**<corpName>** Identifies an organization or group of people that acts as a single entity.

<supplied> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<supplied> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<supplied> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<supplied> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<supplied> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<supplied> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<supplied> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<supplied> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<supplied> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<supplied> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<supplied> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<supplied> → model.transcriptionLike → model.paraccontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<supplied> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<supplied> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<supplied> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<supplied> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<supplied> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<supplied> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<supplied> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<supplied> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<supplied> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<supplied> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<supplied> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<supplied> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<supplied> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<supplied> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<supplied> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<supplied> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<supplied> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<supplied> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<supplied> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<supplied> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<supplied> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<supplied> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<supplied> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<supplied> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<supplied> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<supplied> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<supplied> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<supplied> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<supplied> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<supplied> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<supplied> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<supplied> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<supplied> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<supplied> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<supplied> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<supplied> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<supplied> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<supplied> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<supplied> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<supplied> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<supplied> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<supplied> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<supplied> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<supplied> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<supplied> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<supplied> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<supplied> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<supplied> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<supplied> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<supplied> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<supplied> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<supplied> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<supplied> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<supplied> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<supplied> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<supplied> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<supplied> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<supplied> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<supplied> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<supplied> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<supplied> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<supplied> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<supplied> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<supplied> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<supplied> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<supplied> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<supplied> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<supplied> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<supplied> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<supplied> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<supplied> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<supplied> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<supplied> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<supplied> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<supplied> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<supplied> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<supplied> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<supplied> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<supplied> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<supplied> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<supplied> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<supplied> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<supplied> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<supplied> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<supplied> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<supplied> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<supplied> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<supplied> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<supplied> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<supplied> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<supplied> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<supplied> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<supplied> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<supplied> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<supplied> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<supplied> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameL

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<supplied> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<hispanTick>** Hispanic tick.

<supplied> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<supplied> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<supplied> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<supplied> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<supplied> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<supplied> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<supplied> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<supplied> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<supplied> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<supplied> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<supplied> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<supplied> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<supplied> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<supplied> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<supplied> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<supplied> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<supplied> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<supplied> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<supplied> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<rest>** A non-sounding event found in the source being transcribed.

<supplied> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<supplied> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<supplied> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<supplied> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<supplied> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<supplied> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<supplied> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<supplied> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<supplied> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<supplied> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<supplied> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<supplied> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<supplied> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<supplied> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<supplied> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<supplied> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<supplied> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<supplied> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<supplied> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<supplied> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<supplied> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<supplied> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<supplied> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

When the presumed loss of text arises from an identifiable cause, agent signifies the causative agent. When the presumed loss of text arises from action (partial deletion, etc.) assignable to an identifiable hand, the hand attribute signifies the hand responsible for the action. The reason attribute indicates why the text has to be supplied, e.g., overbinding, faded ink, lost folio, omitted in original, etc. The source attribute contains the source of the supplied text. The editor(s) responsible for supplied material may be recorded in the resp attribute. The value of resp must point to one or more identifiers declared in the document header. The cert attribute signifies the degree of certainty ascribed to the supplied material.

In no case should `<supplied>` contain elements that would not otherwise be permitted to occur within the parent of its own `<app>` ancestor. For example, when used as a descendent of `<verse>`, `<supplied>` should only contain those elements allowed within `<verse>`.

The model of this element is based on the `supplied` element of the Text Encoding Initiative (TEI).

## <support>

Provides a description of the physical support material of a written item.

### Module

MEI.msDesc

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<support> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<support> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<support> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<support> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<support> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<support> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<support> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<support> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<support> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<support> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<support> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<support> → [att.lang](#) → @xml:lang

## Member of

(support isn't member of any model class)

## Contained By

**<supportDesc>** Groups elements describing the physical support material of an item.

<support> → elements having support as direct children → <supportDesc>

## May Contain

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<support> → direct children → <condition>

**<decoNote>** Contains a description of one or more decorative features of an item.

<support> → direct children → <decoNote>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<support> → direct children → <dimensions>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<support> → direct children → <head>

**<p>** One or more text phrases that form a logical prose passage.

<support> → direct children → <p>

## Remarks

The model of this element is based on the [support](#) element of the Text Encoding Initiative (TEI).

## <supportDesc>

(support description) – Groups elements describing the physical support material of an item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<supportDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<supportDesc> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<supportDesc> → [att.common](#) → [att.labelled](#) → @label

**@material** (*optional*) Short, project-defined name for the material composing the majority of the support. Allowed values are: "**paper**" (*Paper.*), "**parch**" (*Parchment.*), "**mixed**" (*Mixed materials.*)

<supportDesc> → direct children → @material

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<supportDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<supportDesc> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<supportDesc> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<supportDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<supportDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<supportDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<supportDesc> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<supportDesc> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<supportDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<supportDesc> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<supportDesc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<supportDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<supportDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<supportDesc> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<collation>** Records a description of how the leaves or bifolia of an item are physically arranged.

<supportDesc> → direct children → <collation>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<supportDesc> → direct children → <condition>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<supportDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<supportDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<supportDesc> → model.textPhraseLike.limited → <dedictee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<supportDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<supportDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<supportDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<supportDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<supportDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<supportDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<foliation>** Describes the numbering system or systems used to count the leaves or pages in a codex.

<supportDesc> → direct children → <foliation>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<supportDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<supportDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<supportDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<supportDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<supportDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<supportDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<supportDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<supportDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<supportDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<supportDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<supportDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<supportDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<supportDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<supportDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<supportDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<supportDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<supportDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<supportDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<supportDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<supportDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<supportDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<support>** Provides a description of the physical support material of a written item.

<supportDesc> → direct children → <support>

**<symbol>** A reference to a previously defined symbol.

<supportDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<supportDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<supportDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<supportDesc> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<supportDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **supportDesc** element of the Text Encoding Initiative (TEI).

## <surface>

Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

### Referenced in chapters

[3.7.2.1 Linking surface elements](#), [3.7.2.2 Specifying page dimensions](#), [12.1.1 Elements of the Facsimile Module](#), [14.4 SVG](#)

### Module

[MEI.facsimile](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<surface> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<surface> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<surface> → [att.common](#) → [att.linked](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<surface> → [att.dataPointing](#) → @data

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<surface> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<surface> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<surface> → [att.common](#) → [att.labelled](#) → @label

**@lrx** (*optional*) Indicates the lower-right corner x coordinate. Value is a positive integer, including 0.

<surface> → [att.coordinated](#) → @lrx

**@lry** (*optional*) Indicates the lower-left corner x coordinate. Value is a positive integer, including 0.

<surface> → [att.coordinated](#) → @lry

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<surface> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.responsibility → @resp

**@rotate** Indicates the amount by which the contents of this element have been rotated clockwise or, if applicable, how the orientation of the element self should be interpreted, with respect to the normal orientation of the parent surface. The orientation is expressed in arc degrees. Value conforms to [data.DEGREES](#).

<surface> → att.coordinated → @rotate

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.linking → @sameas

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<surface> → att.startid → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<surface> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<surface> → att.common → att.typed → @type

**@ulx** (*optional*) Indicates the upper-left corner x coordinate. Value is a positive integer, including 0.

<surface> → att.coordinated → @ulx

**@uly** (*optional*) Indicates the upper-left corner y coordinate. Value is a positive integer, including 0.

<surface> → att.coordinated → @uly

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<surface> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<surface> → att.common → att.basic → att.id → @xml:id

**Member of**

(surface isn't member of any model class)

**Contained By**

**<facsimile>** Contains a representation of a written source in the form of a set of images rather than as transcribed or encoded text.

<surface> → elements having surface as direct children → <facsimile>

**May Contain**

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<surface> → [model.figDescLike](#) → <figDesc>

**<graphic>** Indicates the location of an inline graphic.

<surface> → [model.graphicLike](#) → <graphic>

**<zone>** Defines an area of interest within a <surface> or graphic file.

<surface> → direct children → <zone>

**Remarks**

Scalable Vector Graphics (SVG) markup may be used when allowed by the graphicLike model.

The startid attribute may be used to hold a reference to the first feature occurring on this surface.

The model of this element is based on the [surface](#) element of the Text Encoding Initiative (TEI).

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<syl> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@con** (*optional*) Describes the symbols typically used to indicate breaks between syllables and their functions. Allowed values are: "**s**" (*Space (word separator)*), "**d**" (*Dash (syllable separator)*), "**u**" (*Underscore (syllable extension)*), "**t**" (*Tilde (syllable elision)*), "**c**" (*Circumflex [angled line above] (syllable elision)*), "**v**" (*Caron [angled line below] (syllable elision)*), "**i**" (*Inverted breve [curved line above] (syllable elision)*), "**b**" (*Breve [curved line below] (syllable elision)*).

<syl> → [att.syl.log](#) → @con

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<syl> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<syl> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<syl> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<syl> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<syl> → [att.syl.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<syl> → [att.syl.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<syl> → [att.syl.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<syl> → att.syl.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<syl> → att.syl.vis → att.typography → @fontweight

**@halign** (*optional*) Records horizontal alignment. Value conforms to [data.HORIZONTALALIGNMENT](#).

<syl> → att.syl.vis → att.horizontalAlign → @halign

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<syl> → att.syl.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<syl> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<syl> → att.syl.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<syl> → att.syl.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<syl> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<syl> → att.common → att.linked → @next

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<syl> → att.syl.vis → att.placementRelStaff → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<syl> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<syl> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<syl> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<syl> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<syll> → [att.common](#) → [att.linkin](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<syll> → [att.syl.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<syll> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<syll> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<syll> → [att.syl.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@wordpos** (*optional*) Records the position of a syllable within a word. Allowed values are: "**i**" ((*initial*) *first syllable*), "**m**" ((*medial*) *neither first nor last syllable*), "**s**" ((*single*) *single syllable*), "**t**" ((*terminal*) *last syllable*).

<syll> → [att.syl.log](#) → @wordpos

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<syll> → [att.syl.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<syll> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<syll> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<syll> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<syll> → [att.syl.vis](#) → [att.xy](#) → @y

## Member of

[model.sylLike](#) Groups elements that contain a lyric syllable.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<syl> → model.sylLike → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<syl> → model.sylLike → model.editTransPart → <add>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<syl> → model.sylLike → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.

<syl> → model.sylLike → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<syl> → model.sylLike → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<syl> → model.sylLike → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<syl> → model.sylLike → model.editTransPart → <expan>

**<l>** Contains a single line of text within a line group.

<syl> → model.sylLike → <l>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<syl> → model.sylLike → model.rdgPart → <lem>

**<note>** A single pitched event.

<syl> → model.sylLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<syl> → model.sylLike → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<syl> → model.sylLike → model.rdgPart → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<syl> → model.sylLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<syl> → model.sylLike → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<syl> → model.sylLike → model.editTransPart → <restore>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<syl> → model.sylLike → <seg>

**<sic>** Contains apparently incorrect or inaccurate material.

<syl> → model.sylLike → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<syl> → model.sylLike → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<syl> → model.sylLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<syl> → model.sylLike → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<syl> → model.sylLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<syl> → model.sylLike → <volta>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<syl> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<syl> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<syl> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<syl> → model.textPhraseLike.limited → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<syl> → model.appLike → <app>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<syl> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<syl> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<syl> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<syl> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<syl> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<syl> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<syl> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<syl> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<syl> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<syl> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<syl> → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<syl> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<syl> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<syl> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<syl> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<syl> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<syl> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<syl> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<syl> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<syl> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<syl> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<syl> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<syl> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<syl> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<syl> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<syl> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<syl> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<syl> → model.textPhraseLike.limited → model.mslInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<syl> → model.textPhraseLike.limited → model.mslInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<syl> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<syl> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<syl> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<syl> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<syl> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<syl> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<syl> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<syl> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<syl> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<syl> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<syl> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<syl> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<sy> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<sy> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sy> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<sy> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<sy> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<sy> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sy> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sy> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<sy> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<sy> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<sy> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<sy> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sy> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sy> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<sy> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<sy> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<sy> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<syl> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<syl> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<syl> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<syl> → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<syl> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Do not confuse this element with the [<syllable>](#) element, which is used to organize neume notation.

