**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<collation> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<collation> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<collation> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<collation> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<collation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [collation](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="collation" module="MEI.msDesc">

```

## <colophon>

Contains a statement providing information regarding the date, place, agency, or reason for production of the item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<colophon> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<colophon> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<colophon> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<colophon> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<colophon> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<colophon> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<colophon> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<colophon> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<colophon> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<colophon> → [att.lang](#) → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<colophon> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<colophon> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<colophon> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.  
<colophon> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.  
<colophon> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.  
<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<colophon> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<colophon> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [colophon](#) element of the Text Encoding Initiative (TEI).

## <componentList>

Container for intellectual or physical component parts of a bibliographic entity.

### Referenced in chapters

[3.5.2 Component Parts in FRBR](#), [3.5.3 FRBR Relationships](#), [3.6.13 Work Relationships](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<componentList> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<componentList> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<componentList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<componentList> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<componentList> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<componentList> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<componentList> → att.common → att.basic → att.id → @xml:id

## Member of

(componentList isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<componentList> → elements having componentList as direct children → <expression>

**<item>** Single instance or exemplar of a source/manifestation.

<componentList> → elements having componentList as direct children → <item>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<componentList> → elements having componentList as direct children → <manifestation>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<componentList> → elements having componentList as direct children → <work>

## May Contain

**<expression>** Intellectual or artistic realization of a work.

<componentList> → [model.expressionLike](#) → <expression>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<componentList> → [model.headLike](#) → <head>

**<item>** Single instance or exemplar of a source/manifestation.

<componentList> → [model.itemLike](#) → <item>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<componentList> → [model.manifestationLike](#) → <manifestation>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<componentList> → model.workLike → <work>

## Remarks

The child elements of this element are treated as components of the bibliographic entity containing the <componentList>. Although this is an implicit way of expressing FRBR's hasPart and isPartOf relationships, it avoids this terminology in order to prevent confusion with musical terminology. Work, expression, and item components must be the same type as the parent of componentList: <work> children are allowed within <work>, etc. Manifestations; i.e., sources, may have either <source> or <item> components as required to accommodate composite sources (those containing multiple sources) or multi-part sources (those made up of several physical items).

## Constraints

Only child elements of the same name as the parent of the componentList are allowed.

When any child element has a comptype attribute, it is recommended that comptype appear on all child elements.

## Declaration

```

## <composer>

The name of the creator of the intellectual content of a musical work.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6 Work Description](#), [3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<composer> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<composer> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<composer> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<composer> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<composer> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<composer> → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<composer> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<composer> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<composer> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<composer> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<composer> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<composer> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<composer> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<composer> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<composer> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<composer> → att.lang → @xml:lang

## Member of

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<composer> → model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<composer> → model.respLikePart → model.respLike → model.biblPart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<composer> → model.respLikePart → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<composer> → model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<composer> → model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<composer> → model.respLikePart → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<composer> → model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<composer> → model.respLikePart → model.titlePagePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<composer> → model.respLikePart → model.respLike → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<composer> → model.respLikePart → <work>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<composer> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<composer> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<composer> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<composer> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<composer> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<composer> → model.textPhraseLike.limited → model.msiinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<composer> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<composer> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<composer> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<composer> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<composer> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<composer> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<composer> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<composer> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<composer> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<composer> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<composer> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<composer> → model.textPhraseLike.limited → model.msiinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<composer> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<composer> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<composer> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<composer> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<composer> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<composer> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<composer> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<composer> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<composer> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<composer> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<composer> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<composer> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<composer> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<composer> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<composer> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<composer> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<composer> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<composer> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<composer> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<composer> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<composer> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<composer> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<composer> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<composer> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<composer> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<composer> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<composer> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<composer> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<composer> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<composer> → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

```

```

## <condition>

The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<condition> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<condition> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<condition> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<condition> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<condition> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<condition> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<condition> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<condition> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<condition> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<condition> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<condition> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<condition> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<condition> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.  
 <condition> → elements having condition as direct children → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.

<condition> → elements having condition as direct children → <bindingDesc>

**<decoDesc>** Contains a description of the decoration of an item.

<condition> → elements having condition as direct children → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<condition> → elements having condition as direct children → <decoNote>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<condition> → [model.physDescPart](#) → <physDesc>

**<seal>** A single seal or similar attachment.

<condition> → elements having condition as direct children → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<condition> → elements having condition as direct children → <sealDesc>

**<support>** Provides a description of the physical support material of a written item.

<condition> → elements having condition as direct children → <support>

**<supportDesc>** Groups elements describing the physical support material of an item.

<condition> → elements having condition as direct children → <supportDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatree>** Entity to whom a creative work is formally offered.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatree>

**<depth>** Description of a measurement taken through a three-dimensional object.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<condition> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<condition> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<condition> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<condition> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<condition> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the respective element of the Encoded Archival Description (EAD).

## Declaration

```

<elementSpec ident="condition" module="MEI.header">
  <desc xml:lang="en">The physical condition of an item, particularly any variances between
  the physical make-up of the item and that of other copies of the same item (
    <abbr>e.g.</abbr>
    , missing pages or plates, brittleness, faded images, etc.).</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.bibl"/>

    <p>The model of this element is based on the respective element of the Encoded Archival
    Description (EAD).</p>
  </remarks>
</elementSpec>

```

## <contentItem>

Contains a single entry within a content description element.

### Referenced in chapters

[3.4.1.4 Series Statement](#), [3.6.9 Work Contents](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<contentItem> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<contentItem> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<contentItem> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<contentItem> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contentItem> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<contentItem> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<contentItem> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<contentItem> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<contentItem> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<contentItem> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<contentItem> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<contentItem> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<contentItem> → att.lang → @xml:lang

## Member of

(contentItem isn't member of any model class)

## Contained By

**<contents>** List of the material contained within a resource.

<contentItem> → elements having contentItem as direct children → <contents>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<contentItem> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<contentItem> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<contentItem> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<contentItem> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicataire>** Entity to whom a creative work is formally offered.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <dedicataire>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<contentItem> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<contentItem> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<contentItem> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<contentItem> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<contentItem> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<contentItem> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<contentItem> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<contentItem> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<contentItem> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<contentItem> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<contentItem> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<contentItem> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## <contents>

List of the material contained within a resource.

### Referenced in chapters

[3.4.1.4 Series Statement](#), [3.5.2 Component Parts in FRBR](#), [3.6 Work Description](#), [3.6.9 Work Contents](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<contents> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.typed](#) → [att.classest](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<contents> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<contents> → [att.common](#) → [att.labell](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<contents> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<contents> → [att.common](#) → [att.linking](#) → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<contents> → [att.pointing](#) → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<contents> → [att.pointing](#) → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<contents> → [att.common](#) → [att.typed](#) → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<contents> → [att.pointing](#) → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<contents> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<contents> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<contents> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<contents> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<contents> → elements having contents as direct children → <expression>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<contents> → elements having contents as direct children → <manifestation>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<contents> → elements having contents as direct children → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<contents> → [model.titlePagePart](#) → <titlePage>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<contents> → elements having contents as direct children → <work>

## May Contain

**<contentItem>** Contains a single entry within a content description element.

<contents> → direct children → <contentItem>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<contents> → [model.headLike](#) → <head>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<contents> → direct children → <label>

**<p>** One or more text phrases that form a logical prose passage.

<contents> → [model.pLike](#) → <p>

## Remarks

Use this element to provide an enumeration of the contents of a bibliographic entity, like that often found in a table of contents. When a detailed bibliographic description of included material is desired, use the [<componentList>](#) element instead.

## Constraints

When labels are used, usually each content item has one.

## <context>

The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

### Referenced in chapters

[3.6 Work Description](#), [3.6.8 Audience and Context](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<context> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<context> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<context> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<context> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<context> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<context> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<context> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<context> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<context> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<context> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<context> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<context> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<context> → [att.lang](#) → @xml:lang

## Member of

(context isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<context> → elements having context as direct children → <expression>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<context> → elements having context as direct children → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<context> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<context> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<context> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<context> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<context> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

```

<elementSpec ident="context" module="MEI.header">
  <desc xml:lang="en">The historical, social, intellectual, artistic, or other context
  within which the work was originally conceived (
    <abbr>e.g.</abbr>
    , the 17th century restoration of the monarchy in England, the aesthetic movement of the
    late 19th century, etc.) or the historical, social, intellectual, artistic, or other
    context within which the expression was realized.</desc>

```

## <contributor>

Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6 Work Description](#), [3.6.1 Work Identification](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<contributor> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<contributor> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<contributor> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<contributor> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<contributor> → [att.common](#) → [att.linking](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<contributor> → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<contributor> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<contributor> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<contributor> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<contributor> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.responsibility → @resp

**@role** (*recommended*) Used to specify the contributor's function. Value is plain text.

<contributor> → direct children → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<contributor> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<contributor> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<contributor> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<contributor> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<contributor> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<contributor> → att.lang → @xml:lang

**Member of**

[model.respLikePart](#) Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

**Contained By**

[<analytic>](#) Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<contributor> → [model.respLikePart](#) → [<analytic>](#)

[<bibl>](#) Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<contributor> → [model.respLikePart](#) → [model.respLike](#) → [model.biblPart](#) → [<bibl>](#)

[<byline>](#) Contains the primary statement of responsibility given for a work on its title page.

<contributor> → [model.respLikePart](#) → [<byline>](#)

[<editionStmt>](#) Container for meta-data pertaining to a particular edition of the material being described.

<contributor> → [model.respLikePart](#) → [<editionStmt>](#)

[<expression>](#) Intellectual or artistic realization of a work.

<contributor> → [model.respLikePart](#) → [<expression>](#)

[<monogr>](#) Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<contributor> → [model.respLikePart](#) → [<monogr>](#)

[<seriesStmt>](#) Groups information about the series, if any, to which a publication belongs.

<contributor> → [model.respLikePart](#) → [<seriesStmt>](#)

[<titlePage>](#) Contains a transcription of the title page of a text.

<contributor> → [model.respLikePart](#) → [model.titlePagePart](#) → [<titlePage>](#)

[<titleStmt>](#) Container for title and responsibility meta-data.

<contributor> → [model.respLikePart](#) → [model.respLike](#) → [<titleStmt>](#)

[<work>](#) Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<contributor> → [model.respLikePart](#) → [<work>](#)

**May Contain**

[<abbr>](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<contributor> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → [<abbr>](#)

[<address>](#) Contains a postal address, for example of a publisher, an organization, or an individual.

<contributor> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → [<address>](#)

[<annot>](#) Provides a statement explaining the text or indicating the basis for an assertion.

<contributor> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → [<annot>](#)

[<bibl>](#) Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<contributor> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → [<bibl>](#)

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<contributor> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<contributor> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<contributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<contributor> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<contributor> → model.textPhraseLike.limited → <dedictee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<contributor> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<contributor> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<contributor> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<contributor> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<contributor> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<contributor> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<contributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<contributor> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<contributor> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<contributor> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<contributor> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<contributor> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<contributor> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<contributor> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<contributor> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<contributor> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<contributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<contributor> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<contributor> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<contributor> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<contributor> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<contributor> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<contributor> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<contributor> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<contributor> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<contributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<contributor> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<contributor> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<contributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<contributor> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<contributor> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<contributor> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<contributor> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<contributor> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<contributor> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<contributor> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<contributor> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<contributor> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<contributor> → model.textPhraseLike.limited → model.dimLike → <width>

## Constraints

The value of @role must not contain the name of another element available in this context.

DEVELOPMENT  
VERSION

## <corpName>

(corporate name) – Identifies an organization or group of people that acts as a single entity.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#)

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<corpName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<corpName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<corpName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<corpName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<corpName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<corpName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<corpName> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<corpName> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<corpName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<corpName> → att.edit → att.evidence → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<corpName> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<corpName> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<corpName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<corpName> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<corpName> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<corpName> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<corpName> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<corpName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<corpName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<corpName> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<corpName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<corpName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<corpName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<corpName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<corpName> → att.lang → @xml:lang

## Member of

[model.nameLike.agent](#) Groups elements which contain names of individuals or corporate bodies.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<corpName> → model.nameLike.agent → model.eventPart → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<corpName> → model.nameLike.agent → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<corpName> → elements having corpName as direct children → <monogr>

**<name>** Proper noun or noun phrase.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <resp>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<corpName> → model.nameLike.agent → <respStmt>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<corpName> → model.nameLike.agent → model.nameLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<corpName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<corpName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<corpName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<corpName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<corpName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<corpName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<corpName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<corpName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<corpName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<corpName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<corpName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<corpName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<corpName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<corpName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<corpName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<corpName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Examples of corporate entities include names of associations, institutions, business firms, non-profit enterprises, governments, government agencies, projects, programs, religious bodies, churches, conferences, athletic contests, exhibitions, expeditions, fairs, and ships. Usually, secondary name parts are encoded in <corpName> sub-elements. The name of the list from which a controlled value is taken may be recorded using the auth attribute.

The model of this element is based on the [corpname](#) element of the Encoded Archival Description (EAD).

## <corr>

(correction) – Contains the correct form of an apparent erroneous passage.

### Referenced in chapters

[11.2 Editorial Markup](#), [11.2.2 Apparent Errors](#), [11.2.4.2 Additions and Deletions](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<corr> → att.extent → att.ranging → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<corr> → att.extent → att.ranging → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<corr> → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.typed → att.classed → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<corr> → att.extent → att.ranging → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<corr> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<corr> → att.trans → att.metadataPointing → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<corr> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<corr> → att.extent → @extent

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<corr> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to [data.BOOLEAN](#) or [unknown](#).

<corr> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<corr> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<corr> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<corr> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<corr> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<corr> → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<corr> → att.edit → att.source → @source

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<corr> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<corr> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<corr> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<corr> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<corr> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<corr> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<corr> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<corr> → att.lang → @xml:lang

## Member of

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<corr> → model.transcriptionLike → <abbr>

**<add>** Marks an addition to the text.

<corr> → model.transcriptionLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<corr> → model.transcriptionLike → <addName>

**<addrLine>** Single line of a postal address.

<corr> → model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<corr> → model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<corr> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<corr> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<corr> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<corr> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<corr> → model.transcriptionLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<corr> → model.choicePart → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<corr> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<corr> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<corr> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<corr> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<corr> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<corr> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<corr> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<corr> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<corr> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<corr> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<corr> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<corr> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<corr> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<corr> → model.transcriptionLike → model.paraccontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<corr> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<corr> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<corr> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<corr> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<corr> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<corr> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<corr> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<corr> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<corr> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<corr> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<corr> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<corr> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<corr> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<corr> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<corr> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<corr> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<corr> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<corr> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<corr> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<corr> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<corr> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<corr> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<corr> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<corr> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<corr> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<corr> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<corr> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<corr> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<corr> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<corr> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<corr> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<corr> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<corr> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<corr> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<corr> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<corr> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<corr> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<corr> → model.transcriptionLike → model.paraccontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<corr> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<corr> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<corr> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<corr> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<corr> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<corr> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<corr> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<corr> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<corr> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<corr> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<corr> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<corr> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<corr> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<corr> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<corr> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<corr> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<corr> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<corr> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<corr> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<corr> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<corr> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<corr> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragmant.

<corr> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<corr> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<corr> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<corr> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<corr> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<corr> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<corr> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<corr> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<corr> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<corr> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<corr> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<corr> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<corr> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<corr> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<corr> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<corr> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<corr> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<corr> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<corr> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<corr> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<corr> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<corr> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<corr> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<corr> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<corr> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<corr> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<corr> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<corr> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<corr> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<corr> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<corr> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<corr> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<corr> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<corr> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<corr> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<corr> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.g

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<corr> → model.transcriptionLike → <handShift>

- <harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.  
<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>
- <harpPedal>** Harp pedal diagram.  
<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>
- <height>** Description of the vertical size of an object.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>
- <heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <heraldry>
- <hispanTick>** Hispanic tick.  
<corr> → model.neumeModifierLike → <hispanTick>
- <identifier>** An alpha-numeric string that establishes the identity of the described material.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>
- <keyAccid>** Accidental in a key signature.  
<corr> → model.keyAccidLike → <keyAccid>
- <keySig>** Written key signature.  
<corr> → model.layerPart → model.eventLike → model.keySigLike → <keySig>
- <layer>** An independent stream of events on a staff.  
<corr> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>
- <lb>** An empty formatting element that forces text to begin on a new line.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>
- <lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.  
<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>
- <ligature>** A mensural notation symbol that combines two or more notes into a single sign.  
<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>
- <line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.  
<corr> → model.graphicPrimitiveLike → <line>
- <liquegent>** Liquescent.  
<corr> → model.neumeComponentModifierLike → <liquegent>
- <list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.  
<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>
- <locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>
- <locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.  
<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>
- <lv>** A "tie-like" indication that a note should ring beyond its written duration.  
<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>
- <mRest>** Complete measure rest in any meter.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<corr> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<corr> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<corr> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<corr> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<corr> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<corr> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<corr> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<corr> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<corr> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<corr> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<corr> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<corr> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<corr> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rndLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryL

**<rest>** A non-sounding event found in the source being transcribed.

<corr> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<corr> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<corr> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<corr> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<corr> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<corr> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<corr> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<corr> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<corr> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<corr> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<corr> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<corr> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<corr> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<corr> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<corr> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<corr> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<corr> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<corr> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<corr> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<corr> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<corr> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<corr> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<corr> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The cert attribute signifies the degree of certainty ascribed to correction. The resp attribute contains an ID reference to an element containing the name of the editor or transcriber responsible for suggesting the correction held as the content of the **<corr>** element. If the correction was made in the source, resp should be used to identify the hand of the corrector. The value of resp must point to one or more identifiers declared in the document header.

In no case should **<corr>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<corr>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the **corr** element of the Text Encoding Initiative (TEI).

## <correction>

States how and under what circumstances corrections have been made in the text.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<correction> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<correction> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<correction> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<correction> → [att.common](#) → [att.linkin](#) → @corresp

**@corrlevel** (*optional*) Indicates the degree of correction applied to the text. Allowed values are: "**high**" (*The text has been thoroughly checked and proofread.*), "**medium**" (*The text has been checked at least once.*), "**low**" (*The text has not been checked.*), "**unknown**" (*The correction status of the text is unknown.*)

<correction> → direct children → @corrlevel

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<correction> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<correction> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<correction> → [att.common](#) → [att.labelled](#) → @label

**@method** (*optional*) Indicates the method employed to mark corrections and normalizations. Allowed values are: "**silent**" (*Corrections and normalizations made silently.*), "**tags**" (*Corrections and normalizations indicated using elements.*)

<correction> → [att.regularMethod](#) → @method

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<correction> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<correction> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<correction> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<correction> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<correction> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<correction> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<correction> → att.lang → @xml:lang

## Member of

[model.editorialDeclPart](#) Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

## Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<correction> → model.editorialDeclPart → <editorialDecl>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<correction> → model.headLike → <head>

**<p>** One or more text phrases that form a logical prose passage.

<correction> → model.pLike → <p>

## Remarks

The model of this element is based on the **correction** element of the Text Encoding Initiative (TEI).

## <country>

Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<country> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<country> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<country> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<country> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<country> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<country> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<country> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<country> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<country> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<country> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<country> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<country> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<country> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<country> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<country> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<country> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<country> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<country> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<country> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<country> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<country> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<country> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<country> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<country> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<country> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<country> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<country> → att.lang → @xml:lang

## Member of

[model.geogNamePart](#) Groups elements which form part of a geographic name.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<country> → model.geogNamePart → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<country> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<country> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<country> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<country> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<country> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <dedicathee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<country> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<country> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<country> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<country> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<country> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<country> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<country> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<country> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<country> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<country> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<country> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<country> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<country> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [country](#) element of the Text Encoding Initiative (TEI).

## <cpMark>

(copy/colla parte mark) – A verbal or graphical indication to copy musical material written elsewhere.

### Referenced in chapters

[11.2.1.1 Instructions](#)

### Module

[MEI.edittrans](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<cpMark> → att.cpMark.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<cpMark> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<cpMark> → att.cpMark.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<cpMark> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<cpMark> → att.common → att.linked → @corresp`

**@dis** (*optional*) Records the amount of octave displacement. Value conforms to [data.OCTAVE.DIS](#).

`<cpMark> → att.cpMark.log → att.octaveDisplacement → @dis`

**@dis.place** (*optional*) Records the direction of octave displacement. Value conforms to [data.STAFFREL.basic](#).

`<cpMark> → att.cpMark.log → att.octaveDisplacement → @dis.place`

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

`<cpMark> → att.cpMark.ges → att.duration.ges → @dots.ges`

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

`<cpMark> → att.cpMark.ges → att.duration.ges → @dur.ges`

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

`<cpMark> → att.cpMark.ges → att.duration.ges → @dur.metrical`

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

`<cpMark> → att.cpMark.ges → att.duration.ges → @dur.ppq`

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<cpMark> → att.cpMark.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip value**. Value is a [token](#).

<cpMark> → att.cpMark.ges → att.duration.ges → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<cpMark> → att.cpMark.vis → att.enclosingChars → @enclose

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<cpMark> → att.cpMark.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<cpMark> → att.cpMark.log → att.controlEvent → att.targetEval → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<cpMark> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<cpMark> → att.common → att.linked → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<cpMark> → att.cpMark.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<cpMark> → att.cpMark.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<cpMark> → att.cpMark.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<cpMark> → att.cpMark.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<cpMark> → att.cpMark.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<cpMark> → att.cpMark.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<cpMark> → att.cpMark.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<cpMark> → [att.cpMark.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<cpMark> → [att.cpMark.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<cpMark> → [att.cpMark.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<cpMark> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<cpMark> → [att.cpMark.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<cpMark> → [att.cpMark.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<cpMark> → [att.cpMark.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<cpMark> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.common](#) → [att.linked](#) → @next

**@origin.endid** (*optional*) indicates the final element in a sequence of events. Value conforms to [data.URI](#).

<cpMark> → [att.cpMark.log](#) → [att.origin.startEndId](#) → @origin.endid

**@origin.layer** (*optional*) identifies the layer on which referenced notation occurs. One or more of **positiveInteger**.

<cpMark> → [att.cpMark.log](#) → [att.origin.layerIdent](#) → @origin.layer

**@origin.staff** (*recommended*) signifies the staff on which referenced notation occurs. Defaults to the same value as the local staff. Mandatory when applicable. One or more of **positiveInteger**.

<cpMark> → [att.cpMark.log](#) → [att.origin.staffIdent](#) → @origin.staff

**@origin.startid** (*optional*) indicates the first element in a sequence of events. Value conforms to [data.URI](#).

<cpMark> → [att.cpMark.log](#) → [att.origin.startEndId](#) → @origin.startid

**@origin.timestamp** (*optional*) encodes the starting point of musical material in terms of musical time, i.e., a (potentially negative) count of measures plus a beat location. Value conforms to [data.MEASUREBEATOFFSET](#).

<cpMark> → [att.cpMark.log](#) → [att.origin.timestamp.log](#) → @origin.timestamp

**@origin.timestamp2** (*recommended*) encodes the ending point of musical material in terms of musical time, i.e., a count of measures plus a beat location. The values are relative to the measure identified by origin.timestamp. Value conforms to [data.MEASUREBEAT](#).

<cpMark> → [att.cpMark.log](#) → [att.origin.timestamp.log](#) → @origin.timestamp2

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<cpMark> → [att.cpMark.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<cpMark> → [att.cpMark.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<cpMark> → [att.cpMark.vis](#) → [att.placementRelStaff](#) → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.cpMark.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<cpMark> → [att.common](#) → [att.linked](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<cpMark> → [att.cpMark.log](#) → [att.controlEvent](#) → [att.staffIdent](#) → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<cpMark> → att.cpMark.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<cpMark> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<cpMark> → att.cpMark.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<cpMark> → att.cpMark.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<cpMark> → att.cpMark.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<cpMark> → att.cpMark.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<cpMark> → att.cpMark.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<cpMark> → att.cpMark.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<cpMark> → att.cpMark.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<cpMark> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<cpMark> → att.cpMark.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<cpMark> → att.cpMark.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facsimile` attribute. Value is a decimal number.

<cpMark> → att.cpMark.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<cpMark> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<cpMark> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<cpMark> → att.cpMark.vis → att.xy → @y

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<cpMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<cpMark> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<cpMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<cpMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<cpMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<cpMark> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<cpMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<cpMark> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<cpMark> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<cpMark> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<cpMark> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<cpMark> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<cpMark> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<cpMark> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<cpMark> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<cpMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<cpMark> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<cpMark> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<cpMark> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<cpMark> → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<cpMark> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<cpMark> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<cpMark> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<cpMark> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<cpMark> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<cpMark> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<cpMark> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<cpMark> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<cpMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<cpMark> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<cpMark> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<cpMark> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<cpMark> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<cpMark> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<cpMark> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<cpMark> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<cpMark> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<cpMark> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<cpMark> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<cpMark> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<cpMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<cpMark> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<cpMark> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<cpMark> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<cpMark> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<cpMark> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<cpMark> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<cpMark> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<cpMark> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<cpMark> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<cpMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<cpMark> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<cpMark> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<cpMark> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<cpMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<cpMark> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<cpMark> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<cpMark> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<cpMark> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<cpMark> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<cpMark> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<cpMark> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<cpMark> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<cpMark> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<cpMark> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<cpMark> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<cpMark> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<cpMark> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<cpMark> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Typical examples are *colla parte* instructions (such as "col Basso") or other indications intended to result in filling gaps in the score with material written elsewhere. It is recommended to capture the position of the indication itself with the attributes tstamp and staff. The area to be filled should contain <space> or <mSpace> elements. The material to be used to fill the gap can be identified by the attributes origin.tstamp, origin.tstamp2, origin.staff, and origin.layer. If origin.tstamp2 is not provided, a duration similar to that of the local omission (as encoded in the combination of tstamp and tstamp2) is assumed. Any missing @origin.\* attributes are assumed to take the same values as information associated with the cpMark. For example, when only the origin.staff attribute is provided, it is assumed that the referenced part comes from a different staff in the same measure. If a different measure is provided by origin.tstamp, but no origin.staff is given, then it is assumed that the material is to be taken from the same staff.

