> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<oriscus> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<oriscus> → att.oriscus.vis → att.xy → @y

## Member of

[model.neumeComponentModifierLike](#) Groups elements that modify neume components.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<oriscus> → model.neumeComponentModifierLike → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<oriscus> → model.neumeComponentModifierLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<oriscus> → model.neumeComponentModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<oriscus> → model.neumeComponentModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

<oriscus> → model.neumeComponentModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<oriscus> → model.neumeComponentModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<oriscus> → model.neumeComponentModifierLike → <nc>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<oriscus> → model.neumeComponentModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<oriscus> → model.neumeComponentModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<oriscus> → model.neumeComponentModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<oriscus> → model.neumeComponentModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<oriscus> → model.neumeComponentModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<oriscus> → model.neumeComponentModifierLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<oriscus> → model.neumeComponentModifierLike → <unclear>

DEVELOPMENT  
VERSION

## <ornam>

An element indicating an ornament that is not a mordent, turn, or trill.

### Referenced in chapters

[2.2.5.5 Ornaments](#), [4.4.5 Other Ornaments](#)

### Module

[MEI.shared](#)

### Attributes

**@accidlower** (*optional*) Records the written accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<ornam> → [att.ornam.log](#) → [att.ornamentAccid](#) → @accidlower

**@accidlower.ges** (*optional*) Records the sounding accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<ornam> → [att.ornam.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidlower.ges

**@accidupper** (*optional*) Records the written accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<ornam> → [att.ornam.log](#) → [att.ornamentAccid](#) → @accidupper

**@accidupper.ges** (*optional*) Records the sounding accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<ornam> → [att.ornam.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidupper.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<ornam> → [att.ornam.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<ornam> → [att.ornam.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ornam> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linkin](#) → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<ornam> → [att.ornam.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<ornam> → [att.ornam.ges](#) → [att.duration.ges](#) → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<ornam> → [att.ornam.vis](#) → [att.enclosingChars](#) → @enclose

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<ornam> → [att.ornam.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset2.to](#) → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linking](#) → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ornam> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ornam> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linked](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\ni][\nc]+)"**, separated by spaces.

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<ornam> → [att.ornam.vis](#) → [att.placeRelStaff](#) → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<ornam> → [att.ornam.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset2.to](#) → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ornam> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<ornam> → [att.ornam.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<ornam> → [att.ornam.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<ornam> → [att.ornam.log](#) → [att.timestamp2.log](#) → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<ornam> → [att.ornam.ges](#) → [att.timestamp2.ges](#) → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<ornam> → [att.ornam.ges](#) → [att.timestamp2.ges](#) → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<ornam> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<ornam> → att.ornam.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<ornam> → att.ornam.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<ornam> → att.ornam.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ornam> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ornam> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<ornam> → att.ornam.vis → att.xy → @y

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ornam> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<ornam> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<ornam> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ornam> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<ornam> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<ornam> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ornam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ornam> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<ornam> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<ornam> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<ornam> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<ornam> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<ornam> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<ornam> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<ornam> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<ornam> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<ornam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ornam> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<ornam> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<ornam> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<ornam> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<ornam> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ornam> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<ornam> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<ornam> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<ornam> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<ornam> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<ornam> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<ornam> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<ornam> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<ornam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<ornam> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<ornam> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<ornam> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<ornam> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<ornam> → model.textPhraseLike.limited → model.lbLike → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<ornam> → model.graphicPrimitiveLike → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<ornam> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<ornam> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<ornam> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<ornam> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ornam> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<ornam> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<ornam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<ornam> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<ornam> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<ornam> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<ornam> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<ornam> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ornam> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<ornam> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<ornam> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<ornam> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<ornam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ornam> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<ornam> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<ornam> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<ornam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<ornam> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<ornam> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<ornam> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<ornam> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<ornam> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<ornam> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<ornam> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ornam> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<ornam> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<ornam> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<ornam> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ornam> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<ornam> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<ornam> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

If it is not textual, the glyph of the ornament may be indicated with the altsym attribute, and it is recommended to provide an expansion of the ornament on the staff content. The starting point of the ornament may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute. It is a semantic error not to specify one of these attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```

## <ossia>

Captures original notation and a differently notated version **\*present in the source being transcribed\***.

### Referenced in chapters

[4.3.7 Ossia](#)

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ossia> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ossia> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ossia> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ossia> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<ossia> → [att.common](#) → [att.type](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ossia> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ossia> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.ossiaLike](#) Groups elements that function like ossia.

## Contained By

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<ossia> → [model.ossiaLike](#) → [model.measurePart](#) → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<ossia> → [model.ossiaLike](#) → [model.staffPart](#) → <oStaff>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<ossia> → [model.ossiaLike](#) → [model.staffPart](#) → <staff>

## May Contain

**<layer>** An independent stream of events on a staff.

<ossia> → [model.layerLike](#) → <layer>

**<oLayer>** A layer that contains an alternative to material in another layer.

<ossia> → direct children → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<ossia> → direct children → <oStaff>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<ossia> → [model.staffLike](#) → <staff>

## Remarks

The alternative material in an ossia often provides a simpler, easier-to-perform option, while at other times the alternate material provides indications of performance practice, such as ornamentation. Often an ossia is rendered above the main staff on a reduced-size staff. Sometimes the alternate material occurs on the same staff as the primary text, but in a separate layer. In this case, the alternative material is often rendered in small-sized notation.

## Constraints

In a measure, ossia may only contain staff and oStaff elements.

In a staff, ossia may only contain layer and oLayer elements.

## Declaration

## <otherChar>

(other distinguishing characteristic) – Any characteristic that serves to differentiate a work or expression from another.

### Referenced in chapters

[3.6 Work Description](#), [3.6.4 Other Identifying Characteristics](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<otherChar> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<otherChar> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<otherChar> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<otherChar> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<otherChar> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<otherChar> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<otherChar> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<otherChar> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<otherChar> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<otherChar> → [att.lang](#) → @xml:lang

## Member of

(otherChar isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<otherChar> → elements having otherChar as direct children → <expression>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<otherChar> → elements having otherChar as direct children → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<otherChar> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<otherChar> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<otherChar> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<otherChar> → macro.struc-unstrucContent → model.plike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<otherChar> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<otherChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## <p>

(paragraph) – One or more text phrases that form a logical prose passage.