DEVELOPMENT  
VERSION

## <syllable>

Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

### Referenced in chapters

[6.1.1 Basic four elements](#)

### Module

[MEI.neumes](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<syllable> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<syllable> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<syllable> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<syllable> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<syllable> → [att.common](#) → [att.typed](#) → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<syllable> → [att.syllable.log](#) → [att.alignment](#) → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<syllable> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<syllable> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.syllableLike](#) Groups elements that accommodate neumed text.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<syllable> → [model.syllableLike](#) → [model.layerPart.neumes](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <expan>

**<layer>** An independent stream of events on a staff.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<syllable> → model.syllableLike → model.layerPart.neumes → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

**<accid>** Records a temporary alteration to the pitch of a note.

<syllable> → model.syllablePart → <accid>

**<add>** Marks an addition to the text.

<syllable> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<syllable> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<syllable> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<syllable> → model.appLike → <app>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<syllable> → model.syllablePart → model.controlEventLike → <bend>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<syllable> → model.syllablePart → model.controlEventLike → <caesura>

**<cb>** An empty formatting element that forces text to begin in a new column.

<syllable> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<syllable> → model.editLike → <choice>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<syllable> → model.syllablePart → <clef>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<syllable> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<syllable> → model.transcriptionLike → <corr>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<syllable> → model.syllablePart → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<syllable> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<syllable> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<syllable> → model.transcriptionLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<syllable> → model.syllablePart → model.controlEventLike → <dir>

**<div>** Major structural division of text, such as a preface, chapter or section.

<syllable> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<syllable> → model.syllablePart → model.eventLike.neumes → <divLine>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<syllable> → model.syllablePart → model.controlEventLike → <dynam>

**<episema>** Episema.

<syllable> → model.neumeModifierLike → <episema>

**<fing>** finger – An individual finger in a fingering indication.

<syllable> → model.syllablePart → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<syllable> → model.syllablePart → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<syllable> → model.transcriptionLike → <gap>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<syllable> → model.syllablePart → model.controlEventLike → <gliss>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<syllable> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<syllable> → model.syllablePart → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<hispanTick>** Hispanic tick.

<syllable> → model.neumeModifierLike → <hispanTick>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<syllable> → model.graphicPrimitiveLike → <line>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<syllable> → model.syllablePart → model.controlEventLike → <metaMark>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<syllable> → model.syllablePart → model.midiLike → <midi>

**<neume>** Sign representing one or more musical pitches.

<syllable> → model.syllablePart → model.eventLike.neumes → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<syllable> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<syllable> → model.syllablePart → model.controlEventLike → <ornam>

**<pb>** An empty formatting element that forces text to begin on a new page.

<syllable> → model.milestoneLike.music → model.pblike → <pb>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<syllable> → model.syllablePart → model.controlEventLike → <phrase>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<syllable> → model.syllablePart → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<syllable> → model.transcriptionLike → <reg>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<syllable> → model.syllablePart → model.controlEventLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<syllable> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<syllable> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<syllable> → model.scoreDefLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

<syllable> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<syllable> → model.neumeModifierLike → <signifLet>

**<sp>** Contains an individual speech in a performance text.

<syllable> → model.syllablePart → model.controlEventLike → <sp>

**<staffDef>** Container for staff meta-information.

<syllable> → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<syllable> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<syllable> → model.syllablePart → model.controlEventLike → model.stageDirLike → <stageDir>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<syllable> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<syllable> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<syllable> → model.syllablePart → model.sylLike → <syl>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60".

<syllable> → model.syllablePart → model.controlEventLike → <tempo>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<syllable> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<syllable> → model.syllablePart → model.verseLike → <verse>

## Declaration

## <symName>

(symbol name) – Contains the name of a symbol, expressed following Unicode conventions.

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<symName> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<symName> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<symName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<symName> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<symName> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<symName> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<symName> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<symName> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(symName isn't member of any model class)

## Contained By

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<symName> → elements having symName as direct children → <symbolDef>

## May Contain

### Declaration

```
<elementSpec ident="symName" module="MEI.usersymbols">
  <gloss versionDate="2022-05-18" xml:lang="en">symbol name</gloss>
  <desc xml:lang="en">Contains the name of a symbol, expressed following Unicode
  conventions.</desc>
  <classes>
    <memberOf key="att.common"/>
  </classes>
  <content>
    <rng:text/>
  </content>
</elementSpec>
```

## <symProp>

(symbol property) – Provides a name and value for some property of the parent symbol.

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<symProp> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<symProp> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<symProp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<symProp> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<symProp> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<symProp> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<symProp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<symProp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(symProp isn't member of any model class)

## Contained By

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<symProp> → elements having symProp as direct children → <symbolDef>

## May Contain

**<propName>** Name of a property of the symbol.

<symProp> → direct children → <propName>

**<propValue>** A single property value.

<symProp> → direct children → <propValue>

## Declaration

```
<elementSpec ident="symProp" module="MEI.usersymbols">
  <gloss versionDate="2022-05-18" xml:lang="en">symbol property</gloss>
  <desc xml:lang="en">Provides a name and value for some property of the parent
  symbol.</desc>
  <classes>
    <memberOf key="att.common"/>
  </classes>
  <content>
    <rng:ref name="propName"/>
    <rng:ref name="propValue"/>
  </content>
</elementSpec>
```

## <symbol>

A reference to a previously defined symbol.

### Referenced in chapters

[2.4.1.1 Elements](#), [2.4.2 Uses of the Usersymbols Module](#), [2.4.2.1 Defining Reusable Symbols](#), [2.4.3.3 Positioning](#)

### Module

[MEI.shared](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<symbol> → [att.symbol.vis](#) → [att.altsym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<symbol> → [att.symbol.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<symbol> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.linked](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.linked](#) → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<symbol> → [att.symbol.vis](#) → [att.typography](#) → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<symbol> → [att.symbol.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<symbol> → [att.symbol.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<symbol> → att.symbol.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<symbol> → att.symbol.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<symbol> → att.symbol.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<symbol> → att.symbol.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<symbol> → att.symbol.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<symbol> → att.symbol.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<symbol> → att.symbol.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<symbol> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<symbol> → att.symbol.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<symbol> → att.symbol.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<symbol> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbol> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbol> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbol> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.linking](#) → @sameas

**@scale** (*optional*) Scale factor to be applied to the feature to make it the desired display size. Value conforms to [data.PERCENT](#).

<symbol> → [att.symbol.vis](#) → [att.scalable](#) → @scale

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<symbol> → [att.symbol.log](#) → [att.startId](#) → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<symbol> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<symbol> → [att.symbol.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<symbol> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<symbol> → [att.symbol.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<symbol> → [att.symbol.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<symbol> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<symbol> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<symbol> → [att.symbol.vis](#) → [att.xy](#) → @y

**Member of**

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<symbol> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<symbol> → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<symbol> → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<symbol> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<symbol> → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<symbol> → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<symbol> → [model.textPhraseLike.limited](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<symbol> → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<symbol> → [model.textPhraseLike.limited](#) → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<symbol> → [model.textPhraseLike.limited](#) → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<symbol> → [model.textPhraseLike.limited](#) → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<symbol> → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<symbol> → [model.textPhraseLike.limited](#) → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<symbol> → [model.textPhraseLike.limited](#) → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<symbol> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<symbol> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<symbol> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<symbol> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<symbol> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<symbol> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<symbol> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<symbol> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<symbol> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<symbol> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<symbol> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<symbol> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<symbol> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<symbol> → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<symbol> → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<symbol> → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<symbol> → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<symbol> → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<symbol> → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<symbol> → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<symbol> → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<symbol> → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<symbol> → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<symbol> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<symbol> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<symbol> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<symbol> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<symbol> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<symbol> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<symbol> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<symbol> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<symbol> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<symbol> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<symbol> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<symbol> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<symbol> → model.textPhraseLike.limited → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<symbol> → elements having symbol as direct children → <locus>

**<lyricist>** Person or organization who is a writer of the text of a song.

<symbol> → model.textPhraseLike.limited → <lyricist>

**<mapping>** One or more characters which are related to the parent symbol in some respect, as specified by the type attribute.

<symbol> → elements having symbol as direct children → <mapping>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<symbol> → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<symbol> → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<symbol> → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<symbol> → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<symbol> → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<symbol> → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<symbol> → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<symbol> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<symbol> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<symbol> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<symbol> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<symbol> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<symbol> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<symbol> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<symbol> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<symbol> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<symbol> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<symbol> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<symbol> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<symbol> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<symbol> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<symbol> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<symbol> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<symbol> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<symbol> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<symbol> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<symbol> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<symbol> → model.textPhraseLike.limited → <syl>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<symbol> → elements having symbol as direct children → <symbolDef>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<symbol> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<symbol> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<symbol> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<symbol> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<symbol> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<symbol> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<symbol> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<symbol> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<symbol> → model.textPhraseLike.limited → <width>

## May Contain

- (<symbol> may not have child elements)

## Remarks

The starting point, e.g., "hotspot", of the symbol may be identified in absolute output coordinate terms using the x and y attributes or relative to another element using the startid attribute. Attributes in the att.visualOffset class may be used to record horizontal, vertical, or time offsets from the absolute coordinates or from the location of the referenced element. The altsym attribute must contain the id of a <symbolDef> element. The scale attribute indicates that the printed output must be scaled by the specified percentage.

## Constraints

In the symbolDef context, symbol must have either a startid attribute or x and y attributes.

In the symbolDef context, symbol must have one of the following attributes: altsym, glyph.name, or glyph.num.

## Declaration

```

## <symbolDef>

(symbol definition) – Declaration of an individual symbol in a symbolTable.

### Referenced in chapters

[2.4.1.1 Elements](#), [2.4.2 Uses of the Usersymbols Module](#), [2.4.2.1 Defining Reusable Symbols](#), [2.4.3.3 Positioning](#), [2.4.3.4 Curve Shape](#)

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<symbolDef> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<symbolDef> → att.common → att.labelled → @label

**@lrx** (*optional*) Indicates the lower-right corner x coordinate. Value is a positive integer, including 0.

<symbolDef> → att.coordinated → @lrx

**@lry** (*optional*) Indicates the lower-left corner x coordinate. Value is a positive integer, including 0.

<symbolDef> → att.coordinated → @lry

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<symbolDef> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.responsibility → @resp

**@rotate** Indicates the amount by which the contents of this element have been rotated clockwise or, if applicable, how the orientation of the element self should be interpreted, with respect to the normal orientation of the parent surface. The orientation is expressed in arc degrees. Value conforms to [data.DEGREES](#).

<symbolDef> → att.coordinated → @rotate

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<symbolDef> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<symbolDef> → att.common → att.typed → @type

**@ulx** (*optional*) Indicates the upper-left corner x coordinate. Value is a positive integer, including 0.

<symbolDef> → att.coordinated → @ulx

**@uly** (*optional*) Indicates the upper-left corner y coordinate. Value is a positive integer, including 0.

<symbolDef> → att.coordinated → @uly

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<symbolDef> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<symbolDef> → att.common → att.basic → att.id → @xml:id

## Member of

(symbolDef isn't member of any model class)

## Contained By

**<symbolTable>** Contains a set of user-defined symbols.

<symbolDef> → elements having symbolDef as direct children → <symbolTable>

## May Contain

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<symbolDef> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<symbolDef> → model.annotLike → <annot>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<symbolDef> → model.graphicPrimitiveLike → <curve>

**<graphic>** Indicates the location of an inline graphic.

<symbolDef> → direct children → <graphic>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<symbolDef> → model.graphicPrimitiveLike → <line>

**<mapping>** One or more characters which are related to the parent symbol in some respect, as specified by the type attribute.

<symbolDef> → direct children → <mapping>

**<symName>** Contains the name of a symbol, expressed following Unicode conventions.

<symbolDef> → direct children → <symName>

**<symProp>** Provides a name and value for some property of the parent symbol.

<symbolDef> → direct children → <symProp>

**<symbol>** A reference to a previously defined symbol.

<symbolDef> → direct children → <symbol>

## Remarks

Like a chord table, a symbolTable may be shared between MEI instances through the use of an external parsed entity containing the symbolTable to be shared.

## Declaration

```

## <symbolTable>

Contains a set of user-defined symbols.

### Referenced in chapters

[2.4.1.1 Elements](#)

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.typed → att.clased → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<symbolTable> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<symbolTable> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<symbolTable> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<symbolTable> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<symbolTable> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<symbolTable> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<symbolTable> → att.common → att.basic → att.id → @xml:id

## Member of

[model.symbolTableLike](#) Groups elements that group symbol definitions.