Textual instructions are encoded as text content of the cpMark, while graphical instructions may use the altsym, facs, or extsym attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real

Must have one of the attributes: dur, dur.ges, endid, or tstamp2

</exemplum>
<remarks xml:lang="en">

```

<p>Typical examples are <foreign>colla parte</foreign> instructions (such as "col Basso") or other indications intended to result in filling gaps in the score with material written elsewhere. It is recommended to capture the position of the indication itself with the attributes <att>tstamp</att> and <att>staff</att>. The area to be filled should contain <gi scheme="MEI">space</gi> or <gi scheme="MEI">mSpace</gi> elements. The material to be used to fill the gap can be identified by the attributes <att>origin.tstamp</att>, <att>origin.tstamp2</att>, <att>origin.staff</att>, and <att>origin.layer</att>. If <att>origin.tstamp2</att> is not provided, a duration similar to that of the local omission (as encoded in the combination of <att>tstamp</att> and <att>tstamp2</att>) is assumed. Any missing @origin.\* attributes are assumed to take the same values as information associated with the cpMark. For example, when only the <att>origin.staff</att> attribute is provided, it is assumed that the referenced part comes from a different staff in the same measure. If a different measure is provided by <att>origin.tstamp</att>, but no <att>origin.staff</att> is given, then it is assumed that the material is to be taken from the same staff.</p>

<p>Textual instructions are encoded as text content of the cpMark, while graphical instructions may use the <att>altsym</att>, <att>facs</att>, or <att>extsym</att> attributes.</p>

</remarks>

</elementSpec>

## <creation>

Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

### Referenced in chapters

[3.6.5 Work History](#), [3.7 Encoding Sources in MEI](#), [9 Text Encoding](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<creation> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<creation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<creation> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<creation> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<creation> → [att.datable](#) → @enddate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<creation> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<creation> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<creation> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<creation> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<creation> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.linking → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<creation> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<creation> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.linking → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<creation> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<creation> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<creation> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<creation> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<creation> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<creation> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<creation> → [att.lang](#) → @xml:lang

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<creation> → [model.biblPart](#) → <bibl>

**<expression>** Intellectual or artistic realization of a work.

<creation> → elements having creation as direct children → <expression>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<creation> → elements having creation as direct children → <manifestation>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<creation> → elements having creation as direct children → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<creation> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<creation> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<creation> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<creation> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<creation> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<creation> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → [model.geogNamePart](#) → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<creation> → [model.textPhraseLike.limited](#) → [model.mslinline](#) → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<creation> → [model.textPhraseLike.limited](#) → [model.nameLike](#) → [model.nameLike.agent](#) → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<creation> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<creation> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<creation> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<creation> → direct children → <dedication>

**<depth>** Description of a measurement taken through a three-dimensional object.

<creation> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<creation> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<creation> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<creation> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<creation> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<creation> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<creation> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<creation> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<creation> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<creation> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<creation> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<creation> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<creation> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<creation> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<creation> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<creation> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<creation> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<creation> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<creation> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<creation> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<creation> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<creation> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<creation> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<creation> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<creation> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<creation> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<creation> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<creation> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<creation> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<creation> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<creation> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<creation> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<creation> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<creation> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<creation> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<creation> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<creation> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<creation> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<creation> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<creation> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<creation> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<creation> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<creation> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [creation](#) element of the Text Encoding Initiative (TEI).

## <cue>

MIDI cue point.

### Module

MEI.midi

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<cue> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<cue> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<cue> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<cue> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\d][\n\c]+)"**, separated by spaces.

<cue> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<cue> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<cue> → att.midi.event → att.staffid → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<cue> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<cue> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<cue> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<cue> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<cue> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<cue> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<cue> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<cue> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<cue> → [att.lang](#) → @xml:lang

## <curve>

A curved line that cannot be represented by a more specific element, such as a slur.

### Referenced in chapters

[2.4.1.1 Elements](#), [2.4.2 Uses of the Usersymbols Module](#), [2.4.2.2 Elements Without Semantic Implications](#)

### Module

[MEI.usersymbols](#)

### Attributes

**@bezier** (*optional*) Records the placement of Bezier control points as a series of pairs of space-separated values; e.g., 19 45 -32 118. One or more values, each consisting of a sequence of **decimal** and **decimal** sub-values.

<curve> → [att.curve.vis](#) → [att.curvature](#) → @bezier

**@bulge** (*optional*) Describes a curve as one or more pairs of values with respect to an imaginary line connecting the starting and ending points of the curve. The first value captures a distance to the left (positive value) or right (negative value) of the line, expressed in virtual units. The second value of each pair represents a point along the line, expressed as a percentage of the line's length. N.B. An MEI virtual unit (vu) is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. One or more of **decimal**.

<curve> → [att.curve.vis](#) → [att.curvature](#) → @bulge

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<curve> → [att.common](#) → [att.typed](#) → [att.classe](#)d → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<curve> → [att.curve.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<curve> → [att.common](#) → [att.linkin](#)g → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<curve> → [att.common](#) → [att.linkin](#)g → @corresp

**@curvedir** (*optional*) Describes a curve with a generic term indicating the direction of curvature. Allowed values are: "**above**" (*Upward curve*.), "**below**" (*Downward curve*.), "**mixed**" (*A "meandering" curve, both above and below the items it pertains to*.)

<curve> → [att.curve.vis](#) → [att.curvature](#) → @curvedir

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → [att.curve.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<curve> → att.curve.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<curve> → att.curve.vis → att.visualOffset2 → att.visualOffset2.to → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → att.curve.vis → att.visualOffset2 → att.visualOffset2.vo → @endvo

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<curve> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linked → @follows

**@func** (*recommended*) Indicates the function of the curve. Allowed values are: "**unknown**" (*The function of the curve is unknown.*)

<curve> → att.curve.log → @func

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → att.curve.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<curve> → att.common → att.labelled → @label

**@lform** (*optional*) Describes the line style of a curve. Value conforms to [data.LINEFORM](#).

<curve> → att.curve.vis → att.curveRend → @lform

**@lwidth** (*optional*) Width of a curved line. Value conforms to [data.LINEWIDTH](#).

<curve> → att.curve.vis → att.curveRend → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<curve> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linkin → @sameas

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → att.curve.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<curve> → att.curve.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<curve> → att.curve.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → att.curve.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<curve> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<curve> → att.curve.vis → att.visualOffset → att.visualOffset.to → @to

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<curve> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<curve> → att.curve.vis → att.visualOffset → att.visualOffset.vo → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<curve> → att.curve.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<curve> → att.curve.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<curve> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

`<curve> → att.common → att.basic → att.id → @xml:id`

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

`<curve> → att.curve.vis → att.xy → @y`

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

`<curve> → att.curve.vis → att.xy2 → @y2`

## Member of

`model.graphicPrimitiveLike` Groups elements that function as drawing primitives.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`<curve> → model.graphicPrimitiveLike → <abbr>`

**<add>** Marks an addition to the text.

`<curve> → model.graphicPrimitiveLike → <add>`

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

`<curve> → model.graphicPrimitiveLike → <attacca>`

**<corr>** Contains the correct form of an apparent erroneous passage.

`<curve> → model.graphicPrimitiveLike → <corr>`

**<damage>** Contains an area of damage to the physical medium.

`<curve> → model.graphicPrimitiveLike → <damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

`<curve> → model.graphicPrimitiveLike → <del>`

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like `<tempo>`, `<dynam>` or `<repeatMark>`.

`<curve> → model.graphicPrimitiveLike → <dir>`

**<ending>** Alternative ending for a repeated passage of music; i.e., *prima volta*, *seconda volta*, etc.

`<curve> → model.graphicPrimitiveLike → <ending>`

**<expan>** Contains the expansion of an abbreviation.

`<curve> → model.graphicPrimitiveLike → <expan>`

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

`<curve> → model.graphicPrimitiveLike → <harm>`

**<layer>** An independent stream of events on a staff.

`<curve> → model.graphicPrimitiveLike → <layer>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

`<curve> → model.graphicPrimitiveLike → <lem>`

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<curve> → elements having curve as direct children → <lv>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<curve> → model.graphicPrimitiveLike → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

<curve> → model.graphicPrimitiveLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<curve> → model.graphicPrimitiveLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<curve> → model.graphicPrimitiveLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<curve> → model.graphicPrimitiveLike → <ornam>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<curve> → model.graphicPrimitiveLike → <part>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<curve> → model.graphicPrimitiveLike → <pgDesc>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<curve> → elements having curve as direct children → <phrase>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<curve> → model.graphicPrimitiveLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<curve> → model.graphicPrimitiveLike → <reg>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<curve> → model.graphicPrimitiveLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<curve> → model.graphicPrimitiveLike → <restore>

**<score>** Full score view of the musical content.

<curve> → model.graphicPrimitiveLike → <score>

**<section>** Segment of music data.

<curve> → model.graphicPrimitiveLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<curve> → model.graphicPrimitiveLike → <sic>

**<signifLet>** Significative letter(s).

<curve> → model.graphicPrimitiveLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<curve> → elements having curve as direct children → <slur>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<curve> → model.graphicPrimitiveLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<curve> → model.graphicPrimitiveLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<curve> → model.graphicPrimitiveLike → <syllable>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<curve> → model.graphicPrimitiveLike → <symbolDef>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<curve> → model.graphicPrimitiveLike → <tempo>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<curve> → elements having curve as direct children → <tie>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<curve> → model.graphicPrimitiveLike → <unclear>

## May Contain

- (<curve> may not have child elements)

## Remarks

The starting point of the curve may be identified in absolute output coordinate terms using the x and y attributes or relative to the location of another element using the startid attribute. The attributes in the att.visualOffset class may be used to record horizontal, vertical, or time offsets from the absolute coordinates or from the location of the referenced element. Similarly, the terminal point of the curve may be recorded using either the x2 and y2 coordinates or in relation to the location of another element using the endid attribute. Attributes in the att.visualOffset2 class maybe used to record the offsets of the ending point. The bulge attribute or, alternatively, the bezier attribute, describe the shape of the curve and the lform and lwidth attributes capture its appearance.

## Constraints

In the symbolDef context, curve must have either a startid attribute or x and y attributes.

In the symbolDef context, curve must have either an endid attribute or both x2 and y2 attributes.

In the symbolDef context, curve must have either a bezier or bulge attribute.

## Declaration

## <custos>

Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

### Referenced in chapters

[2.2.4.2 Bar Lines and Custos Signs](#), [6.4.1 Elements](#)

### Module

[MEI.shared](#)

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<custos> → att.custos.log → att.accidental → @accid

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <symbolDef> element elsewhere in the document. Value conforms to [data.URI](#).

<custos> → att.custos.vis → att.altsym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<custos> → att.custos.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<custos> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<custos> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<custos> → att.custos.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<custos> → att.custos.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<custos> → att.custos.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<custos> → [att.custos.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<custos> → [att.custos.vis](#) → [att.typography](#) → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<custos> → [att.custos.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<custos> → [att.custos.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<custos> → [att.custos.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Value conforms to [data.URI](#).

<custos> → [att.custos.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<custos> → [att.custos.vis](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<custos> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<custos> → [att.custos.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<custos> → [att.custos.vis](#) → [att.typography](#) → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<custos> → [att.custos.vis](#) → [att.staffLoc](#) → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<custos> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<custos> → [att.common](#) → [att.linked](#) → @next

**@oct** (*optional*) Captures written octave information. Value conforms to [data.OCTAVE](#).

<custos> → [att.custos.log](#) → [att.pitched](#) → [att.octave](#) → @oct

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

<custos> → att.custos.log → att.pitched → att.pitch → @pname

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkng → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<custos> → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<custos> → att.common → att.linkng → @synch

**@target** (*optional*) Encodes the target note when its pitch differs from the pitch at which the custos appears. Value conforms to [data.URI](#).

<custos> → att.custos.log → @target

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<custos> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<custos> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<custos> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<custos> → [model.eventLike](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<custos> → model.eventLike → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<custos> → model.eventLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<custos> → model.eventLike → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<custos> → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<custos> → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<custos> → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<custos> → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<custos> → model.eventLike → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<custos> → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<custos> → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<custos> → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<custos> → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<custos> → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<custos> → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<custos> → model.eventLike → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<custos> → model.eventLike → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<custos> → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<custos> → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<custos> → model.eventLike → model.layerPart → <unclear>

## May Contain

**<accid>** Records a temporary alteration to the pitch of a note.

<custos> → direct children → <accid>

## Remarks

The most common visual form is a sign resembling a mordent. Other graphical forms may be indicated by the altsym attribute. Together the pname and oct attributes identify the location where the custos appears.

## Declaration

## <cutout>

A cutout is a section of a document sheet that has been removed and is now missing.

### Referenced in chapters

[3.7.2.4 Cutouts](#), [11.3.4 Genetic Changes at the Page Level](#)

### Module

[MEI.header](#)

### Attributes

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<cutout> → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<cutout> → att.common → att.typed → att.classest → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<cutout> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<cutout> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<cutout> → att.trans → att.metadataPointing → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<cutout> → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<cutout> → att.common → att.linkin → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<cutout> → att.trans → att.handIdent → @hand

**@height** (*optional*) Measurement of the vertical dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<cutout> → att.dimensions → att.height → @height

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to **data.BOOLEAN** or **unknown**.

<cutout> → att.trans → att.geneticState → @instant

**@label (optional)** Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<cutout> → att.common → att.labelled → @label

**@n (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to **data.WORD**.

<cutout> → att.common → att.nNumberLike → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from **data.URI**, separated by spaces.

<cutout> → att.common → att.linking → @next

**@precedes (optional)** Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from **data.URI**, separated by spaces.

<cutout> → att.common → att.linking → @precedes

**@prev (optional)** Points to the previous event(s) in a user-defined collection. One or more values from **data.URI**, separated by spaces.

<cutout> → att.common → att.linking → @prev

**@removed.by (optional)** Describes the method of removing the cutout. Allowed values are: "**cut**" (*section is cleanly cut by a knife, scissor or other sharp blade.*), "**rip**" (*section is ripped off the page, leaving a rough edge.*)  
<cutout> → direct children → @removed.by

**@removed.from (required)** Describes the position of the cutout on the parent folium / bifolium. Allowed values are: "**outer.recto**" (*removed from outer recto side of bifolium.*), "**inner.verso**" (*removed from inner verso side of bifolium.*), "**inner.recto**" (*removed from inner recto side of bifolium.*), "**outer.verso**" (*removed from outer verso side of bifolium.*), "**recto**" (*removed from recto side of folium.*), "**verso**" (*removed from verso side of folium.*)

<cutout> → direct children → @removed.from

**@resp (optional)** Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from **data.URI**, separated by spaces.

<cutout> → att.common → att.responsibility → @resp

**@sameas (optional)** Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from **data.URI**, separated by spaces.

<cutout> → att.common → att.linking → @sameas

**@seq (optional)** Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<cutout> → att.trans → att.sequence → @seq

**@state** Points to the genetic state that results from this modification. One or more values from **data.URI**, separated by spaces.

<cutout> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<cutout> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<cutout> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<cutout> → [att.measurement](#) → @unit

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<cutout> → [att.dimensions](#) → [att.width](#) → @width

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<cutout> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<cutout> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<cutout> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<cutout> → [att.xy](#) → @y

## Member of

[model.paperModLike](#) Groups elements dealing with modifications of document pages.

## Contained By

**<bifolium>** Describes a folded sheet of paper.

<cutout> → [model.paperModLike](#) → <bifolium>

**<folium>** Describes a single leaf of paper.

<cutout> → [model.paperModLike](#) → <folium>

## May Contain

**<bifolium>** Describes a folded sheet of paper.

<cutout> → [model.bifoliumLike](#) → <bifolium>

**<folium>** Describes a single leaf of paper.

<cutout> → model.foliumLike → <folium>

## Remarks

The dimensions (@width, @height) of the parent element (e.g., **<folium>**) indicate the size of the bounding box of the remaining part of the page. That is, if the complete lower half of a page has been cut, the @width and @height attributes describe the remaining upper half. If, in contrast, only the lower right quarter of the page has been cut, these attributes still indicate the size of the full page (assuming that the removed section was a regular rectangle).

The dimensions (@width, @height) on **<cutout>** itself are only to be used when there is a "gap" in the manuscript that allows to specify the dimensions of that missing part. In this case, the bounding box dimensions are given, together with @x and @y to indicate the upper left point on the original page. If, however, the removed section is available by itself, then a corresponding **<folium>** (or **<bifolium>**) should be placed inside the **<cutout>** element, and should provide its own dimensions using @width and @height there. In this case, @width and @height on **<cutout>** is expendable.

## <damage>

Contains an area of damage to the physical medium.

### Referenced in chapters

[11.2.4.1 Omissions, Unclear Readings, Damage, and Supplied Readings](#)

### Module

[MEI.edittrans](#)

### Attributes

**@agent** (*optional*) Signifies the causative agent of damage, illegibility, or other loss of original text. Value is plain text.

<damage> → [att.agentIdent](#) → @agent

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<damage> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<damage> → [att.extent](#) → [att.ranging](#) → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<damage> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<damage> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<damage> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<damage> → [att.common](#) → [att.linking](#) → @corresp

**@degree** (*optional*) Records the degree of damage. Value is plain text.

<damage> → direct children → @degree

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<damage> → [att.extent](#) → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<damage> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<damage> → att.handIdent → @hand

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<damage> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<damage> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<damage> → att.extent → att.ranging → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<damage> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<damage> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<damage> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<damage> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<damage> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<damage> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<damage> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<damage> → att.lang → @xml:lang

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<damage> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<damage> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<damage> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<damage> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<damage> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<damage> → [model.transcriptionLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<damage> → [model.transcriptionLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<damage> → [model.transcriptionLike](#) → <beam>

**<bifolium>** Describes a folded sheet of paper.

<damage> → elements having damage as direct children → <bifolium>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<damage> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<damage> → model.transcriptionLike → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<damage> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<damage> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<damage> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<damage> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<damage> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<damage> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<damage> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<damage> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<damage> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<damage> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<damage> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<damage> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<damage> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<damage> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<damage> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<damage> → model.transcriptionLike → <f>

**<farmName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<damage> → model.transcriptionLike → <farmName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<damage> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<damage> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

<damage> → model.transcriptionLike → <fingGrp>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<damage> → elements having damage as direct children → <foliaDesc>

**<foreName>** Contains a forename, given or baptismal name.

<damage> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<damage> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<damage> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<damage> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<damage> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<damage> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<damage> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<damage> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<damage> → model.transcriptionLike → model.paraccontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<damage> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<damage> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<damage> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<damage> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<damage> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<damage> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<damage> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<damage> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<damage> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<damage> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<damage> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<damage> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<damage> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<damage> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<damage> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<damage> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<damage> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<damage> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<damage> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<damage> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<damage> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<damage> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<damage> → model.transcriptionLike → model.paraccontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<damage> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<damage> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<damage> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<damage> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<damage> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<damage> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<damage> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<damage> → model.transcriptionLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<damage> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<damage> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<damage> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<damage> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<damage> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<damage> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<damage> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<damage> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<damage> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<damage> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<damage> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<damage> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<damage> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<damage> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<damage> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<damage> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<damage> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<damage> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<damage> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<damage> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<damage> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<damage> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<damage> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<damage> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<damage> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<damage> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<damage> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<damage> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<damage> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<damage> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<damage> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<damage> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<damage> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<damage> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or *dramatis personae*.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<damage> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<damage> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<damage> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<damage> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<damage> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<damage> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<damage> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<damage> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line.

Sometimes called a "direct".

<damage> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<damage> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<damage> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<damage> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<damage> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<damage> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<damage> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<damage> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLi

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<damage> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <heraldry>

**<hispanTick>** Hispanic tick.

<damage> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<damage> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<damage> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<damage> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<damage> → model.graphicPrimitiveLike → <line>

**<liquefiant>** Liquescent.

<damage> → model.neumeComponentModifierLike → <liquefiant>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<damage> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<damage> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<damage> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<damage> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<damage> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<damage> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<damage> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<damage> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<damage> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<damage> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<damage> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<damage> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<damage> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<rest>** A non-sounding event found in the source being transcribed.

<damage> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<damage> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<damage> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<damage> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<damage> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<damage> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<damage> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<damage> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<damage> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<damage> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<damage> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msnline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<damage> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<damage> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<damage> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<damage> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<damage> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<damage> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<damage> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<damage> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<damage> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<damage> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<damage> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<damage> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

In no case should <damage> contain elements that would not otherwise be permitted to occur within the parent of its own <app> ancestor. For example, when used as a descendent of <verse>, <damage> should only contain those elements allowed within <verse>.

The model of this element is based on the damage element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <date>

A string identifying a point in time or the time period between two such points.

### Referenced in chapters

[3.4.1.1 Edition Statement](#), [3.4.1.3 Publication, Distribution, etc.](#), [3.4.3 Revision Description](#), [3.6.5 Work History](#), [9 Text Encoding](#), [9.2.9 Dates](#), [9.2.12 Bibliographic Citations and References](#), [11.3.1 Encoding Genetic States](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<date> → [att.bibl](#) → @analog

**@calendar** (*optional*) Indicates the calendar system to which a date belongs, for example, Gregorian, Julian, Roman, Mosaic, Revolutionary, Islamic, etc. Value is a [NMTOKEN](#).

<date> → [att.calendared](#) → @calendar

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<date> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<date> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<date> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<date> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<date> → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<date> → [att.edit](#) → [att.evidence](#) → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<date> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.linkin → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<date> → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<date> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<date> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.linkin → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<date> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<date> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<date> → att.common → att.linkin → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<date> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<date> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<date> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<date> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<date> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<date> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<date> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<date> → [att.lang](#) → @xml:lang

## Member of

[model.dateLike](#) Groups elements containing date expressions.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<date> → [model.dateLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<date> → model.dateLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<date> → model.dateLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<date> → model.dateLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<date> → model.dateLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<date> → model.dateLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<date> → model.dateLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<date> → model.dateLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<date> → model.dateLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<change>** Individual change within the revision description.

<date> → model.dateLike → <change>

**<composer>** The name of the creator of the intellectual content of a musical work.

<date> → model.dateLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<date> → model.dateLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<date> → model.dateLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<date> → model.dateLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<date> → model.dateLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<date> → model.dateLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<date> → model.dateLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<date> → model.dateLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<date> → model.dateLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<date> → model.dateLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<date> → model.dateLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<date> → model.dateLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<date> → model.dateLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<date> → model.dateLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<date> → model.dateLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<date> → model.dateLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<date> → model.dateLike → model.eventPart → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<date> → model.dateLike → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<date> → model.dateLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<date> → model.dateLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<date> → model.dateLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<date> → model.dateLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<date> → model.dateLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<date> → model.dateLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genState>** Describes a distinctive state in the textual development of a work.

<date> → model.dateLike → <genState>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<date> → model.dateLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<date> → model.dateLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<date> → model.dateLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<date> → model.dateLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<date> → model.dateLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<date> → model.dateLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<date> → model.dateLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<date> → model.dateLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<date> → model.dateLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<date> → model.dateLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<date> → model.dateLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<date> → model.dateLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<date> → model.dateLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<date> → model.dateLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<date> → model.dateLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<date> → model.dateLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<date> → model.dateLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<date> → model.dateLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<date> → model.dateLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<date> → model.dateLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<date> → model.dateLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<date> → model.dateLike → model.textPhraseLike.limited → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<date> → model.dateLike → model.pubStmtPart → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<date> → model.dateLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<date> → model.dateLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<date> → model.dateLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<date> → model.dateLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<date> → model.dateLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<date> → model.dateLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<date> → model.dateLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<date> → model.dateLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<date> → model.dateLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<date> → model.dateLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<date> → model.dateLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<date> → model.dateLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<date> → model.dateLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<date> → model.dateLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<date> → model.dateLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<date> → model.dateLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<date> → model.dateLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<date> → model.dateLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<date> → model.dateLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<date> → model.dateLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<date> → model.dateLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<date> → model.dateLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<date> → model.dateLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<date> → model.dateLike → model.titlePagePart → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<date> → model.dateLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<date> → model.dateLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<date> → model.dateLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<date> → model.dateLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<date> → model.dateLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic peacee>** Entity to whom a creative work is formally offered.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <dedic peacee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<pb>** An empty formatting element that forces text to begin on a new page.

<date> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<date> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<date> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [date](#) element of the Text Encoding Initiative (TEI) and the [date](#) element of the Encoded Archival Description (EAD).

## Declaration

## <decoDesc>

(decoration description) – Contains a description of the decoration of an item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<decoDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<decoDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<decoDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<decoDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → att.common → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<decoDesc> → att.common → att.linkng → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<decoDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<decoDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<decoDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<decoDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<decoDesc> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<decoDesc> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<decoDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<decoDesc> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<decoDesc> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<decoDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<decoDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<decoDesc> → model.textPhraseLike.limited → model.msInline → <catchwords>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<decoDesc> → direct children → <condition>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<decoDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<decoDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<decoNote>** Contains a description of one or more decorative features of an item.

<decoDesc> → direct children → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<decoDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<decoDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<decoDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<decoDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<decoDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<decoDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<decoDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<decoDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<decoDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<decoDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<decoDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<decoDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<decoDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<decoDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<decoDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<decoDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<decoDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<decoDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<decoDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<decoDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<decoDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<decoDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<decoDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<decoDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<decoDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<decoDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<decoDesc> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<decoDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<decoDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<decoDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<decoDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<decoDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<decoDesc> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<decoDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **decoDesc** element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <decoNote>

(decoration note) – Contains a description of one or more decorative features of an item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<decoNote> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<decoNote> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<decoNote> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<decoNote> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<decoNote> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<decoNote> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<decoNote> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<decoNote> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<decoNote> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<decoNote> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<decoNote> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<decoNote> → att.lang → @xml:lang

## Member of

(decoNote isn't member of any model class)

## Contained By

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.  
 <decoNote> → elements having decoNote as direct children → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.  
 <decoNote> → elements having decoNote as direct children → <bindingDesc>

**<decoDesc>** Contains a description of the decoration of an item.  
 <decoNote> → elements having decoNote as direct children → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.  
 <decoNote> → elements having decoNote as direct children → <decoNote>

**<seal>** A single seal or similar attachment.  
 <decoNote> → elements having decoNote as direct children → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.  
 <decoNote> → elements having decoNote as direct children → <sealDesc>

**<support>** Provides a description of the physical support material of a written item.  
 <decoNote> → elements having decoNote as direct children → <support>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<decoNote> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<decoNote> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<decoNote> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<decoNote> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<decoNote> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<decoNote> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<decoNote> → direct children → <condition>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<decoNote> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<decoNote> → model.textPhraseLike.limited → model.dateLike → <date>

**<decoNote>** Contains a description of one or more decorative features of an item.

<decoNote> → direct children → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<decoNote> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<decoNote> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<decoNote> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<decoNote> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<decoNote> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<decoNote> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<decoNote> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<decoNote> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<decoNote> → direct children → <head>

**<height>** Description of the vertical size of an object.

<decoNote> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<decoNote> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<decoNote> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<decoNote> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<decoNote> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<decoNote> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<decoNote> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<decoNote> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<decoNote> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<decoNote> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<decoNote> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<decoNote> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<decoNote> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<decoNote> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<decoNote> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<decoNote> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<decoNote> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<decoNote> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<decoNote> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<decoNote> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<decoNote> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<decoNote> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<decoNote> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<decoNote> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<decoNote> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<decoNote> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<decoNote> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<decoNote> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<decoNote> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<decoNote> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<decoNote> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<decoNote> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<decoNote> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [decoNote](#) element of the Text Encoding Initiative (TEI).

## <dedicatee>

Entity to whom a creative work is formally offered.

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<dedicatee> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dedicatee> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dedicatee> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dedicatee> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dedicatee> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dedictee> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dedictee> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dedictee> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<dedictee> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<dedictee> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dedictee> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<dedictee> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<dedictee> → [att.lang](#) → @xml:lang

## Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the [model.textPhraseLike](#) class without the pb element.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dedictee> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<dedictee> → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<dedictee> → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<dedicatee> → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<dedicatee> → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<dedicatee> → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<dedicatee> → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<dedicatee> → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<dedicatee> → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<dedicatee> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<dedicatee> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<dedicatee> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<dedicatee> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<dedicatee> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<dedicatee> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<dedicatee> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<dedicatee> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dedicatee> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<dedicatee> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dedicatee> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<dedicatee> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<dedicatee> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<dedicatee> → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<dedicatee> → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<dedicatee> → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<dedicatee> → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<dedicatee> → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<dedicatee> → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dedicatee> → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<dedicatee> → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<dedicatee> → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<dedicatee> → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<dedicatee> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<dedicatee> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<dedicatee> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<dedicatee> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<dedicatee> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<dedicatee> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<dedicatee> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<dedicatee> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<dedicatee> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<dedicatee> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dedicatee> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<dedicatee> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<dedicatee> → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<dedicatee> → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<dedicatee> → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<dedicatee> → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<dedicatee> → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<dedicatee> → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<dedicatee> → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<dedicatee> → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<dedicatee> → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<dedictee> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<dedictee> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<dedictee> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<dedictee> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<dedictee> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dedictee> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<dedictee> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dedictee> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dedictee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dedictee> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dedictee> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<dedictee> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dedictee> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<dedictee> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dedictee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<dedictee> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<dedictee> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<dedicatee> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<dedicatee> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<dedicatee> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<dedicatee> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<dedicatee> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<dedicatee> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<dedicatee> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<dedicatee> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<dedicatee> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<dedicatee> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<dedicatee> → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<dedicatee> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<dedicatee> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<dedicatee> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<dedicatee> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<dedicatee> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<dedicatee> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<dedicatee> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dedicatee> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<dedicatee> → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dedicatee> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dedicatee> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dedicatee> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dedicatee> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dedicatee> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

- <bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.  
<dedicatee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>
- <catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.  
<dedicatee> → model.textPhraseLike.limited → model.mslinline → <catchwords>
- <corpName>** Identifies an organization or group of people that acts as a single entity.  
<dedicatee> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>
- <country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.  
<dedicatee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>
- <date>** A string identifying a point in time or the time period between two such points.  
<dedicatee> → model.textPhraseLike.limited → model.dateLike → <date>
- <dedicatee>** Entity to whom a creative work is formally offered.  
<dedicatee> → model.textPhraseLike.limited → <dedicatee>
- <depth>** Description of a measurement taken through a three-dimensional object.  
<dedicatee> → model.textPhraseLike.limited → model.dimLike → <depth>
- <dim>** Any single dimensional specification.  
<dedicatee> → model.textPhraseLike.limited → model.dimLike → <dim>
- <dimensions>** Information about the physical size of an entity; usually includes numerical data.  
<dedicatee> → model.textPhraseLike.limited → <dimensions>
- <district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.  
<dedicatee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>
- <expan>** Contains the expansion of an abbreviation.  
<dedicatee> → model.textPhraseLike.limited → model.editorialLike → <expan>
- <extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.  
<dedicatee> → model.textPhraseLike.limited → <extent>
- <fig>** Groups elements representing or containing graphic information such as an illustration or figure.  
<dedicatee> → model.textPhraseLike.limited → model.figureLike → <fig>
- <geogFeat>** Contains a common noun identifying a geographical feature.  
<dedicatee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>
- <geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.  
<dedicatee> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>
- <height>** Description of the vertical size of an object.  
<dedicatee> → model.textPhraseLike.limited → model.dimLike → <height>
- <heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<dedicatee> → model.textPhraseLike.limited → model.mslinline → <heraldry>
- <identifier>** An alpha-numeric string that establishes the identity of the described material.  
<dedicatee> → model.textPhraseLike.limited → model.identifierLike → <identifier>
- <lb>** An empty formatting element that forces text to begin on a new line.

<dedicatee> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dedicatee> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dedicatee> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<dedicatee> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dedicatee> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dedicatee> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dedicatee> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dedicatee> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dedicatee> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dedicatee> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<dedicatee> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dedicatee> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dedicatee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dedicatee> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dedicatee> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dedicatee> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dedicatee> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dedictee> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dedictee> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dedictee> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dedictee> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<dedictee> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dedictee> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dedictee> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dedictee> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<dedictee> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<dedictee> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<dedictee> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<dedictee> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<dedictee> → model.textPhraseLike.limited → model.dimLike → <width>

## Constraints

The dedictee element may not be recursively nested.

## Declaration