### Referenced in chapters

[2.1.4 General Text Structure Elements](#), [3.7.1 Title Pages](#), [9.2.1 Paragraphs](#), [9.2.3.1 Figure Captions and Descriptions](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<p> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<p> → att.metadataPointing → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<p> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<p> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<p> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<p> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<p> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<p> → att.common → att.typed → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<p> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<p> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<p> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<p> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<p> → att.xy → @y

## Member of

[model.pLike](#) Groups paragraph-like elements.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<p> → model.pLike → <acquisition>

**<add>** Marks an addition to the text.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<p> → model.pLike → model.textComponentLike → <annot>

**<application>** Provides information about an application which has acted upon the current document.

<p> → model.pLike → <application>

**<argument>** Contains a formal list or prose description of topics addressed.

<p> → model.pLike → model.textComponentLike → <argument>

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.

<p> → elements having p as direct children → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.

<p> → elements having p as direct children → <bindingDesc>

**<changeDesc>** Description of a revision of the MEI file.

<p> → model.pLike → <changeDesc>

**<contents>** List of the material contained within a resource.

<p> → model.pLike → <contents>

**<corr>** Contains the correct form of an apparent erroneous passage.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <corr>

**<correction>** States how and under what circumstances corrections have been made in the text.

<p> → model.pLike → <correction>

**<damage>** Contains an area of damage to the physical medium.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<decoDesc>** Contains a description of the decoration of an item.

<p> → elements having p as direct children → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<p> → elements having p as direct children → <decoNote>

**<dedication>** Contains a dedicatory statement.

<p> → model.pLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<p> → model.pLike → model.textComponentLike → <div>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<p> → model.pLike → <editorialDecl>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<p> → elements having p as direct children → <epigraph>

**<event>** Contains a free-text event description.

<p> → model.pLike → <event>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<p> → model.pLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<p> → model.pLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<p> → model.pLike → model.textComponentLike → <history>

**<incipText>** Opening words of a musical composition.

<p> → model.pLike → <incipText>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

<p> → model.pLike → <interpretation>

**<layoutDesc>** Collects layout descriptions.

<p> → elements having p as direct children → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<p> → model.pLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<p> → model.pLike → model.textComponentLike → <li>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

<p> → model.pLike → <normalization>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<p> → model.pLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<p> → model.pLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<p> → model.pLike → model.textComponentLike → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<p> → model.pLike → <physDesc>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

<p> → model.pLike → <projectDesc>

**<provenance>** The record of ownership or custodianship of an item.

<p> → model.pLike → <provenance>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<p> → model.pLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<p> → model.pLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

<p> → model.pLike → <samplingDecl>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<p> → elements having p as direct children → <scriptDesc>

**<seal>** A single seal or similar attachment.

<p> → elements having p as direct children → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<p> → elements having p as direct children → <sealDesc>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

<p> → model.pLike → <segmentation>

**<sic>** Contains apparently incorrect or inaccurate material.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<sp>** Contains an individual speech in a performance text.

<p> → model.pLike → <sp>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

<p> → model.pLike → <stdVals>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<support>** Provides a description of the physical support material of a written item.

<p> → elements having p as direct children → <support>

**<supportDesc>** Groups elements describing the physical support material of an item.

<p> → elements having p as direct children → <supportDesc>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<p> → model.pLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<p> → model.pLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<p> → model.pLike → model.textComponentLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<p> → model.pLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<p> → model.pLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<p> → elements having p as direct children → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<p> → model.pLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<p> → model.paracontentPart → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<p> → model.paracontentPart → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<p> → model.paracontentPart → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<p> → model.paracontentPart → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<p> → model.paracontentPart → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<p> → model.paracontentPart → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<p> → model.paracontentPart → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<p> → model.paracontentPart → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<p> → model.paracontentPart → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geog

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<p> → model.paracontentPart → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<p> → model.paracontentPart → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<p> → model.paracontentPart → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<p> → model.paracontentPart → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<p> → model.paracontentPart → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<p> → model.paracontentPart → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<p> → model.paracontentPart → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<p> → model.paracontentPart → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<p> → model.paracontentPart → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<p> → model.paracontentPart → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<p> → model.paracontentPart → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<p> → model.paracontentPart → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<p> → model.paracontentPart → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<p> → model.paracontentPart → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<p> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

A paragraph is usually typographically distinct: The text usually begins on a new line and the first letter of the content is often indented, enlarged, or both.

The model of this element is based on the [p](#) element of the Encoded Archival Description, the [p](#) element of the Text Encoding Initiative (TEI), and the [p](#) element of HTML.

## Declaration

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pad> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pad> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pad> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pad> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pad> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<pad> → [att.pad.log](#) → [att.event](#) → [att.staffident](#) → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pad> → [att.common](#) → [att.linking](#) → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<pad> → [att.pad.log](#) → [att.event](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<pad> → [att.pad.log](#) → [att.event](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).  
<pad> → [att.pad.log](#) → [att.event](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<pad> → [att.common](#) → [att.typed](#) → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<pad> → [att.pad.log](#) → [att.event](#) → [att.alignment](#) → @when

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<pad> → [att.pad.log](#) → [att.width](#) → @width

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pad> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pad> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pad> → model.eventLike → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<pad> → model.eventLike → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<pad> → model.eventLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<pad> → model.eventLike → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<pad> → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<pad> → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<pad> → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<pad> → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<pad> → model.eventLike → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<pad> → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<pad> → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<pad> → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<pad> → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<pad> → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<pad> → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<pad> → model.eventLike → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<pad> → model.eventLike → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<pad> → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<pad> → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<pad> → model.eventLike → model.layerPart → <unclear>

## May Contain

## <part>

An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [2.2.1 Score and Parts](#), [4.2.2 Defining Score Parameters for CMN](#), [4.2.4 Re-definition of Score Parameters](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<part> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<part> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<part> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<part> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<part> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<part> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<part> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<part> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.partLike](#) Groups elements that represent a separate performer part.