## Contained By

**<scoreDef>** Container for score meta-information.

<symbolTable> → [model.symbolTableLike](#) → <scoreDef>

## May Contain

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

<symbolTable> → direct children → <symbolDef>

## Remarks

Like a chord table, a symbolTable may be shared between mei instances through the use of an external parsed entity containing the symbolTable to be shared.

## Declaration

```

```

DEVELOPMENT  
VERSION

## <sysReq>

(system requirements) – System requirements for using the electronic item.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<sysReq> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sysReq> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sysReq> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sysReq> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sysReq> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<sysReq> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<sysReq> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sysReq> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sysReq> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<sysReq> → [att.lang](#) → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

[\*\*<titlePage>\*\*](#) Contains a transcription of the title page of a text.

<sysReq> → [model.titlePagePart](#) → <titlePage>

## May Contain

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sysReq> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

[\*\*<address>\*\*](#) Contains a postal address, for example of a publisher, an organization, or an individual.

<sysReq> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

[\*\*<annot>\*\*](#) Provides a statement explaining the text or indicating the basis for an assertion.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.  
<sysReq> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.  
<sysReq> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.  
<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<sysReq> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<sysReq> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

## <table>

Contains text displayed in tabular form.

### Referenced in chapters

[3.7.1 Title Pages](#), [9.2.3.1 Figure Captions and Descriptions](#), [9.2.5 Tables](#), [9.2.5.1 Rows](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<table> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<table> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<table> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<table> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<table> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<table> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMOKEN](#), separated by spaces.

<table> → [att.common](#) → [att.typed](#) → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<table> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<table> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<table> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<table> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<table> → [att.xy](#) → @y

## Member of

[model.tableLike](#) Groups table-like elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<table> → model.tableLike → model.textComponentLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<table> → model.tableLike → model.textComponentLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<dedication>** Contains a dedicatory statement.

<table> → model.tableLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<table> → model.tableLike → model.textComponentLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<table> → model.tableLike → model.paracontentPart → <epigraph>

**<event>** Contains a free-text event description.

<table> → model.tableLike → <event>

**<expan>** Contains the expansion of an abbreviation.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<table> → model.tableLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<table> → model.tableLike → model.textComponentLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<table> → model.tableLike → model.paracontentPart → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<table> → model.tableLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<table> → model.tableLike → model.textComponentLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<table> → model.tableLike → model.paracontentPart → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<table> → model.tableLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<table> → model.tableLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<table> → model.tableLike → model.textComponentLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<table> → model.tableLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<table> → model.tableLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<table> → model.tableLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<table> → model.tableLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<table> → model.tableLike → model.textComponentLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<table> → model.tableLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<caption>** A label which accompanies an illustration or a table.

<table> → model.captionLike → <caption>

**<tr>** A formatting element that contains one or more cells (intersection of a row and a column) in a <table>.

<table> → direct children → <tr>

## Remarks

The model of this element is based on the `table` element of the Encoded Archival Description (EAD), the `table` element of the Text Encoding Initiative (TEI), and the `table` element of HTML.

## <tagUsage>

Documents the usage of a specific element within the document.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<tagUsage> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tagUsage> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@context** (*optional*) Circumstances in which the element appears, an XPath expression. Value is plain text.

<tagUsage> → direct children → @context

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tagUsage> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tagUsage> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tagUsage> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tagUsage> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tagUsage> → [att.common](#) → [att.nNumberLike](#) → @n

**@name** (*required*) Name of the element. Value conforms to [data.NMOKEN](#).

<tagUsage> → direct children → @name

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tagUsage> → [att.common](#) → [att.linkin](#) → @next

**@occurs** (*optional*) Number of occurrences in the defined context. Value is a positive integer, including 0.

<tagUsage> → direct children → @occurs

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tagUsage> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<tagUsage> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from data.URI, separated by spaces.

<tagUsage> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from data.URI, separated by spaces.

<tagUsage> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from data.URI, separated by spaces.

<tagUsage> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype NMTOKEN, separated by spaces.

<tagUsage> → att.common → att.typed → @type

**@withid** (*optional*) Number of occurrences in the defined context that have an xml:id attribute. Value is a positive integer, including 0.

<tagUsage> → direct children → @withid

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to data.URI.

<tagUsage> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid xml:id.

<tagUsage> → att.common → att.basic → att.id → @xml:id

## Member of

(tagUsage isn't member of any model class)

## Contained By

**<namespace>** Supplies the formal name of the namespace to which the elements documented by its children belong.

<tagUsage> → elements having tagUsage as direct children → <namespace>

## May Contain

**<attUsage>** Documents the usage of a specific attribute of the element.

<tagUsage> → direct children → <attUsage>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<tagUsage> → direct children → <desc>

## Remarks

The model of this element is based on the [tagUsage](#) element of the Text Encoding Initiative (TEI).

## Constraints

@context attribute should contain an XPath expression.

## Declaration

```
<elementSpec ident="tagUsage" module="MEI.header">
  <desc xml:lang="en">Documents the usage of a specific element within the document.</desc>

## <tagsDecl>

(tagging declaration) – Provides detailed information about the tagging applied to a document.

### Referenced in chapters

[3.4.2 Encoding Description](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<tagsDecl> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tagsDecl> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tagsDecl> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tagsDecl> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tagsDecl> → [att.common](#) → [att.linked](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<tagsDecl> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tagsDecl> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<tagsDecl> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(tagsDecl isn't member of any model class)

## Contained By

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<tagsDecl> → elements having tagsDecl as direct children → <encodingDesc>

## May Contain

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<tagsDecl> → direct children → <desc>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<tagsDecl> → [model.headLike](#) → <head>

**<namespace>** Supplies the formal name of the namespace to which the elements documented by its children belong.

<tagsDecl> → direct children → <namespace>

## Remarks

The model of this element is based on the [tagsDecl](#) element of the Text Encoding Initiative (TEI).

## Declaration

```

## <taxonomy>

Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<taxonomy> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<taxonomy> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<taxonomy> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<taxonomy> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linkng](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<taxonomy> → [att.common](#) → [att.linkng](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<taxonomy> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<taxonomy> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<taxonomy> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(taxonomy isn't member of any model class)

## Contained By

**<classDecls>** Groups information which describes the nature or topic of an entity.

<taxonomy> → elements having taxonomy as direct children → <classDecls>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

<taxonomy> → elements having taxonomy as direct children → <taxonomy>

## May Contain

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<taxonomy> → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<taxonomy> → [model.biblLike](#) → <biblStruct>

**<category>** Contains an individual descriptive category in a user-defined taxonomy, possibly nested within a superordinate category.

<taxonomy> → direct children → <category>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<taxonomy> → direct children → <desc>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<taxonomy> → [model.headLike](#) → <head>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