```
<elementSpec ident="dedictee" module="MEI.shared">
  <desc xml:lang="en">Entity to whom a creative work is formally offered.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.bibl"/>

      recursively nested.</sch:assert>
    </sch:rule>
  </constraint>
</constraintSpec>
</elementSpec>
```

## <dedication>

Contains a dedicatory statement.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<dedication> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dedication> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dedication> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dedication> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dedication> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<dedication> → [att.common](#) → [att.translit](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<dedication> → [att.common](#) → [att.type](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dedication> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<dedication> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<dedication> → [att.lang](#) → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<dedication> → elements having dedication as direct children → <creation>

**<titlePage>** Contains a transcription of the title page of a text.

<dedication> → [model.titlePagePart](#) → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dedication> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dedication> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dedication> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dedication> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<dedication> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dedication> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<dedication> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<dedication> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dedication> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<dedication> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dedication> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dedication> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<dedication> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<dedication> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<dedication> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<dedication> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dedication> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<dedication> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dedication> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<dedication> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<dedication> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<dedication> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dedication> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<dedication> → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<dedication> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<dedication> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dedication> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dedication> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<dedication> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dedication> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<dedication> → model.textComponentLike → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dedication> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dedication> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dedication> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dedication> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dedication> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<dedication> → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<dedication> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dedication> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dedication> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dedication> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dedication> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dedication> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dedication> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dedication> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dedication> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dedication> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<dedication> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dedication> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dedication> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dedication> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<dedication> → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<dedication> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<dedication> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<dedication> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<dedication> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<dedication> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

This element uses a variant of the content model provided by macro.struc-unstrucContent.

## <del>

(deletion) – Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

### Referenced in chapters

[11.2.2 Apparent Errors](#), [11.2.4 Additions, Deletions, and Omissions](#), [11.2.4.2 Additions and Deletions](#),  
[11.2.4.3 Substitutions, Restorations, and Handshifts](#), [11.3.2 Referencing Genetic States](#), [11.3.4 Genetic Changes at the Page Level](#)

### Module

[MEI.edittrans](#)

### Attributes

**@altrend** (*optional*) Used to extend the values of the rend attribute. One or more values of datatype **NMTOKEN**, separated by spaces.

<del> → [att.textRendition](#) → @altrend

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<del> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<del> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<del> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<del> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<del> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<del> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<del> → [att.common](#) → [att.linking](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<del> → [att.trans](#) → [att.metadataPointing](#) → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<del> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<del> → att.extent → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<del> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linked → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<del> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to [data.BOOLEAN](#) or [unknown](#).

<del> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<del> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<del> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<del> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<del> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linkin → @prev

**@rend** (*optional*) Captures the appearance of the element's contents using MEI-defined descriptors. One or more values from [data.TEXTRENDITION](#), separated by spaces.

<del> → att.textRendition → @rend

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linkin → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<del> → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<del> → att.edit → att.source → @source

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<del> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<del> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<del> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<del> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<del> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<del> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<del> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<del> → [att.lang](#) → @xml:lang

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<del> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<del> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<del> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<del> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<del> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<del> → [model.transcriptionLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<del> → [model.transcriptionLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<del> → [model.transcriptionLike](#) → <beam>

**<bifolium>** Describes a folded sheet of paper.

<del> → elements having del as direct children → <bifolium>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<del> → [model.transcriptionLike](#) → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<del> → [model.transcriptionLike](#) → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<del> → [model.transcriptionLike](#) → <chord>

**<contentItem>** Contains a single entry within a content description element.

<del> → [model.transcriptionLike](#) → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<del> → [model.transcriptionLike](#) → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<del> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<del> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<del> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<del> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<del> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<del> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<del> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<del> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<del> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<del> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<del> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<del> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<del> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<del> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<del> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<del> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<del> → model.transcriptionLike → <fingGrp>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<del> → elements having del as direct children → <foliaDesc>

**<foreName>** Contains a forename, given or baptismal name.

<del> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<del> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<del> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<del> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<del> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<del> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<del> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<del> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<del> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<del> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<del> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<del> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<del> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<del> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<del> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<del> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<del> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<del> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<del> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<del> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<del> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<del> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<del> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<del> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<del> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<del> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<del> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<del> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<del> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<del> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<del> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<del> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<del> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<del> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<del> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<del> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<del> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<del> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<del> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<del> → model.transcriptionLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<del> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<del> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<del> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<del> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<del> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<del> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<del> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<del> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<del> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<del> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<del> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<del> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<del> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<del> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<del> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<del> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<del> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<del> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<del> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<del> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<del> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<del> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<del> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<del> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<del> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<del> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<del> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<del> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<del> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<del> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<del> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<del> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<del> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<del> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<del> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<del> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<del> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<del> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<del> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<del> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<del> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<del> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line.

Sometimes called a "direct".

<del> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<del> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<del> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<del> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<del> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<del> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<del> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<del> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.ge

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<del> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<hispanTick>** Hispanic tick.

<del> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<del> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<del> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<del> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<del> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<del> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<del> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<del> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<del> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<del> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<del> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<del> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<del> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<del> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<del> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<del> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<del> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<del> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<del> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike

**<rest>** A non-sounding event found in the source being transcribed.

<del> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<del> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<del> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<del> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<section>** Segment of music data.

<del> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<del> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <signatures>

**<signifLet>** Significantive letter(s).

<del> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<del> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<del> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<del> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<del> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<del> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<del> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<del> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<del> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<del> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<del> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<del> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuples, especially useful for tuples that extend across bar lines.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<del> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<del> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<del> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<del> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<del> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The resp attribute contains an ID reference to an element containing the name of the editor or transcriber responsible for identifying the hand of the deletion. The cert attribute signifies the degree of certainty ascribed to the identification of the hand of the deletion. The hand of the agent which made the deletion should be pointed to using the hand attribute. The rend attribute may be used to record the method used to make the deletion (overstrike, strike[through], etc.).

In no case should <del> contain elements that would not otherwise be permitted to occur within the parent of its own <app> ancestor. For example, when used as a descendent of <verse>, <del> should only contain those elements allowed within <verse>.

The model of this element is based on the **del** element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <depth>

Description of a measurement taken through a three-dimensional object.

### Module

MEI.shared

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<depth> → att.bibl → @analog

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<depth> → att.quantity → att.ranging → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<depth> → att.quantity → att.ranging → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.typed → att.classed → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<depth> → att.quantity → att.ranging → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<depth> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<depth> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<depth> → att.quantity → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<depth> → att.quantity → att.ranging → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<depth> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linking → @prev

**@quantity** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<depth> → att.quantity → @quantity

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<depth> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<depth> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<depth> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "**byte**" (*Byte*.), "**char**" (*Character*.), "**cm**" (*Centimeter*.), "**deg**" (*Degree*.), "**in**" (*Inch*.), "**issue**" (*Serial issue*.), "**ft**" (*Foot*.), "**m**" (*Meter*.), "**mm**" (*Millimeter*.), "**page**" (*Page*.), "**pc**" (*Pica*.), "**pt**" (*Point*.), "**px**" (*Pixel*.), "**rad**" (*Radian*.), "**record**" (*Record*.), "**vol**" (*Serial volume*.), "**vu**" (*MEI virtual unit*.)

<depth> → att.quantity → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<depth> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<depth> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<depth> → att.lang → @xml:lang

## Member of

[model.dimLike](#) Groups elements which describe a measurement forming part of the physical dimensions of an object.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<depth> → model.dimLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<depth> → model.dimLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<depth> → model.dimLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<depth> → model.dimLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<depth> → model.dimLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<depth> → model.dimLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<depth> → model.dimLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<depth> → model.dimLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<depth> → model.dimLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<depth> → model.dimLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<depth> → model.dimLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<depth> → model.dimLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<depth> → model.dimLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<depth> → model.dimLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<depth> → model.dimLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<depth> → model.dimLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<depth> → model.dimLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<depth> → model.dimLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<depth> → model.dimLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<depth> → model.dimLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<depth> → model.dimLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<depth> → model.dimLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<depth> → model.dimLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<depth> → model.dimLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<depth> → model.dimLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<depth> → model.dimLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<depth> → model.dimLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<depth> → model.dimLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<depth> → model.dimLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<depth> → model.dimLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<depth> → model.dimLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<depth> → model.dimLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<depth> → model.dimLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<depth> → model.dimLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<depth> → model.dimLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<depth> → model.dimLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<depth> → model.dimLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<depth> → model.dimLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<depth> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<depth> → model.dimLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<depth> → model.dimLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<depth> → model.dimLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<depth> → model.dimLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<depth> → model.dimLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<depth> → model.dimLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<depth> → model.dimLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<depth> → model.dimLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<depth> → model.dimLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<depth> → model.dimLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<depth> → model.dimLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<depth> → model.dimLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<depth> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<depth> → model.dimLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<depth> → model.dimLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<depth> → model.dimLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<depth> → model.dimLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<depth> → model.dimLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<depth> → model.dimLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<depth> → model.dimLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<depth> → model.dimLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<depth> → model.dimLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<depth> → model.dimLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<depth> → model.dimLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<depth> → model.dimLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<depth> → model.dimLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<depth> → model.dimLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <supportDesc>

**<syI>** Individual lyric syllable.

<depth> → model.dimLike → model.textPhraseLike.limited → <syI>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<depth> → model.dimLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<depth> → model.dimLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<depth> → model.dimLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<depth> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<depth> → model.dimLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<depth> → model.dimLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<depth> → model.dimLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<depth> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<depth> → model.dimLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<depth> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<depth> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<depth> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<depth> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<depth> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<depth> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<depth> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<depth> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<depth> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<depth> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<depth> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<depth> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<depth> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<depth> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<depth> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<depth> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<depth> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<depth> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<depth> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<depth> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<depth> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<depth> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<depth> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<depth> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<depth> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<depth> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<depth> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<depth> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<depth> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<depth> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<depth> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<depth> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<depth> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<depth> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<depth> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<depth> → model.textPhraseLike.limited → model.mslInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<depth> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<depth> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<depth> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<depth> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<depth> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<depth> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<depth> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<depth> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<depth> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<depth> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<depth> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<depth> → model.textPhraseLike.limited → model.dimLike → <width>

## <desc>

(description) – Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

### Referenced in chapters

[11.3.1 Encoding Genetic States](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<desc> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.linked → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<desc> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<desc> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<desc> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<desc> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<desc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<desc> → [att.common](#) → [att.linking](#) → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<desc> → [att.source](#) → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<desc> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<desc> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<desc> → [att.common](#) → [att.lang](#) → att.attributed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<desc> → [att.common](#) → [att.lang](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<desc> → [att.common](#) → [att.lang](#) → [att.basic](#) → att.attributed → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<desc> → [att.common](#) → [att.lang](#) → @xml:lang

## Member of

[model.descLike](#) Groups elements which provide a description of their parent entity.

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

## Contained By

**<attUsage>** Documents the usage of a specific attribute of the element.

<desc> → elements having desc as direct children → <attUsage>

**<catRel>** Contains the name of a related category.

<desc> → elements having desc as direct children → <catRel>

**<category>** Contains an individual descriptive category in a user-defined taxonomy, possibly nested within a superordinate category.

<desc> → elements having desc as direct children → <category>

**<event>** Contains a free-text event description.

<desc> → model.eventPart → <event>

**<genState>** Describes a distinctive state in the textual development of a work.

<desc> → elements having desc as direct children → <genState>

**<namespace>** Supplies the formal name of the namespace to which the elements documented by its children belong.

<desc> → elements having desc as direct children → <namespace>

**<tagUsage>** Documents the usage of a specific element within the document.

<desc> → elements having desc as direct children → <tagUsage>

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

<desc> → elements having desc as direct children → <tagsDecl>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

<desc> → elements having desc as direct children → <taxonomy>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<desc> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<desc> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<desc> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<desc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<desc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<desc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<desc> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<desc> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<desc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<desc> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<desc> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<desc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<desc> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<desc> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<desc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<desc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<desc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<desc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<desc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<desc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<desc> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<desc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<desc> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<desc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<desc> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<desc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<desc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<desc> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<desc> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<desc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<desc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<desc> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<desc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<desc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<desc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<desc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<desc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<desc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<desc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<desc> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<desc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<desc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<desc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<desc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<desc> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<desc> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<desc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<desc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<desc> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<desc> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<desc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<desc> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<desc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<desc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<desc> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<desc> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<desc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<desc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<desc> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<desc> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<desc> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<desc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **desc** element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <dim>

(dimension) – Any single dimensional specification.

### Module

MEI.shared

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<dim> → att.bibl → @analog

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<dim> → att.quantity → att.ranging → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<dim> → att.quantity → att.ranging → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.typed → att.classed → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<dim> → att.quantity → att.ranging → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dim> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @follows

**@form** (*required*) Aspect of the object being measured. Allowed values are: "**alt**" (*Altitude. Refers to the distance above a given level, commonly mean sea level.*), "**angle**" (*Angle. Amount of rotation needed to bring one line or plane into coincidence with another.*), "**circum**" (*Circumference of a circular area.*), "**depth**" (*Dimension taken through an object or body of material, usually downward from an upper surface, horizontally inward from an outer surface, or from top to bottom of something regarded as one of several layers.*), "**diameter**" (*Length of a straight line passing through the center of a circle or sphere and meeting the circumference or surface at each end.*), "**elevation**" (*Distance to which something has been raised or uplifted above a level, , a hill's elevation above the surrounding country.*), "**height**" (*Denotes extent upward (as from foot to head) as well as any*

*measurable distance above a given level.), "length" (Measure of the greatest dimension of a plane or solid figure.), "radius" (Half the diameter of a circular, spherical, or cylindrical object.), "relief" (Projection of a figure or part from the plane on which it is formed.), "width" (Extent from side to side; breadth.)*

<dim> → direct children → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dim> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<dim> → att.quantity → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<dim> → att.quantity → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dim> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @prev

**@quantity** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<dim> → att.quantity → @quantity

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dim> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<dim> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<dim> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<dim> → att.quantity → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dim> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<dim> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<dim> → att.lang → @xml:lang

## Member of

[model.dimLike](#) Groups elements which describe a measurement forming part of the physical dimensions of an object.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<dim> → model.dimLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<dim> → model.dimLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<dim> → model.dimLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<dim> → model.dimLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<dim> → model.dimLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<dim> → model.dimLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<dim> → model.dimLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<dim> → model.dimLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<dim> → model.dimLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<dim> → model.dimLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<dim> → model.dimLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<dim> → model.dimLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<dim> → model.dimLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dim> → model.dimLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<dim> → model.dimLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dim> → model.dimLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<dim> → model.dimLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<dim> → model.dimLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<dim> → model.dimLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<dim> → model.dimLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<dim> → model.dimLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<dim> → model.dimLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<dim> → model.dimLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<dim> → model.dimLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dim> → model.dimLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<dim> → model.dimLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<dim> → model.dimLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<dim> → model.dimLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<dim> → model.dimLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<dim> → model.dimLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<dim> → model.dimLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<dim> → model.dimLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<dim> → model.dimLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<dim> → model.dimLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<dim> → model.dimLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<dim> → model.dimLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<dim> → model.dimLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<dim> → model.dimLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dim> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<dim> → model.dimLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<dim> → model.dimLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<dim> → model.dimLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<dim> → model.dimLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<dim> → model.dimLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<dim> → model.dimLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<dim> → model.dimLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<dim> → model.dimLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<dim> → model.dimLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<dim> → model.dimLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<dim> → model.dimLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<dim> → model.dimLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dim> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<dim> → model.dimLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<dim> → model.dimLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dim> → model.dimLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<dim> → model.dimLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<dim> → model.dimLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<dim> → model.dimLike → model.textPhraseLike.limited → <roleDesc>

**< roleName >** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<dim> → model.dimLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<dim> → model.dimLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<dim> → model.dimLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<dim> → model.dimLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<dim> → model.dimLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<dim> → model.dimLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<dim> → model.dimLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<dim> → model.dimLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<dim> → model.dimLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<dim> → model.dimLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<dim> → model.dimLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<dim> → model.dimLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<dim> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<dim> → model.dimLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<dim> → model.dimLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<dim> → model.dimLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dim> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<dim> → model.dimLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dim> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dim> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dim> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dim> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dim> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<dim> → model.textPhraseLike.limited → model.msiinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dim> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<dim> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dim> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dim> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<dim> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<dim> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<dim> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dim> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<dim> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dim> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<dim> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<dim> → model.textPhraseLike.limited → model.msinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dim> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<dim> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dim> → model.textPhraseLike.limited → model.msinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dim> → model.textPhraseLike.limited → model.msinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<dim> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dim> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dim> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dim> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dim> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dim> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dim> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<dim> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dim> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dim> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dim> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dim> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dim> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dim> → model.textPhraseLike.limited → model.msinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dim> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dim> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dim> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<dim> → model.textPhraseLike.limited → model.rndLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dim> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dim> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dim> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<dim> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<dim> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<dim> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<dim> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<dim> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The <height>, <width>, and <depth> elements are preferred when appropriate.

## <dimensions>

Information about the physical size of an entity; usually includes numerical data.

### Module

MEI.shared

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<dimensions> → att.bibl → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<dimensions> → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dimensions> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dimensions> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dimensions> → att.common → att.linking → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<dimensions> → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dimensions> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dimensions> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dimensions> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dimensions> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dimensions> → att.common → att.linkin → @precedes

**@prev** (optional) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<dimensions> → att.common → att.linkin → @prev

**@resp** (optional) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<dimensions> → att.common → att.responsibility → @resp

**@sameas** (optional) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<dimensions> → att.common → att.linkin → @sameas

**@synch** (optional) Points to elements that are synchronous with the current element. One or more values from data.URI, separated by spaces.

<dimensions> → att.common → att.linkin → @synch

**@translit** (optional) Specifies the transliteration technique used. Value is a NMTOKEN.

<dimensions> → att.common → att.lang → @translit

**@type** (optional) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype NMTOKEN, separated by spaces.

<dimensions> → att.common → att.lang → @type

**@unit** (optional) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<dimensions> → att.common → att.measurement → @unit

**@xml:base** (optional) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to data.URI.

<dimensions> → att.common → att.basic → @xml:base

**@xml:id** (optional) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid xml:id.

<dimensions> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (optional) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a language.

<dimensions> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<dimensions> → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<dimensions> → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<dimensions> → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<dimensions> → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<dimensions> → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<dimensions> → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<dimensions> → model.textPhraseLike.limited → <biblScope>

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.

<dimensions> → elements having dimensions as direct children → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.

<dimensions> → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<dimensions> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<dimensions> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<dimensions> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<dimensions> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<dimensions> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<dimensions> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<dimensions> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<dimensions> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dimensions> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<dimensions> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dimensions> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<dimensions> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<dimensions> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<dimensions> → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<dimensions> → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<dimensions> → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<dimensions> → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<dimensions> → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<dimensions> → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dimensions> → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<dimensions> → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<dimensions> → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<dimensions> → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<dimensions> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<dimensions> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<dimensions> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<dimensions> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<dimensions> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<dimensions> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<dimensions> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<dimensions> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<dimensions> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<dimensions> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dimensions> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<dimensions> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<dimensions> → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<dimensions> → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<dimensions> → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<dimensions> → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<dimensions> → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<dimensions> → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<dimensions> → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<dimensions> → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<dimensions> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<dimensions> → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<dimensions> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<dimensions> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<dimensions> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dimensions> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<dimensions> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<dimensions> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dimensions> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<dimensions> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<dimensions> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<dimensions> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<dimensions> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<dimensions> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<dimensions> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<dimensions> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<dimensions> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<dimensions> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<dimensions> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<dimensions> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<dimensions> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<support>** Provides a description of the physical support material of a written item.

<dimensions> → elements having dimensions as direct children → <support>

**<supportDesc>** Groups elements describing the physical support material of an item.

<dimensions> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<dimensions> → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<dimensions> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<dimensions> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<dimensions> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<dimensions> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<dimensions> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<dimensions> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<dimensions> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dimensions> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<dimensions> → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dimensions> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<dimensions> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<dimensions> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dimensions> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<dimensions> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The elements **<height>**, **<width>**, **<depth>**, and **<dim>** are available for circumstances that require the capture of the individual dimensions of an object. Do not confuse this element with the **<extent>** element, which is used to indicate the quantity of described materials.

The model of this element is based on the **dimensions** element of the Text Encoding Initiative (TEI) and the **dimensions** element of the Encoded Archival Description (EAD).

## Constraints

The depth element may only appear once.

The height element may only appear once.

The width element may only appear once.

## Declaration

## <dir>

(directive) – An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

### Referenced in chapters

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dir> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<dir> → att.dir.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<dir> → att.dir.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<dir> → att.dir.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<dir> → att.dir.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<dir> → att.dir.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<dir> → att.dir.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<dir> → att.dir.ges → att.duration.ges → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<dir> → att.dir.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<dir> → att.dir.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<dir> → att.dir.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<dir> → att.dir.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<dir> → att.dir.vis → att.extender → @extender

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<dir> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dir> → att.dir.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dir> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<dir> → att.dir.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<dir> → att.dir.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<dir> → att.dir.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<dir> → att.dir.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<dir> → att.dir.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<dir> → att.dir.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<dir> → att.dir.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<dir> → att.dir.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dir> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<dir> → att.dir.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<dir> → att.dir.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<dir> → att.dir.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<dir> → att.dir.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dir> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dir> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dir> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<dir> → [att.dir.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<dir> → [att.dir.vis](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<dir> → [att.dir.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<dir> → [att.dir.vis](#) → [att.visualOffset2.to](#) → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dir> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<dir> → [att.dir.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<dir> → [att.lang](#) → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dir> → [att.dir.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dir> → [att.dir.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<dir> → [att.dir.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<dir> → [att.dir.log](#) → [att.timestamp2.log](#) → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<dir> → [att.dir.ges](#) → [att.timestamp2.ges](#) → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<dir> → [att.dir.ges](#) → [att.timestamp2.ges](#) → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<dir> → [att.common](#) → [att.typed](#) → @type

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<dir> → [att.dir.vis](#) → [att.verticalGroup](#) → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dir> → [att.dir.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<dir> → [att.dir.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<dir> → [att.dir.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dir> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<dir> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<dir> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<dir> → [att.dir.vis](#) → [att.xy](#) → @y

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dir> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<dir> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<dir> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dir> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<dir> → elements having dir as direct children → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<dir> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<dir> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dir> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<dir> → elements having dir as direct children → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<dir> → elements having dir as direct children → <volta>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dir> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<dir> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dir> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<dir> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dir> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dir> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dir> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<dir> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<dir> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dir> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<dir> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<dir> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<dir> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<dir> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dir> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dir> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<dir> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<dir> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<dir> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dir> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<dir> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<dir> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<dir> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<dir> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<dir> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dir> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<dir> → model.textPhraseLike.limited → model.lbLike → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<dir> → model.graphicPrimitiveLike → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dir> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dir> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<dir> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dir> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dir> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dir> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dir> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dir> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dir> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<dir> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dir> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dir> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dir> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dir> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dir> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dir> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dir> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dir> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<dir> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dir> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<dir> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dir> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dir> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dir> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<dir> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dir> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<dir> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<dir> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<dir> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dir> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<dir> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<dir> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Examples include text strings, such as 'affettuoso', and music symbols, such as segno and coda symbols, fermatas over a bar line, etc. Directives can be control elements. That is, they can be linked via their attributes to other events. The starting point of the directive may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify a starting point attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

## <distributor>

Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<distributor> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<distributor> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<distributor> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<distributor> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<distributor> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<distributor> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<distributor> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<distributor> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<distributor> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<distributor> → [att.lang](#) → @xml:lang

## Member of

[model.imprintPart](#) Groups elements that may appear as part of a bibliographic imprint.

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<distributor> → [model.imprintPart](#) → <bibl>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<distributor> → [model.imprintPart](#) → <imprint>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<distributor> → model.pubStmtPart → <pubStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<distributor> → model.imprintPart → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<distributor> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<distributor> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<distributor> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<distributor> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<distributor> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<distributor> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<distributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<distributor> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<distributor> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<distributor> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<distributor> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<distributor> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<distributor> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<distributor> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<distributor> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<distributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<distributor> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<distributor> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<distributor> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<distributor> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<distributor> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<distributor> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<distributor> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<distributor> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<distributor> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<distributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<distributor> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<distributor> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<distributor> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<distributor> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<distributor> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<distributor> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<distributor> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<distributor> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<distributor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<distributor> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<distributor> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<distributor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<distributor> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<distributor> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<distributor> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<distributor> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<distributor> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<distributor> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<distributor> → `model.textPhraseLike.limited` → <term>

**<title>** Title of a bibliographic entity.

<distributor> → `model.textPhraseLike.limited` → `model.titleLike` → <title>

**<watermark>** Contains a description of a watermark or similar device.

<distributor> → `model.textPhraseLike.limited` → `model.mslInline` → <watermark>

**<width>** Description of the horizontal size of an object.

<distributor> → `model.textPhraseLike.limited` → `model.dimLike` → <width>

## Remarks

The model of this element is based on the **distributor** element of the Text Encoding Initiative (TEI).

## <district>

Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<district> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<district> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<district> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<district> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<district> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<district> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<district> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<district> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<district> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<district> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<district> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<district> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<district> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<district> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<district> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<district> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<district> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<district> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<district> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<district> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<district> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<district> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<district> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<district> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<district> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<district> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<district> → att.lang → @xml:lang

## Member of

[model.geogNamePart](#) Groups elements which form part of a geographic name.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<district> → model.geogNamePart → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<district> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<district> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<district> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<district> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<district> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<district> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<district> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<district> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<district> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<district> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<district> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<district> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<district> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<district> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<district> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<district> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<district> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<district> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **district** element of the Text Encoding Initiative (TEI).

## <div>

(division) – Major structural division of text, such as a preface, chapter or section.

### Referenced in chapters

[2.1.4 General Text Structure Elements](#), [3.6.5 Work History](#), [9.1.1 Organizing Text into Divisions](#), [9.1.2.1 Front Matter](#), [9.2.1 Paragraphs](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<div> → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<div> → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<div> → [att.linking](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<div> → [att.metadataPointing](#) → @decls

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<div> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<div> → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<div> → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<div> → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<div> → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<div> → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<div> → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<div> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<div> → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<div> → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<div> → att.lang → @translit

**@type** (*optional*) Characterizes the textual division in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**abstract**" (*A summary of the content of a text as continuous prose.*), "**ack**" (*A formal declaration of acknowledgment by the author in which persons and institutions are thanked for their part in the creation of a text.*), "**appendix**" (*An ancillary self-contained section of a work, often providing additional but in some sense extra-canonical text.*), "**bibliography**" (*A list of bibliographic citations.*), "**colophon**" (*A statement appearing at the end of a book describing the conditions of its physical production.*), "**contents**" (*A table of contents, specifying the structure of a work and listing its constituents. The list element should be used to mark its structure.*), "**dedication**" (*A formal offering or dedication of a text to one or more persons or institutions by the author.*), "**frontispiece**" (*A pictorial frontispiece, possibly including some text.*), "**glossary**" (*A list of terms associated with definition texts ('glosses').*), "**half-title**" (*A page containing only the title of a book — as opposed to the title page, which also lists subtitle, author, imprint and similar data.*), "**index**" (*Any form of index to the work.*), "**annotations**" (*A section in which annotations on the text are gathered together.*), "**preface**" (*A foreword or preface addressed to the reader in which the author or publisher explains the content, purpose, or origin of the text.*)

<div> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<div> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<div> → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<div> → att.lang → @xml:lang

**Member of**

[model.divLike](#) Groups elements used to represent generic structural divisions of text.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<div> → [model.divLike](#) → <abbr>

**<add>** Marks an addition to the text.

<div> → [model.divLike](#) → <add>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<div> → [model.divLike](#) → <back>

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

<div> → [model.divLike](#) → <body>

**<corr>** Contains the correct form of an apparent erroneous passage.

<div> → [model.divLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<div> → [model.divLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<div> → [model.divLike](#) → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<div> → [model.divLike](#) → <div>

**<expan>** Contains the expansion of an abbreviation.

<div> → [model.divLike](#) → <expan>

**<front>** Bundles prefatory text found before the start of the musical text.

<div> → [model.divLike](#) → <front>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<div> → [model.divLike](#) → <history>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<div> → [model.divLike](#) → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<div> → [model.divLike](#) → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<div> → [model.divLike](#) → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<div> → [model.divLike](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<div> → [model.divLike](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<div> → model.divLike → <restore>

**<score>** Full score view of the musical content.

<div> → model.divLike → <score>

**<section>** Segment of music data.

<div> → model.divLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<div> → model.divLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<div> → model.divLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<div> → model.divLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<div> → model.divLike → <unclear>

## May Contain

**<biblList>** List of bibliographic references.

<div> → model.textComponentLike → model.listLike → <biblList>

**<castList>** Contains a single cast list or dramatis personae.

<div> → model.textComponentLike → model.listLike → <castList>

**<cb>** An empty formatting element that forces text to begin in a new column.

<div> → model.milestoneLike.text → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<div> → model.milestoneLike.text → <colLayout>

**<div>** Major structural division of text, such as a preface, chapter or section.

<div> → model.divLike → <div>

**<eventList>** Contains historical information given as a sequence of significant past events.

<div> → model.textComponentLike → model.listLike → <eventList>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<div> → model.figureLike → <fig>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<div> → model.headLike → <head>

**<lb>** An empty formatting element that forces text to begin on a new line.

<div> → model.milestoneLike.text → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<div> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<div> → model.textComponentLike → model.listLike → <list>

**<p>** One or more text phrases that form a logical prose passage.

<div> → model.textComponentLike → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<div> → model.milestoneLike.text → model.pbLike → <pb>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<div> → model.textComponentLike → model.quoteLike → <quote>

**<sp>** Contains an individual speech in a performance text.

<div> → direct children → <sp>

**<table>** Contains text displayed in tabular form.

<div> → model.textComponentLike → model.tableLike → <table>

## Remarks

Often, the **<head>** sub-element identifies the <div>'s purpose. The model of this element is based on the **div** element of the Text Encoding Initiative (TEI).

## <divLine>

Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

### Module

[MEI.neumes](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<divLine> → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<divLine> → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @follows

**@form** (*optional*) Identifies the different kinds of division. Allowed values are: "**caesura**" , "**finalis**" , "**maior**" , "**maxima**" , "**minima**" , "**virgula**"

<divLine> → [att.divLine.log](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<divLine> → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<divLine> → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<divLine> → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<divLine> → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<divLine> → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<divLine> → [att.labelled](#) → @label

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<divLine> → [att.staffLoc](#) → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<divLine> → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<divLine> → [att.linked](#) → @synch

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<divLine> → [att.visibility](#) → @visible

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<divLine> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<divLine> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<divLine> → `att.basic` → `att.id` → `@xml:id`

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<divLine> → `att.xy` → `@y`

## Member of

`model.eventLike.neumes` Groups event elements that occur in the neume repertoire.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`abbr`>

**<add>** Marks an addition to the text.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`add`>

**<corr>** Contains the correct form of an apparent erroneous passage.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`corr`>

**<damage>** Contains an area of damage to the physical medium.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`damage`>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`del`>

**<expan>** Contains the expansion of an abbreviation.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`expan`>

**<layer>** An independent stream of events on a staff.

<divLine> → elements having `divLine` as direct children → <`layer`>

**<layer>** An independent stream of events on a staff.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`layer`>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`lem`>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<divLine> → `model.eventLike.neumes` → <`ligature`>

**<oLayer>** A layer that contains an alternative to material in another layer.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`oLayer`>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`orig`>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<divLine> → `model.eventLike.neumes` → `model.layerPart.neumes` → `model.layerPart.mensuralAndNeumes` → `model.layerPart` → <`rdg`>

**<reg>** Contains material which has been regularized or normalized in some sense.

<divLine> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<divLine> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<divLine> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<divLine> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<divLine> → model.eventLike.neumes → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<divLine> → model.eventLike.neumes → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

## <domainsDecl>

(domains declaration) – Indicates which domains are included in the encoding.

### Referenced in chapters

[3.4.2 Encoding Description](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<domainsDecl> → [att.bibl](#) → @analog

**@anl** (*required*) Value conforms to [data.BOOLEAN](#).

<domainsDecl> → direct children → @anl

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<domainsDecl> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → [att.common](#) → [att.linking](#) → @follows

**@ges** (*required*) Value conforms to [data.BOOLEAN](#).

<domainsDecl> → direct children → @ges

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<domainsDecl> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<domainsDecl> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<domainsDecl> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<domainsDecl> → att.common → att.typed → @type

**@vis** (*required*) Value conforms to [data.BOOLEAN](#).

<domainsDecl> → direct children → @vis

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<domainsDecl> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<domainsDecl> → att.common → att.basic → att.id → @xml:id

## Member of

(domainsDecl isn't member of any model class)

## Contained By

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<domainsDecl> → elements having domainsDecl as direct children → <encodingDesc>

## May Contain

– (<domainsDecl> may not have child elements)

## Declaration