## Contained By

**<parts>** Provides a container for performers' parts.

<part> → [model.partLike](#) → <parts>

## May Contain

**<add>** Marks an addition to the text.

<part> → [model.transcriptionLike](#) → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<part> → [model.graphicPrimitiveLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<part> → [model.annotLike](#) → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<part> → [model.appLike](#) → <app>

**<cb>** An empty formatting element that forces text to begin in a new column.

<part> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<part> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<part> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<part> → model.transcriptionLike → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<part> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<part> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<part> → model.transcriptionLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<part> → model.divLike → <div>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<part> → model.scorePart → model.endingLike → <ending>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<part> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<part> → model.transcriptionLike → <handShift>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<part> → model.graphicPrimitiveLike → <line>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<part> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<part> → model.milestoneLike.music → model.pbLike → <pb>

**<reg>** Contains material which has been regularized or normalized in some sense.

<part> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<part> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<part> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<part> → model.scoreDefLike → <scoreDef>

**<section>** Segment of music data.

<part> → model.scorePart → model.sectionLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<part> → model.transcriptionLike → <sic>

**<staffDef>** Container for staff meta-information.

<part> → model.staffDefLike → <staffDef>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<part> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<part> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<part> → model.transcriptionLike → <unclear>

## Remarks

<part> elements are not used in MEI to indicate voice leading. next attributes on event elements should be used for this purpose. <part> elements are useful for encoding individual parts when there is no score, such as early music part books, when the music has non-aligning bar lines, when different layout, such as page turns, are needed for the score and parts, or for accommodating software that requires part-by-part encoding. When assembly of the parts into a score is desired and there are non-aligning bar lines, bar lines which indicate points of alignment across all the parts may be marked as 'controlling', while non-aligning ones may be marked as 'non-controlling'.

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<parts> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<parts> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<parts> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<parts> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<parts> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<parts> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<parts> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.partsLike](#) Groups elements that collect separate performer parts.

## Contained By

**<mdiv>** Contains a subdivision of the body of a musical text.

<parts> → [model.partsLike](#) → <mdiv>

## May Contain

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<parts> → [model.partLike](#) → <part>

DEVELOPMENT  
VERSION

## <patch>

Describes a physical writing surface attached to the original document.

### Referenced in chapters

[3.7.2.3 Patches](#), [11.3.4 Genetic Changes at the Page Level](#)

### Module

[MEI.header](#)

### Attributes

**@attached.by** (*optional*) Describes the method of attachment of the patch. Allowed values are: "**glue**" (*patch is glued on surface beneath.*), "**thread**" (*patch is sewn on surface beneath.*), "**needle**" (*patch is pinned to the surface beneath.*), "**tape**" (*patch is taped on surface beneath using an adhesive strip.*), "**staple**" (*patch is attached on surface beneath using a staple.*)

<patch> → direct children → @attached.by

**@attached.to** (*required*) Describes the position of the patch on the parent folium / bifolium. Allowed values are: "**outer.recto**" (*patch attached to outer recto side of bifolium.*), "**inner.verso**" (*patch attached to inner verso side of bifolium.*), "**inner.recto**" (*patch attached to inner recto side of bifolium.*), "**outer.verso**" (*patch attached to outer verso side of bifolium.*), "**recto**" (*patch attached to recto side of folium.*), "**verso**" (*patch attached to verso side of folium.*)

<patch> → direct children → @attached.to

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<patch> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<patch> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<patch> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<patch> → [att.common](#) → [att.linking](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<patch> → [att.trans](#) → [att.metadataPointing](#) → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<patch> → [att.evidence](#) → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<patch> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to [data.BOOLEAN](#) or [unknown](#).

<patch> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<patch> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<patch> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<patch> → att.trans → att.sequence → @seq

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<patch> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<patch> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<patch> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<patch> → att.measurement → @unit

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<patch> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<patch> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<patch> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<patch> → att.xy → @y

## Member of

[model.paperModLike](#) Groups elements dealing with modifications of document pages.

## Contained By

**<bifolium>** Describes a folded sheet of paper.

<patch> → [model.paperModLike](#) → <bifolium>

**<folium>** Describes a single leaf of paper.

<patch> → [model.paperModLike](#) → <folium>

## May Contain

**<bifolium>** Describes a folded sheet of paper.

<patch> → [model.bifoliumLike](#) → <bifolium>

**<folium>** Describes a single leaf of paper.

<patch> → [model.foliumLike](#) → <folium>

## Remarks

A patch must always contain a <folium> or <bifolium> element. The @x and @y attributes are used to position the patch on its parent surface by indicating the upper left corner of the patch. The size of the patch is encoded using the @height and @width attributes on the child folium (or bifolium).

## Constraints

The allowed positions of a patch depend on its parent element.  
A patch element must contain either a folium or a bifolium element.

## Declaration

## <pb>

(page beginning) – An empty formatting element that forces text to begin on a new page.

### Referenced in chapters

[2.1.3 Document Layout Elements](#), [12.1.1 Elements of the Facsimile Module](#), [13.2.1 Pointers and References](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pb> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pb> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pb> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<pb> → att.facsimile → @facs

**@folium** (*optional*) States the side of a leaf (as in a manuscript) on which the content following the <pb> element occurs. Allowed values are: "**verso**" (*The back of a manuscript page.*), "**recto**" (*The front of a manuscript page.*)

<pb> → att.pb.vis → @folium

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pb> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pb> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pb> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pb> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pb> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<pb> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<pb> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<pb> → att.common → att.linked → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from data.URI, separated by spaces.

<pb> → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from data.URI, separated by spaces.

<pb> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from data.URI, separated by spaces.

<pb> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a NMTOKEN.

<pb> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

NMTOKEN, separated by spaces.

<pb> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to data.URI.

<pb> → att.pb.log → att.alignment → @when

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "onLoad" (*Load the target resource(s) immediately.*), "onRequest" (*Load the target resource(s) upon user request.*), "none" (*Do not permit loading of the target resource(s).*), "other" (*Behavior other than allowed by the other values of this attribute.*)

<pb> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to data.URI.