<taxonomy> → direct children → <taxonomy>

## Declaration

```

## <td>

(table data) – Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

### Referenced in chapters

[9.2.5.1 Rows](#), [9.2.5.2 Cells](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<td> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@colspan** (*optional*) The number of columns spanned by this cell. Value is a positive integer.

<td> → [att.tabular](#) → @colspan

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<td> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<td> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<td> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<td> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<td> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<td> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<td> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<td> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<td> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<td> → att.common → att.responsibility → @resp

**@rowspan** (*optional*) The number of rows spanned by this cell. Value is a positive integer.

<td> → att.tabular → @rowspan

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<td> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<td> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<td> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<td> → att.common → att.type → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<td> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<td> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<td> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<td> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<td> → att.xy → @y

## Member of

(td isn't member of any model class)

### Contained By

**<tr>** A formatting element that contains one or more cells (intersection of a row and a column) in a **<table>**.

<td> → elements having td as direct children → <tr>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<td> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<td> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<td> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<td> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<td> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<td> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<td> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<td> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<td> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<td> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<td> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<td> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<td> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<td> → model.textComponentLike → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<td> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<td> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<td> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<td> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<td> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<td> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<td> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<td> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<td> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<td> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<td> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The colspan and rowspan attributes record tabular display rendering information.

The model of this element is based on the `td` element of HTML.

## Declaration

### Module

MEI.shared

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<tempo> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tempo> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tempo> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tempo> → att.common → att.linkin → @corresp

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tempo> → att.tempo.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tempo> → att.tempo.log → att.startEndid → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<tempo> → att.tempo.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.), "**one**" (If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.), "**none**" (No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.)

<tempo> → att.tempo.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<tempo> → [att,tempo.vis](#) → [att.extender](#) → @extender

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att,facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att,common](#) → [att,linking](#) → @follows

**@func** Records the function of a tempo indication. Allowed values are: "**continuous**" (*Marks a gradual change of tempo, such as "accel." or "rit."*), "**instantaneous**" (*Represents a static tempo instruction, such as a textual term like "Adagio", a metronome marking like "J=70", or a combination of text and metronome indication.*), "**metricmod**" (*Captures a change in pulse rate (tempo) and/or pulse grouping (subdivision) in an "equation" of the form [tempo before change] = [tempo after change].*), "**precedente**" (*Indicates a change in pulse rate (tempo) and/or pulse grouping (subdivision) in an "equation" of the form [tempo after change] = [tempo before change]. The term "precedente" often appears following the "equation" to distinguish this kind of historical usage from the modern metric modulation form.*)

<tempo> → [att,tempo.log](#) → @func

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<tempo> → [att,tempo.vis](#) → [att,visualOffset](#) → [att,visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tempo> → [att,common](#) → [att,labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<tempo> → [att,tempo.log](#) → [att,controlEvent](#) → [att,layerIdent](#) → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<tempo> → [att,tempo.vis](#) → [att,extender](#) → [att,lineRend](#) → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<tempo> → [att,tempo.vis](#) → [att,extender](#) → [att,lineRend](#) → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).  
<tempo> → [att,tempo.vis](#) → [att,extender](#) → [att,lineRend](#) → [att,lineRend.base](#) → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<tempo> → [att,tempo.vis](#) → [att,extender](#) → [att,lineRend](#) → [att,lineRend.base](#) → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<tempo> → att.tempo.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<tempo> → att.tempo.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<tempo> → att.tempo.vis → att.extender → att.lineRend.base → @lwidth

**@midi.bpm** (*optional*) Captures the number of \*quarter notes\* per minute. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. Value conforms to [data.MIDIBPM](#).

<tempo> → att.tempo.ges → att.midiTempo → @midi.bpm

**@midi.mspb** (*optional*) Records the number of microseconds per \*quarter note\*. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. At 120 quarter notes per minute, each quarter note will last 500,000 microseconds. Value conforms to [data.MIDIMSPB](#).

<tempo> → att.tempo.ges → att.midiTempo → @midi.mspb

**@mm** (*optional*) Used to describe tempo in terms of beats (often the meter signature denominator) per minute, ala M.M. (Maelzel's Metronome). Do not confuse this attribute with midi.bpm or midi.mspb. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. Value conforms to [data.TEMPOVALUE](#).

<tempo> → att.tempo.log → att.mmTempo → @mm

**@mm.dots** (*optional*) Records the number of augmentation dots required by a dotted metronome unit. Value conforms to [data.AUGMENTDOT](#).

<tempo> → att.tempo.log → att.mmTempo → @mm.dots

**@mm.unit** (*optional*) Captures the metronomic unit. Value conforms to [data.DURATION](#).

<tempo> → att.tempo.log → att.mmTempo → @mm.unit

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tempo> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URL](#), separated by spaces.

<tempo> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<tempo> → att.tempo.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<tempo> → att.tempo.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<tempo> → att.tempo.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.tempo.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<tempo> → [att.tempo.log](#) → [att.controlEvent](#) → [att.staffId](#) → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tempo> → [att.tempo.vis](#) → [att.visualOffset2.ho](#) → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tempo> → [att.tempo.log](#) → [att.startEndId](#) → [att.startId](#) → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<tempo> → [att.tempo.vis](#) → [att.visualOffset2.to](#) → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tempo> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<tempo> → [att.tempo.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<tempo> → [att.lang](#) → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tempo> → [att.tempo.log](#) → [att.controlEvent](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tempo> → [att.tempo.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tempo> → [att.tempo.log](#) → [att.controlEvent](#) → [att.timestamp.ges](#) → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<tempo> → [att.tempo.log](#) → [att.timestamp2.log](#) → @tstamp2

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<tempo> → [att.common](#) → [att.typed](#) → @type

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<tempo> → [att.tempo.vis](#) → [att.verticalGroup](#) → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<tempo> → [att.tempo.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<tempo> → [att.common](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<tempo> → [att.tempo.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tempo> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<tempo> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<tempo> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<tempo> → [att.tempo.vis](#) → [att.xy](#) → @y

## Member of

---

**model.controlEventLike** Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

**model.workIdent** Groups elements that assist in the identification of a work.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<expression>** Intellectual or artistic realization of a work.

<tempo> → model.workIdent → <expression>

**<incip>** The opening music and/or words of a musical or textual work.

<tempo> → elements having tempo as direct children → <incip>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<tempo> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<tempo> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<tempo> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<tempo> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<tempo> → elements having tempo as direct children → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<tempo> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<tempo> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tempo> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<tempo> → elements having tempo as direct children → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<tempo> → elements having tempo as direct children → <volta>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<tempo> → model.workIdent → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<tempo> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<tempo> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<tempo> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<tempo> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<tempo> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<tempo> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<tempo> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<tempo> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<tempo> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<tempo> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tempo> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<tempo> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<tempo> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<tempo> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<tempo> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tempo> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<tempo> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<tempo> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<tempo> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<tempo> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<tempo> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<tempo> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<tempo> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<tempo> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<tempo> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<tempo> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<tempo> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<tempo> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<tempo> → model.textPhraseLike.limited → model.lbLike → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<tempo> → model.graphicPrimitiveLike → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<tempo> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<tempo> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<tempo> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<tempo> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tempo> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<tempo> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<tempo> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<tempo> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<tempo> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<tempo> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<tempo> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<tempo> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tempo> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<tempo> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<tempo> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<tempo> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<tempo> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tempo> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<tempo> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<tempo> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<tempo> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<tempo> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<tempo> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<tempo> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<tempo> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<tempo> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<tempo> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<tempo> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tempo> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<tempo> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<tempo> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<tempo> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tempo> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<tempo> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<tempo> → model.textPhraseLike.limited → model.dimLike → <width>

## Constraints

Only analog, class, label, mm, mm.dots, mm.unit, n, translit, type, xml:base, xml:id, and xml:lang attributes are allowed when tempo is not a descendant of a score or part.

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```
<elementSpec ident="tempo" module="MEI.shared">
  <desc xml:lang="en">Text and symbols descriptive of tempo, mood, or style,
    <abbr>e.g.</abbr>
    , "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").</desc>
  <classes>
```

```

## <term>

Keyword or phrase which describes a resource.

### Referenced in chapters

[3.6.12 Classification](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<term> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<term> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linked](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<term> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<term> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<term> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<term> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<term> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<term> → [att.common](#) → [att.attributed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<term> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<term> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<term> → [att.lang](#) → @xml:lang

## Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the [model.textPhraseLike](#) class without the pb element.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<term> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<term> → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<term> → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<term> → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<term> → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<term> → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<term> → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<term> → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<term> → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<term> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<term> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<term> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<term> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<term> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<term> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<term> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<term> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<term> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<term> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<term> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<term> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<term> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<term> → `model.textPhraseLike.limited` → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<term> → `model.textPhraseLike.limited` → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<term> → `model.textPhraseLike.limited` → `model.textPhraseLike` → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<term> → `model.textPhraseLike.limited` → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<term> → `model.textPhraseLike.limited` → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<term> → `model.textPhraseLike.limited` → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<term> → `model.textPhraseLike.limited` → `model.textPhraseLike` → `model.paracontentPart` → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<term> → `model.textPhraseLike.limited` → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<term> → `model.textPhraseLike.limited` → `model.editTransPart.text` → `model.editTransPart` → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<term> → `model.textPhraseLike.limited` → <extent>

**<f>** Single element of a figured bass indication.

<term> → `model.textPhraseLike.limited` → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<term> → `model.textPhraseLike.limited` → `model.textPhraseLike` → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<term> → `model.textPhraseLike.limited` → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<term> → `model.textPhraseLike.limited` → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<term> → `model.textPhraseLike.limited` → `model.textPhraseLike` → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<term> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<term> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<term> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<term> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<term> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<term> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<term> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<term> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<term> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<term> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<term> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<term> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a **<list>**.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<term> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<term> → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<term> → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<term> → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<term> → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<term> → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<term> → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<term> → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<term> → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<term> → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<term> → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<term> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<term> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<term> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<term> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<term> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<term> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<term> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<term> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<term> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<term> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<term> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<term> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<term> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<term> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<term> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<term> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<term> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<term> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<term> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<term> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<term> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<term> → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<term> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<term> → model.textPhraseLike.limited → <term>

**<termList>** Collection of text phrases which describe a resource.

<term> → elements having term as direct children → <termList>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<term> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<term> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<term> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<term> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<term> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<term> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<term> → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<term> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<term> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<term> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<term> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<term> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<term> → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<term> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<term> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<term> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<term> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<term> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<term> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<term> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<term> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<term> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<term> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<term> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<term> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<term> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<term> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<term> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<term> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<term> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<term> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<term> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<term> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<term> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<term> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<term> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<term> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<term> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<term> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<term> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<term> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<term> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<term> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<term> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<term> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<term> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<term> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<term> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<term> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<term> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<term> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<term> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<term> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<term> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<term> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The **<term>** element may include other **<term>** elements in order to allow the creation of coordinated terms; i.e., terms created from a combination of other, independent terms.

To associate a term with a taxonomy category defined in the MEI metadata header, the value of class must contain a fragment identifier corresponding to the appropriate <term> element. To associate a term with category in an externally-defined taxonomy, class must contain an absolute URI, which may include the fragment identifier of the element containing the category label.

The model of this element is based on the [term](#) element of the Text Encoding Initiative (TEI).

## Constraints

The @data attribute may only occur on a term which is a descendant of a classification element.

## Declaration

## <termList>

Collection of text phrases which describe a resource.

### Referenced in chapters

[3.6.12 Classification](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<termList> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<termList> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<termList> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<termList> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<termList> → [att.common](#) → [att.linking](#) → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<termList> → [att.pointing](#) → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<termList> → [att.pointing](#) → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<termList> → [att.common](#) → [att.typed](#) → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<termList> → [att.pointing](#) → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<termList> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<termList> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<termList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<termList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(termList isn't member of any model class)

## Contained By

**<classification>** Groups information which describes the nature or topic of an entity.

<termList> → elements having termList as direct children → <classification>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<termList> → model.headLike → <head>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<termList> → direct children → <label>

**<term>** Keyword or phrase which describes a resource.

<termList> → direct children → <term>

## Remarks

An external taxonomy from which all the descendant <term> elements are drawn may be referred to using the target attribute.

## Constraints

When labels are used, usually each term has one.

## Declaration

```

## <textLang>

(text language) – Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

### Referenced in chapters

[9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<textLang> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<textLang> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<textLang> → [att.common](#) → [att.labelled](#) → @label

**@lang.main** (*optional*) (main language) supplies a code which identifies the chief language used in the bibliographic work. Value is a [language](#).

<textLang> → direct children → @lang.main

**@lang.other** (*optional*) (other languages) one or more codes identifying any other languages used in the bibliographic work. One or more values of datatype [language](#), separated by spaces.

<textLang> → direct children → @lang.other

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<textLang> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<textLang> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<textLang> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<textLang> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<textLang> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<textLang> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<textLang> → [att.lang](#) → @xml:lang

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<textLang> → [model.biblPart](#) → <bibl>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<textLang> → elements having textLang as direct children → <edition>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<textLang> → elements having textLang as direct children → <series>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<textLang> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<textLang> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<textLang> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<textLang> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<textLang> → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<textLang> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → [model.geogNamePart](#) → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<textLang> → [model.textPhraseLike.limited](#) → [model.msonline](#) → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<textLang> → [model.textPhraseLike.limited](#) → [model.nameLike](#) → [model.nameLike.agent](#) → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<textLang> → [model.textPhraseLike.limited](#) → [model.addressPart](#) → [model.geogNamePart](#) → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<textLang> → [model.textPhraseLike.limited](#) → [model.dateLike](#) → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<textLang> → [model.textPhraseLike.limited](#) → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<textLang> → [model.textPhraseLike.limited](#) → [model.dimLike](#) → <depth>

**<dim>** Any single dimensional specification.

<textLang> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<textLang> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<textLang> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<textLang> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<textLang> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<textLang> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<textLang> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<textLang> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<textLang> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<textLang> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<textLang> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<textLang> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<textLang> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<textLang> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<textLang> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<textLang> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<textLang> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<textLang> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<textLang> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<textLang> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<textLang> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<textLang> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<textLang> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<textLang> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<textLang> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<textLang> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<textLang> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<textLang> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<textLang> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<textLang> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<textLang> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<textLang> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<textLang> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<textLang> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<textLang> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<textLang> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<textLang> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<textLang> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<textLang> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<textLang> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<textLang> → model.textPhraseLike.limited → model.dimLike → <width>

## <th>

(table header) – Designates a table cell containing column or row heading information as opposed to one containing data.

### Referenced in chapters

[9.2.5.1 Rows](#), [9.2.5.2 Cells](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<th> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@colspan** (*optional*) The number of columns spanned by this cell. Value is a positive integer.

<th> → [att.tabular](#) → @colspan

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<th> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<th> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<th> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<th> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<th> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<th> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<th> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<th> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<th> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<th> → att.common → att.responsibility → @resp

**@rowspan** (*optional*) The number of rows spanned by this cell. Value is a positive integer.

<th> → att.tabular → @rowspan

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<th> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<th> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<th> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<th> → att.common → att.type → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<th> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<th> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<th> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<th> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<th> → att.xy → @y

## Member of

(th isn't member of any model class)

### Contained By

**<tr>** A formatting element that contains one or more cells (intersection of a row and a column) in a **<table>**.

<th> → elements having th as direct children → <tr>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<th> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<th> → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<th> → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<th> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<th> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<th> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<th> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<th> → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<th> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<th> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<th> → model.textComponentLike → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<th> → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<th> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<th> → model.textComponentLike → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<th> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<th> → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<th> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<th> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<th> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<th> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<th> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<th> → model.textComponentLike → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<th> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<th> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<th> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The colspan and rowspan attributes record tabular display rendering information.

The model of this element is based on the `th` element of HTML.

## <tie>

An indication that two notes of the same pitch form a single note with their combined rhythmic values.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [4.3.2 Ties, Slurs and Phrase Marks](#)

### Module

[MEI.cmn](#)

### Attributes

**@bezier** (*optional*) Records the placement of Bezier control points as a series of pairs of space-separated values; e.g., 19 45 -32 118. One or more values, each consisting of a sequence of **decimal** and **decimal** sub-values.

<tie> → [att.tie.vis](#) → [att.curvature](#) → @bezier

**@bulge** (*optional*) Describes a curve as one or more pairs of values with respect to an imaginary line connecting the starting and ending points of the curve. The first value captures a distance to the left (positive value) or right (negative value) of the line, expressed in virtual units. The second value of each pair represents a point along the line, expressed as a percentage of the line's length. N.B. An MEI virtual unit (vu) is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. One or more of **decimal**.

<tie> → [att.tie.vis](#) → [att.curvature](#) → @bulge

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tie> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<tie> → [att.tie.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tie> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tie> → [att.common](#) → [att.linked](#) → @corresp

**@curvedir** (*optional*) Describes a curve with a generic term indicating the direction of curvature. Allowed values are: "**above**" (*Upward curve*.), "**below**" (*Downward curve*.), "**mixed**" (*A "meandering" curve, both above and below the items it pertains to*.)