```
<elementSpec ident="domainsDecl" module="MEI.header">

```

## <dot>

Dot of augmentation or division.

### Referenced in chapters

[2.2.4.3 Accidentals, Articulation Symbols, Augmentation Dots, and Custos Signs](#), [5.6.4 Dots](#)

### Module

[MEI.shared](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<dot> → att.dot.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<dot> → att.dot.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dot> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linkin → @corresp

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<dot> → att.dot.log → att.controlEvent → att.targetEval → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<dot> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<dot> → att.dot.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<dot> → att.dot.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<dot> → [att.dot.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<dot> → [att.dot.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<dot> → [att.dot.vis](#) → [att.typography](#) → @fontweight

**@form** (*optional*) Records the function of the dot. Allowed values are: "**aug**" (*Augmentation dot.*), "**div**" (*Dot of division.*)

<dot> → [att.dot.log](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<dot> → [att.dot.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<dot> → [att.dot.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<dot> → [att.dot.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<dot> → [att.dot.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dot> → [att.dot.vis](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dot> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<dot> → [att.dot.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<dot> → [att.dot.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<dot> → [att.dot.vis](#) → [att.typography](#) → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<dot> → att.dot.vis → att.staffLoc → @loc

**@n (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dot> → att.common → att.nNumberLike → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linking → @next

**@oloc (optional)** Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

<dot> → att.dot.vis → att.staffLoc.pitched → @oloc

**@part (optional)** Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<dot> → att.dot.log → att.controlEvent → att.partIdent → @part

**@partstaff (optional)** Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<dot> → att.dot.log → att.controlEvent → att.partIdent → @partstaff

**@plist (optional)** When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<dot> → att.dot.log → att.controlEvent → att.plist → @plist

**@ploc (optional)** Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

<dot> → att.dot.vis → att.staffLoc.pitched → @ploc

**@precedes (optional)** Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linking → @precedes

**@prev (optional)** Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linking → @prev

**@resp (optional)** Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.responsibility → @resp

**@sameas (optional)** Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dot> → att.common → att.linking → @sameas

**@staff (recommended)** Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<dot> → att.dot.log → att.controlEvent → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dot> → [att.common](#) → [att.linking](#) → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dot> → [att.dot.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dot> → [att.dot.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<dot> → [att.dot.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<dot> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dot> → [att.dot.vis](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<dot> → [att.dot.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<dot> → [att.dot.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dot> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<dot> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<dot> → [att.dot.vis](#) → [att.xy](#) → @y

## Member of

[model.noteModifierLike](#) Groups elements that modify note-like features.

[model.eventLike.mensural](#) Groups event elements that occur in the mensural repertoire.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <abbr>

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <add>

**<add>** Marks an addition to the text.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <corr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <damage>

**<damage>** Contains an area of damage to the physical medium.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <del>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<expan>** Contains the expansion of an abbreviation.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<layer>** An independent stream of events on a staff.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<dot> → model.eventLike.mensural → <ligature>

**<note>** A single pitched event.

<dot> → model.noteModifierLike → <note>

**<oLayer>** A layer that contains an alternative to material in another layer.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<oLayer>** A layer that contains an alternative to material in another layer.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<dot> → elements having dot as direct children → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<sic>** Contains apparently incorrect or inaccurate material.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dot> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dot> → model.noteModifierLike → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

– (<dot> may not have child elements)

## Remarks

This element provides an alternative to the dots attribute on [note](#) and [rest](#) elements. It should be used when specific display info, such as size or color, needs to be recorded for the dot. This element may also be used for dots of division in the mensural repertoire.

## Declaration

## <dynam>

(dynamic) – Indication of the volume of a note, phrase, or section of music.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [2.2.5.1 Text Directives](#), [2.2.5.3 Dynamics](#), [4.3.3 Dynamics in CMN](#), [4.3.9 Directives and Rehearsal marks](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<dynam> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<dynam> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<dynam> → [att.common](#) → [att.linkin](#) → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<dynam> → [att.dynam.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<dynam> → [att.dynam.ges](#) → [att.duration.ges](#) → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<dynam> → att.dynam.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<dynam> → att.dynam.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<dynam> → att.dynam.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<dynam> → att.dynam.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<dynam> → att.dynam.vis → att.extender → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dynam> → att.dynam.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<dynam> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<dynam> → att.dynam.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<dynam> → att.dynam.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<dynam> → att.dynam.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<dynam> → att.dynam.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<dynam> → att.dynam.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<dynam> → att.dynam.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<dynam> → att.dynam.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).  
<dynam> → att.dynam.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<dynam> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<dynam> → att.dynam.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<dynam> → att.dynam.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<dynam> → att.dynam.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.dynam.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<dynam> → att.dynam.log → att.controlEvent → att.staffIdn → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<dynam> → att.dynam.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<dynam> → att.dynam.log → att.startEndd → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<dynam> → att.dynam.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<dynam> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<dynam> → att.dynam.vis → att.visualOffset → att.visualOffset.to → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<dynam> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dynam> → att.dynam.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<dynam> → att.dynam.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<dynam> → att.dynam.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<dynam> → att.dynam.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<dynam> → att.dynam.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<dynam> → [att.dynam.ges](#) → [att.timestamp2.ges](#) → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<dynam> → [att.common](#) → [att.typed](#) → @type

**@val** (*optional*) MIDI number. Value conforms to [data.MIDIVALUE](#).

<dynam> → [att.dynam.ges](#) → [att.midiValue](#) → @val

**@val2** (*optional*) MIDI number. Value conforms to [data.MIDIVALUE](#).

<dynam> → [att.dynam.ges](#) → [att.midiValue2](#) → @val2

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<dynam> → [att.dynam.vis](#) → [att.verticalGroup](#) → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<dynam> → [att.dynam.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<dynam> → [att.dynam.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<dynam> → [att.dynam.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<dynam> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<dynam> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<dynam> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<dynam> → [att.dynam.vis](#) → [att.xy](#) → @y

## Member of

**model.controlEventLike** Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<dynam> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<dynam> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<dynam> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<dynam> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<dynam> → elements having dynam as direct children → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<dynam> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<dynam> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dynam> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<dynam> → elements having dynam as direct children → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<dynam> → elements having dynam as direct children → <volta>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<dynam> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<dynam> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<dynam> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<dynam> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<dynam> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<dynam> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<dynam> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<dynam> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<dynam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<dynam> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<dynam> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<dynam> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicataire>** Entity to whom a creative work is formally offered.

<dynam> → model.textPhraseLike.limited → <dedicataire>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<dynam> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<dynam> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<dynam> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<dynam> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<dynam> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<dynam> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<dynam> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<dynam> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<dynam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<dynam> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<dynam> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<dynam> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<dynam> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<dynam> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<dynam> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<dynam> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<dynam> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<dynam> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<dynam> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<dynam> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<dynam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<dynam> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<dynam> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<dynam> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<dynam> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<dynam> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<dynam> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<dynam> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<dynam> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<dynam> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<dynam> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<dynam> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<dynam> → model.textPhraseLike.limited → model.msnline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<dynam> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<dynam> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<dynam> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<dynam> → model.textPhraseLike.limited → model.msnline → <signatures>

**<stack>** An inline table with a single column.

<dynam> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<dynam> → model.textPhraseLike.limited → model.msnline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<dynam> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<dynam> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<dynam> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<dynam> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<dynam> → `model.textPhraseLike.limited` → <symbol>

**<term>** Keyword or phrase which describes a resource.

<dynam> → `model.textPhraseLike.limited` → <term>

**<title>** Title of a bibliographic entity.

<dynam> → `model.textPhraseLike.limited` → `model.titleLike` → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<dynam> → `model.transcriptionLike` → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<dynam> → `model.textPhraseLike.limited` → `model.mslinline` → <watermark>

**<width>** Description of the horizontal size of an object.

<dynam> → `model.textPhraseLike.limited` → `model.dimLike` → <width>

## Remarks

This element may be used for instantaneous or continuous *textual* dynamics, e.g., 'p', 'mf', or 'cresc. poco a poco'. The **<hairpin>** element should be used for *graphical*, i.e., crescendo and diminuendo, dynamic markings. The starting point of the dynamic marking may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify a starting point attribute. MIDI values associated with the graphical dynamic sign may be recorded in the val and val2 attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

When @val2 is present, either @dur, @dur.ges, @endid, or @tstamp2 must also be present.

## Declaration

```

## <edition>

(edition designation) – A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [3.4.1.1 Edition Statement](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<edition> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<edition> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<edition> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<edition> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<edition> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<edition> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<edition> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<edition> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<edition> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<edition> → [att.lang](#) → @xml:lang

## Member of

[model.editionLike](#) Groups elements containing bibliographic edition information.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<edition> → [model.editionLike](#) → [model.biblPart](#) → <bibl>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<edition> → [model.editionLike](#) → <editionStmt>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<edition> → model.editionLike → <monogr>

**<titlePage>** Contains a transcription of the title page of a text.

<edition> → model.editionLike → model.titlePagePart → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<edition> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<edition> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<edition> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<edition> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<edition> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<edition> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<edition> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<edition> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<edition> → model.textPhraseLike.limited → <dedictee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<edition> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<edition> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<edition> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<edition> → direct children → <editor>

**<expan>** Contains the expansion of an abbreviation.

<edition> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<edition> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<edition> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<edition> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<edition> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<edition> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<edition> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<edition> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<edition> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<edition> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<edition> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<edition> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<edition> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<edition> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<edition> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<edition> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<edition> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<edition> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<edition> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<edition> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<edition> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<edition> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<edition> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<edition> → direct children → <respStmt>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<edition> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<edition> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<edition> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<edition> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<edition> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<edition> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<edition> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<edition> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<edition> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<edition> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<edition> → direct children → <textLang>

**<title>** Title of a bibliographic entity.

<edition> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<edition> → model.textPhraseLike.limited → model.msiInline → <watermark>

**<width>** Description of the horizontal size of an object.

<edition> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [edition](#) element of the Text Encoding Initiative (TEI) and the [edition](#) element of the Encoded Archival Description (EAD).

## <editionStmt>

(edition statement) – Container for meta-data pertaining to a particular edition of the material being described.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [3.4.1 File Description](#), [3.4.1.1 Edition Statement](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<editionStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<editionStmt> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<editionStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<editionStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<editionStmt> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<editionStmt> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<editionStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<editionStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<editionStmt> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<editionStmt> → att.lang → @xml:lang

## Member of

(editionStmt isn't member of any model class)

## Contained By

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<editionStmt> → elements having editionStmt as direct children → <fileDesc>

## May Contain

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<editionStmt> → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<editionStmt> → model.respLikePart → <author>

**<composer>** The name of the creator of the intellectual content of a musical work.

<editionStmt> → model.respLikePart → <composer>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<editionStmt> → model.respLikePart → <contributor>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<editionStmt> → model.editionLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<editionStmt> → model.respLikePart → <editor>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<editionStmt> → model.respLikePart → <funder>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<editionStmt> → model.headLike → <head>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<editionStmt> → model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<editionStmt> → model.respLikePart → <lyricist>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<editionStmt> → direct children → <respStmt>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<editionStmt> → model.respLikePart → <sponsor>

## Remarks

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<editor> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<editor> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<editor> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<editor> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<editor> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<editor> → [att.evidence](#) → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<editor> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<editor> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<editor> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<editor> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<editor> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<editor> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<editor> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<editor> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<editor> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<editor> → att.lang → @xml:lang

## Member of

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<editor> → model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<editor> → model.respLikePart → model.respLike → model.biblPart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<editor> → model.respLikePart → <byline>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<editor> → elements having editor as direct children → <edition>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<editor> → model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<editor> → model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<editor> → elements having editor as direct children → <monogr>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<editor> → model.respLikePart → <monogr>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<editor> → elements having editor as direct children → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<editor> → model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<editor> → model.respLikePart → model.titlePagePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<editor> → model.respLikePart → model.respLike → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<editor> → model.respLikePart → <work>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<editor> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<editor> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<editor> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<editor> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<editor> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<editor> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<editor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<editor> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<editor> → model.textPhraseLike.limited → <dedictee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<editor> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<editor> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<editor> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<editor> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<editor> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<editor> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<editor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<editor> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<editor> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<editor> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<editor> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<editor> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<editor> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<editor> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<editor> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<editor> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<editor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<editor> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<editor> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<editor> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<editor> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<editor> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<editor> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<editor> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<editor> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<editor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<editor> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<editor> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<editor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<editor> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<editor> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<editor> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<editor> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<editor> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<editor> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<editor> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<editor> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<editor> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<editor> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [editor](#) element of the Text Encoding Initiative (TEI).

## <editorialDecl>

(editorial declaration) – Used to provide details of editorial principles and practices applied during the encoding of musical text.

### Referenced in chapters

[3.4.2 Encoding Description](#), [3.4.2.2 Declaration of Editorial Principles](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<editorialDecl> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<editorialDecl> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<editorialDecl> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<editorialDecl> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<editorialDecl> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<editorialDecl> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<editorialDecl> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<editorialDecl> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<editorialDecl> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<editorialDecl> → att.lang → @xml:lang

## Member of

[model.encodingPart](#) Groups elements that may appear as part of the description of the encoding process.

## Contained By

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<editorialDecl> → elements having editorialDecl as direct children → <encodingDesc>

## May Contain

**<correction>** States how and under what circumstances corrections have been made in the text.

<editorialDecl> → [model.editorialDeclPart](#) → <correction>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<editorialDecl> → model.headLike → <head>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

<editorialDecl> → model.editorialDeclPart → <interpretation>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

<editorialDecl> → model.editorialDeclPart → <normalization>

**<p>** One or more text phrases that form a logical prose passage.

<editorialDecl> → model.pLike → <p>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

<editorialDecl> → model.editorialDeclPart → <segmentation>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

<editorialDecl> → model.editorialDeclPart → <stdVals>

## Remarks

The model of this element is based on the [editorialDecl](#) element of the Text Encoding Initiative (TEI).

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<encodingDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<encodingDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<encodingDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<encodingDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<encodingDesc> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<encodingDesc> → att.common → att.type → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<encodingDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<encodingDesc> → att.common → att.basic → att.id → @xml:id

## Member of

[model.headerPart](#) Groups elements that may appear as part of the MEI metadata header.

## Contained By

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<encodingDesc> → elements having encodingDesc as direct children → <meiHead>

## May Contain

**<appInfo>** Groups information about applications which have acted upon the MEI file.

<encodingDesc> → direct children → <appInfo>

**<classDecls>** Groups information which describes the nature or topic of an entity.

<encodingDesc> → direct children → <classDecls>

**<domainsDecl>** Indicates which domains are included in the encoding.

<encodingDesc> → direct children → <domainsDecl>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<encodingDesc> → direct children → <editorialDecl>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<encodingDesc> → [model.headLike](#) → <head>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

<encodingDesc> → direct children → <projectDesc>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

<encodingDesc> → direct children → <samplingDecl>

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

<encodingDesc> → direct children → <tagsDecl>

## Remarks

The model of this element is based on the **encodingDesc** element of the Text Encoding Initiative (TEI).