<pb> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<pb> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pb> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pb> → att.common → att.basic → att.id → @xml:id

## Member of

[model.pbLike](#) Groups page beginning-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pb> → [model.pbLike](#) → [model.milestoneLike.music](#) → <abbr>

**<add>** Marks an addition to the text.

<pb> → [model.pbLike](#) → [model.milestoneLike.music](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <addrLine>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<pb> → [model.pbLike](#) → [model.milestoneLike.text](#) → <argument>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<pb> → [model.pbLike](#) → [model.milestoneLike.text](#) → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <bibl>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <caption>

**<contentItem>** Contains a single entry within a content description element.

<pb> → [model.pbLike](#) → [model.textPhraseLike](#) → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<pb> → model.pbLike → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<pb> → model.pbLike → model.milestoneLike.music → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<pb> → model.pbLike → model.textPhraseLike → <country>

**<damage>** Contains an area of damage to the physical medium.

<pb> → model.pbLike → model.milestoneLike.music → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<pb> → model.pbLike → model.textPhraseLike → <date>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<pb> → model.pbLike → model.milestoneLike.music → <del>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<pb> → model.pbLike → model.textPhraseLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<pb> → model.pbLike → model.milestoneLike.text → <div>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<pb> → model.pbLike → model.milestoneLike.music → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<pb> → model.pbLike → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<pb> → model.pbLike → model.milestoneLike.music → <expan>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<pb> → model.pbLike → model.textPhraseLike → <famName>

**<foreName>** Contains a forename, given or baptismal name.

<pb> → model.pbLike → model.textPhraseLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

<pb> → model.pbLike → model.milestoneLike.text → <front>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<pb> → model.pbLike → model.textPhraseLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<pb> → model.pbLike → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<pb> → model.pbLike → model.textPhraseLike → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<pb> → model.pbLike → model.textPhraseLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<pb> → model.pbLike → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<pb> → model.pbLike → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<pb> → model.pbLike → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<pb> → model.pbLike → model.textPhraseLike → <I>

**<layer>** An independent stream of events on a staff.

<pb> → model.pbLike → model.milestoneLike.music → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<pb> → model.pbLike → model.milestoneLike.music → <lem>

**<li>** Single item in a <list>.

<pb> → model.pbLike → model.textPhraseLike → <li>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<pb> → model.pbLike → model.milestoneLike.music → <measure>

**<name>** Proper noun or noun phrase.

<pb> → model.pbLike → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<pb> → model.pbLike → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<pb> → model.pbLike → model.textPhraseLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<pb> → model.pbLike → model.milestoneLike.music → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<pb> → model.pbLike → model.milestoneLike.music → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<pb> → model.pbLike → model.milestoneLike.music → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<pb> → model.pbLike → model.textPhraseLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<pb> → model.pbLike → model.milestoneLike.music → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<pb> → model.pbLike → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<pb> → model.pbLike → model.textPhraseLike → <persName>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<pb> → model.pbLike → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<pb> → model.pbLike → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<pb> → model.pbLike → model.milestoneLike.music → <rdg>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<pb> → model.pbLike → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<pb> → model.pbLike → model.milestoneLike.music → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<pb> → model.pbLike → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<pb> → model.pbLike → model.textPhraseLike → <rend>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<pb> → model.pbLike → model.milestoneLike.music → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<pb> → model.pbLike → model.textPhraseLike → <roleName>

**<score>** Full score view of the musical content.

<pb> → model.pbLike → model.milestoneLike.music → <score>

**<section>** Segment of music data.

<pb> → model.pbLike → model.milestoneLike.music → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<pb> → model.pbLike → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<pb> → model.pbLike → model.milestoneLike.text → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<pb> → model.pbLike → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<pb> → model.pbLike → model.milestoneLike.music → <sic>

**<sp>** Contains an individual speech in a performance text.

<pb> → model.pbLike → model.milestoneLike.text → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<pb> → model.pbLike → model.milestoneLike.music → <staff>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<pb> → model.pbLike → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<pb> → model.pbLike → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<pb> → model.pbLike → model.milestoneLike.music → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<pb> → model.pbLike → model.milestoneLike.music → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<pb> → model.pbLike → model.textPhraseLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<pb> → model.pbLike → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<pb> → model.pbLike → model.milestoneLike.text → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<pb> → model.pbLike → model.milestoneLike.music → <unclear>

## May Contain

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<pb> → macro.metaLike.page → <pgDesc>

**<pgFoot>** A running footer.

<pb> → macro.metaLike.page → <pgFoot>

**<pgHead>** A running header.

<pb> → macro.metaLike.page → <pgHead>

## Remarks

The n attribute should be used to record the page number displayed in the source. It need not be an integer, e.g., 'iv', or 'p17-3'. The logical page number can be calculated by counting previous **<pb>** ancestor elements. When used in a score context, a page beginning implies an accompanying system beginning.

The model of this element is based on the **pb** element of the Text Encoding Initiative (TEI).

## Declaration

## <pedal>

Piano pedal mark.

### Referenced in chapters

[4.3.6.3 Piano Pedal](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <[symbolDef](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<pedal> → [att.pedal.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pedal> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<pedal> → [att.pedal.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pedal> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pedal> → [att.common](#) → [att.linking](#) → @corresp

**@dir** (*required*) Records the position of the piano damper pedal. Allowed values are: "**down**" (*Depress the pedal.*), "**up**" (*Release the pedal.*), "**half**" (*Half pedal.*), "**bounce**" (*Release then immediately depress the pedal.*)

<pedal> → [att.pedal.log](#) → @dir

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<pedal> → [att.pedal.log](#) → [att.startEndId](#) → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<pedal> → [att.pedal.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<pedal> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to data.FONTFAMILY.

<pedal> → att.pedal.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to data.FONTNAME.

<pedal> → att.pedal.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to data.FONTSIZE.

<pedal> → att.pedal.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to data.FONTSTYLE.

<pedal> → att.pedal.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to data.FONTWEIGHT.

<pedal> → att.pedal.vis → att.typography → @fontweight

**@form** (*optional*) Determines whether piano pedal marks should be rendered as lines or as terms. Value conforms to data.PEDALSTYLE.

<pedal> → att.pedal.vis → @form

**@func** (*optional*) Indicates the function of the depressed pedal, but not necessarily the text associated with its use. Use the <dir> element for such text. Allowed values are: "**sustain**" (*The sustain pedal, also referred to as the "damper" pedal, allows the piano strings to vibrate sympathetically with the struck strings. It is the right-most and the most frequently used pedal on modern pianos.*), "**soft**" (*The soft pedal, sometimes called the "una corda", "piano", or "half-blown" pedal, reduces the volume and modifies the timbre of the piano. On the modern piano, it is the left-most pedal.*), "**sostenuto**" (*The sostenuto or tone-sustaining pedal allows notes already undamped to continue to ring while other notes are damped normally; that is, on their release by the fingers. This is usually the center pedal of the modern piano.*), "**silent**" (*The silent or practice pedal mutes the volume of the piano so that one may practice quietly. It is sometimes a replacement for the sostenuto pedal, especially on an upright or vertical instrument.*)

<pedal> → att.pedal.log → @func

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<pedal> → att.pedal.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<pedal> → att.pedal.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to data.HEXNUM.