<tie> → [att.tie.vis](#) → [att.curvature](#) → @curvedir

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → [att.tie.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tie> → att.tie.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<tie> → att.tie.vis → att.visualOffset2 → att.visualOffset2.to → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → att.tie.vis → att.visualOffset2 → att.visualOffset2.vo → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<tie> → att.tie.log → att.controlEvent → att.targetEval → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<tie> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → att.tie.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tie> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<tie> → att.tie.log → att.controlEvent → att.layerIdent → @layer

**@lform** (*optional*) Describes the line style of a curve. Value conforms to [data.LINEFORM](#).

<tie> → att.tie.vis → att.curveRend → @lform

**@lwidth** (*optional*) Width of a curved line. Value conforms to [data.LINEWIDTH](#).

<tie> → att.tie.vis → att.curveRend → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tie> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<tie> → att.tie.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<tie> → att.tie.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<tie> → att.tie.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<tie> → att.tie.log → att.controlEvent → att.staffIdent → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → att.tie.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tie> → att.tie.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<tie> → att.tie.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → att.tie.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tie> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<tie> → att.tie.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tie> → att.tie.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tie> → att.tie.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tie> → att.tie.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<tie> → att.tie.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<tie> → att.tie.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tie> → att.tie.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<tie> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<tie> → att.tie.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<tie> → att.tie.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `fac` attribute. Value is a decimal number.

<tie> → att.tie.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<tie> → att.tie.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tie> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid xml:id.

<tie> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<tie> → att.tie.vis → att.xy → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<tie> → att.tie.vis → att.xy2 → @y2

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<tie> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<tie> → [model.controlEventLike.cmn](#) → [model.measurePart](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<tie> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tie> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tie> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<tie> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tie> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tie> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<tie> → direct children → <curve>

## Remarks

Most often, a tie is rendered as a curved line connecting the two notes. See Read, p. 110-111, 122.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

The visual attributes of the tie (@bezier, @bulge, @curvedir, @lform, @lwidth, @ho, @startho, @endho, @to, @startto, @endto, @vo, @startvo, @endvo, @x, @y, @x2, and @y2) will be overridden by visual attributes of the contained curve elements.

## <title>

Title of a bibliographic entity.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.3.1 Title Statement](#), [3.4.1.4 Series Statement](#), [3.6 Work Description](#),  
[3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<title> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<title> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<title> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<title> → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<title> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<title> → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<title> → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<title> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<title> → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<title> → att.labelled → @label

**@level** (*optional*) Indicates the bibliographic level of the title. Allowed values are: "**a**" (*Analyzed component, such as an article or chapter, within a larger bibliographic entity.*), "**c**" (*Collection. A group of items that were not originally published, distributed, or produced together.*), "**d**" (*Subunit of a collection, , item, folder, box, archival series, subgroup, or subcollection.*), "**i**" (*Integrating resource, such as a continuously updated loose-leaf service or Web site.*), "**m**" (*Monograph.*), "**j**" (*Journal.*), "**s**" (*Series.*), "**u**" (*Unpublished (including theses and dissertations unless published by a commercial press).*)

<title> → direct children → @level

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<title> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<title> → att.linkng → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<title> → att.filing → @nonfiling

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<title> → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<title> → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<title> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<title> → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<title> → att.linkng → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<title> → att.lang → @translit

**@type** (*optional*) Characterizes the title in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**main**" (*Main title.*), "**subordinate**" (*Subtitle or title of part.*), "**abbreviated**" (*Abbreviated form of title.*), "**alternative**" (*Alternate title by which the item is also known.*), "**translated**" (*Translated form of title.*), "**uniform**" (*Collective title.*), "**desc**" (*Descriptive paraphrase of the work.*)

<title> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<title> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<title> → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<title> → [att.lang](#) → @xml:lang

## Member of

[model.titleLike](#) Groups elements that denote the name of a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addrLine>

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<title> → elements having title as direct children → <analytic>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<title> → [model.titleLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<title> → model.titleLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<title> → model.titleLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<title> → model.titleLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<title> → model.titleLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<title> → model.titleLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<title> → model.titleLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<title> → model.titleLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<title> → model.titleLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<title> → model.titleLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<title> → model.titleLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<title> → model.titleLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<title> → model.titleLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<title> → model.titleLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<title> → model.titleLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<title> → model.titleLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<title> → model.titleLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<title> → model.titleLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<title> → model.titleLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<title> → model.titleLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<title> → model.titleLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<title> → model.titleLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<title> → model.titleLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<title> → model.titleLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<title> → model.titleLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<expression>** Intellectual or artistic realization of a work.

<title> → model.titleLike → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<title> → model.titleLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<title> → model.titleLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<title> → model.titleLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<title> → model.titleLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<title> → model.titleLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<title> → model.titleLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<title> → model.titleLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<title> → model.titleLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<title> → model.titleLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<title> → model.titleLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<title> → model.titleLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<title> → model.titleLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<title> → model.titleLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<title> → model.titleLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<title> → model.titleLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<title> → model.titleLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<title> → model.titleLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<title> → model.titleLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<title> → model.titleLike → model.textPhraseLike.limited → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<title> → model.titleLike → <monogr>

**<name>** Proper noun or noun phrase.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<title> → model.titleLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<title> → model.titleLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<title> → model.titleLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<title> → model.titleLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<title> → model.titleLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<title> → model.titleLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<title> → model.titleLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<title> → model.titleLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<title> → model.titleLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<title> → model.titleLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<title> → model.titleLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<title> → model.titleLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<title> → model.titleLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<title> → model.titleLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<title> → model.titleLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<title> → model.titleLike → model.textPhraseLike.limited → <roleDesc>

**< roleName >** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<title> → model.titleLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<title> → model.titleLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<title> → model.titleLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<title> → model.titleLike → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<title> → model.titleLike → <seriesStmt>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<title> → model.titleLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<title> → model.titleLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<title> → model.titleLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<title> → model.titleLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<title> → model.titleLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<title> → model.titleLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<title> → model.titleLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<title> → model.titleLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<title> → model.titleLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<title> → model.titleLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<title> → model.titleLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<title> → model.titleLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<title> → model.titleLike → model.titlePagePart → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<title> → model.titleLike → <titlePart>

**<titleStmt>** Container for title and responsibility meta-data.

<title> → model.titleLike → <titleStmt>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<title> → model.titleLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<title> → model.titleLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<title> → model.titleLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<title> → model.titleLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<title> → model.titleLike → model.textPhraseLike.limited → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<title> → model.titleLike → <work>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<title> → macro.titlePart → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<title> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<title> → macro.titlePart → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<title> → macro.titlePart → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<title> → macro.titlePart → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<title> → macro.titlePart → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <bloc>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<title> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<title> → macro.titlePart → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<title> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<title> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<title> → macro.titlePart → model.datelike → <date>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<title> → model.transcriptionLike → <del>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<title> → macro.titlePart → model.editorialLike → <expan>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<title> → macro.titlePart → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<title> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<title> → macro.titlePart → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<title> → model.transcriptionLike → <handShift>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<title> → macro.titlePart → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<title> → macro.titlePart → model.lbLike → <lb>

**<name>** Proper noun or noun phrase.

<title> → macro.titlePart → model.nameLike → <name>

**<num>** Numeric information in any form.

<title> → macro.titlePart → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<title> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<title> → macro.titlePart → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<title> → macro.titlePart → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<title> → macro.titlePart → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<title> → macro.titlePart → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<title> → macro.titlePart → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<title> → macro.titlePart → model.locrefLike → <ptr>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<title> → macro.titlePart → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<title> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<title> → macro.titlePart → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<title> → macro.titlePart → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<title> → model.transcriptionLike → <restore>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<title> → macro.titlePart → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<title> → model.transcriptionLike → <sic>

**<stack>** An inline table with a single column.

<title> → macro.titlePart → model.rendLike → <stack>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<title> → macro.titlePart → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<title> → macro.titlePart → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<title> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<title> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<title> → macro.titlePart → <symbol>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<title> → direct children → <titlePart>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<title> → model.transcriptionLike → <unclear>

## Remarks

The type attribute may be used to classify the title according to some convenient typology. Sample values include: main (main title), subordinate (subtitle, title of part), abbreviated (abbreviated form of title), alternative (alternate title by which the work is also known), translated (translated form of title), uniform (collective title), and desc (descriptive title). The type attribute is provided for convenience in analysing titles and processing them according to their type; where such specialized processing is not necessary, there is no need for such analysis, and the entire title, including subtitles and any parallel titles, may be enclosed within a single **<title>** element. Title parts may be encoded in **<titlePart>** sub-elements. The name of the list from which a controlled value is taken may be recorded using the auth attribute. The number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name may be indicated in the nonfiling attribute.

The model of this element is based on the **title** element of the Text Encoding Initiative (TEI).

## <titlePage>

Contains a transcription of the title page of a text.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.7.1 Title Pages](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<titlePage> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<titlePage> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<titlePage> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<titlePage> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<titlePage> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<titlePage> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<titlePage> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<titlePage> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<titlePage> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<titlePage> → [att.lang](#) → @xml:lang

## Member of

[model.frontAndBackPart](#) Groups elements that may appear as part of auxiliary material preceding or following the text proper.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<titlePage> → [model.frontAndBackPart](#) → <back>

**<front>** Bundles prefatory text found before the start of the musical text.

<titlePage> → model.frontAndBackPart → <front>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<titlePage> → model.physDescPart → <physDesc>

## May Contain

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

<titlePage> → model.titlePagePart → <accessRestrict>

**<add>** Marks an addition to the text.

<titlePage> → model.transcriptionLike → <add>

**<argument>** Contains a formal list or prose description of topics addressed.

<titlePage> → model.titlePagePart → <argument>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<titlePage> → model.titlePagePart → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<titlePage> → model.titlePagePart → model.respLikePart → <author>

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

<titlePage> → model.imprintPart → <availability>

**<biblList>** List of bibliographic references.

<titlePage> → model.textComponentLike → model.listLike → <biblList>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<titlePage> → model.titlePagePart → <byline>

**<castList>** Contains a single cast list or *dramatis personae*.

<titlePage> → model.textComponentLike → model.listLike → <castList>

**<cb>** An empty formatting element that forces text to begin in a new column.

<titlePage> → model.milestoneLike.text → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<titlePage> → model.milestoneLike.text → <colLayout>

**<composer>** The name of the creator of the intellectual content of a musical work.

<titlePage> → model.titlePagePart → model.respLikePart → <composer>

**<contents>** List of the material contained within a resource.

<titlePage> → model.titlePagePart → <contents>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<titlePage> → model.titlePagePart → model.respLikePart → <contributor>

**<corr>** Contains the correct form of an apparent erroneous passage.

<titlePage> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<titlePage> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<titlePage> → model.titlePagePart → model.dateLike → <date>

**<dedication>** Contains a dedicatory statement.

<titlePage> → model.titlePagePart → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<titlePage> → model.transcriptionLike → <del>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<titlePage> → model.imprintPart → <distributor>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<titlePage> → model.titlePagePart → model.editionLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<titlePage> → model.titlePagePart → model.respLikePart → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<titlePage> → model.titlePagePart → <epigraph>

**<eventList>** Contains historical information given as a sequence of significant past events.

<titlePage> → model.textComponentLike → model.listLike → <eventList>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<titlePage> → model.figureLike → <fig>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<titlePage> → model.titlePagePart → model.respLikePart → <funder>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<titlePage> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<titlePage> → model.transcriptionLike → <handShift>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<titlePage> → model.headLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<titlePage> → model.titlePagePart → model.identifierLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<titlePage> → model.titlePagePart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<titlePage> → model.titlePagePart → <imprint>

**<lb>** An empty formatting element that forces text to begin on a new line.

<titlePage> → model.milestoneLike.text → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<titlePage> → model.textComponentLike → model.lgLike → <lg>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<titlePage> → model.titlePagePart → model.respLikePart → <librettist>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<titlePage> → model.textComponentLike → model.listLike → <list>

**<lyricist>** Person or organization who is a writer of the text of a song.

<titlePage> → model.titlePagePart → model.respLikePart → <lyricist>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<titlePage> → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<titlePage> → model.textComponentLike → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<titlePage> → model.milestoneLike.text → model.pbLike → <pb>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

<titlePage> → model.titlePagePart → <perfDuration>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

<titlePage> → model.titlePagePart → <perfMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

<titlePage> → model.titlePagePart → <plateNum>

**<price>** The cost of access to a bibliographic item.

<titlePage> → model.titlePagePart → <price>

**<pubPlace>** Name of the place where a bibliographic item was published.

<titlePage> → model.imprintPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<titlePage> → model.imprintPart → <publisher>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<titlePage> → model.textComponentLike → model.quoteLike → <quote>

**<reg>** Contains material which has been regularized or normalized in some sense.

<titlePage> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<titlePage> → model.transcriptionLike → <restore>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<titlePage> → model.titlePagePart → <series>

**<sic>** Contains apparently incorrect or inaccurate material.

<titlePage> → model.transcriptionLike → <sic>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<titlePage> → model.titlePagePart → model.respLikePart → <sponsor>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<titlePage> → model.transcriptionLike → <supplied>

**<sysReq>** System requirements for using the electronic item.

<titlePage> → model.titlePagePart → <sysReq>

**<table>** Contains text displayed in tabular form.

<titlePage> → model.textComponentLike → model.tableLike → <table>

**<title>** Title of a bibliographic entity.

<titlePage> → model.titlePagePart → model.titleLike → <title>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<titlePage> → model.titlePagePart → <titlePart>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<titlePage> → model.transcriptionLike → <unclear>

**<unpub>** Used to explicitly indicate that a bibliographic resource is unpublished.

<titlePage> → model.imprintPart → <unpub>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

<titlePage> → model.titlePagePart → <useRestrict>

## Remarks

This element may be used within the <physDesc> element when no other transcription is provided.