## Declaration

```

<elementSpec ident="encodingDesc" module="MEI.header">

## <ending>

Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [4.2.4 Re-definition of Score Parameters](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ending> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ending> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ending> → [att.common](#) → [att.linkin](#) → @corresp

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<ending> → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<ending> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ending> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ending> → [att.common](#) → [att.labelled](#) → @label

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<ending> → [att.ending.vis](#) → [att.lineRend](#) → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<ending> → [att.ending.vis](#) → [att.lineRend](#) → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<ending> → [att.ending.vis](#) → [att.lineRend](#) → [att.lineRend.base](#) → @lform

**@lseg** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<ending> → att.ending.vis → att.lineRend → att.lineRend.base → @lseg

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<ending> → att.ending.vis → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<ending> → att.ending.vis → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).  
<ending> → att.ending.vis → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ending> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ending> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<ending> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<ending> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<ending> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<ending> → att.ending.log → att.alignment → @when

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<ending> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<ending> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<ending> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ending> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ending> → att.common → att.basic → att.id → @xml:id

## Member of

[model.endingLike](#) Groups elements that represent alternative endings.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ending> → model.endingLike → model.sectionPart → <abbr>

**<add>** Marks an addition to the text.

<ending> → model.endingLike → model.sectionPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ending> → model.endingLike → model.sectionPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<ending> → model.endingLike → model.sectionPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ending> → model.endingLike → model.sectionPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<ending> → model.endingLike → model.sectionPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ending> → model.endingLike → model.sectionPart → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ending> → model.endingLike → model.sectionPart → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<ending> → model.endingLike → model.scorePart → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ending> → model.endingLike → model.sectionPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ending> → model.endingLike → model.sectionPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ending> → model.endingLike → model.sectionPart → <restore>

**<score>** Full score view of the musical content.

<ending> → model.endingLike → model.scorePart → <score>

**<section>** Segment of music data.

<ending> → model.endingLike → model.sectionPart → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<ending> → model.endingLike → model.sectionPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ending> → model.endingLike → model.sectionPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ending> → model.endingLike → model.sectionPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<ending> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<ending> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<ending> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<ending> → model.appLike → <app>

**<cb>** An empty formatting element that forces text to begin in a new column.

<ending> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<ending> → [model.editLike](#) → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<ending> → [model.milestoneLike.music](#) → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ending> → [model.transcriptionLike](#) → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<ending> → [model.graphicPrimitiveLike](#) → <curve>

**<damage>** Contains an area of damage to the physical medium.

<ending> → [model.transcriptionLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ending> → [model.transcriptionLike](#) → <del>

**<expansion>** Indicates how a section may be programmatically expanded into its 'through-composed' form.

<ending> → direct children → <expansion>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<ending> → [model.transcriptionLike](#) → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<ending> → [model.transcriptionLike](#) → <handShift>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<ending> → [model.graphicPrimitiveLike](#) → <line>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<ending> → [model.sectionPart.cmn](#) → [model.measureLike](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ending> → [model.transcriptionLike](#) → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<ending> → [model.milestoneLike.music](#) → [model.pbLike](#) → <pb>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ending> → [model.transcriptionLike](#) → <reg>

**<relation>** Describes a relationship or linkage amongst entities.

<ending> → [model.relationLike](#) → <relation>

**<relationList>** Gathers relation elements.

<ending> → [model.relationLike](#) → <relationList>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ending> → [model.transcriptionLike](#) → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<ending> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<ending> → model.scoreDefLike → <scoreDef>

**<section>** Segment of music data.

<ending> → model.sectionLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<ending> → model.transcriptionLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<ending> → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<ending> → model.staffDefLike → <staffDef>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<ending> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ending> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ending> → model.transcriptionLike → <unclear>

## Remarks

The <scoreDef> element is allowed as a sub-element so that an ending may have its own meta-data without the overhead of child <section> elements. <div> sub-elements are not allowed within ending. They may, however, be contained by the children of ending, e.g., measures. Endings may not contain other ending elements.

## <epigraph>

Contains a quotation, anonymous or attributed, appearing on a title page.

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<epigraph> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.metadataPointing](#) → @decls

**@fac** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.facsimile](#) → @fac

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<epigraph> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<epigraph> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<epigraph> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<epigraph> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<epigraph> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<epigraph> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<epigraph> → [att.common](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<epigraph> → [att.lang](#) → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

[\*\*<titlePage>\*\*](#) Contains a transcription of the title page of a text.

<epigraph> → [model.titlePagePart](#) → <titlePage>

## May Contain

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<epigraph> → [model.paracontentPart](#) → [model.textPhraseLike](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

[\*\*<add>\*\*](#) Marks an addition to the text.

<epigraph> → [model.paracontentPart](#) → [model.transcriptionLike](#) → <add>

[\*\*<address>\*\*](#) Contains a postal address, for example of a publisher, an organization, or an individual.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<epigraph> → model.paracontentPart → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<epigraph> → model.paracontentPart → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<epigraph> → model.paracontentPart → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<epigraph> → model.paracontentPart → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<epigraph> → model.paracontentPart → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<epigraph> → model.paracontentPart → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<epigraph> → model paracontentPart → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<epigraph> → model paracontentPart → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<epigraph> → model paracontentPart → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msnline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<epigraph> → model paracontentPart → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<epigraph> → model paracontentPart → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<epigraph> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msnline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<epigraph> → model.paracontentPart → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<epigraph> → direct children → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<epigraph> → model.paracontentPart → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<epigraph> → model.paracontentPart → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<epigraph> → model.paracontentPart → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<epigraph> → model.paracontentPart → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<epigraph> → model.paracontentPart → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<epigraph> → model.paracontentPart → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<epigraph> → model.paracontentPart → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<epigraph> → model.paracontentPart → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<epigraph> → model.paracontentPart → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<epigraph> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [epigraph](#) element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

# <episema>

Episema.

## Referenced in chapters

[6.4.1 Elements](#)

## Module

[MEI.neumes](#)

## Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<episema> → [att.episema.vis](#) → [att.altSym](#) → @altsym

**@artic.ges** (*optional*) Records performed articulation that differs from the written value. One or more values from [data.ARTICULATION](#), separated by spaces.

<episema> → [att.episema.ges](#) → [att.articulation.ges](#) → @artic.ges

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.typed](#) → [att.classe](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<episema> → [att.episema.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<episema> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.linking](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<episema> → [att.episema.vis](#) → [att.enclosingChars](#) → @enclose

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<episema> → [att.episema.log](#) → [att.targetEval](#) → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @fontweight

**@form** (*recommended*) Allowed values are: "**h**" (*Horizontal stroke*), "**v**" (*Vertical stroke*).

<episema> → [att.episema.vis](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<episema> → [att.episema.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<episema> → [att.episema.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<episema> → [att.episema.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<episema> → [att.episema.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<episema> → [att.episema.vis](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<episema> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<episema> → [att.episema.log](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<episema> → [att.episema.vis](#) → [att.typography](#) → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<episema> → [att.episema.vis](#) → [att.staffLoc](#) → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<episema> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.linked](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<episema> → [att.episema.log](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<episema> → [att.episema.log](#) → [att.partIdent](#) → @partstaff

**@place** (*recommended*) Captures the placement of the episema with respect to the neume or neume component with which it is associated. Value conforms to [data.EVENTREL](#).

<episema> → [att.episema.vis](#) → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.episema.log](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<episema> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<episema> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<episema> → att.episema.log → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<episema> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<episema> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<episema> → att.episema.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<episema> → att.episema.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<episema> → att.episema.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<episema> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<episema> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<episema> → att.episema.vis → att.xy → @y

## Member of

[model.neumeModifierLike](#) Groups elements that modify neume-like features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<episema> → [model.neumeModifierLike](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<episema> → [model.neumeModifierLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<episema> → model.neumeModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<episema> → model.neumeModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

<episema> → model.neumeModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<episema> → model.neumeModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<episema> → model.neumeModifierLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<episema> → model.neumeModifierLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<episema> → model.neumeModifierLike → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<episema> → model.neumeModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<episema> → model.neumeModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<episema> → model.neumeModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<episema> → model.neumeModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<episema> → model.neumeModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<episema> → model.neumeModifierLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<episema> → model.neumeModifierLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<episema> → model.neumeModifierLike → <unclear>

## May Contain

## <event>

Contains a free-text event description.

### Referenced in chapters

[3.6.5 Work History](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<event> → [att.bibl](#) → @analog

**@calendar** (*optional*) Indicates the calendar system to which a date belongs, for example, Gregorian, Julian, Roman, Mosaic, Revolutionary, Islamic, etc. Value is a [NMTOKEN](#).

<event> → [att.calendared](#) → @calendar

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<event> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<event> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<event> → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<event> → [att.edit](#) → [att.evidence](#) → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<event> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<event> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<event> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<event> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linked](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<event> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<event> → [att.datable](#) → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linked](#) → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<event> → [att.edit](#) → [att.source](#) → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<event> → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<event> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<event> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<event> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<event> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<event> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<event> → [att.lang](#) → @xml:lang

## Member of

(event isn't member of any model class)

## Contained By

**<eventList>** Contains historical information given as a sequence of significant past events.

<event> → elements having event as direct children → <eventList>

## May Contain

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<event> → [model.eventPart](#) → [model.addressLike](#) → <address>

**<biblList>** List of bibliographic references.

<event> → direct children → <biblList>

**<castList>** Contains a single cast list or dramatis personae.

<event> → direct children → <castList>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<event> → [model.eventPart](#) → [model.nameLike.agent](#) → <corpName>

**<date>** A string identifying a point in time or the time period between two such points.

<event> → [model.eventPart](#) → [model.dateLike](#) → <date>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<event> → [model.eventPart](#) → <desc>

**<eventList>** Contains historical information given as a sequence of significant past events.

<event> → direct children → <eventList>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<event> → model.eventPart → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<event> → model.headLike → <head>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<event> → direct children → <list>

**<name>** Proper noun or noun phrase.

<event> → model.eventPart → <name>

**<p>** One or more text phrases that form a logical prose passage.

<event> → model.pLike → <p>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<event> → model.eventPart → model.nameLike.agent → <persName>

**<table>** Contains text displayed in tabular form.

<event> → model.tableLike → <table>

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<eventList> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<eventList> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linkin](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<eventList> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<eventList> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<eventList> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<eventList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<eventList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<eventList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.listLike](#) Groups list-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<eventList> → [model.listLike](#) → [model.textComponentLike](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<eventList> → elements having eventList as direct children → <acquisition>

**<add>** Marks an addition to the text.

<eventList> → [model.listLike](#) → [model.textComponentLike](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<eventList> → [model.listLike](#) → [model.textComponentLike](#) → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<eventList> → [model.listLike](#) → [model.textComponentLike](#) → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<eventList> → [model.listLike](#) → [model.textComponentLike](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<dedication>** Contains a dedicatory statement.

<eventList> → model.listLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<eventList> → model.listLike → model.textComponentLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<eventList> → model.listLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<eventList> → elements having eventList as direct children → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<eventList> → elements having eventList as direct children → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<eventList> → elements having eventList as direct children → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<eventList> → model.listLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<eventList> → model.listLike → model.textComponentLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<eventList> → model.listLike → model.paracontentPart → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<eventList> → model.listLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<eventList> → model.listLike → model.textComponentLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<eventList> → model.listLike → model.paracontentPart → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<eventList> → model.listLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<eventList> → model.listLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<eventList> → model.listLike → model.textComponentLike → <pgHead>

**<provenance>** The record of ownership or custodianship of an item.

<eventList> → elements having eventList as direct children → <provenance>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<eventList> → model.listLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<eventList> → model.listLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<eventList> → model.listLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<eventList> → model.listLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<eventList> → model.listLike → model.textComponentLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<eventList> → elements having eventList as direct children → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<eventList> → elements having eventList as direct children → <treatSched>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<eventList> → model.listLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<eventList> → model.addressLike → <address>

**<biblList>** List of bibliographic references.

<eventList> → direct children → <biblList>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<eventList> → model.nameLike.agent → <corpName>

**<date>** A string identifying a point in time or the time period between two such points.

<eventList> → model.dateLike → <date>

**<event>** Contains a free-text event description.

<eventList> → direct children → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<eventList> → direct children → <eventList>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<eventList> → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<eventList> → model.headLike → <head>

**<name>** Proper noun or noun phrase.

<eventList> → direct children → <name>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<eventList> → model.nameLike.agent → <persName>

## Remarks

An **<eventList>** contains **<event>** elements that capture a brief description of the associated event, including dates and locations where the event took place. An **<eventList>** describes events associated with a work when it appears in the **<workList>** element or events associated with the custodial history of a given copy of a source for the encoding when it appears within the **<sourceDesc>** or **<relatedItem>** elements. The type attribute may be used to distinguish between event lists with different functions, such as a list of events in the compositional process and a list of performance dates.

&lt;/content&gt;
&lt;remarks xml:lang="en"&gt;
  &lt;p&gt;An &lt;gi scheme="MEI"&gt;eventList&lt;/gi&gt; contains &lt;gi scheme="MEI"&gt;event&lt;/gi&gt; elements that capture a brief description of the associated event, including dates and locations where the event took place. An &lt;gi scheme="MEI"&gt;eventList&lt;/gi&gt; describes events associated with a work when it appears in the &lt;gi scheme="MEI"&gt;workList&lt;/gi&gt; element or events associated with the custodial history of a given copy of a source for the encoding when it appears within the &lt;gi scheme="MEI"&gt;sourceDesc&lt;/gi&gt; or &lt;gi scheme="MEI"&gt;relatedItem&lt;/gi&gt; elements. The &lt;att&gt;type&lt;/att&gt; attribute may be used to distinguish between event lists with different functions, such as a list of events in the compositional process and a list of performance dates.&lt;/p&gt;
&lt;/remarks&gt;
&lt;/elementSpec&gt;</pre>
```

## <exhibHist>

(exhibition history) – A record of public exhibitions, including dates, venues, etc.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<exhibHist> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.typed](#) → [att.classe](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<exhibHist> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<exhibHist> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<exhibHist> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<exhibHist> → [att.common](#) → [att.labell](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<exhibHist> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<exhibHist> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<exhibHist> → [att.datable](#) → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<exhibHist> → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<exhibHist> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<exhibHist> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<exhibHist> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<exhibHist> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<exhibHist> → [att.lang](#) → @xml:lang

## Member of

(exhibHist isn't member of any model class)

## Contained By

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<exhibHist> → elements having exhibHist as direct children → <history>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<exhibHist> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<exhibHist> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<exhibHist> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<exhibHist> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<exhibHist> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<exhibHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<exhibHist> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<exhibHist> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<exhibHist> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<exhibHist> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<exhibHist> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<exhibHist> → direct children → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<exhibHist> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<exhibHist> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<exhibHist> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<exhibHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<exhibHist> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<exhibHist> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<exhibHist> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<exhibHist> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<exhibHist> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<exhibHist> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<exhibHist> → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<exhibHist> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<exhibHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<exhibHist> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<exhibHist> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<exhibHist> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<exhibHist> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<exhibHist> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<exhibHist> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<exhibHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<exhibHist> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<exhibHist> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<exhibHist> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<exhibHist> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<exhibHist> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<exhibHist> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<exhibHist> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<exhibHist> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<exhibHist> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the MARC 585 field.

## <expan>

(expansion) – Contains the expansion of an abbreviation.

### Referenced in chapters

[11.2 Editorial Markup](#), [11.2.1 Abbreviations](#), [11.2.1.1 Instructions](#), [11.2.2 Apparent Errors](#)

### Module

[MEI.edittrans](#)

### Attributes

**@abbr** (*optional*) Captures the abbreviated form of the text. Value is plain text.

<expan> → direct children → @abbr

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<expan> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<expan> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<expan> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<expan> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<expan> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<expan> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<expan> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<expan> → [att.trans](#) → [att.metadataPointing](#) → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<expan> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<expan> → att.extent → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<expan> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linked → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<expan> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to **data.BOOLEAN** or **unknown**.

<expan> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<expan> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<expan> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<expan> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<expan> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linkin → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<expan> → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<expan> → att.edit → att.source → @source

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<expan> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<expan> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<expan> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<expan> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<expan> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<expan> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<expan> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<expan> → att.lang → @xml:lang

## Member of

[model.editorialLike](#) Groups editorial intervention elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<expan> → model.editorialLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<expan> → model.editorialLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<expan> → model.editorialLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<expan> → model.editorialLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<expan> → model.editorialLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<expan> → model.editorialLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<expan> → model.editorialLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<expan> → model.editorialLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<expan> → model.editorialLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<expan> → model.editorialLike → model.choicePart → <choice>

**<composer>** The name of the creator of the intellectual content of a musical work.

<expan> → model.editorialLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<expan> → model.editorialLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<expan> → model.editorialLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<expan> → model.editorialLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<expan> → model.editorialLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<expan> → model.editorialLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<expan> → model.editorialLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<expan> → model.editorialLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<expan> → model.editorialLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**,

**<dynam>** or **<repeatMark>**.

<expan> → model.editorialLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<expan> → model.editorialLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<expan> → model.editorialLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<expan> → model.editorialLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<expan> → model.editorialLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<expan> → model.editorialLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<expan> → model.editorialLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<expan> → model.editorialLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<expan> → model.editorialLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<expan> → model.editorialLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<expan> → model.editorialLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<expan> → model.editorialLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<expan> → model.editorialLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<expan> → model.editorialLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<expan> → model.editorialLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<expan> → model.editorialLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<expan> → model.editorialLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<expan> → model.editorialLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<expan> → model.editorialLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<expan> → model.editorialLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<expan> → model.editorialLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<expan> → model.editorialLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<expan> → model.editorialLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<expan> → model.editorialLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<expan> → model.editorialLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<expan> → model.editorialLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<expan> → model.editorialLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<expan> → model.editorialLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<expan> → model.editorialLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<expan> → model.editorialLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<expan> → model.editorialLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<expan> → model.editorialLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<expan> → model.editorialLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<expan> → model.editorialLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<expan> → model.editorialLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<expan> → model.editorialLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<expan> → model.editorialLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<expan> → model.editorialLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<expan> → model.editorialLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<expan> → model.editorialLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<expan> → model.editorialLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<expan> → model.editorialLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<expan> → model.editorialLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<expan> → model.editorialLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<expan> → model.editorialLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<expan> → model.editorialLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<expan> → model.editorialLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<expan> → model.editorialLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<expan> → model.editorialLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<expan> → model.editorialLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<expan> → model.editorialLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<expan> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<expan> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<expan> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<expan> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<expan> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<expan> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<expan> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<expan> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<expan> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<expan> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<expan> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<expan> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<expan> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<expan> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<expan> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<expan> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<expan> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<expan> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<expan> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<expan> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<hispanTick>** Hispanic tick.

<expan> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keySig>** Written key signature.

<expan> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<expan> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<expan> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<expan> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<expan> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<expan> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<expan> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<expan> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<expan> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<expan> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<expan> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<expan> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<expan> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<expan> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<expan> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<expan> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<expan> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<rest>** A non-sounding event found in the source being transcribed.

<expan> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<expan> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<expan> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<expan> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<section>** Segment of music data.

<expan> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

- <settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>
- <sic>** Contains apparently incorrect or inaccurate material.  
<expan> → model.transcriptionLike → <sic>
- <signatures>** Provides a description of the leaf or quire signatures found within a codex.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <signatures>
- <signifLet>** Significantive letter(s).  
<expan> → model.neumeModifierLike → <signifLet>
- <slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.  
<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>
- <sp>** Contains an individual speech in a performance text.  
<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>
- <space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.  
<expan> → model.layerPart → model.eventLike → <space>
- <stack>** An inline table with a single column.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>
- <staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.  
<expan> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>
- <staffDef>** Container for staff meta-information.  
<expan> → model.sectionPart → model.staffDefLike → <staffDef>
- <staffGrp>** A group of bracketed or braced staves.  
<expan> → model.staffGrpLike → <staffGrp>
- <stageDir>** Contains any kind of stage direction within a dramatic text or fragment.  
<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>
- <stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <stamp>
- <street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>
- <strophicus>** Strophicus.  
<expan> → model.neumeComponentModifierLike → <strophicus>
- <styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.  
<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>
- <subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.  
<expan> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<expan> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<expan> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<expan> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<expan> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<expan> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<expan> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<expan> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<expan> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<expan> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<expan> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

In no case should **<expan>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<expan>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the **expan** element of the Text Encoding Initiative (TEI) and the **expan** element of the Encoded Archival Description (EAD).

## <expansion>

Indicates how a section may be programmatically expanded into its 'through-composed' form.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [4.3.10.1 Structural Repetition](#), [11.2.1 Abbreviations](#)

### Module

[MEI.shared](#)

### Attributes

**@class (optional)** Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.typed → att.classed → @class

**@copyof (optional)** Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<expansion> → att.common → att.linkin → @copyof

**@corresp (optional)** Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @corresp

**@evaluate (optional)** Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<expansion> → att.targetEval → @evaluate

**@follows (optional)** points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @follows

**@label (optional)** Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<expansion> → att.common → att.labelled → @label

**@n (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<expansion> → att.common → att.nNumberLike → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @next

**@plist (optional)** When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<expansion> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<expansion> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<expansion> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<expansion> → att.common → att.basic → att.id → @xml:id

## Member of

(expansion isn't member of any model class)

## Contained By

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<expansion> → elements having expansion as direct children → <ending>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<expansion> → elements having expansion as direct children → <lem>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<expansion> → elements having expansion as direct children → <rdg>

**<section>** Segment of music data.

<expansion> → elements having expansion as direct children → <section>

### May Contain

- (<expansion> may not have child elements)

### Remarks

The plist attribute contains an ordered list of identifiers of descendant <section>, <ending>, <lem>, or <rdg> elements. For example, the sequence "#A #End1 #A #End2" indicates that the section labelled 'A' comes first, then the ending labelled 'End1', followed by the 'A' section again, and finally the ending labelled 'End2'.

### Declaration

```
<elementSpec ident="expansion" module="MEI.shared">
  <desc xml:lang="en">Indicates how a section may be programmatically expanded into its
  'through-composed' form.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.plist"/>
    <memberOf key="att.source"/>
    <memberOf key="att.targetEval"/>
  </classes>
  <content>
    <rng:empty/>
  </content>
  <remarks xml:lang="en">
    <p>The <att>plist</att> attribute contains an ordered list of identifiers of descendant
    <gi scheme="MEI">section</gi>, <gi scheme="MEI">ending</gi>, <gi scheme="MEI">lem</gi>,
    or <gi scheme="MEI">rdg</gi> elements. For example, the sequence "#A #End1 #A #End2"
    indicates that the section labelled 'A' comes first, then the ending labelled 'End1',
    followed by the 'A' section again, and finally the ending labelled 'End2'.</p>
  </remarks>
</elementSpec>
```

## <explicit>

Contains the explicit of a manuscript item; that is, the closing words of the text proper, exclusive of any rubric or colophon which might follow it.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<explicit> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<explicit> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<explicit> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<explicit> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<explicit> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<explicit> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<explicit> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<explicit> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<explicit> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<explicit> → [att.lang](#) → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<explicit> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<explicit> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<explicit> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.  
<explicit> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.  
<explicit> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.  
<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<explicit> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<explicit> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [explicit](#) element of the Text Encoding Initiative (TEI).

## <expression>

Intellectual or artistic realization of a work.

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#), [3.6.12 Classification](#), [3.8.2 Including non-MEI Metadata in MEI files](#)

### Module

[MEI.frbr](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<expression> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<expression> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<expression> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<expression> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<expression> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<expression> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<expression> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<expression> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<expression> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<expression> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<expression> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<expression> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<expression> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<expression> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<expression> → att.common → att.basic → att.id → @xml:id

## Member of

[model.expressionLike](#) Collects FRBR expression-like elements.

## Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<expression> → model.expressionLike → <componentList>

**<expressionList>** Gathers bibliographic expression entities.

<expression> → model.expressionLike → <expressionList>

## May Contain

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<expression> → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<expression> → model.respLikePart → <author>

**<biblList>** List of bibliographic references.

<expression> → direct children → <biblList>

**<classification>** Groups information which describes the nature or topic of an entity.

<expression> → direct children → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<expression> → direct children → <componentList>

**<composer>** The name of the creator of the intellectual content of a musical work.

<expression> → model.respLikePart → <composer>

**<contents>** List of the material contained within a resource.

<expression> → direct children → <contents>

**<context>** The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

<expression> → direct children → <context>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<expression> → model.respLikePart → <contributor>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<expression> → direct children → <creation>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<expression> → model.respLikePart → <editor>

**<extMeta>** Provides a container element for non-MEI metadata formats.

<expression> → direct children → <extMeta>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<expression> → direct children → <extent>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<expression> → model.respLikePart → <funder>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<expression> → model.headLike → <head>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<expression> → direct children → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<expression> → model.identifierLike → <identifier>

**<incip>** The opening music and/or words of a musical or textual work.

<expression> → model.workIdent → model.incipLike → <incip>

**<key>** Key captures information about tonal center and mode.

<expression> → model.workIdent → <key>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

<expression> → direct children → <langUsage>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<expression> → model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<expression> → model.respLikePart → <lyricist>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

<expression> → model.workIdent → <mensuration>

**<meter>** Captures information about the time signature within bibliographic descriptions.

<expression> → model.workIdent → <meter>

**<notesStmt>** (notes statement)- Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<expression> → direct children → <notesStmt>

**<otherChar>** Any characteristic that serves to differentiate a work or expression from another.

<expression> → direct children → <otherChar>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

<expression> → direct children → <perfDuration>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

<expression> → direct children → <perfMedium>

**<relationList>** Gathers relation elements.

<expression> → direct children → <relationList>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

<expression> → direct children → <scoreFormat>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<expression> → model.respLikePart → <sponsor>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<expression> → model.workIdent → <tempo>

**<title>** Title of a bibliographic entity.

<expression> → model.titleLike → <title>

## Remarks

The <perfDuration> element captures the *intended duration* of the expression, while <extent> records scope of the expression in other terms, such as number of pages, measures, etc.

## <expressionList>

Gathers bibliographic expression entities.