<pedal> → att.pedal.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to data.URI.

<pedal> → att.pedal.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<pedal> → [att.pedal.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pedal> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<pedal> → [att.pedal.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → @lendsym.size

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<pedal> → [att.pedal.vis](#) → [att.typography](#) → @letterspacing

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → [att.lineRend.base](#) → @lform

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<pedal> → [att.pedal.vis](#) → [att.typography](#) → @lineheight

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → [att.lineRend.base](#) → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<pedal> → [att.pedal.vis](#) → [att.lineRend](#) → [att.lineRend.base](#) → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pedal> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<pedal> → att.pedal.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<pedal> → att.pedal.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<pedal> → att.pedal.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.pedal.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<pedal> → att.pedal.log → att.controlEvent → att.staffIdent → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<pedal> → att.pedal.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pedal> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<pedal> → att.pedal.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<pedal> → att.pedal.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<pedal> → att.pedal.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<pedal> → att.pedal.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<pedal> → att.pedal.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<pedal> → att.pedal.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<pedal> → att.pedal.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<pedal> → att.common → att.typed → @type

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<pedal> → att.pedal.vis → att.verticalGroup → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<pedal> → att.pedal.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<pedal> → att.pedal.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *facs* attribute. Value is a decimal number.

<pedal> → att.pedal.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pedal> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pedal> → att.common → att.basic → att.id → @xml:id

**@y (optional)** Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<pedal> → att.pedal.vis → att.xy → @y

### Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<pedal> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<pedal> → [model.controlEventLike.cmn](#) → [model.measurePart](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<pedal> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<pedal> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<pedal> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

- (<pedal> may not have child elements)

## Remarks

The starting point of the pedal mark may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute. It is a semantic error not to specify one of these attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```

<elementSpec ident="pedal" module="MEI.cmn">

```

## <perfDuration>

(performance duration) – Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<perfDuration> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<perfDuration> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linkin](#) → @follows

**@isodur** (*optional*) Holds a W3C duration value, e.g., "PT2H34M45.67S". Value is an [ISO duration](#).

<perfDuration> → direct children → @isodur

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<perfDuration> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<perfDuration> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<perfDuration> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<perfDuration> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<perfDuration> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<perfDuration> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<perfDuration> → [att.lang](#) → @xml:lang

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<perfDuration> → [model.biblPart](#) → <bibl>

**<expression>** Intellectual or artistic realization of a work.

<perfDuration> → elements having perfDuration as direct children → <expression>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<perfDuration> → model.physDescPart → <physDesc>

**<titlePage>** Contains a transcription of the title page of a text.

<perfDuration> → model.titlePagePart → <titlePage>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<perfDuration> → elements having perfDuration as direct children → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedictee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<perfDuration> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<perfDuration> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<perfDuration> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<perfDuration> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.renderLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<perfDuration> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## <perfMedium>

(performance medium) – Indicates the number and character of the performing forces used in a musical composition.

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#), [3.6 Work Description](#), [3.6.7 Performance Medium](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<perfMedium> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<perfMedium> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<perfMedium> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<perfMedium> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<perfMedium> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<perfMedium> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<perfMedium> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<perfMedium> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<perfMedium> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<perfMedium> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<perfMedium> → att.common → att.basic → att.id → @xml:id

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<perfMedium> → elements having perfMedium as direct children → <expression>

**<titlePage>** Contains a transcription of the title page of a text.

<perfMedium> → [model.titlePagePart](#) → <titlePage>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<perfMedium> → elements having perfMedium as direct children → <work>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<perfMedium> → model.annotLike → <annot>

**<castList>** Contains a single cast list or dramatis personae.

<perfMedium> → direct children → <castList>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<perfMedium> → model.headLike → <head>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<perfMedium> → direct children → <perfResList>

## Remarks

Arrangements are coded for the medium of the work being described, not for the original medium.

## Declaration

DEVELOPMENT  
VERSION

## <perfRes>

(performance resource) – Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

### Referenced in chapters

[3.6.2 Incipits](#), [3.6.7.1 Cast Lists](#), [3.6.7.2 Instrumentation](#)

### Module

[MEI.header](#)

### Attributes

**@adlib** (*optional*) Marks a performance resource as ad libitum (*optional*). Value conforms to [data.BOOLEAN](#).

<perfRes> → [att.perfRes](#) → [att.perfRes.basic](#) → [att.adlibitum](#) → @adlib

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<perfRes> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<perfRes> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<perfRes> → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<perfRes> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<perfRes> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<perfRes> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<perfRes> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<perfRes> → [att.common](#) → [att.linkin](#) → @corresp

**@count** (*optional*) Indicates the number of performers. Value is a positive integer.

<perfRes> → [att.perfRes](#) → [att.perfRes.basic](#) → @count

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
 <perfRes> → att.edit → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<perfRes> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<perfRes> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @sameas

**@solo** (*optional*) Use this attribute to identify the performance resource as a soloist especially in an accompanied work, such as a concerto or vocal solo. Value conforms to [data.BOOLEAN](#).

<perfRes> → att.perfRes → @solo

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<perfRes> → att.common → att.linking → @synch

**@trans.diat** (*optional*) Records the amount of diatonic pitch shift, e.g., C to C♯ = 0, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<perfRes> → att.perfRes → att.transposition → @trans.diat

**@trans.semi** (*optional*) Records the amount of pitch shift in semitones, e.g., C to C♯ = 1, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<perfRes> → att.perfRes → att.transposition → @trans.semi

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<perfRes> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<perfRes> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<perfRes> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<perfRes> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<perfRes> → att.lang → @xml:lang

## Member of

(perfRes isn't member of any model class)

## Contained By

**<castItem>** Contains a single entry within a cast list, describing either a single role or a list of non-speaking roles.

<perfRes> → elements having perfRes as direct children → <castItem>

**<incip>** The opening music and/or words of a musical or textual work.

<perfRes> → elements having perfRes as direct children → <incip>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<perfRes> → elements having perfRes as direct children → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<perfRes> → elements having perfRes as direct children → <perfResList>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<perfRes> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<perfRes> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<perfRes> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<perfRes> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<perfRes> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<perfRes> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<perfRes> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<perfRes> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<perfRes> → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<perfRes> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<perfRes> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<perfRes> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<perfRes> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<perfRes> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<perfRes> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<perfRes> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<perfRes> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<perfRes> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<perfRes> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<perfRes> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<perfRes> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<perfRes> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<perfRes> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<perfRes> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<perfRes> → direct children → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<perfRes> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<perfRes> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<perfRes> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<perfRes> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<perfRes> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<perfRes> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<perfRes> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<perfRes> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<perfRes> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<perfRes> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<perfRes> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<perfRes> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<perfRes> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<perfRes> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<perfRes> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<perfRes> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<perfRes> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<perfRes> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<perfRes> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<perfRes> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<perfRes> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<perfRes> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<perfRes> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<perfRes> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

In the context of a performance resource the attribute adlib marks a resource as optional.

To indicate the tuning of an instrument, the attribute trans.diat can be used.

## Declaration