The model of this element is based on the titlePage element of the Text Encoding Initiative (TEI).

## <titlePart>

Contains a subsection or division of the title of a bibliographic entity.

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<titlePart> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<titlePart> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
 <titlePart> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<titlePart> → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<titlePart> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<titlePart> → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<titlePart> → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<titlePart> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePart> → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<titlePart> → [att.labelled](#) → @label

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<titlePart> → att.ninteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.linkin → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<titlePart> → att.filing → @nonfiling

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<titlePart> → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<titlePart> → att.lang → @translit

**@type** (*optional*) Characterizes this title component in some sense, using any convenient classification scheme or typology that employs single-token labels. Allowed values are: "**alternative**" (*Alternate title by which the item is also known.*), "**arrangement**" (*Arranged statement for music. Analogous to 240 subfield o.*), "**carrier**" (*Medium of the carrier. Analogous to 240 subfield h.*), "**date**" (*Publication/creation date(s) of work. Analogous to 240 subfield f.*), "**desc**" (*Descriptive paraphrase of the work.*), "**form**" (*Form subheading. Analogous to 240 subfield k.*), "**key**" (*Key for music. Analogous to 240 subfield r.*), "**language**" (*Language of a work. Analogous to 240 subfield l (el.)*), "**main**" (*Main title.*), "**name**" (*Name of a part or section of a work. Analogous to 240 subfield p.*), "**number**" (*Standard number designation of a work or of a part or section of a work. Analogous to 240 subfield n.*), "**perfmedium**" (*Performance medium. Analogous to 240 subfield m.*), "**subordinate**" (*Subtitle.*), "**translated**" (*Translated form of title.*), "**version**" (*Version. Analogous to 240 subfield s.*)

<titlePart> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<titlePart> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<titlePart> → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<titlePart> → [att.lang](#) → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<title>** Title of a bibliographic entity.

<titlePart> → elements having titlePart as direct children → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<titlePart> → [model.titlePagePart](#) → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<titlePart> → [macro.titlePart](#) → [model.editorialLike](#) → <abbr>

**<add>** Marks an addition to the text.

<titlePart> → [model.transcriptionLike](#) → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<titlePart> → [macro.titlePart](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<titlePart> → [macro.titlePart](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<titlePart> → [macro.titlePart](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<titlePart> → [macro.titlePart](#) → [model.biblLike](#) → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<titlePart> → [macro.titlePart](#) → [model.addressPart](#) → [model.geogNamePart](#) → <bloc>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<titlePart> → [model.editLike](#) → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<titlePart> → [macro.titlePart](#) → [model.nameLike](#) → [model.nameLike.agent](#) → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<titlePart> → [model.transcriptionLike](#) → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<titlePart> → [macro.titlePart](#) → [model.addressPart](#) → [model.geogNamePart](#) → <country>

**<damage>** Contains an area of damage to the physical medium.

<titlePart> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<titlePart> → macro.titlePart → model.dateLike → <date>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<titlePart> → model.transcriptionLike → <del>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<titlePart> → macro.titlePart → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<titlePart> → macro.titlePart → model.editorialLike → <expan>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<titlePart> → macro.titlePart → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<titlePart> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<titlePart> → macro.titlePart → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<titlePart> → macro.titlePart → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<titlePart> → model.transcriptionLike → <handShift>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<titlePart> → macro.titlePart → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<titlePart> → macro.titlePart → model.lbLike → <lb>

**<name>** Proper noun or noun phrase.

<titlePart> → macro.titlePart → model.nameLike → <name>

**<num>** Numeric information in any form.

<titlePart> → macro.titlePart → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<titlePart> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<titlePart> → macro.titlePart → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<titlePart> → macro.titlePart → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<titlePart> → macro.titlePart → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<titlePart> → macro.titlePart → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<titlePart> → macro.titlePart → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<titlePart> → macro.titlePart → model.locrefLike → <ptr>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<titlePart> → macro.titlePart → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<titlePart> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<titlePart> → macro.titlePart → model.addressPart → model.geogNamePart → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<titlePart> → macro.titlePart → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<titlePart> → macro.titlePart → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<titlePart> → model.transcriptionLike → <restore>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<titlePart> → macro.titlePart → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<titlePart> → model.transcriptionLike → <sic>

**<stack>** An inline table with a single column.

<titlePart> → macro.titlePart → model.rendLike → <stack>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<titlePart> → macro.titlePart → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<titlePart> → macro.titlePart → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<titlePart> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<titlePart> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<titlePart> → macro.titlePart → <symbol>

**<title>** Title of a bibliographic entity.

<titlePart> → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<titlePart> → model.transcriptionLike → <unclear>

## Remarks

The model of this element is based on the **titlePart** element of the Text Encoding Initiative (TEI).

## <titleStmt>

(title statement) – Container for title and responsibility meta-data.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.3.1 Title Statement](#), [3.3.2 Responsibility Attribution](#), [3.4.1 File Description](#), [3.4.1.1 Edition Statement](#), [3.7 Encoding Sources in MEI](#), [3.8.3 Minimal and Recommended Header Information](#), [3.8.5.2 Combining Corpus and Text Headers](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<titleStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<titleStmt> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<titleStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<titleStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → att.common → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → att.common → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<titleStmt> → att.common → att.linkng → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<titleStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<titleStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<titleStmt> → att.common → att.basic → att.id → @xml:id

## Member of

(titleStmt isn't member of any model class)

## Contained By

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<titleStmt> → elements having titleStmt as direct children → <fileDesc>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<titleStmt> → elements having titleStmt as direct children → <manifestation>

## May Contain

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<titleStmt> → model.respLike → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<titleStmt> → model.respLike → model.respLikePart → <author>

**<composer>** The name of the creator of the intellectual content of a musical work.

<titleStmt> → model.respLike → model.respLikePart → <composer>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<titleStmt> → model.respLike → model.respLikePart → <contributor>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<titleStmt> → model.respLike → model.respLikePart → <editor>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<titleStmt> → model.respLike → model.respLikePart → <funder>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<titleStmt> → model.headLike → <head>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<titleStmt> → model.respLike → model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<titleStmt> → model.respLike → model.respLikePart → <lyricist>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<titleStmt> → model.respLike → <respStmt>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<titleStmt> → model.respLike → model.respLikePart → <sponsor>

**<title>** Title of a bibliographic entity.

<titleStmt> → model.titleLike → <title>

## Remarks

The model of this element is based on the [titleStmt](#) element of the Text Encoding Initiative (TEI).

## <tr>

(table row) – A formatting element that contains one or more cells (intersection of a row and a column) in a <table>.

### Referenced in chapters

[9.2.5.1 Rows](#)

### Module

[MEI.figtable](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tr> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<tr> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tr> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tr> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tr> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<tr> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<tr> → att.common → att.type → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<tr> → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tr> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<tr> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<tr> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `fac` attribute. Value is a decimal number.

<tr> → att.xy → @y

## Member of

(tr isn't member of any model class)

## Contained By

**<table>** Contains text displayed in tabular form.

<tr> → elements having tr as direct children → <table>

## May Contain

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<tr> → direct children → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<tr> → direct children → <th>

## Remarks

More precise rendition of the table and its cells can be specified in a style sheet.

The model of this element is based on the [tr](#) element of HTML.

DEVELOPMENT  
VERSION

## <trackConfig>

(track configuration) – Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<trackConfig> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<trackConfig> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<trackConfig> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<trackConfig> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<trackConfig> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<trackConfig> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<trackConfig> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.linking → @next

**@num** (*optional*) Records the track configuration in numeric form. Value is a positive integer.

<trackConfig> → direct children → @num

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<trackConfig> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<trackConfig> → att.common → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<trackConfig> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<trackConfig> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<trackConfig> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<trackConfig> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<trackConfig> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<trackConfig> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<trackConfig> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<trackConfig> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<trackConfig> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<trackConfig> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The number of apparent playback channels can differ from the number of physical channels of the recording medium, i.e., 2-track monophonic recordings. In this example, the trackConfig element should record the fact that there are two physical tracks on the sound medium, while the **<soundChan>** element should be used to state that there is a single output channel. This element may be mapped to MARC field 344 subfield e or subfield f as appropriate.