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#), [3.6.13 Work Relationships](#)

### Module

[MEI.frbr](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.typed → att.classest → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<expressionList> → att.common → att.linkinest → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.linkinest → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.linkinest → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<expressionList> → att.common → att.labellest → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<expressionList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.linkinest → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.linkinest → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.linkinest → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<expressionList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<expressionList> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<expressionList> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<expressionList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<expressionList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<expressionList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(expressionList isn't member of any model class)

## Contained By

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<expressionList> → elements having expressionList as direct children → <work>

## May Contain

**<expression>** Intellectual or artistic realization of a work.

<expressionList> → [model.expressionLike](#) → <expression>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<expressionList> → [model.headLike](#) → <head>

## Declaration

```

<elementSpec ident="expressionList" module="MEI.frbr">

DEVELOPMENT  
VERSION

## <extData>

(extended data) – Provides a container element for non-MEI data formats.

### Referenced in chapters

[12.2.1 Overview](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<extData> → [att.typed](#) → [att.classed](#) → @class

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<extData> → [att.labelled](#) → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<extData> → [att.internetMedia](#) → @mimetype

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<extData> → [att.responsibility](#) → @resp

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<extData> → [att.pointing](#) → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<extData> → [att.pointing](#) → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<extData> → [att.typed](#) → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<extData> → [att.pointing](#) → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<extData> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<extData> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<extData> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<extData> → att.basic → att.id → @xml:id

**@xml:space** (*optional*) Allows one to signal to an application whether an element's white space is "significant". The behavior of xml:space cascades to all descendant elements, but it can be turned off locally by setting the xml:space attribute to the value "default". Allowed values are: "**default**" (*Allows the application to handle white space as necessary. Not including an xml:space attribute produces the same result as using the default value.*), "**preserve**" (*Instructs the application to maintain white space "as-is", suggesting that it might have meaning.*)

<extData> → att.whitespace → @xml:space

## Member of

(extData isn't member of any model class)

## Contained By

**<when>** Indicates a point in time either absolutely (using the absolute attribute), or relative to another when element (using the since, interval and inttype attributes).

<extData> → elements having extData as direct children → <when>

## May Contain

### Remarks

Container for holding non-MEI data formats, similar to [<extMeta>](#) but available in [<when>](#) rather than in [<meiHead>](#). The content of this element, by virtue of being inside a [<when>](#) element, is associated with a particular point in time in a media file and this point in time may be linked to symbolic data, such as notes, chords, rests, etc., recorded elsewhere. When the data in [<extData>](#) contains left angle bracket (less-than) or ampersand characters, or when it contains white space that should be preserved (such as line breaks), then the data should be enclosed in a CDATA section (e.g., for JSON formatted data).

## Declaration

## <extMeta>

(extended metadata) – Provides a container element for non-MEI metadata formats.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.7 Encoding Sources in MEI](#), [3.8.2 Including non-MEI Metadata in MEI files](#), [12.2.1 Overview](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<extMeta> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<extMeta> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<extMeta> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<extMeta> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<extMeta> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<extMeta> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<extMeta> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<extMeta> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:space** (*optional*) Allows one to signal to an application whether an element's white space is "significant". The behavior of xml:space cascades to all descendant elements, but it can be turned off locally by setting the xml:space attribute to the value "default". Allowed values are: "**default**" (*Allows the application to handle white space as necessary. Not including an xml:space attribute produces the same result as using the default value.*), "**preserve**" (*Instructs the application to maintain white space "as-is", suggesting that it might have meaning.*)

<extMeta> → [att.whitespace](#) → @xml:space

## Member of

(extMeta isn't member of any model class)

## Contained By

**<expression>** Intellectual or artistic realization of a work.

<extMeta> → elements having extMeta as direct children → <expression>

**<item>** Single instance or exemplar of a source/manifestation.

<extMeta> → elements having extMeta as direct children → <item>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<extMeta> → elements having extMeta as direct children → <manifestation>

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<extMeta> → elements having extMeta as direct children → <meiHead>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<extMeta> → elements having extMeta as direct children → <work>

## May Contain

### Declaration

```

## <extent>

Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

### Referenced in chapters

[3.4.1 File Description](#), [3.4.1.2 Extent of the File](#), [3.5.1 FRBR Entities in MEI](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<extent> → [att.bibl](#) → @analog

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<extent> → [att.quantity](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<extent> → [att.quantity](#) → [att.ranging](#) → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<extent> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<extent> → [att.quantity](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<extent> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<extent> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<extent> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<extent> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<extent> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<extent> → att.quantity → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<extent> → att.quantity → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<extent> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.linked → @prev

**@quantity** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<extent> → att.quantity → @quantity

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<extent> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<extent> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<extent> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<extent> → att.quantity → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<extent> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<extent> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<extent> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<extent> → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<extent> → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<extent> → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<extent> → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<extent> → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<extent> → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<extent> → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<extent> → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<extent> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<extent> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<extent> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<extent> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<extent> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<extent> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<extent> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<extent> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<extent> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<extent> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<extent> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<extent> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<extent> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<extent> → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<extent> → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<extent> → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<extent> → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<extent> → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<extent> → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<expression>** Intellectual or artistic realization of a work.

<extent> → elements having extent as direct children → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<extent> → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<extent> → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<extent> → model.textPhraseLike.limited → <figDesc>

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<extent> → elements having extent as direct children → <fileDesc>

**<fing>** finger – An individual finger in a fingering indication.

<extent> → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<extent> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<extent> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<extent> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<extent> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<extent> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<extent> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<extent> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<extent> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<extent> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<extent> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<extent> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<extent> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<extent> → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<extent> → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<extent> → `model.textPhraseLike.limited` → **<metaMark>**

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<extent> → elements having extent as direct children → **<monogr>**

**<name>** Proper noun or noun phrase.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → **<name>**

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → **<nameLink>**

**<num>** Numeric information in any form.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → **<num>**

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<extent> → `model.textPhraseLike.limited` → **<octave>**

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<extent> → `model.textPhraseLike.limited` → `model.editTransPart.text` → `model.editTransPart` → **<orig>**

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<extent> → `model.textPhraseLike.limited` → **<ornam>**

**<p>** One or more text phrases that form a logical prose passage.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → `model.paracontentPart` → **<p>**

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<extent> → `model.textPhraseLike.limited` → **<perfRes>**

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → **<periodName>**

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<extent> → `model.textPhraseLike.limited` → `model.textPhraseLike` → **<persName>**

**<pgFoot>** A running footer.

<extent> → `model.textPhraseLike.limited` → **<pgFoot>**

**<pgHead>** A running header.

<extent> → `model.textPhraseLike.limited` → **<pgHead>**

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<extent> → `model.physDescPart` → **<physDesc>**

**<price>** The cost of access to a bibliographic item.

<extent> → `model.textPhraseLike.limited` → **<price>**

**<provenance>** The record of ownership or custodianship of an item.

<extent> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<extent> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<extent> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<extent> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<extent> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<extent> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<extent> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<extent> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<extent> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<extent> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<extent> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<extent> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<extent> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<extent> → elements having extent as direct children → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<extent> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<extent> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<extent> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<extent> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<extent> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<extent> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<extent> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<extent> → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<extent> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<extent> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<extent> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<extent> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<extent> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<extent> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<extent> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<extent> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<extent> → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<extent> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<extent> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<extent> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<extent> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<extent> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<extent> → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<extent> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<extent> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<extent> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<extent> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<extent> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<extent> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<extent> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<extent> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<extent> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<extent> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<extent> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<extent> → model.textPhraseLike.limited → model.mslInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<extent> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<extent> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<extent> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<extent> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<extent> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<extent> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<extent> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<extent> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<extent> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<extent> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<extent> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<extent> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<extent> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<extent> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<extent> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<extent> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<extent> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<extent> → model.textPhraseLike.limited → model.mslInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<extent> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<extent> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<extent> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<extent> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<extent> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<extent> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<extent> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<extent> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<extent> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<extent> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<extent> → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<extent> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Use the **<dimensions>** element when it is necessary to specify the **physical** size of materials being described, for example, height and width.

The model of this element is based on the **extent** element of the Text Encoding Initiative (TEI).

**<f>**

(figure) – Single element of a figured bass indication.

**Referenced in chapters**

[10.2.1.3.1 Figured Bass](#)

**Module**

[MEI.harmony](#)

**Attributes**

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<f> → att.f.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<f> → att.common → att.typed → att.classed → @class`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<f> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<f> → att.common → att.linked → @corresp`

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

`<f> → att.f.ges → att.duration.ges → @dots.ges`

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

`<f> → att.f.log → att.duration.additive → @dur`

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

`<f> → att.f.ges → att.duration.ges → @dur.ges`

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

`<f> → att.f.ges → att.duration.ges → @dur.metrical`

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

`<f> → att.f.ges → att.duration.ges → @dur.ppq`

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

`<f> → att.f.ges → att.duration.ges → @dur.real`

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

`<f> → att.f.ges → att.duration.ges → @dur.recip`

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<f> → att.f.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<f> → att.f.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<f> → att.f.vis → att.extender → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<f> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<f> → att.f.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<f> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<f> → att.f.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<f> → att.f.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<f> → att.f.vis → att.extender → att.lineRend → @lendsym.size

**@lineForm** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<f> → att.f.vis → att.extender → att.lineRend → att.lineRend.base → @lineForm

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<f> → att.f.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<f> → att.f.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<f> → att.f.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<f> → att.f.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<f> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<f> → att.f.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<f> → att.f.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<f> → att.f.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<f> → att.f.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<f> → att.f.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<f> → att.f.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<f> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<f> → att.f.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<f> → att.f.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<f> → att.f.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<f> → att.f.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<f> → att.f.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<f> → att.f.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<f> → att.f.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<f> → att.common → att.type → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<f> → att.f.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<f> → att.f.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<f> → `att.f.vis` → `att.xy` → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<f> → `att.common` → `att.basic` → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<f> → `att.common` → `att.basic` → `att.id` → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<f> → `att.f.vis` → `att.xy` → @y

## Member of

[model.flLike](#) Groups elements that represent single figured bass elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<f> → [model.flLike](#) → <abbr>

**<add>** Marks an addition to the text.

<f> → [model.flLike](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<f> → [model.flLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<f> → [model.flLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<f> → [model.flLike](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<f> → [model.flLike](#) → <expan>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<f> → [model.flLike](#) → <fb>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<f> → [model.flLike](#) → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<f> → [model.flLike](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<f> → model.fLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<f> → model.fLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<f> → model.fLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<f> → model.fLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<f> → model.fLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<f> → model.fLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<f> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<f> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<f> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<f> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<f> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<f> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<f> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<f> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<f> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<f> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<f> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<f> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<f> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<f> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<f> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<f> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<f> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<f> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<f> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<f> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<f> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<f> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<f> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<f> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<f> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<f> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<f> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<f> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<f> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<f> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<f> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<f> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<f> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<f> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<f> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<f> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<f> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<f> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<f> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<f> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<f> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<f> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<f> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<f> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<f> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<f> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<f> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<f> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<f> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<f> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<f> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<f> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<f> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<f> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<f> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<f> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<f> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<f> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<f> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<f> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<f> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<f> → model.textPhraseLike.limited → model.dimLike → <width>

## <fTrem>

(fingered tremolo) – A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

### Referenced in chapters

4.3.5 Articulation and Performance Instructions in CMN, 4.3.5.3 Tremoland

### Module

MEI.cmn

### Attributes

**@beams** (*optional*) Indicates the number of beams present. Value is a positive integer.

<fTrem> → att.fTrem.vis → @beams

**@beams.float** (*optional*) Captures the number of "floating" beams, i.e., those not attached to stems. Value is a positive integer, including 0.

<fTrem> → att.fTrem.vis → @beams.float

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fTrem> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linkin → @corresp

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

<fTrem> → att.fTrem.log → att.augmentDots → @dots

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the [data.DURATION](#) datatype. Value conforms to [data.DURATION](#).

<fTrem> → att.fTrem.log → att.duration.log → @dur

**@fac** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.facsimile → @fac

**@float.gap** (*optional*) Records the amount of separation between floating beams and stems. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<fTrem> → att.fTrem.vis → @float.gap

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linkin → @follows

**@form** (*optional*) Describes the style of the tremolo. Allowed values are: "**meas**" (*Measured tremolo.*), "**unmeas**" (*Unmeasured tremolo.*)

<fTrem> → att.fTrem.log → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fTrem> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<fTrem> → att.fTrem.log → att.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fTrem> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<fTrem> → att.fTrem.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fTrem> → att.common → att.linking → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fTrem> → att.fTrem.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fTrem> → att.fTrem.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fTrem> → att.fTrem.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fTrem> → att.common → att.typed → @type

**@unitdur** (*optional*) The performed duration of an individual note in a measured tremolo. Value conforms to [data.DURATION.cmn](#).

<fTrem> → att.fTrem.ges → att.tremMeasured → @unitdur

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<fTrem> → att.fTrem.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fTrem> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fTrem> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.cmn](#) Groups events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<fTrem> → model.eventLike.cmn → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<fTrem> → model.eventLike.cmn → <graceGrp>

**<layer>** An independent stream of events on a staff.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<fTrem> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fTrem> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<fTrem> → direct children → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<fTrem> → direct children → <clef>

**<note>** A single pitched event.

<fTrem> → direct children → <note>

### Module

[MEI.facsimile](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<facsimile> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<facsimile> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<facsimile> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<facsimile> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<facsimile> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<facsimile> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<facsimile> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.resourceLike](#) Groups non-text components that represent the content of the musical text.

## Contained By

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

<facsimile> → [model.resourceLike](#) → <music>

## May Contain

**<graphic>** Indicates the location of an inline graphic.

<facsimile> → direct children → <graphic>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

<facsimile> → direct children → <surface>

## Remarks

The `<graphic>` element is provided within `facsimile` for association of the facsimile with graphic files capable of representing multiple pages, such as TIFF or PDF formats. When more than one graphic element is used, each must represent the same material. When each page is represented by a different graphic, use a `<surface>` element for each page.

The `decls` attribute may be used to link the collection of images with a particular source described in the header.

The model of this element is based on the `facsimile` element of the Text Encoding Initiative (TEI).

## Declaration

```

## <famName>

(family name) – Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<famName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<famName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<famName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<famName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<famName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<famName> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<famName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<famName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<famName> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<famName> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<famName> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<famName> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<famName> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<famName> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<famName> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<famName> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<famName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<famName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<famName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<famName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<famName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<famName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<famName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<famName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<famName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<famName> → att.lang → @xml:lang

## Member of

[model.persNamePart](#) Groups elements which form part of a personal name.

## Contained By

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<famName> → [model.persNamePart](#) → <persName>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<famName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<famName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<famName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<famName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<famName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<famName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<famName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<famName> → direct children → <nameLink>

**<num>** Numeric information in any form.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<famName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<famName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<famName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<famName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msiInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<famName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msiInline → <signatures>

**<stack>** An inline table with a single column.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msiInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<famName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<famName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<famName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<famName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fb> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.linked → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<fb> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fb> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fb> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fb> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fb> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fb> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fb> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fb> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fb> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fb> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.figbassLike](#) Groups elements that record figured bass.

## Contained By

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<fb> → [model.figbassLike](#) → <harm>

## May Contain

**<add>** Marks an addition to the text.

<fb> → [model.transcriptionLike](#) → <add>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<fb> → [model.editLike](#) → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fb> → [model.transcriptionLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<fb> → [model.transcriptionLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fb> → [model.transcriptionLike](#) → <del>

**<f>** Single element of a figured bass indication.

<fb> → [model.fLike](#) → <f>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<fb> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<fb> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fb> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fb> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fb> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fb> → model.transcriptionLike → <sic>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<fb> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fb> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fb> → model.transcriptionLike → <unclear>

DEVELOPMENT  
VERSION

## <fermata>

An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

### Referenced in chapters

[4.2.5.3.1 Measure Rests](#), [4.3.5 Articulation and Performance Instructions in CMN](#), [4.3.5.4 Fermata](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<fermata> → att.fermata.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fermata> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<fermata> → att.fermata.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fermata> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fermata> → att.common → att.linked → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<fermata> → att.fermata.ges → att.duration.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<fermata> → att.fermata.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<fermata> → att.fermata.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<fermata> → att.fermata.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<fermata> → att.fermata.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<fermata> → att.fermata.ges → att.duration.ges → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<fermata> → [att.fermata.vis](#) → [att.enclosingChars](#) → @enclose

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fermata> → [att.fermata.log](#) → [att.startEndId](#) → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @fontweight

**@form** (*optional*) Describes the visual appearance of the fermata; that is, whether it occurs as upright or inverted. Allowed values are: "**inv**" (*Inverted, , curve or bracket below the dot.*), "**norm**" (*Upright; , curve or bracket above the dot.*)

<fermata> → [att.fermata.vis](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout.*)

<fermata> → [att.fermata.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<fermata> → [att.fermata.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<fermata> → [att.fermata.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<fermata> → [att.fermata.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<fermata> → [att.fermata.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fermata> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<fermata> → [att.fermata.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fermata> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linking](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\vi][\c]+)"**, separated by spaces.

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<fermata> → [att.fermata.vis](#) → [att.placementRelStaff](#) → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linking](#) → @sameas

**@shape** (*optional*) Describes the visual appearance of the fermata; that is, whether it has a curved, square, or angular shape. Allowed values are: "**curved**" (*A curve above or below the dot.*), "**square**" (*A bracket above or below the dot.*), "**angular**" (*A triangle above or below the dot.*)

<fermata> → [att.fermata.vis](#) → @shape

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fermata> → [att.fermata.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fermata> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<fermata> → [att.fermata.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fermata> → [att.fermata.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fermata> → att.fermata.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fermata> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<fermata> → att.fermata.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<fermata> → att.fermata.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facsimile` attribute. Value is a decimal number.

<fermata> → att.fermata.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fermata> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fermata> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facsimile` attribute. Value is a decimal number.

<fermata> → att.fermata.vis → att.xy → @y

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fermata> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<fermata> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fermata> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<fermata> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<fermata> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<fermata> → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<fermata> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fermata> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<fermata> may not have child elements)

## Remarks

The shape attribute may be used to record whether the fermata is curved, square, or triangular, while form may be used to capture whether the fermata is "upright", i.e., has the curve or bracket above the dot, or inverted, i.e., has the curve or bracket below the dot. Other visual forms of a fermata may be indicated via the altsym attribute. The starting point of the fermata may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute. It is a semantic error not to specify a starting point attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fig> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<fig> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linkin → @follows

**@halign** (*optional*) Records horizontal alignment. Value conforms to [data.HORIZONTALALIGNMENT](#).

<fig> → att.horizontalAlign → @halign

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fig> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fig> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fig> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fig> → att.common → att.typed → @type

**@valign** (*optional*) Records vertical alignment. Value conforms to [data.VERTICALALIGNMENT](#).

<fig> → att.verticalAlign → @valign

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<fig> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fig> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fig> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<fig> → att.xy → @y

## Member of

[model.figureLike](#) Groups elements representing or containing graphic information such as an illustration or figure.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<fig> → model.figureLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<fig> → model.figureLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<fig> → model.figureLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<fig> → model.figureLike → <argument>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<fig> → model.figureLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<fig> → model.figureLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<fig> → model.figureLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<fig> → model.figureLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<fig> → model.figureLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<fig> → model.figureLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<fig> → model.figureLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<fig> → model.figureLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<fig> → model.figureLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<fig> → model.figureLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<fig> → model.figureLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<fig> → model.figureLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<fig> → model.figureLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<fig> → model.figureLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<fig> → model.figureLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<fig> → model.figureLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<fig> → model.figureLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<fig> → model.figureLike → <div>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<fig> → model.figureLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<fig> → model.figureLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<fig> → model.figureLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<fig> → model.figureLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<fig> → model.figureLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<fig> → model.figureLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<fig> → model.figureLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<fig> → model.figureLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<fig> → model.figureLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<fig> → model.figureLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<fig> → model.figureLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<fig> → model.figureLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<fig> → model.figureLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<fig> → model.figureLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<fig> → model.figureLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<fig> → model.figureLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<fig> → model.figureLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<fig> → model.figureLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<fig> → model.figureLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<fig> → model.figureLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<fig> → model.figureLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<fig> → model.figureLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<fig> → model.figureLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<fig> → model.figureLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<fig> → model.figureLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<fig> → model.figureLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<fig> → model.figureLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<fig> → model.figureLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<fig> → model.figureLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<fig> → model.figureLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<fig> → model.figureLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<fig> → model.figureLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<fig> → model.figureLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<fig> → model.figureLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<fig> → model.figureLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<fig> → model.figureLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<fig> → model.figureLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<fig> → model.figureLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<fig> → model.figureLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<fig> → model.figureLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<fig> → model.figureLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<fig> → model.figureLike → model.textPhraseLike.limited → <soundChan>

**<sp>** Contains an individual speech in a performance text.

<fig> → model.figureLike → <sp>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<fig> → model.figureLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<fig> → model.figureLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<fig> → model.figureLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<fig> → model.figureLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<fig> → model.figureLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<fig> → model.figureLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<fig> → model.figureLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<fig> → model.figureLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<fig> → model.figureLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<fig> → model.figureLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<fig> → model.figureLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<fig> → model.figureLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<fig> → model.figureLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fig> → model.figureLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<fig> → model.figureLike → model.textPhraseLike.limited → <width>

## May Contain

**<caption>** A label which accompanies an illustration or a table.

<fig> → model.captionLike → <caption>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<fig> → direct children → <figDesc>

**<graphic>** Indicates the location of an inline graphic.

<fig> → model.graphicLike → <graphic>

**<score>** Full score view of the musical content.

<fig> → model.scoreLike → <score>

## Remarks

The model of this element is based on the [figure](#) element of the Text Encoding Initiative (TEI).

## <figDesc>

(figure description) – Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

### Referenced in chapters

[9.2.1 Paragraphs](#), [9.2.3.1 Figure Captions and Descriptions](#), [12.1.1 Elements of the Facsimile Module](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<figDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<figDesc> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<figDesc> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<figDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<figDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<figDesc> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<figDesc> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<figDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<figDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<figDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<figDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<figDesc> → att.lang → @xml:lang

## Member of

[model.figDescLike](#) Groups elements that provide a brief prose description of the appearance or content of a graphic figure.

## Contained By

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<figDesc> → elements having figDesc as direct children → <fig>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

<figDesc> → [model.figDescLike](#) → <surface>

**<zone>** Defines an area of interest within a [<surface>](#) or graphic file.

<figDesc> → [model.figDescLike](#) → <zone>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<figDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<figDesc> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<figDesc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<figDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<figDesc> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<figDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<figDesc> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<figDesc> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<figDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<figDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<figDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<figDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<figDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<figDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<figDesc> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<figDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<figDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<figDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<figDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<figDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<figDesc> → model.textPhraseLike.limited → model.msnline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<figDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<figDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<figDesc> → model.textComponentLike → model.lglike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<figDesc> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<figDesc> → model.textPhraseLike.limited → model.msnline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<figDesc> → model.textPhraseLike.limited → model.msnline → <locusGrp>

**<name>** Proper noun or noun phrase.

<figDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<figDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<figDesc> → model.textComponentLike → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<figDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<figDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<figDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<figDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<figDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<figDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<figDesc> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<figDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<figDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<figDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<figDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<figDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<figDesc> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<figDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<figDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<figDesc> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<figDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<figDesc> → model.textPhraseLike.limited → model.mslInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<figDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<figDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<figDesc> → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<figDesc> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<figDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<figDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<figDesc> → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<figDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Best practice suggests the use of controlled vocabulary for figure descriptions. Don't confuse this entity with a figure caption. A caption is text primarily intended for display with an illustration. It may or may not function as a description of the illustration.

The model of this element is based on the [figDesc](#) element of the Text Encoding Initiative (TEI).

## Declaration

```

## <fileChar>

(file characteristics) – Standards or schemes used to encode the file (e.g., ASCII, SGML, etc.), physical characteristics of the file (e.g., recording density, parity, blocking, etc.), and other characteristics that have a bearing on how the file can be processed.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<fileChar> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fileChar> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fileChar> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fileChar> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fileChar> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<fileChar> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<fileChar> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fileChar> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fileChar> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<fileChar> → [att.lang](#) → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<fileChar> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fileChar> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<fileChar> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.  
<fileChar> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInline → <locusGrp>

**<name>** Proper noun or noun phrase.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.  
<fileChar> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.  
<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<fileChar> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<fileChar> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## <fileDesc>

(file description) – Contains a full bibliographic description of the MEI file.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.3.1 Title Statement](#), [3.4.1 File Description](#), [3.4.1.1 Edition Statement](#), [3.4.1.3 Publication, Distribution, etc.](#), [3.4.1.4 Series Statement](#), [3.4.1.5 Notes Statement](#), [3.4.1.6 Source Description](#), [3.8.3 Minimal and Recommended Header Information](#), [3.8.5.2 Combining Corpus and Text Headers](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<fileDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fileDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fileDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fileDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fileDesc> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fileDesc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<fileDesc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<fileDesc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(fileDesc isn't member of any model class)

## Contained By

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<fileDesc> → elements having fileDesc as direct children → <meiHead>

## May Contain

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<fileDesc> → direct children → <editionStmt>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<fileDesc> → direct children → <extent>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<fileDesc> → direct children → <notesStmt>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<fileDesc> → direct children → <pubStmt>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<fileDesc> → direct children → <seriesStmt>

**<sourceDesc>** A container for the descriptions of the source(s) used in the creation of the electronic file.

<fileDesc> → direct children → <sourceDesc>

**<titleStmt>** Container for title and responsibility meta-data.

<fileDesc> → direct children → <titleStmt>

## Remarks

Extent in this context represents file size.

The model of this element is based on the [fileDesc](#) element of the Text Encoding Initiative (TEI) and the [filedesc](#) element of the Encoded Archival Description (EAD).

## <fing>

finger – An individual finger in a fingering indication.

### Referenced in chapters

[4.3.6.4 Fingering](#)

### Module

[MEI.fingering](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <symbolDef> element elsewhere in the document. Value conforms to [data.URI](#).

<fing> → [att.fing.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fing> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fing> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fing> → [att.common](#) → [att.linkin](#) → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<fing> → [att.fing.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip** value. Value is a [token](#).

<fing> → [att.fing.ges](#) → [att.duration.ges](#) → @dur.recip

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fing> → att.fing.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<fing> → att.fing.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<fing> → att.fing.vis → att.extender → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<fing> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<fing> → att.fing.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fing> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<fing> → att.fing.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<fing> → att.fing.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<fing> → att.fing.vis → att.extender → att.lineRend → @lendsym.size

**@lfom** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<fing> → att.fing.vis → att.extender → att.lineRend → att.lineRend.base → @lfom

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<fing> → att.fing.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<fing> → att.fing.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<fing> → att.fing.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<fing> → att.fing.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fing> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<fing> → att.fing.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<fing> → att.fing.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<fing> → att.fing.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<fing> → att.fing.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<fing> → att.fing.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fing> → att.fing.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fing> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<fing> → att.fing.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fing> → att.fing.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fing> → att.fing.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fing> → att.fing.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<fing> → att.fing.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<fing> → att.fing.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fing> → att.fing.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fing> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<fing> → att.fing.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<fing> → att.fing.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<fing> → att.fing.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to `data.URI`.

<fing> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<fing> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<fing> → att.fing.vis → att.xy → @y

## Member of

`model.f fingeringLike` Groups elements that capture performance instructions regarding the use of the fingers of the hand (or a subset of them).