```

## <perfResList>

Several instrumental or vocal resources treated as a group.

### Referenced in chapters

[3.6.2 Incipits](#), [3.6.7 Performance Medium](#), [3.6.7.2 Instrumentation](#)

### Module

[MEI.header](#)

### Attributes

**@adlib** (*optional*) Marks a performance resource as ad libitum (optional). Value conforms to [data.BOOLEAN](#).

<perfResList> → att.perfRes.basic → att.adlibitum → @adlib

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<perfResList> → att.bibl → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<perfResList> → att.authorized → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<perfResList> → att.authorized → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<perfResList> → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.typed → att.classed → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<perfResList> → att.authorized → att.canonical → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<perfResList> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linking → @corresp

**@count** (*optional*) Indicates the number of performers. Value is a positive integer.

<perfResList> → att.perfRes.basic → @count

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<perfResList> → att.edit → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<perfResList> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<perfResList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<perfResList> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<perfResList> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<perfResList> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<perfResList> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<perfResList> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<perfResList> → att.lang → @xml:lang

## Member of

(perfResList isn't member of any model class)

## Contained By

**<incip>** The opening music and/or words of a musical or textual work.

<perfResList> → elements having perfResList as direct children → <incip>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

<perfResList> → elements having perfResList as direct children → <perfMedium>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<perfResList> → elements having perfResList as direct children → <perfResList>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<perfResList> → direct children → <annot>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<perfResList> → model.headLike → <head>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<perfResList> → direct children → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

<perfResList> → direct children → <perfResList>

## Remarks

The function of instrumentalists or vocalists is represented by the choice of **<perfRes>** and **<perfResList>** child elements. Arrangements are coded for the medium of the work being described, not for the original medium.

## Declaration

# <performance>

A presentation of one or more musical works.

## Referenced in chapters

[2.1.2 General Music Structure Elements](#), [12.2.1 Overview](#)

## Module

[MEI.performance](#)

## Attributes

**@class (optional)** Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof (optional)** Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<performance> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp (optional)** Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @corresp

**@decls (optional)** Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.metadataPointing](#) → @decls

**@follows (optional)** points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @follows

**@label (optional)** Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<performance> → [att.common](#) → [att.labelled](#) → @label

**@n (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<performance> → [att.common](#) → [att.nNumberLike](#) → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @next

**@precedes (optional)** Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @precedes

**@prev (optional)** Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<performance> → [att.common](#) → [att.linkin](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<performance> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<performance> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<performance> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.resourceLike](#) Groups non-text components that represent the content of the musical text.

## Contained By

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

<performance> → [model.resourceLike](#) → <music>

## May Contain

**<recording>** A recorded performance.

<performance> → direct children → <recording>

## Remarks

The decls attribute may be used to link the collection with a particular source described in the header. This element is analogous to the [<facsimile>](#) element in the facsimile module.

## Declaration

```
<elementSpec ident="performance" module="MEI.performance">
  <desc xml:lang="en">A presentation of one or more musical works.</desc>
  <classes>
    <memberOf key="att.common"/>
```

</content>
<remarks xml:lang="en">
  <p>The <att>decls</att> attribute may be used to link the collection with a particular source described in the header. This element is analogous to the <gi scheme="MEI">facsimile</gi> element in the facsimile module.</p>
</remarks>
</elementSpec>
```

## <periodName>

(period name) – A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<periodName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<periodName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<periodName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<periodName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<periodName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<periodName> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<periodName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<periodName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<periodName> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<periodName> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<periodName> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<periodName> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<periodName> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<periodName> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<periodName> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<periodName> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<periodName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<periodName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<periodName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<periodName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<periodName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<periodName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<periodName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<periodName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<periodName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<periodName> → att.lang → @xml:lang

## Member of

[model.nameLike.label](#) Groups elements that serve as stylistic labels.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<periodName> → [model.nameLike.label](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<!>** Contains a single line of text within a line group.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <!>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<periodName> → model.nameLike.label → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<periodName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<periodName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<periodName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<periodName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<periodName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<periodName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<periodName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<periodName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<periodName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<periodName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<periodName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslnline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<periodName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<periodName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<periodName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<periodName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<periodName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The name of the list from which a controlled value is taken may be recorded using the auth attribute.

## Declaration

```

## <persName>

(personal name) – Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#)

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<persName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<persName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<persName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<persName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<persName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<persName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<persName> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<persName> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<persName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<persName> → att.edit → att.evidence → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.  
<persName> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.  
<persName> → att.common → att.linking → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).  
<persName> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.  
<persName> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).  
<persName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.  
<persName> → att.common → att.linking → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.  
<persName> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).  
<persName> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).  
<persName> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).  
<persName> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.  
<persName> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.  
<persName> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<persName> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<persName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<persName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<persName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<persName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<persName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<persName> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<persName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<persName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<persName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<persName> → att.lang → @xml:lang

## Member of

[model.nameLike.agent](#) Groups elements which contain names of individuals or corporate bodies.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<persName> → model.nameLike.agent → model.eventPart → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<persName> → model.nameLike.agent → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatu

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <resp>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<persName> → model.nameLike.agent → <respStmt>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<persName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<persName> → model.transcriptionLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<persName> → model.persNamePart → <addName>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<persName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<persName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<persName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<persName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<persName> → model.persNamePart → <famName>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<foreName>** Contains a forename, given or baptismal name.