## Declaration

```

## <treatHist>

(treatment history) – A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<treatHist> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<treatHist> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<treatHist> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<treatHist> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<treatHist> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<treatHist> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linkin](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<treatHist> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<treatHist> → [att.datable](#) → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linking](#) → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<treatHist> → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<treatHist> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<treatHist> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<treatHist> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<treatHist> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<treatHist> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<treatHist> → [att.lang](#) → @xml:lang

## Member of

(treatHist isn't member of any model class)

## Contained By

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<treatHist> → elements having treatHist as direct children → <history>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<treatHist> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<treatHist> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<treatHist> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<treatHist> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<treatHist> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<treatHist> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<treatHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<treatHist> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<treatHist> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<treatHist> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<treatHist> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<treatHist> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<treatHist> → direct children → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<treatHist> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<treatHist> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<treatHist> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<treatHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<treatHist> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<treatHist> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<treatHist> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<treatHist> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<treatHist> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<treatHist> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<treatHist> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<treatHist> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<treatHist> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<treatHist> → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<treatHist> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<treatHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<treatHist> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<treatHist> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<treatHist> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<treatHist> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<treatHist> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<treatHist> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<treatHist> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<treatHist> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<treatHist> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<treatHist> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<treatHist> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<treatHist> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<treatHist> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<treatHist> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<treatHist> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<treatHist> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<treatHist> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<treatHist> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<treatHist> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<treatHist> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<treatHist> → model.textPhraseLike.limited → model.msnInline → <watermark>

**<width>** Description of the horizontal size of an object.

<treatHist> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Treatment history may also comprise details of the treatment process (e.g., chemical solutions used, techniques applied, etc.), the date the treatment was applied, etc.

The model of this element is based on the respective element of the Encoded Archival Description (EAD).

## <treatSched>

(treatment scheduled) – Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<treatSched> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<treatSched> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<treatSched> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<treatSched> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<treatSched> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<treatSched> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<treatSched> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<treatSched> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<treatSched> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<treatSched> → [att.common](#) → [att.linkin](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<treatSched> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<treatSched> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<treatSched> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<treatSched> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<treatSched> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<treatSched> → att.common → att.linkin → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<treatSched> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<treatSched> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<treatSched> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<treatSched> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<treatSched> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<treatSched> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<treatSched> → att.lang → @xml:lang

## Member of

(treatSched isn't member of any model class)

**Contained By**

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<treatSched> → elements having treatSched as direct children → <history>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<treatSched> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<treatSched> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<treatSched> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<treatSched> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<treatSched> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<treatSched> → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<treatSched> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<treatSched> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<treatSched> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<treatSched> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<treatSched> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<treatSched> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<treatSched> → direct children → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<treatSched> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<treatSched> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<treatSched> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<treatSched> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<treatSched> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<treatSched> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<treatSched> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<treatSched> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<treatSched> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<treatSched> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<treatSched> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<treatSched> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<treatSched> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<treatSched> → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<treatSched> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<treatSched> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<treatSched> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<treatSched> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<treatSched> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<treatSched> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<treatSched> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<treatSched> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<treatSched> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<treatSched> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<treatSched> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<treatSched> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<treatSched> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<treatSched> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<treatSched> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<treatSched> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<treatSched> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<treatSched> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<treatSched> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<treatSched> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<treatSched> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<treatSched> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<treatSched> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<treatSched> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the respective element of the Encoded Archival Description (EAD).

## <trill>

Rapid alternation of a note with another (usually at the interval of a second above).

### Referenced in chapters

[4.4.3 Trills](#)

### Module

[MEI.cmnOrnaments](#)

### Attributes

**@accidlower** (*optional*) Records the written accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<trill> → att.trill.log → att.ornamentAccid → @accidlower

**@accidlower.ges** (*optional*) Records the sounding accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<trill> → att.trill.log → att.ornamentAccid → att.ornamentAccid.ges → @accidlower.ges

**@accidupper** (*optional*) Records the written accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<trill> → att.trill.log → att.ornamentAccid → @accidupper

**@accidupper.ges** (*optional*) Records the sounding accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<trill> → att.trill.log → att.ornamentAccid → att.ornamentAccid.ges → @accidupper.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<trill> → att.trill.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<trill> → att.trill.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<trill> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<trill> → att.trill.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<trill> → [att.trill.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<trill> → [att.trill.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<trill> → [att.trill.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<trill> → [att.trill.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<trill> → [att.trill.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<trill> → [att.trill.ges](#) → [att.duration.ges](#) → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<trill> → [att.trill.vis](#) → [att.enclosingChars](#) → @enclose

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<trill> → [att.trill.vis](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<trill> → [att.trill.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<trill> → [att.trill.vis](#) → [att.visualOffset2.to](#) → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<trill> → [att.trill.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<trill> → [att.trill.vis](#) → [att.extender](#) → @extender

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<trill> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<trill> → [att.common](#) → [att.linking](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<trill> → [att.trill.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<trill> → [att.trill.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<trill> → [att.trill.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<trill> → [att.trill.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<trill> → [att.trill.vis](#) → [att.typography](#) → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<trill> → [att.trill.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<trill> → [att.trill.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<trill> → [att.trill.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<trill> → [att.trill.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<trill> → [att.trill.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<trill> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<trill> → [att.trill.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<trill> → [att.trill.vis](#) → [att.extender](#) → [att.lineRend](#) → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<trill> → att.trill.vis → att.extender → att.lineRend → @lendsym.size

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<trill> → att.trill.vis → att.typography → @letterspacing

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

<trill> → att.trill.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<trill> → att.trill.vis → att.typography → @lineheight

**@lseg** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<trill> → att.trill.vis → att.extender → att.lineRend → att.lineRend.base → @lseg

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

<trill> → att.trill.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<trill> → att.trill.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

<trill> → att.trill.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<trill> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<trill> → att.trill.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<trill> → att.trill.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<trill> → att.trill.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<trill> → att.trill.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<trill> → att.trill.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<trill> → att.trill.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<trill> → att.trill.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<trill> → att.trill.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<trill> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<trill> → att.trill.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<trill> → att.trill.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<trill> → att.trill.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).  
 <trill> → att.trill.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<trill> → att.trill.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<trill> → att.trill.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<trill> → att.trill.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<trill> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<trill> → att.trill.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <[when](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<trill> → att.trill.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<trill> → att.trill.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<trill> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<trill> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<trill> → att.trill.vis → att.xy → @y

## Member of

[model.ornamentLike.cmn](#) Groups CMN ornament elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<trill> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<trill> may not have child elements)

## Remarks

The interval between the main and auxiliary notes is usually understood to be diatonic unless altered by an accidental. The starting note of the trill; i.e., the written one or the ornamenting one, and the speed of alternation depends on performance practice. The starting point of the trill may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify a starting point attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```

VERSION

## <trkName>

(track name) – MIDI track/sequence name.

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<trkName> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<trkName> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<trkName> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<trkName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\d][\n\c]+)"**, separated by spaces.

<trkName> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<trkName> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<trkName> → att.midi.event → att.staffid → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<trkName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<trkName> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<trkName> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<trkName> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<trkName> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<trkName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<trkName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<trkName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<trkName> → [att.lang](#) → @xml:lang

### Member of

(trkName isn't member of any model class)

### Contained By

**<midi>** Container for elements that contain information useful when generating MIDI output.

<trkName> → elements having trkName as direct children → <midi>

### May Contain

#### Declaration

```
<elementSpec ident="trkName" module="MEI.midi">

</elementSpec>
```

## <tuplet>

A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

### Referenced in chapters

[4.3.4 Tuples](#), [4.3.5.3 Tremolandi](#)

### Module

[MEI.cmn](#)

### Attributes

**@beam.with** (*optional*) In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below. Value conforms to [data.NEIGHBORINGLAYER](#).

<tuplet> → [att.tuplet.log](#) → [att.beamedWith](#) → @beam.with

**@bracket.place** (*optional*) Used to state where a tuplet bracket will be placed in relation to the note heads. Value conforms to [data.STAFFREL.basic](#).

<tuplet> → [att.tuplet.vis](#) → @bracket.place

**@bracket.visible** (*optional*) States whether a bracket should be rendered with a tuplet. Value conforms to [data.BOOLEAN](#).

<tuplet> → [att.tuplet.vis](#) → @bracket.visible

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tuplet> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<tuplet> → [att.tuplet.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tuplet> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tuplet> → [att.common](#) → [att.linkin](#) → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<tuplet> → [att.tuplet.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<tuplet> → [att.tuplet.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<tuplet> → att.tuplet.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<tuplet> → att.tuplet.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<tuplet> → att.tuplet.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<tuplet> → att.tuplet.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a [token](#).

<tuplet> → att.tuplet.ges → att.duration.ges → @dur.recip

**@dur.visible** (*optional*) Determines if the tuplet duration is visible. Value conforms to [data.BOOLEAN](#).

<tuplet> → att.tuplet.vis → @dur.visible

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tuplet> → att.tuplet.log → att.startEndId → @endid

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tuplet> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<tuplet> → att.tuplet.log → att.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tuplet> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linked → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<tuplet> → att.tuplet.log → att.duration.ratio → @num

**@num.format** (*optional*) Controls how the num:numbase ratio is to be displayed. Allowed values are:

**"count"** (*Only the num attribute is displayed, , '7.'*), **"ratio"** (*Both the num and numbase attributes are displayed, , '7:4.'*)

<tuplet> → att.tuplet.vis → @num.format

**@num.place** (*optional*) States where the tuplet number will be placed in relation to the note heads.

Value conforms to [data.STAFFREL.basic](#).

<tuplet> → att.tuplet.vis → att.numberPlacement → @num.place

**@num.visible** (*optional*) Determines if the tuplet number is visible. Value conforms to [data.BOOLEAN](#).

<tuplet> → att.tuplet.vis → att.numberPlacement → @num.visible

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<tuplet> → att.tuplet.log → att.duration.ratio → @numbase

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<tuplet> → att.tuplet.log → att.event → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tuplet> → att.tuplet.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tuplet> → att.common → att.linking → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tuplet> → att.tuplet.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tuplet> → att.tuplet.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tuplet> → att.tuplet.log → att.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<tuplet> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<tuplet> → att.tuplet.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tuplet> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<tuplet> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike.cmn](#) Groups events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<tuplet> → [model.eventLike.cmn](#) → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<tuplet> → [model.eventLike.cmn](#) → <graceGrp>

**<layer>** An independent stream of events on a staff.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

<tuplet> → [model.eventLike.cmn](#) → [model.layerPart.cmn](#) → [model.layerPart](#) → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<tuplet> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tuplet> → model.eventLike.cmn → model.layerPart.cmn → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<tuplet> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<tuplet> → model.appLike → <app>

**<bTrem>** A rapid alternation on a single pitch or chord.

<tuplet> → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<tuplet> → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<tuplet> → model.eventLike.cmn → <beam>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<tuplet> → model.eventLike.cmn → <beatRpt>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<tuplet> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<tuplet> → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<tuplet> → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<tuplet> → model.eventLike → <clefGrp>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tuplet> → model.transcriptionLike → <corr>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<tuplet> → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<tuplet> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tuplet> → model.transcriptionLike → <del>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<tuplet> → model.eventLike.cmn → <fTrem>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<tuplet> → model.transcriptionLike → <gap>

**<graceGrp>** A container for a sequence of grace notes.

<tuplet> → model.eventLike.cmn → <graceGrp>

**<halfmRpt>** A half-measure repeat in any meter.

<tuplet> → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<tuplet> → model.transcriptionLike → <handShift>

**<keySig>** Written key signature.

<tuplet> → model.eventLike → model.keySigLike → <keySig>

**<meterSig>** Written meter signature.

<tuplet> → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<tuplet> → model.eventLike → model.meterSigLike → <meterSigGrp>

**<note>** A single pitched event.

<tuplet> → model.eventLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tuplet> → model.transcriptionLike → <orig>

**<pad>** An indication of extra visual space between notational elements.

<tuplet> → model.eventLike → <pad>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tuplet> → model.transcriptionLike → <reg>

**<rest>** A non-sounding event found in the source being transcribed.

<tuplet> → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tuplet> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<tuplet> → model.transcriptionLike → <sic>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<tuplet> → model.eventLike → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<tuplet> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tuplet> → model.transcriptionLike → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<tuplet> → model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tuplet> → model.transcriptionLike → <unclear>

## Remarks

The **<beam>** sub-element is allowed so that custom beaming may be indicated, e.g., a septuplet may be divided into a group of three plus a group of four notes. See Read, p. 187-215. The **<tuplet>** element may also be used for bowed tremolo (Read, p. 394) and double, triple, or flutter tonguing (Read, p. 348-349); that is, for repetition of the same pitch. In the case of irrational durations, such as such as two quarter notes in the time of five 8th notes in a measure of 5/8 time, decimal values may be used in the dur.ges attribute. For example, the dur.ges attribute would take the value 2.5 if the midi.div attribute's value was 1. The num and numbase attributes may be used for explicit labelling of a tuplet, such as, '3' with an 8th-note triplet, '3:2' over a quarter-note triplet, etc. The rendering of the ratio, however, is dependent on the num.format attribute found in the att.vis.tuplet attribute class.

<remarks xml:lang="en">
  <p>The <gi scheme="MEI">beam</gi> sub-element is allowed so that custom beaming may be indicated,
    <abbr>e.g.</abbr>
    , a septuplet may be divided into a group of three plus a group of four notes. See Read, p. 187–215. The <gi scheme="MEI">tuplet</gi> element may also used for bowed tremolo (Read, p. 394) and double, triple, or flutter tonguing (Read, p. 348–349); that is, for repetition of the same pitch. In the case of irrational durations, such as such as two quarter notes in the time of five 8th notes in a measure of 5/8 time, decimal values may be used in the <att>dur.ges</att> attribute. For example, the <att>dur.ges</att> attribute would take the value
    <val>2.5</val>
  if the <att>midi.div</att> attribute's value was
    <val>1</val>
  . The <att>num</att> and <att>numbase</att> attributes may be used for explicit labelling of a tuplet, such as, '3' with an 8th-note triplet, '3:2' over a quarter-note triplet, etc. The rendering of the ratio, however, is dependent on the <att>num.format</att> attribute found in the att.vis.tuplet attribute class.</p>
</remarks>
</elementSpec>

```

## <tupletSpan>

(tuplet span) – Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

### Referenced in chapters

[4.3.4 Tuples](#)

### Module

[MEI.cmn](#)

### Attributes

**@beam.with** (*optional*) In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below. Value conforms to [data.NEIGHBORINGLAYER](#).

<tupletSpan> → att.tupletSpan.log → att.beamedWith → @beam.with

**@bracket.place** (*optional*) Used to state where a tuplet bracket will be placed in relation to the note heads. Value conforms to [data.STAFFREL.basic](#).

<tupletSpan> → att.tupletSpan.vis → att.tuplet.vis → @bracket.place

**@bracket.visible** (*optional*) States whether a bracket should be rendered with a tuplet. Value conforms to [data.BOOLEAN](#).