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<fing> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<fing> → model.f fingeringLike → <fingGrp>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<fing> → model.f fingeringLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<fing> → model.f fingeringLike → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<fing> → model.fingeringLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<fing> → model.fingeringLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<fing> → model.fingeringLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<fing> → model.fingeringLike → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fing> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<fing> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<fing> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<fing> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<fing> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<fing> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<fing> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

- <bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.  
 <fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>
- <catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.  
 <fing> → model.textPhraseLike.limited → model.msInLine → <catchwords>
- <choice>** Groups a number of alternative encodings for the same point in a text.  
 <fing> → model.editLike → <choice>
- <corpName>** Identifies an organization or group of people that acts as a single entity.  
 <fing> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>
- <corr>** Contains the correct form of an apparent erroneous passage.  
 <fing> → model.transcriptionLike → <corr>
- <country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.  
 <fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>
- <damage>** Contains an area of damage to the physical medium.  
 <fing> → model.transcriptionLike → <damage>
- <date>** A string identifying a point in time or the time period between two such points.  
 <fing> → model.textPhraseLike.limited → model.dateLike → <date>
- <dedicatee>** Entity to whom a creative work is formally offered.  
 <fing> → model.textPhraseLike.limited → <dedicatee>
- <del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.  
 <fing> → model.transcriptionLike → <del>
- <depth>** Description of a measurement taken through a three-dimensional object.  
 <fing> → model.textPhraseLike.limited → model.dimLike → <depth>
- <dim>** Any single dimensional specification.  
 <fing> → model.textPhraseLike.limited → model.dimLike → <dim>
- <dimensions>** Information about the physical size of an entity; usually includes numerical data.  
 <fing> → model.textPhraseLike.limited → <dimensions>
- <district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.  
 <fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>
- <expan>** Contains the expansion of an abbreviation.  
 <fing> → model.textPhraseLike.limited → model.editorialLike → <expan>
- <extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.  
 <fing> → model.textPhraseLike.limited → <extent>
- <fig>** Groups elements representing or containing graphic information such as an illustration or figure.  
 <fing> → model.textPhraseLike.limited → model.figureLike → <fig>
- <gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<fing> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<fing> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<fing> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<fing> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<fing> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<fing> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<fing> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<fing> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<fing> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<fing> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<fing> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fing> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<fing> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<fing> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<fing> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<fing> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<fing> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<fing> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<fing> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fing> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<fing> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<fing> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<fing> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<fing> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fing> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<fing> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<fing> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<fing> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<fing> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<fing> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<fing> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<fing> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<fing> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<fing> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<fing> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fing> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<fing> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<fing> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<fing> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fing> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<fing> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<fing> → model.textPhraseLike.limited → model.dimLike → <width>

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

The stack element is not allowed as a descendant of fing.

## Declaration

```

## <fingGrp>

(finger group)- A group of individual fingers in a fingering indication.

### Module

MEI.fingering

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <symbolDef> element elsewhere in the document. Value conforms to [data.URI](#).

<fingGrp> → att.fingGrp.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<fingGrp> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<fingGrp> → att.fingGrp.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<fingGrp> → att.fingGrp.ges → att.duration.ges → @dur.recip

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fingGrp> → att.fingGrp.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<fingGrp> → att.fingGrp.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to data.BOOLEAN.

<fingGrp> → att.fingGrp.vis → att.extender → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from data.URI, separated by spaces.

<fingGrp> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from data.URI, separated by spaces.

<fingGrp> → att.common → att.linked → @follows

**@form** (*optional*) Allowed values are: "**alter**" (*alternation of fingers.*), "**combi**" (*combination of fingers.*), "**subst**" (*substitution of fingers.*)

<fingGrp> → att.fingGrp.log → @form

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to data.MEASUREMENTSIGNED.

<fingGrp> → att.fingGrp.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<fingGrp> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<fingGrp> → att.fingGrp.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to data.LINESTARTENDSYMBOL.

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to data.FONTSCALE.

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to data.LINEFORM.

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<fingGrp> → att.fingGrp.vis → att.extender → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<fingGrp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linking → @next

**@orient** (*optional*) Allowed values are: "**horiz**" (*Combination expressed horizontally, as for brass instruments.*), "**vert**" (*Combination expressed vertically, as for woodwind instruments or piano.*)

<fingGrp> → att.fingGrp.vis → @orient

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<fingGrp> → att.fingGrp.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<fingGrp> → att.fingGrp.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<fingGrp> → att.fingGrp.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.fingGrp.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<fingGrp> → att.fingGrp.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<fingGrp> → att.fingGrp.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<fingGrp> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<fingGrp> → att.fingGrp.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fingGrp> → att.fingGrp.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<fingGrp> → att.fingGrp.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fingGrp> → att.fingGrp.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<fingGrp> → att.fingGrp.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<fingGrp> → att.fingGrp.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<fingGrp> → att.fingGrp.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<fingGrp> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<fingGrp> → att.fingGrp.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a `<when>` element elsewhere in the document. Value conforms to [data.URI](#).

`<fingGrp> → att.fingGrp.log → att.controlEvent → att.alignment → @when`

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

`<fingGrp> → att.fingGrp.vis → att.xy → @x`

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

`<fingGrp> → att.common → att.basic → @xml:base`

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

`<fingGrp> → att.common → att.basic → att.id → @xml:id`

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

`<fingGrp> → att.fingGrp.vis → att.xy → @y`

## Member of

[model.f fingeringLike](#) Groups elements that capture performance instructions regarding the use of the fingers of the hand (or a subset of them).

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>`

**<add>** Marks an addition to the text.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>`

**<corr>** Contains the correct form of an apparent erroneous passage.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>`

**<damage>** Contains an area of damage to the physical medium.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>`

**<expan>** Contains the expansion of an abbreviation.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>`

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

`<fingGrp> → model.f fingeringLike → <fingGrp>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

`<fingGrp> → model.f fingeringLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>`

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fingGrp> → model.fingeringLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<fingGrp> → model.transcriptionLike → <add>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<fingGrp> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<fingGrp> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<fingGrp> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<fingGrp> → model.transcriptionLike → <del>

**<fing>** finger – An individual finger in a fingering indication.

<fingGrp> → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<fingGrp> → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<fingGrp> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<fingGrp> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<fingGrp> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<fingGrp> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<fingGrp> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<fingGrp> → model.transcriptionLike → <sic>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<fingGrp> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<fingGrp> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<fingGrp> → model.transcriptionLike → <unclear>

## Constraints

At least 2 fing or fingGrp elements are required.

When @tstamp or @startid is present on fingGrp, its child elements cannot have a @tstamp or @startid attribute.

When @tstamp or @startid is not present on fingGrp, each of its child elements must have a @tstamp or @startid attribute.

## <foliaDesc>

Describes the order of folia and bifolia making up the text block of a manuscript or print.

### Referenced in chapters

[3.7.2 Description of folia](#), [3.7.2.1 Linking surface elements](#), [3.7.2.2 Specifying page dimensions](#), [3.7.2.3 Patches](#), [11.3.4 Genetic Changes at the Page Level](#), [12.1.1 Elements of the Facsimile Module](#)

### Module

[MEI.header](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<foliaDesc> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<foliaDesc> → att.common → att.labelled → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<foliaDesc> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<foliaDesc> → att.common → att.linkng → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<foliaDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<foliaDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<foliaDesc> → att.common → att.basic → att.id → @xml:id

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<foliaDesc> → [model.physDescPart](#) → <physDesc>

## May Contain

**<add>** Marks an addition to the text.

<foliaDesc> → direct children → <add>

**<bifolium>** Describes a folded sheet of paper.

<foliaDesc> → [model.bifoliumLike](#) → <bifolium>

**<damage>** Contains an area of damage to the physical medium.

<foliaDesc> → direct children → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<foliaDesc> → direct children → <del>

**<folium>** Describes a single leaf of paper.

<foliaDesc> → [model.foliumLike](#) → <folium>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<foliaDesc> → direct children → <gap>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<foliaDesc> → direct children → <restore>

## Remarks

The purpose of <foliaDesc> is to transcribe the addition and removal of pages as part of physical modifications to a document. Missing pages may be indicated using the <gap> element. The <folium> and <bifolium> children describe the physical order of <surface> elements provided elsewhere.

## Declaration

## <foliation>

Describes the numbering system or systems used to count the leaves or pages in a codex.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<foliation> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<foliation> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<foliation> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<foliation> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<foliation> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<foliation> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<foliation> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<foliation> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<foliation> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<foliation> → [att.lang](#) → @xml:lang

## Member of

(foliation isn't member of any model class)

## Contained By

**<supportDesc>** Groups elements describing the physical support material of an item.

<foliation> → elements having foliation as direct children → <supportDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<foliation> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<foliation> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<foliation> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<foliation> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<foliation> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<foliation> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<foliation> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<foliation> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<foliation> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [foliation](#) element of the Text Encoding Initiative (TEI).

## Declaration

```

# <folium>

Describes a single leaf of paper.

## Referenced in chapters

[3.7.2 Description of folia](#), [3.7.2.1 Linking surface elements](#), [3.7.2.2 Specifying page dimensions](#), [3.7.2.3 Patches](#), [3.7.2.4 Cutouts](#)

## Module

[MEI.header](#)

## Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<folium> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linkin](#) → @follows

**@height** (*optional*) Measurement of the vertical dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<folium> → [att.dimensions](#) → [att.height](#) → @height

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<folium> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<folium> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linkin](#) → @prev

**@recto** (*optional*) A reference to a [<surface>](#) element positioned on the recto side of the sheet. Value conforms to [data.URI](#).

<folium> → [att.foliumSurfaces](#) → @recto

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<folium> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<folium> → [att.common](#) → [att.type](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "**byte**" (Byte.), "**char**" (Character.), "**cm**" (Centimeter.), "**deg**" (Degree.), "**in**" (Inch.), "**issue**" (Serial issue.), "**ft**" (Foot.), "**m**" (Meter.), "**mm**" (Millimeter.), "**page**" (Page.), "**pc**" (Pica.), "**pt**" (Point.), "**px**" (Pixel.), "**rad**" (Radian.), "**record**" (Record.), "**vol**" (Serial volume.), "**vu**" (MEI virtual unit.)

<folium> → [att.measurement](#) → @unit

**@verso** (*optional*) A reference to a [<surface>](#) element positioned on the verso side of the sheet. Value conforms to [data.URI](#).

<folium> → [att.foliumSurfaces](#) → @verso

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<folium> → [att.dimensions](#) → [att.width](#) → @width

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<folium> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid **xml:id**.

<folium> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.foliumLike](#) Collects foliumlike elements.

## Contained By

**<bifolium>** Describes a folded sheet of paper.

<folium> → [model.foliumLike](#) → <bifolium>

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

<folium> → model.foliumLike → <cutout>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<folium> → model.foliumLike → <foliaDesc>

**<patch>** Describes a physical writing surface attached to the original document.

<folium> → model.foliumLike → <patch>

## May Contain

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

<folium> → model.paperModLike → <cutout>

**<patch>** Describes a physical writing surface attached to the original document.

<folium> → model.paperModLike → <patch>

## Remarks

When the exact folium setup can't be identified, it is advised to use <folium> elements only (and not guess about the presence of <bifolium>s in the document).

## Declaration

```

</elementSpec>

```

## <foreName>

Contains a forename, given or baptismal name.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<foreName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<foreName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<foreName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<foreName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<foreName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<foreName> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<foreName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<foreName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<foreName> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<foreName> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<foreName> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<foreName> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<foreName> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<foreName> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<foreName> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<foreName> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<foreName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<foreName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<foreName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<foreName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<foreName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<foreName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<foreName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<foreName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<foreName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<foreName> → att.lang → @xml:lang

## Member of

[model.persNamePart](#) Groups elements which form part of a personal name.

## Contained By

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<foreName> → [model.persNamePart](#) → <persName>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<foreName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<foreName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<foreName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<foreName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<foreName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<foreName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<foreName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<foreName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<foreName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<foreName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<foreName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<foreName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<foreName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<foreName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<foreName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<foreName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [forename](#) element of the Text Encoding Initiative (TEI).

## <front>

(front matter) – Bundles prefatory text found before the start of the musical text.

### Referenced in chapters

[2.1.2 General Music Structure Elements](#), [2.1.3 Document Layout Elements](#), [9.1.2.2 Back Matter](#)

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<front> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<front> → [att.metadataPointing](#) → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<front> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<front> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<front> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<front> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<front> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<front> → [att.common](#) → [att.type](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<front> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<front> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<front> → [att.lang](#) → @xml:lang

## Member of

[model.frontLike](#) Groups elements that may contain front matter.

## Contained By

### May Contain

**<cb>** An empty formatting element that forces text to begin in a new column.

<front> → [model.milestoneLike.text](#) → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<front> → [model.milestoneLike.text](#) → <colLayout>

**<div>** Major structural division of text, such as a preface, chapter or section.

<front> → model.divLike → <div>

**<lb>** An empty formatting element that forces text to begin on a new line.

<front> → model.milestoneLike.text → model.lbLike → <lb>

**<pb>** An empty formatting element that forces text to begin on a new page.

<front> → model.milestoneLike.text → model.pbLike → <pb>

**<relation>** Describes a relationship or linkage amongst entities.

<front> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<front> → model.relationLike → <relationList>

**<titlePage>** Contains a transcription of the title page of a text.

<front> → model.frontAndBackPart → <titlePage>

## Remarks

**<titlePage>** may be used to transcribe the item's title page. Other front matter structures, such as a preface, dedication, or table of contents, may be encoded as textual divisions; that is, as <div> elements, with an optional **<head>** sub-element describing the nature of the division. The **<pb>** element is allowed here in order to accommodate page images, e.g., cover, endpapers, etc. before and after the actual textual matter.

The model of this element is based on the **front** element of the Text Encoding Initiative (TEI).

## <funder>

Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<funder> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<funder> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<funder> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<funder> → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<funder> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<funder> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<funder> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<funder> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<funder> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<funder> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<funder> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<funder> → [att.lang](#) → @xml:lang

## Member of

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<funder> → model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<funder> → model.respLikePart → model.respLike → model.biblPart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<funder> → model.respLikePart → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<funder> → model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<funder> → model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<funder> → model.respLikePart → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<funder> → model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<funder> → model.respLikePart → model.titlePagePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<funder> → model.respLikePart → model.respLike → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<funder> → model.respLikePart → <work>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<funder> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<funder> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<funder> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<funder> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<funder> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<funder> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<funder> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<funder> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<funder> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<funder> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<funder> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<funder> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<funder> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<funder> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<funder> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<funder> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<funder> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<funder> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<funder> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<funder> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<funder> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<funder> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<funder> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<funder> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<funder> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<funder> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<funder> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<funder> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<funder> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<funder> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<funder> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<funder> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<funder> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<funder> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<funder> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<funder> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<funder> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<funder> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<funder> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<funder> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<funder> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<funder> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<funder> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<funder> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<funder> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<funder> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<funder> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<funder> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [funder](#) element of the Text Encoding Initiative (TEI).

## <gap>

Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

### Referenced in chapters

[11.2.4 Additions, Deletions, and Omissions](#), [11.2.4.1 Omissions, Unclear Readings, Damage, and Supplied Readings](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<gap> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<gap> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<gap> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<gap> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<gap> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<gap> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<gap> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<gap> → [att.edit](#) → [att.evidence](#) → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<gap> → [att.extent](#) → @extent

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.linkin → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<gap> → att.handIdent → @hand

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<gap> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<gap> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<gap> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<gap> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.linkin → @prev

**@reason** (*optional*) Holds a short phrase describing the reason for missing textual material (gap), why material is supplied (supplied), or why transcription is difficult (unclear). Value is plain text.

<gap> → att.reasonIdent → @reason

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<gap> → att.common → att.linkin → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<gap> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<gap> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<gap> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<gap> → [att.extent](#) → [att.measurement](#) → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<gap> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<gap> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<gap> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<gap> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<gap> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<gap> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<gap> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<gap> → [model.transcriptionLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<gap> → [model.transcriptionLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<gap> → model.transcriptionLike → <beam>

**<bifolium>** Describes a folded sheet of paper.

<gap> → elements having gap as direct children → <bifolium>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<gap> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<gap> → model.transcriptionLike → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<gap> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<gap> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<gap> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<gap> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<gap> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<gap> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<gap> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<gap> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<gap> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<gap> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<gap> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<gap> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<gap> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<gap> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<gap> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<gap> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<gap> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<gap> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<gap> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<gap> → model.transcriptionLike → <fingGrp>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<gap> → elements having gap as direct children → <foliaDesc>

**<foreName>** Contains a forename, given or baptismal name.

<gap> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<gap> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<gap> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<gap> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<gap> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<gap> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<gap> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<gap> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<gap> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<gap> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<gap> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<gap> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<gap> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<gap> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<gap> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<gap> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<gap> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<gap> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<gap> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<gap> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<gap> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<gap> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<gap> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<gap> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<gap> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<gap> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<gap> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<gap> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<gap> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<gap> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<gap> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<gap> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<gap> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<gap> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<gap> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<gap> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<gap> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<gap> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<gap> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<gap> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<gap> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<gap> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<gap> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<gap> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<gap> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<gap> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<gap> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<gap> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<gap> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<gap> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<gap> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<gap> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<gap> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<gap> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<gap> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<gap> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<gap> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<gap> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<gap> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<gap> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<gap> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<gap> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<gap> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<gap> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<gap> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<gap> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<gap> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<gap> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<gap> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<gap> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<gap> → model.transcriptionLike → <unclear>

## May Contain

– (<gap> may not have child elements)

## Remarks

When material is omitted because it is illegible or inaudible, **<unclear>** should be used instead. Similarly, use **<damage>** if the omission is due to damage and **<del>** if the omission is because the material is marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector. An indication of how much material has been omitted from the transcription may be recorded in the extent attribute. The unit attribute names the unit used for describing the extent of the gap. The reason attribute gives the reason for omission. Sample values include sampling, irrelevant, cancelled. The resp attribute contains an ID reference to an element containing the name of the editor, transcriber or encoder responsible for the decision not to provide any transcription of the material and hence the application of the **<gap>** tag. The hand attribute signifies the hand which made the deletion in the case of text omitted from the transcription because of deliberate deletion by an identifiable hand. The cert attribute signifies the degree of certainty ascribed to the identification of the extent of the missing material.

The model of this element is based on the **gap** element of the Text Encoding Initiative (TEI).

## Declaration

```

<elementSpec ident="gap" module="MEI.edittrans">
  <desc xml:lang="en">Indicates a point where material has been omitted in a transcription,
  whether as part of sampling practice or for editorial reasons described in the MEI
  header.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.edit"/>
    <memberOf key="att.extent"/>

## <genDesc>

(genetic description) - Bundles information about the textual development of a work.

### Referenced in chapters

[2.1.2 General Music Structure Elements](#), [11.3.1 Encoding Genetic States](#), [11.3.2 Referencing Genetic States](#)

### Module

[MEI.genetic](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<genDesc> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<genDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<genDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linkin](#) → @next

**@ordered** When set to "true" the child elements are known to be in chronological order. When set to "false" or when not provided, the order of child elements is unknown. Value conforms to [data.BOOLEAN](#).

<genDesc> → direct children → @ordered

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<genDesc> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<genDesc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<genDesc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<genDesc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.resourceLike](#) Groups non-text components that represent the content of the musical text.

## Contained By

**<genDesc>** (genetic description) - Bundles information about the textual development of a work.

<genDesc> → elements having genDesc as direct children → <genDesc>

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

<genDesc> → [model.resourceLike](#) → <music>

## May Contain

**<genDesc>** (genetic description) - Bundles information about the textual development of a work.

<genDesc> → direct children → <genDesc>

**<genState>** Describes a distinctive state in the textual development of a work.

<genDesc> → direct children → <genState>

## Remarks

The development of a work can be traced in one or more sources.

When the <genDesc> element is nested, the inner element describes a group of processes with unknown chronological order inside a larger set of processes with known order, or vice versa.

The decls attribute may be used to link the genetic description with a particular work described in the header.

## Declaration

```
<elementSpec ident="genDesc" module="MEI.genetic">

```

## <genName>

(generational name component) – Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<genName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<genName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<genName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<genName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<genName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<genName> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<genName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<genName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<genName> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<genName> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<genName> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<genName> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<genName> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<genName> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<genName> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<genName> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<genName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<genName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<genName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<genName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<genName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<genName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<genName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<genName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<genName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<genName> → att.lang → @xml:lang

## Member of

[model.persNamePart](#) Groups elements which form part of a personal name.

## Contained By

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<genName> → [model.persNamePart](#) → <persName>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<genName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<genName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<genName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<genName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<genName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<genName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<genName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<genName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<genName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<genName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<genName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<genName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<genName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<genName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<genName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<genName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [genName](#) element of the Text Encoding Initiative (TEI).

## <genState>

Describes a distinctive state in the textual development of a work.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [11.3.1 Encoding Genetic States](#), [11.3.2 Referencing Genetic States](#), [11.3.4 Genetic Changes at the Page Level](#)

### Module

[MEI.genetic](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<genState> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<genState> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<genState> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<genState> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<genState> → [att.dataPointing](#) → @data

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<genState> → [att.metadataPointing](#) → @decls

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<genState> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<genState> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<genState> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<genState> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<genState> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.linked → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<genState> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<genState> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.linked → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<genState> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<genState> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<genState> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<genState> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<genState> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "onLoad" (*Load the target resource(s) immediately.*), "onRequest" (*Load the target resource(s) upon user request.*), "none" (*Do not permit loading of the target resource(s).*), "other" (*Behavior other than allowed by the other values of this attribute.*)

<genState> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<genState> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "new" (*Open in a new window.*), "replace" (*Load the referenced resource in the same window.*), "embed" (*Embed the referenced resource at the point of the link.*), "none" (*Do not permit traversal to the referenced resource.*), "other" (*Behavior other than permitted by the other values of this attribute.*)

<genState> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<genState> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<genState> → att.common → att.basic → att.id → @xml:id

## Member of

(genState isn't member of any model class)

## Contained By

**<genDesc>** (*genetic description*) - Bundles information about the textual development of a work.

<genState> → elements having genState as direct children → <genDesc>

## May Contain

**<date>** A string identifying a point in time or the time period between two such points.

<genState> → model:dateLike → <date>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<genState> → direct children → <desc>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<genState> → direct children → <respStmt>

## Remarks

Any scribal modifications encoded with elements, such as **<add>**, **<del>**, etc., which refer to a genState element, are regarded as the operations that need to be implemented to reach this state; that is, they precede this state.

When nested inside a <genDesc> element with ordered set to "false", information regarding the chronological order of states may be provided using the next, prev, follows and precedes attributes.

The <date> can be used to identify when the current state was achieved.

## <genre>

Term or terms that designate a category characterizing a particular style, form, or content.

### Referenced in chapters

[9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<genre> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<genre> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<genre> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<genre> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<genre> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<genre> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<genre> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<genre> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<genre> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<genre> → att.common → att.labelled → @label

**@n (optional)** Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<genre> → att.common → att.nNumberLike → @n

**@next (optional)** Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.linked → @next

**@precedes (optional)** Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.linked → @precedes

**@prev (optional)** Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.linked → @prev

**@resp (optional)** Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.responsibility → @resp

**@sameas (optional)** Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.linked → @sameas

**@synch (optional)** Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<genre> → att.common → att.linked → @synch

**@translit (optional)** Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<genre> → att.lang → @translit

**@type (optional)** Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<genre> → att.common → att.typed → @type

**@xml:base (optional)** Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<genre> → att.common → att.basic → @xml:base

**@xml:id (optional)** Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<genre> → att.common → att.basic → att.id → @xml:id

**@xml:lang (optional)** Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<genre> → att.lang → @xml:lang

## Member of

**model.biblPart** Groups elements that may appear as part of a bibliographic description.

### Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<genre> → model.textPhraseLike.limited → <bibl>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<genre> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<genre> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<genre> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<genre> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<genre> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<genre> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<genre> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<genre> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatree>** Entity to whom a creative work is formally offered.

<genre> → model.textPhraseLike.limited → <dedicatree>

**<depth>** Description of a measurement taken through a three-dimensional object.

<genre> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<genre> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<genre> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<genre> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<genre> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<genre> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<genre> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<genre> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<genre> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<genre> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<genre> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<genre> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<genre> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<genre> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<genre> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<genre> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<genre> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<genre> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<genre> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<genre> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<genre> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<genre> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<genre> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<genre> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<genre> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<genre> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<genre> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<genre> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<genre> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<genre> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<genre> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<genre> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<genre> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<genre> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<genre> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<genre> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<genre> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<genre> → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<genre> → model.textPhraseLike.limited → model.dimLike → <width>

## <geogFeat>

(geographical feature name) – Contains a common noun identifying a geographical feature.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<geogFeat> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<geogFeat> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<geogFeat> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<geogFeat> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<geogFeat> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<geogFeat> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<geogFeat> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<geogFeat> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linked → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<geogFeat> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<geogFeat> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<geogFeat> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linked → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<geogFeat> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<geogFeat> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<geogFeat> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<geogFeat> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<geogFeat> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<geogFeat> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<geogFeat> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<geogFeat> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<geogFeat> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<geogFeat> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<geogFeat> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<geogFeat> → att.common → att.lang → @xml:lang

## Member of

[model.geogNamePart](#) Groups elements which form part of a geographic name.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<geogFeat> → [model.geogNamePart](#) → [model.addressPart](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<geogFeat> → model.geogNamePart → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatu

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<geogFeat> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<geogFeat> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<geogFeat> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<geogFeat> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<geogFeat> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<geogFeat> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<geogFeat> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogNa

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<geogFeat> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<geogFeat> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<geogFeat> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<geogFeat> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<geogFeat> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<geogFeat> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.renderLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<geogFeat> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<geogFeat> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<geogFeat> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<geogFeat> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [geogFeat](#) element of the Text Encoding Initiative (TEI).

## <geogName>

(geographic name) – The proper noun designation for a place, natural feature, or political jurisdiction.

### Referenced in chapters

[3.6.5 Work History](#)

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<geogName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<geogName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<geogName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<geogName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<geogName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<geogName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<geogName> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<geogName> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<geogName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<geogName> → att.edit → att.evidence → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<geogName> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<geogName> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<geogName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<geogName> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<geogName> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<geogName> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<geogName> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<geogName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<geogName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<geogName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<geogName> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<geogName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<geogName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<geogName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<geogName> → att.lang → @xml:lang

## Member of

[model.nameLike.geogName](#) Groups geographic name elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → mod

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → mod

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addNa

**<addrLine>** Single line of a postal address.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addrL

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model

**<date>** A string identifying a point in time or the time period between two such points.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model

**<depth>** Description of a measurement taken through a three-dimensional object.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.epigraph

**<event>** Contains a free-text event description.

<geogName> → model.nameLike.geogName → model.eventPart → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

<geogName> → model.nameLike.geogName → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.expan

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.textPhraseLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<>** Contains a single line of text within a line group.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdg

**<li>** Single item in a <list>.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.textPhraseLike

**<rdg>** (reading) – Contains a single reading within a textual variation.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart.rdg

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart.reg

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → mod

**<role>** Name of a dramatic role, as given in a cast list.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <roleNa

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <settle

**<sic>** Contains apparently incorrect or inaccurate material.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → mod

**<signifLet>** Significantive letter(s).

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.supplied

**<supportDesc>** Groups elements describing the physical support material of an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.unclear

**<width>** Description of the horizontal size of an object.

<geogName> → model.nameLike.geogName → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <width>

## May Contain

---

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<geogName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<geogName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<geogName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<geogName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<geogName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<geogName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<geogName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<geogName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<geogName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<geogName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<geogName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<geogName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<geogName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<geogName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<geogName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<geogName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

---

Examples include Black Forest; Baltimore, Maryland; and Quartier Latin, Paris. Geographic name parts can be encoded using <geogName> sub-elements. For greater specificity, however, use <district>, <settlement>, <region>, <country>, and <bloc> sub-elements. The name of the list from which a controlled value is taken, such as the Thesaurus of Geographic Names (TGN), may be recorded using the auth attribute.

The model of this element is based on the [geogname](#) element of the Encoded Archival Description (EAD).

DEVELOPMENT  
VERSION

## <gliss>

(glissando) – A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

### Referenced in chapters

[2.4.2.2 Elements Without Semantic Implications](#), [4.3.5 Articulation and Performance Instructions in CMN](#),  
[4.3.5.1 Arpeggio and Glissando](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<gliss> → att.gliss.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<gliss> → att.gliss.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<gliss> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linkin → @corresp

**@dots ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<gliss> → att.gliss.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<gliss> → att.gliss.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<gliss> → att.gliss.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<gliss> → att.gliss.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<gliss> → att.gliss.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<gliss> → att.gliss.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a token.

<gliss> → att.gliss.ges → att.duration.ges → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<gliss> → att.gliss.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.to → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.vo → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<gliss> → att.gliss.log → att.controlEvent → att.targetEval → @evaluate

**@facsc** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.facsimile → @facsc

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<gliss> → att.gliss.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<gliss> → att.gliss.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<gliss> → att.gliss.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<gliss> → att.gliss.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<gliss> → att.gliss.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<gliss> → att.gliss.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<gliss> → att.gliss.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<gliss> → att.gliss.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<gliss> → att.gliss.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<gliss> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<gliss> → att.gliss.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<gliss> → att.gliss.vis → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<gliss> → att.gliss.vis → att.lineRend → @lendsym.size

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<gliss> → att.gliss.vis → att.typography → @letterspacing

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<gliss> → att.gliss.vis → att.lineRend → att.lineRend.base → @lform

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<gliss> → att.gliss.vis → att.typography → @lineheight

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<gliss> → att.gliss.vis → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<gliss> → att.gliss.vis → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<gliss> → att.gliss.vis → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<gliss> → att.gliss.vis → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<gliss> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<gliss> → att.gliss.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<gliss> → att.gliss.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.gliss.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<gliss> → att.gliss.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<gliss> → att.gliss.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<gliss> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<gliss> → att.gliss.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<gliss> → att.gliss.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<gliss> → att.gliss.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<gliss> → att.gliss.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<gliss> → att.gliss.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<gliss> → att.gliss.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<gliss> → att.gliss.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<gliss> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<gliss> → att.gliss.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<gliss> → att.gliss.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<gliss> → att.gliss.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<gliss> → att.gliss.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<gliss> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<gliss> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<gliss> → att.gliss.vis → att.xy → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<gliss> → att.gliss.vis → att.xy2 → @y2

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<gliss> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<gliss> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<gliss> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<gliss> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<gliss> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<gliss> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<gliss> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<gliss> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<gliss> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<gliss> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<gliss> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<gliss> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<gliss> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<gliss> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<gliss> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<gliss> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<gliss> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<gliss> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<gliss> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<gliss> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<gliss> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<gliss> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<gliss> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<gliss> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<gliss> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<gliss> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<gliss> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<gliss> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<gliss> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<gliss> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<gliss> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<gliss> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<gliss> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<gliss> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<gliss> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<gliss> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<gliss> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<gliss> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<gliss> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<gliss> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<gliss> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<gliss> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<gliss> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<gliss> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<gliss> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<gliss> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<gliss> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<gliss> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<gliss> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<gliss> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<gliss> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<gliss> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<gliss> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<gliss> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<gliss> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Commonly also called a 'slide'. The term 'glissando' is frequently used to indicate both the case where distinct intermediate pitches are produced (as on the piano) and the case where they are not (as on the trombone), though the latter is sometimes referred to as 'portamento'. The visual appearance of the indicating

line may be recorded in the lform and lwidth attributes. The starting point of the glissando may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

## Declaration