<persName> → model.persNamePart → <foreName>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<persName> → model.transcriptionLike → <gap>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<persName> → model.persNamePart → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<persName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<persName> → model.persNamePart → <nameLink>

**<num>** Numeric information in any form.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<persName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<persName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<persName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<persName> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<persName> → model.persNamePart → <roleName>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<persName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<persName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<persName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<persName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<persName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Parts of a personal name may be captured using <persName> sub-elements. For greater specificity, however, use foreName, famName, genName, addName, genName, nameLink, and roleName elements. The name of the list from which a controlled value for persName is taken may be recorded using the auth attribute.

The model of this element is based on the [persname](#) element of the Encoded Archival Description (EAD).

## <pgDesc>

(page description) – Contains a brief prose description of the appearance or description of the content of a physical page.

### Referenced in chapters

[2.1.3 Document Layout Elements](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pgDesc> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.linked](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pgDesc> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pgDesc> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pgDesc> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<pgDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<pgDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pgDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pgDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<pgDesc> → att.lang → @xml:lang

## Member of

(pgDesc isn't member of any model class)

## Contained By

### May Contain

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<pgDesc> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<pgDesc> → model.annotLike → <annot>

**<biblList>** List of bibliographic references.

<pgDesc> → model.textComponentLike → model.listLike → <biblList>

**<castList>** Contains a single cast list or dramatis personae.

<pgDesc> → model.textComponentLike → model.listLike → <castList>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<pgDesc> → model.graphicPrimitiveLike → <curve>

**<eventList>** Contains historical information given as a sequence of significant past events.

<pgDesc> → model.textComponentLike → model.listLike → <eventList>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<pgDesc> → model.textComponentLike → model.lgLike → <lg>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<pgDesc> → model.graphicPrimitiveLike → <line>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<pgDesc> → model.textComponentLike → model.listLike → <list>

**<p>** One or more text phrases that form a logical prose passage.

<pgDesc> → model.textComponentLike → model.pLike → <p>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<pgDesc> → model.locrefLike → <ptr>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<pgDesc> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<pgDesc> → model.locrefLike → <ref>

**<table>** Contains text displayed in tabular form.

<pgDesc> → model.textComponentLike → model.tableLike → <table>

## Remarks

Best practice suggests the use of controlled vocabulary. Don't confuse this element with a figure caption. A caption is text primarily intended for display with an illustration. It may or may not function as a description of the illustration.

## Declaration

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pgFoot> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @follows

**@func** (*optional*) Records the function (i.e., placement) of the page footer. Value conforms to [data.PGFUNC](#).

<pgFoot> → direct children → @func

**@halign** (*optional*) Records horizontal alignment of the page footer. Value conforms to [data.HORIZONTALALIGNMENT](#).

<pgFoot> → direct children → @halign

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pgFoot> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pgFoot> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<pgFoot> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMTOKEN](#), separated by spaces.

<pgFoot> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pgFoot> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pgFoot> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<pgFoot> → [att.lang](#) → @xml:lang

## Member of

(pgFoot isn't member of any model class)

## Contained By

**<scoreDef>** Container for score meta-information.

<pgFoot> → elements having pgFoot as direct children → <scoreDef>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pgFoot> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<pgFoot> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<pgFoot> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<pgFoot> → direct children → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<pgFoot> → model.textPhraseLike.limited → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<pgFoot> → model.appLike → <app>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<pgFoot> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<pgFoot> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<pgFoot> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<pgFoot> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<pgFoot> → model.textPhraseLike.limited → model.msninline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<pgFoot> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<pgFoot> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<pgFoot> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<pgFoot> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<pgFoot> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<pgFoot> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<pgFoot> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<pgFoot> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<pgFoot> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<pgFoot> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<pgFoot> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<pgFoot> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<pgFoot> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<pgFoot> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<pgFoot> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<pgFoot> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<pgFoot> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<pgFoot> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<pgFoot> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<pgFoot> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<pgFoot> → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<pgFoot> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<pgFoot> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<pgFoot> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<pgFoot> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<pgFoot> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<pgFoot> → model.textComponentLike → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<pgFoot> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<pgFoot> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<pgFoot> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<pgFoot> → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<pgFoot> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<pgFoot> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<pgFoot> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<pgFoot> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<pgFoot> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<pgFoot> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<pgFoot> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<pgFoot> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<pgFoot> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<pgFoot> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<pgFoot> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<pgFoot> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<pgFoot> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<pgFoot> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<pgFoot> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<pgFoot> → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<pgFoot> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<pgFoot> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<pgFoot> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<pgFoot> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<pgFoot> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<pgFoot> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

This element is used to capture the textual data that often appears in printed music. It may also be used for similarly formatted material in manuscripts. When used within <pb>, it records a temporary suspension of the pattern of page footers established by the use of <pgFoot> within a previous <scoreDef>. Auto-generated page numbers may be indicated with a processing instruction. The pgHead and pgFoot elements should **\*not\*** be used to encode textual notes/annotations.

# <pgHead>

(page header) – A running header.

## Referenced in chapters

[2.1.3 Document Layout Elements](#)

## Module

[MEI.shared](#)

## Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pgHead> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @follows

**@func** (*optional*) Records the function (i.e., placement) of the page header. Value conforms to [data.PGFUNC](#).

<pgHead> → direct children → @func

**@halign** (*optional*) Records horizontal alignment of the page header. Value conforms to [data.HORIZONTALALIGNMENT](#).

<pgHead> → direct children → @halign

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pgHead> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pgHead> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pgHead> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<pgHead> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<pgHead> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pgHead> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pgHead> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<pgHead> → [att.lang](#) → @xml:lang

## Member of

(pgHead isn't member of any model class)

## Contained By

**<scoreDef>** Container for score meta-information.

<pgHead> → elements having pgHead as direct children → <scoreDef>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pgHead> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<pgHead> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<pgHead> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<pgHead> → direct children → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<pgHead> → model.textPhraseLike.limited → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<pgHead> → model.appLike → <app>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<pgHead> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<pgHead> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<pgHead> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<pgHead> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<pgHead> → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<pgHead> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<pgHead> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<pgHead> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<pgHead> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<pgHead> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<pgHead> → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<pgHead> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<pgHead> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<pgHead> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<pgHead> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<pgHead> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<pgHead> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<pgHead> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<pgHead> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<pgHead> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<pgHead> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<pgHead> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<pgHead> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<pgHead> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<pgHead> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<pgHead> → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<pgHead> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<pgHead> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<pgHead> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<pgHead> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<pgHead> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<pgHead> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<pgHead> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<pgHead> → model.textComponentLike → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<pgHead> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<pgHead> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<pgHead> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<pgHead> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<pgHead> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<pgHead> → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<pgHead> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<pgHead> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<pgHead> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<pgHead> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<pgHead> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<pgHead> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<pgHead> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<pgHead> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<pgHead> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<pgHead> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<pgHead> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<pgHead> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<pgHead> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<pgHead> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<pgHead> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<pgHead> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<pgHead> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<pgHead> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<pgHead> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<pgHead> → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<pgHead> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<pgHead> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<pgHead> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<pgHead> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<pgHead> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<pgHead> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

This element is used to capture the textual data that often appears in printed music. It may also be used for similarly formatted material in manuscripts. When used within <pb>, it records a temporary suspension of the pattern of page headers established by the use of <pgHead> within a previous <scoreDef>. Auto-generated page numbers may be indicated with a processing instruction. The pgHead and pgFoot elements should **\*not\*** be used to encode textual notes/annotations.

## Declaration

```
<elementSpec ident="pgHead" module="MEI.shared">

## <phrase>

Indication of 1) a "unified melodic idea" or 2) performance technique.

### Referenced in chapters

[2.2.5.4 Phrase Marks](#), [4.3.2 Ties, Slurs and Phrase Marks](#)

### Module

[MEI.shared](#)

### Attributes

**@bezier** (*optional*) Records the placement of Bezier control points as a series of pairs of space-separated values; e.g., 19 45 -32 118. One or more values, each consisting of a sequence of **decimal** and **decimal** sub-values.

<phrase> → [att.phrase.vis](#) → [att.phrase.vis.cmn](#) → [att.curvature](#) → @bezier

**@bulge** (*optional*) Describes a curve as one or more pairs of values with respect to an imaginary line connecting the starting and ending points of the curve. The first value captures a distance to the left (positive value) or right (negative value) of the line, expressed in virtual units. The second value of each pair represents a point along the line, expressed as a percentage of the line's length. N.B. An MEI virtual unit (vu) is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. One or more of **decimal**.

<phrase> → [att.phrase.vis](#) → [att.phrase.vis.cmn](#) → [att.curvature](#) → @bulge

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<phrase> → [att.phrase.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<phrase> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.linking](#) → @corresp

**@curvedir** (*optional*) Describes a curve with a generic term indicating the direction of curvature. Allowed values are: "**above**" (*Upward curve.*), "**below**" (*Downward curve.*), "**mixed**" (*A "meandering" curve, both above and below the items it pertains to.*)

<phrase> → [att.phrase.vis](#) → [att.phrase.vis.cmn](#) → [att.curvature](#) → @curvedir

**@dots ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<phrase> → [att.phrase.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<phrase> → [att.phrase.ges](#) → [att.duration.ges](#) → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<phrase> → [att.phrase.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.to](#) → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.vo](#) → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<phrase> → [att.phrase.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.linked](#) → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → att.phrase.vis → att.visualOffset → att.visualOffset.ho → @ho

**@join** (*optional*) Used for linking visually separate entities that form a single logical entity, for example, multiple slurs broken across a system break that form a single musical phrase. Also used to indicate a measure which metrically completes the current one. Record the identifiers of the separately encoded components, excluding the one carrying the attribute. One or more values from [data.URI](#), separated by spaces.

<phrase> → att.phrase.anl → att.joined → @join

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<phrase> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<phrase> → att.phrase.log → att.controlEvent → att.layerIdent → @layer

**@lform** (*optional*) Describes the line style of a curve. Value conforms to [data.LINEFORM](#).

<phrase> → att.phrase.vis → att.phrase.vis.cmn → att.curveRend → @lform

**@lwidth** (*optional*) Width of a curved line. Value conforms to [data.LINEWIDTH](#).

<phrase> → att.phrase.vis → att.phrase.vis.cmn → att.curveRend → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<phrase> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<phrase> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\ij][\c]+)"**, separated by spaces.

<phrase> → att.phrase.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<phrase> → att.phrase.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<phrase> → att.phrase.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<phrase> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<phrase> → [att.phrase.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<phrase> → [att.phrase.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.to](#) → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.vo](#) → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<phrase> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<phrase> → [att.phrase.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<phrase> → [att.phrase.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<phrase> → [att.phrase.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<phrase> → [att.phrase.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<phrase> → att.phrase.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<phrase> → att.phrase.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<phrase> → att.phrase.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<phrase> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<phrase> → att.phrase.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<phrase> → att.phrase.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facs attribute. Value is a decimal number.

<phrase> → att.phrase.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<phrase> → att.phrase.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<phrase> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<phrase> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facs attribute. Value is a decimal number.

<phrase> → att.phrase.vis → att.xy → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<phrase> → att.phrase.vis → att.xy2 → @y2

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<phrase> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<phrase> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<phrase> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<phrase> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<phrase> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<phrase> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<phrase> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<phrase> → direct children → <curve>

## Remarks

Historically, the term "slur" indicated two notes performed legato, while the term "phrase" was used for a "unified melodic idea". Nowadays, however, "slur" often has the same meaning as "phrase" (See Read, p. 265-266), since the visual rendition of the two concepts is the same. MEI provides two distinct elements so that those users wishing to maintain a distinction for historical reasons may do so. If the user does not want to maintain the distinction, then the more generic **<slur>** element should be employed. The starting point of the phrase/slur may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute. Either place, bulge, or bezier attributes may be used to record the curvature of the phrase/slur. The **<slur>** and **<tie>** elements may be used instead of the slur.\* and tie.\* attributes provided on **<chord>** and **<note>** elements when 1) they are required by software, or 2) multiple, alternative slurs are needed.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

The visual attributes of the phrase (@bezier, @bulge, @curvedir, @lform, @lwidth, @ho, @startho, @endho, @to, @startto, @endto, @vo, @startvo, @endvo, @x, @y, @x2, and @y2) will be overridden by visual attributes of the contained curve elements.

## <physDesc>

(physical description) – Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

### Referenced in chapters

[3.7 Encoding Sources in MEI](#), [3.7.1 Title Pages](#), [3.7.2 Description of folia](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<physDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<physDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<physDesc> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<physDesc> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physDesc> → [att.common](#) → [att.linking](#) → @prev