```

<elementSpec ident="gliss" module="MEI.cmn">

## <graceGrp>

A container for a sequence of grace notes.

### Referenced in chapters

[4.2.5.1.2 Grace Notes](#)

### Module

[MEI.cmn](#)

### Attributes

**@attach** (*optional*) Records whether the grace note group is attached to the following event or to the preceding one. The usual name for the latter is "Nachschlag". Allowed values are: "**pre**" (*Attached to the preceding event.*), "**post**" (*Attached to the following event.*), "**unknown**" (*Attachment is ambiguous.*)

<graceGrp> → [att.graceGrp.log](#) → @attach

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<graceGrp> → [att.graceGrp.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<graceGrp> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → [att.common](#) → [att.linkin](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → [att.common](#) → [att.linkin](#) → @follows

**@grace** (*optional*) Marks a note or chord as a "grace" (without a definite performed duration) and records from which other note/chord it should "steal" time. Value conforms to [data.GRACE](#).

<graceGrp> → [att.graceGrp.log](#) → [att.graced](#) → @grace

**@grace.time** (*optional*) Records the amount of time to be "stolen" from a non-grace note/chord. Value conforms to [data.PERCENT](#).

<graceGrp> → [att.graceGrp.log](#) → [att.graced](#) → @grace.time

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<graceGrp> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<graceGrp> → att.graceGrp.log → att.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<graceGrp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<graceGrp> → att.graceGrp.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<graceGrp> → att.common → att.linking → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<graceGrp> → att.graceGrp.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<graceGrp> → att.graceGrp.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<graceGrp> → att.graceGrp.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<graceGrp> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<graceGrp> → att.graceGrp.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<graceGrp> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<graceGrp> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.cmn](#) Groups events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<graceGrp> → model.eventLike.cmn → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<graceGrp> → model.eventLike.cmn → <graceGrp>

**<layer>** An independent stream of events on a staff.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<graceGrp> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<graceGrp> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<graceGrp> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<graceGrp> → model.appLike → <app>

**<bTrem>** A rapid alternation on a single pitch or chord.

<graceGrp> → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<graceGrp> → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<graceGrp> → model.eventLike.cmn → <beam>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<graceGrp> → model.eventLike.cmn → <beatRpt>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<graceGrp> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<graceGrp> → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<graceGrp> → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<graceGrp> → model.eventLike → <clefGrp>

**<corr>** Contains the correct form of an apparent erroneous passage.

<graceGrp> → model.transcriptionLike → <corr>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<graceGrp> → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<graceGrp> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<graceGrp> → model.transcriptionLike → <del>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<graceGrp> → model.eventLike.cmn → <fTrem>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<graceGrp> → model.transcriptionLike → <gap>

**<graceGrp>** A container for a sequence of grace notes.

<graceGrp> → model.eventLike.cmn → <graceGrp>

**<halfmRpt>** A half-measure repeat in any meter.

<graceGrp> → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<graceGrp> → model.transcriptionLike → <handShift>

**<keySig>** Written key signature.

<graceGrp> → model.eventLike → model.keySigLike → <keySig>

**<meterSig>** Written meter signature.

<graceGrp> → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<graceGrp> → model.eventLike → model.meterSigLike → <meterSigGrp>

**<note>** A single pitched event.

<graceGrp> → model.eventLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<graceGrp> → model.transcriptionLike → <orig>

**<pad>** An indication of extra visual space between notational elements.

<graceGrp> → model.eventLike → <pad>

**<reg>** Contains material which has been regularized or normalized in some sense.

<graceGrp> → model.transcriptionLike → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<graceGrp> → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<graceGrp> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<graceGrp> → model.transcriptionLike → <sic>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<graceGrp> → model.eventLike → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<graceGrp> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<graceGrp> → model.transcriptionLike → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<graceGrp> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<graceGrp> → model.transcriptionLike → <unclear>

## Constraints

A graceGrp without a copyof attribute must have at least 1 note, rest, chord, or space descendants. The grace attribute is not allowed on descendants of a graceGrp with a grace attribute.

## Declaration

```

## <graphic>

Indicates the location of an inline graphic.

### Referenced in chapters

[2.3.1 Attributes from the XML-namespace](#), [3.6.2 Incipits](#), [3.7.2.2 Specifying page dimensions](#), [9.2.3 Figures](#), [9.2.3.2 Images](#), [12.1.1 Elements of the Facsimile Module](#), [13.2.2.3 Define the mimetype of a link element's target](#), [14.4 SVG](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<graphic> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<graphic> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<graphic> → [att.common](#) → [att.linked](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<graphic> → [att.metadataPointing](#) → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<graphic> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<graphic> → [att.common](#) → [att.linked](#) → @follows

**@height** (*optional*) Measurement of the vertical dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<graphic> → [att.dimensions](#) → [att.height](#) → @height

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<graphic> → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<graphic> → [att.common](#) → [att.labelled](#) → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<graphic> → att.internetMedia → @mimetype

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<graphic> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.linked → @sameas

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<graphic> → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<graphic> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<graphic> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<graphic> → att.pointing → @targettype

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<graphic> → att.visualOffset → att.visualOffset.to → @to

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<graphic> → att.common → att.typed → @type

**@ulx** (*optional*) Indicates the upper-left corner x coordinate. Value is a positive integer, including 0.  
<graphic> → direct children → @ulx

**@uly** (*optional*) Indicates the upper-left corner y coordinate. Value is a positive integer, including 0.  
<graphic> → direct children → @uly

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<graphic> → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<graphic> → [att.dimensions](#) → [att.width](#) → @width

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<graphic> → [att.pointing](#) → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<graphic> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<graphic> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<graphic> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<graphic> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.graphicLike](#) Groups elements that indicate the location of an inline graphic, illustration, or figure.

## Contained By

**<facsimile>** Contains a representation of a written source in the form of a set of images rather than as transcribed or encoded text.

<graphic> → elements having graphic as direct children → <facsimile>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<graphic> → [model.graphicLike](#) → <fig>

**<incip>** The opening music and/or words of a musical or textual work.

<graphic> → [model.graphicLike](#) → <incip>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

<graphic> → model.graphicLike → <surface>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<graphic> → elements having graphic as direct children → <symbolDef>

**<zone>** Defines an area of interest within a <surface> or graphic file.

<graphic> → model.graphicLike → <zone>

## May Contain

**<zone>** Defines an area of interest within a <surface> or graphic file.

<graphic> → direct children → <zone>

## Remarks

The model of this element is based on the **graphic** element of the Text Encoding Initiative (TEI).

## Constraints

Graphic child of zone should not have children.

Graphic should have either a startid attribute or ulx and uly attributes.

Graphic should not have @ulx or @uly attributes.

Graphic should not have @ho or @vo attributes.

## Declaration

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<group> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<group> → att.metadataPointing → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<group> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<group> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<group> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<group> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<group> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<group> → att.common → att.basic → att.id → @xml:id

## Member of

(group isn't member of any model class)

## Contained By

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

<group> → elements having group as direct children → <group>

## May Contain

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

<group> → direct children → <group>

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

<group> → direct children → <music>

## Remarks

Because its model contains the music element, each of the subordinate MEI documents can have its own front and back matter.

The model of this element is based on the [group](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="group" module="MEI.shared">

```

## <grpSym>

(group symbol) – A brace or bracket used to group two or more staves of a score or part.

### Referenced in chapters

[2.2.1 Score and Parts](#)

### Module

[MEI.shared](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<grpSym> → att.grpSym.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<grpSym> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<grpSym> → att.grpSym.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<grpSym> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<grpSym> → att.common → att.linked → @corresp`

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

`<grpSym> → att.grpSym.log → att.startEndId → @endid`

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<grpSym> → att.facsimile → @facs`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<grpSym> → att.common → att.linked → @follows`

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

`<grpSym> → att.grpSym.vis → att.typography → @fontfam`

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

`<grpSym> → att.grpSym.vis → att.typography → @fontname`

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

`<grpSym> → att.grpSym.vis → att.typography → @fontsize`

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<grpSym> → att.grpSym.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<grpSym> → att.grpSym.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<grpSym> → att.grpSym.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<grpSym> → att.grpSym.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<grpSym> → att.grpSym.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<grpSym> → att.grpSym.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<grpSym> → att.grpSym.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<grpSym> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<grpSym> → att.grpSym.vis → att.typography → @letterspacing

**@level** (*optional*) Indicates the nesting level of staff grouping symbols. Value is a positive integer.

<grpSym> → att.grpSym.log → @level

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<grpSym> → att.grpSym.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<grpSym> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<grpSym> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<grpSym> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<grpSym> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<grpSym> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<grpSym> → [att.common](#) → [att.linking](#) → @sameas

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<grpSym> → [att.grpSym.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@symbol** (*optional*) Specifies the symbol used to group a set of staves. Allowed values are: "**brace**" (*Curved symbol, , {,}*), "**bracket**" (*Square symbol, , [, but with curved/angled top and bottom segments.*), "**bracketsq**" (*Square symbol, , [, with horizontal top and bottom segments.*), "**line**" (*Line symbol, , |, (wide) line without top and bottom curved/horizontal segments.*), "**none**" (*Grouping symbol missing.*)

<grpSym> → [att.grpSym.log](#) → [att.staffGroupingSym](#) → @symbol

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<grpSym> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<grpSym> → [att.grpSym.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<grpSym> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<grpSym> → [att.grpSym.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<grpSym> → [att.grpSym.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<grpSym> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<grpSym> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y (optional)** Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<grpSym> → att.grpSym.vis → att.xy → @y

### Member of

(grpSym isn't member of any model class)

### Contained By

**<scoreDef>** Container for score meta-information.

<grpSym> → elements having grpSym as direct children → <scoreDef>

**<staffGrp>** A group of bracketed or braced staves.

<grpSym> → elements having grpSym as direct children → <staffGrp>

### May Contain

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<grpSym> → model.labelLike → <label>

**<labelAbbr>** A label on the pages following the first.

<grpSym> → model.labelLike → <labelAbbr>

### Remarks

This element provides an alternative to the **<staffGrp>** element's symbol attribute. It may be used when exact placement or editorial details for the grouping symbol must be recorded.

### Constraints

In scoreDef, grpSym must have startid, endid, and level attributes.

In staffGrp, grpSym must not have startid, endid, or level attributes.

### Declaration

```

<elementSpec ident="grpSym" module="MEI.shared">

# <hairpin>

Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

## Referenced in chapters

[1.2.2 Events and Controlevents](#), [4.3.3 Dynamics in CMN](#)

## Module

[MEI.cmn](#)

## Attributes

**@angle.optimize** (*optional*) Indicates that the slope of the hairpin can be adjusted to follow the content in order to optimize spacing. Value conforms to [data.BOOLEAN](#).

<hairpin> → [att.hairpin.vis](#) → @angle.optimize

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@closed** (*optional*) Applies to a "Rossini" hairpin, i.e., one where the normally open side is closed by a connecting line. Value conforms to [data.BOOLEAN](#).

<hairpin> → [att.hairpin.vis](#) → @closed

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<hairpin> → [att.hairpin.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<hairpin> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.linked](#) → @corresp

**@dots ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<hairpin> → [att.hairpin.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<hairpin> → [att.hairpin.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<hairpin> → [att.hairpin.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<hairpin> → [att.hairpin.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<hairpin> → att.hairpin.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<hairpin> → att.hairpin.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip value**. Value is a [token](#).

<hairpin> → att.hairpin.ges → att.duration.ges → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → att.hairpin.vis → att.visualOffset2 → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<hairpin> → att.hairpin.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<hairpin> → att.hairpin.vis → att.visualOffset2 → att.visualOffset2.to → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → att.hairpin.vis → att.visualOffset2 → att.visualOffset2.vo → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<hairpin> → att.hairpin.log → att.controlEvent → att.targetEval → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<hairpin> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<hairpin> → att.common → att.linking → @follows

**@form** (*required*) Captures the visual rendition and function of the hairpin; that is, whether it indicates an increase or a decrease in volume. Allowed values are: "**cres**" (*Crescendo; , louder.*), "**dim**" (*Diminuendo; , softer.*)

<hairpin> → att.hairpin.log → @form

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → att.hairpin.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<hairpin> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<hairpin> → att.hairpin.log → att.controlEvent → att.layerIdent → @layer

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<hairpin> → att.hairpin.vis → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<hairpin> → att.hairpin.vis → att.lineRend.base → @lsegs

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<hairpin> → att.hairpin.vis → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<hairpin> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hairpin> → att.common → att.linking → @next

**@niente** (*optional*) Indicates that the hairpin starts from or ends in silence. Often rendered as a small circle attached to the closed end of the hairpin. See Gould, p. 108. Value conforms to [data.BOOLEAN](#).

<hairpin> → att.hairpin.log → @niente

**@opening** (*optional*) Specifies the distance between the lines at the open end of a hairpin dynamic mark. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<hairpin> → att.hairpin.vis → @opening

**@opening.vertical** (*optional*) Indicates that the opening points are aligned with an imaginary line that is always 90° perpendicular to the horizontal plane, regardless of any angle or start/end adjustments, including when the hairpin is angled with @angle.optimize or through @endvo/@startvo adjustments. Value conforms to [data.BOOLEAN](#).

<hairpin> → att.hairpin.vis → @opening.vertical

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<hairpin> → att.hairpin.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<hairpin> → att.hairpin.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<hairpin> → att.hairpin.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.hairpin.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.linkin](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<hairpin> → [att.hairpin.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → [att.hairpin.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<hairpin> → [att.hairpin.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<hairpin> → [att.hairpin.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.to](#) → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → [att.hairpin.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.vo](#) → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<hairpin> → [att.common](#) → [att.linkin](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<hairpin> → [att.hairpin.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<hairpin> → att.hairpin.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<hairpin> → att.hairpin.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<hairpin> → att.hairpin.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<hairpin> → att.hairpin.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<hairpin> → att.hairpin.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<hairpin> → att.hairpin.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<hairpin> → att.common → att.typed → @type

**@val** (*optional*) MIDI number. Value conforms to [data.MIDIVALUE](#).

<hairpin> → att.hairpin.ges → att.midiValue → @val

**@val2** (*optional*) MIDI number. Value conforms to [data.MIDIVALUE](#).

<hairpin> → att.hairpin.ges → att.midiValue2 → @val2

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<hairpin> → att.hairpin.vis → att.verticalGroup → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<hairpin> → att.hairpin.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<hairpin> → att.hairpin.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<hairpin> → att.hairpin.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<hairpin> → att.hairpin.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<hairpin> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<hairpin> → `att.common` → `att.basic` → `att.id` → `@xml:id`

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<hairpin> → `att.hairpin.vis` → `att.xy` → `@y`

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<hairpin> → `att.hairpin.vis` → `att.xy2` → `@y2`

## Member of

`model.controlEventLike.cmn` Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<abbr>`

**<add>** Marks an addition to the text.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<add>`

**<corr>** Contains the correct form of an apparent erroneous passage.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<corr>`

**<damage>** Contains an area of damage to the physical medium.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<damage>`

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<del>`

**<expan>** Contains the expansion of an abbreviation.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<expan>`

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<hairpin> → `model.controlEventLike.cmn` → `model.rdgPart.music` → `model.rdgPart` → `<lem>`

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<hairpin> → `model.controlEventLike.cmn` → `model.measurePart` → `<measure>`

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<orig>`

**<rdg>** (reading) – Contains a single reading within a textual variation.

<hairpin> → `model.controlEventLike.cmn` → `model.rdgPart.music` → `model.rdgPart` → `<rdg>`

**<reg>** Contains material which has been regularized or normalized in some sense.

<hairpin> → `model.controlEventLike.cmn` → `model.editTransPart.music` → `model.editTransPart` → `<reg>`

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<hairpin> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<hairpin> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<hairpin> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<hairpin> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<hairpin> may not have child elements)

## Remarks

The <hairpin> element is used for *graphical*, i.e., crescendo and diminuendo, dynamic markings. For instantaneous or continuous *textual* dynamics, such as 'p', 'mf', or 'cres. poco a poco', the <dynam> element should be used. The starting point of the hairpin marking may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute. MIDI values associated with the graphical dynamic sign may be recorded in the val and val2 attributes.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

## Declaration

```

<elementSpec ident="hairpin" module="MEI.cmn">
  <desc xml:lang="en">Indicates continuous dynamics expressed on the score as wedge-shaped

## <halfmRpt>

(half-measure repeat) – A half-measure repeat in any meter.

### Referenced in chapters

[4.3.10.2 Measure-Level Repetition Symbols](#), [11.2.1.1 Instructions](#)

### Module

[MEI.cmn](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<halfmRpt> → att.halfmRpt.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<halfmRpt> → att.halfmRpt.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<halfmRpt> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the [data.DURATION](#) datatype. Value conforms to [data.DURATION](#).

<halfmRpt> → att.halfmRpt.log → att.duration.log → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a [token](#).

<halfmRpt> → att.halfmRpt.ges → att.duration.ges → @dur.recip

**@expand** (*optional*) Indicates whether to render a repeat symbol or the source material to which it refers. A value of 'true' renders the source material, while 'false' displays the repeat symbol. Value conforms to [data.BOOLEAN](#).

<halfmRpt> → att.halfmRpt.vis → att.expandable → @expand

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<halfmRpt> → att.halfmRpt.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<halfmRpt> → att.halfmRpt.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<halfmRpt> → att.halfmRpt.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<halfmRpt> → att.halfmRpt.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<halfmRpt> → att.halfmRpt.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<halfmRpt> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<halfmRpt> → att.halfmRpt.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<halfmRpt> → att.halfmRpt.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<halfmRpt> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<halfmRpt> → att.halfmRpt.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<halfmRpt> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<halfmRpt> → att.halfmRpt.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<halfmRpt> → att.halfmRpt.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<halfmRpt> → att.halfmRpt.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<halfmRpt> → att.halfmRpt.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<halfmRpt> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<halfmRpt> → att.halfmRpt.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<halfmRpt> → att.halfmRpt.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<halfmRpt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<halfmRpt> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.cmn](#) Groups events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <abbr>

**<add>** Marks an addition to the text.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<halfmRpt> → model.eventLike.cmn → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<halfmRpt> → model.eventLike.cmn → <graceGrp>

**<layer>** An independent stream of events on a staff.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<halfmRpt> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<halfmRpt> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

## <hand>

Defines a distinct scribe or handwriting style.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<hand> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<hand> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<hand> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linkin](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<hand> → [att.evidence](#) → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linkin](#) → @follows

**@initial** (*optional*) Marks this hand as the first one of the document. Value conforms to [data.BOOLEAN](#).  
<hand> → direct children → @initial

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<hand> → [att.common](#) → [att.labelled](#) → @label

**@medium** (*optional*) Describes the writing medium. Value is plain text.  
<hand> → [att.medium](#) → @medium

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<hand> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<hand> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<hand> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<hand> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<hand> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<hand> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<hand> → [att.lang](#) → @xml:lang

## Member of

(hand isn't member of any model class)

## Contained By

[<handList>](#) Container for one or more hand elements.

<hand> → elements having hand as direct children → <handList>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<hand> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<hand> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<hand> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<hand> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<hand> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<hand> → model.textPhraseLike.limited → model.msinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<hand> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<hand> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<hand> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<hand> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<hand> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<hand> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<hand> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<hand> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<hand> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<hand> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<hand> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<hand> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<hand> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<hand> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<hand> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<hand> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<hand> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<hand> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<hand> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<hand> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<hand> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<hand> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<hand> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<hand> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<hand> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<hand> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<hand> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<hand> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<hand> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<hand> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<hand> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<hand> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<hand> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<hand> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<hand> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<hand> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<hand> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<hand> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<hand> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<hand> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<hand> → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<hand> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The initial attribute indicates whether this is the first or main hand of the document. The medium attribute describes the writing medium, e.g., pencil, or the tint or type of ink, e.g., brown. The resp attribute contains an ID reference to an element containing the name of the editor or transcriber responsible for identifying the hand. The characteristics of the hand, particularly those related to the quality of the writing, such as shaky, thick, etc. may be described within the content of the **<hand>** element.

The model of this element is based on the **handNote** element of the Text Encoding Initiative (TEI).

## <handList>

Container for one or more hand elements.

### Module

MEI.header

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<handList> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<handList> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<handList> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<handList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<handList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<handList> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<handList> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<handList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<handList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<handList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<handList> → [model.physDescPart](#) → <physDesc>

## May Contain

**<hand>** Defines a distinct scribe or handwriting style.

<handList> → direct children → <hand>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<handList> → [model.headLike](#) → <head>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<handList> → direct children → <label>

## Remarks

The model of this element is based on the [handNotes](#) element of the Text Encoding Initiative (TEI).

## Constraints

When labels are used, usually each hand has one.

## Declaration

```

## <handShift>

Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

### Referenced in chapters

[11.2.4.3 Substitutions, Restorations, and Handshifts](#)

### Module

[MEI.edittrans](#)

### Attributes

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<handShift> → att.edit → att.evidence → @cert

**@character** (*optional*) Describes the character of the new hand. Value is plain text.

<handShift> → direct children → @character

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<handShift> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<handShift> → att.edit → att.evidence → @evidence

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<handShift> → att.common → att.labelled → @label

**@medium** (*optional*) Describes the writing medium. Value is plain text.

<handShift> → att.medium → @medium

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<handShift> → att.common → att.nNumberLike → @on

**@new** (*optional*) Identifies the new hand. The value must contain the ID of a hand element given elsewhere in the document. Value conforms to [data.URI](#).

<handShift> → direct children → @new

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @next

**@old** (*optional*) Identifies the old hand. The value must contain the ID of a hand element given elsewhere in the document. Value conforms to [data.URI](#).

<handShift> → direct children → @old

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<handShift> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<handShift> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<handShift> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<handShift> → att.common → att.basic → att.id → @xml:id

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<handShift> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<handShift> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<handShift> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<handShift> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<handShift> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<handShift> → [model.transcriptionLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<handShift> → [model.transcriptionLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<handShift> → [model.transcriptionLike](#) → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<handShift> → [model.transcriptionLike](#) → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<handShift> → [model.transcriptionLike](#) → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<handShift> → [model.transcriptionLike](#) → <chord>

**<contentItem>** Contains a single entry within a content description element.

<handShift> → [model.transcriptionLike](#) → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<handShift> → [model.transcriptionLike](#) → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<handShift> → [model.transcriptionLike](#) → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<handShift> → [model.transcriptionLike](#) → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<handShift> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<handShift> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<handShift> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<handShift> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<handShift> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<handShift> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<handShift> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<handShift> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<handShift> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<handShift> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<handShift> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<handShift> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<handShift> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<handShift> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<handShift> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<handShift> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<handShift> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<handShift> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<handShift> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<handShift> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<handShift> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<handShift> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<handShift> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.