<tupletSpan> → att.tupletSpan.vis → att.tuplet.vis → @bracket.visible

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<tupletSpan> → att.tupletSpan.vis → att.tuplet.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<tupletSpan> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.common → att.linked → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<tupletSpan> → att.tupletSpan.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<tupletSpan> → att.tupletSpan.ges → att.tuplet.ges → att.duration.ges → @dur.recip

**@dur.visible** (*optional*) Determines if the tuplet duration is visible. Value conforms to [data.BOOLEAN](#).

<tupletSpan> → att.tupletSpan.vis → att.tuplet.vis → @dur.visible

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tupletSpan> → att.tupletSpan.log → att.startEndId → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.targetEval → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<tupletSpan> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<tupletSpan> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.common → att.linking → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<tupleSpan> → att.tupleSpan.log → att.duration.ratio → @num

**@num.format** (*optional*) Controls how the num:numbase ratio is to be displayed. Allowed values are: "count" (*Only the num attribute is displayed, , '7'.*), "ratio" (*Both the num and numbase attributes are displayed, , '7:4'.*)

<tupleSpan> → att.tupleSpan.vis → att.tuple.vis → @num.format

**@num.place** (*optional*) States where the tuplet number will be placed in relation to the note heads. Value conforms to [data.STAFFREL.basic](#).

<tupleSpan> → att.tupleSpan.vis → att.tuple.vis → att.numberPlacement → @num.place

**@num.visible** (*optional*) Determines if the tuplet number is visible. Value conforms to [data.BOOLEAN](#).

<tupleSpan> → att.tupleSpan.vis → att.tuple.vis → att.numberPlacement → @num.visible

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<tupleSpan> → att.tupleSpan.log → att.duration.ratio → @numbase

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<tupleSpan> → att.tupleSpan.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<tupleSpan> → att.tupleSpan.log → att.controlEvent → att.partIdent → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<tupleSpan> → att.tupleSpan.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<tupleSpan> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<tupleSpan> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<tupleSpan> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<tupleSpan> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<tupletSpan> → att.tupletSpan.log → att.startEndId → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<tupletSpan> → att.common → att.linked → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<tupletSpan> → att.tupletSpan.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<tupletSpan> → att.tupletSpan.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<tupletSpan> → att.tupletSpan.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<tupletSpan> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<tupletSpan> → att.tupletSpan.log → att.controlEvent → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<tupletSpan> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<tupletSpan> → att.common → att.basic → att.id → @xml:id

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.measurePart](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<tupleSpan> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <unclear>

### May Contain

- (<tupleSpan> may not have child elements)

## Remarks

The starting point of the tuplet may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

## Declaration

DEVELOPMENT  
VERSION

## <turn>

An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

### Referenced in chapters

[4.4.4 Turns](#)

### Module

[MEI.cmnOrnaments](#)

### Attributes

**@accidlower** (*optional*) Records the written accidental associated with a lower neighboring note. Value conforms to [data.ACIDENTAL.WRITTEN](#).

<turn> → [att.turn.log](#) → [att.ornamentAccid](#) → @accidlower

**@accidlower.ges** (*optional*) Records the sounding accidental associated with a lower neighboring note.

Value conforms to [data.ACIDENTAL.GESTURAL](#).

<turn> → [att.turn.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidlower.ges

**@accidupper** (*optional*) Records the written accidental associated with an upper neighboring note.

Value conforms to [data.ACIDENTAL.WRITTEN](#).

<turn> → [att.turn.log](#) → [att.ornamentAccid](#) → @accidupper

**@accidupper.ges** (*optional*) Records the sounding accidental associated with an upper neighboring note. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<turn> → [att.turn.log](#) → [att.ornamentAccid](#) → [att.ornamentAccid.ges](#) → @accidupper.ges

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [symbolDef](#) element elsewhere in the document. Value conforms to [data.URI](#).

<turn> → [att.turn.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<turn> → [att.turn.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<turn> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.common](#) → [att.linked](#) → @corresp

**@delayed** (*optional*) When set to 'true', the turn begins on the second half of the beat. Value conforms to [data.BOOLEAN](#).

<turn> → [att.turn.log](#) → @delayed

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<turn> → [att.turn.vis](#) → [att.enclosingChars](#) → @enclose

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<turn> → [att.turn.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.common](#) → [att.linked](#) → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @fontweight

**@form** (*optional*) Records meaning; i.e., intended performance, of the turn. The altsym, glyph.name, or glyph.num attributes may be used to specify the appropriate symbol. Allowed values are: "**lower**" (*Begins on the note below the written note.*), "**upper**" (*Begins on the note above the written note.*)

<turn> → [att.turn.log](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout.*)

<turn> → [att.turn.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<turn> → [att.turn.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<turn> → [att.turn.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<turn> → [att.turn.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<turn> → [att.turn.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<turn> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<turn> → [att.turn.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<turn> → [att.turn.vis](#) → [att.typography](#) → @lineheight

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<turn> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.common](#) → [att.linked](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<turn> → [att.turn.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<turn> → [att.turn.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<turn> → [att.turn.vis](#) → [att.placementRelStaff](#) → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<turn> → [att.turn.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<turn> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<turn> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<turn> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<turn> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<turn> → att.turn.log → att.controlEvent → att.staffId → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<turn> → att.turn.log → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<turn> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<turn> → att.turn.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<turn> → att.turn.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<turn> → att.turn.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<turn> → att.turn.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<turn> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<turn> → att.turn.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<turn> → att.turn.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *fac*s attribute. Value is a decimal number.

<turn> → att.turn.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<turn> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each *id* attribute within a document must have a unique value. Value is a valid [xml:id](#).

<turn> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the *fac*s attribute. Value is a decimal number.

<turn> → att.turn.vis → att.xy → @y

## Member of

[model.ornamentLike.cmn](#) Groups CMN ornament elements.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<turn> → model.ornamentLike.cmn → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

– (<turn> may not have child elements)

## Remarks

See Read, p. 246-247. Whether the turn is accented or unaccented may be inferred from the timestamp — accented turns occur directly on the affected beat, unaccented ones do not.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

## Declaration

```
<elementSpec ident="turn" module="MEI.cmnOrnaments">

## <typeDesc>

(type description) – Contains a description of the typefaces or other aspects of the printing of a printed source.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<typeDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.typed](#) → [att.clasped](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<typeDesc> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<typeDesc> → [att.common](#) → [att.labell](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<typeDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<typeDesc> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<typeDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<typeDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<typeDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<typeDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<typeDesc> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<typeDesc> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<typeDesc> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<typeDesc> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<typeDesc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<typeDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<typeDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<typeDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<typeDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<typeDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<typeDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<typeDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<typeDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<typeDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<typeDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<typeDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<typeDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<typeDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<typeDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<typeDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<typeDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<typeDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<typeDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<typeDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<typeDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<typeDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<typeDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<typeDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<typeDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<typeDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<typeDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<typeDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<typeDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<typeDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<typeDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<typeDesc> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<typeDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<typeDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<typeDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<typeDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<typeDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<typeNote>** Describes a particular font or other significant typographic feature of a printed resource.

<typeDesc> → direct children → <typeNote>

**<watermark>** Contains a description of a watermark or similar device.

<typeDesc> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<typeDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [typeDesc](#) element of the Text Encoding Initiative (TEI).

## <typeNote>

(type note) – Describes a particular font or other significant typographic feature of a printed resource.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<typeNote> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.typed](#) → [att.clasped](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<typeNote> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<typeNote> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<typeNote> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.link](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<typeNote> → [att.common](#) → [att.link](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<typeNote> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<typeNote> → [att.common](#) → [att.type](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<typeNote> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<typeNote> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<typeNote> → [att.lang](#) → @xml:lang

## Member of

(typeNote isn't member of any model class)

## Contained By

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<typeNote> → elements having typeNote as direct children → <typeDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<typeNote> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<typeNote> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<typeNote> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<typeNote> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<typeNote> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<typeNote> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<typeNote> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<typeNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [typeNote](#) element in the Text Encoding Initiative (TEI).

## Declaration

```

## <unclear>

Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

### Referenced in chapters

[11.2 Editorial Markup](#), [11.2.4 Additions, Deletions, and Omissions](#), [11.2.4.1 Omissions, Unclear Readings, Damage, and Supplied Readings](#)

### Module

[MEI.edittrans](#)

### Attributes

**@agent** (*optional*) Signifies the causative agent of damage, illegibility, or other loss of original text. Value is plain text.

<unclear> → [att.agentIdent](#) → @agent

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<unclear> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<unclear> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<unclear> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<unclear> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<unclear> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<unclear> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<unclear> → [att.common](#) → [att.linked](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

**"conjecture"** (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<unclear> → [att.edit](#) → [att.evidence](#) → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<unclear> → att.extent → @extent

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.common → att.linked → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a [<hand>](#) element declared in the header. Value conforms to [data.URI](#).

<unclear> → att.handIdent → @hand

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<unclear> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<unclear> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<unclear> → att.extent → att.ranging → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<unclear> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.common → att.linked → @prev

**@reason** (*optional*) Holds a short phrase describing the reason for missing textual material (gap), why material is supplied (supplied), or why transcription is difficult (unclear). Value is plain text.

<unclear> → att.reasonIdent → @reason

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<unclear> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<unclear> → [att.common](#) → [att.linkin](#) → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<unclear> → [att.edit](#) → [att.source](#) → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<unclear> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<unclear> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<unclear> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.).

<unclear> → [att.extent](#) → [att.measurement](#) → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<unclear> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<unclear> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<unclear> → [att.lang](#) → @xml:lang

## Member of

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<unclear> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<unclear> → model.transcriptionLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<unclear> → model.transcriptionLike → <addName>

**<addrLine>** Single line of a postal address.

<unclear> → model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<unclear> → model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<unclear> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<unclear> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<unclear> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<unclear> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<unclear> → model.transcriptionLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<unclear> → model.choicePart → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<unclear> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<unclear> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<unclear> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<unclear> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<unclear> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<unclear> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<unclear> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<unclear> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<unclear> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<unclear> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<unclear> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<unclear> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<unclear> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<unclear> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<unclear> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<unclear> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<unclear> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<unclear> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<unclear> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<unclear> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<unclear> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<unclear> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<unclear> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<unclear> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<unclear> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<unclear> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<unclear> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<unclear> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<unclear> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<unclear> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<unclear> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<unclear> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<unclear> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<unclear> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<unclear> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<unclear> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<unclear> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<unclear> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<unclear> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<unclear> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<unclear> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<unclear> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<unclear> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<unclear> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<unclear> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<unclear> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<unclear> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<unclear> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<unclear> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<unclear> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<unclear> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<unclear> → model.transcriptionLike → model paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<unclear> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<unclear> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<unclear> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<unclear> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<unclear> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<unclear> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<unclear> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<unclear> → model.transcriptionLike → model paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<unclear> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<unclear> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<unclear> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<unclear> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<unclear> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<unclear> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<unclear> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<unclear> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<unclear> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<unclear> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<unclear> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<unclear> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<unclear> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<unclear> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<unclear> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<unclear> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<unclear> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<unclear> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<unclear> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<unclear> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<unclear> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<unclear> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<unclear> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<unclear> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<unclear> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<unclear> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<unclear> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<unclear> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<unclear> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<unclear> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<unclear> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<unclear> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<unclear> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<unclear> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<unclear> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<unclear> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<unclear> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<unclear> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<unclear> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<unclear> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<unclear> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<unclear> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<unclear> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<unclear> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<unclear> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<unclear> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<unclear> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<unclear> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<unclear> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<unclear> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLik

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<unclear> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<hispanTick>** Hispanic tick.

<unclear> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<unclear> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<unclear> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<unclear> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<unclear> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<unclear> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<unclear> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<unclear> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<unclear> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<unclear> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<unclear> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<unclear> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<unclear> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<unclear> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<unclear> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<unclear> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proprt>** Description of note duration as arithmetic ratio.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proprt>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<unclear> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<unclear> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<unclear> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<rest>** A non-sounding event found in the source being transcribed.

<unclear> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<unclear> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<unclear> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<unclear> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<unclear> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<unclear> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <signatures>

**<signifLet>** Significantive letter(s).

<unclear> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<unclear> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<unclear> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<unclear> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<unclear> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<unclear> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<unclear> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<unclear> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<unclear> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<unclear> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<unclear> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<unclear> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<unclear> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<unclear> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<unclear> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<unclear> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<unclear> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Where the difficulty in transcription arises from an identifiable cause, the agent attribute signifies the causative agent. The cert attribute signifies the degree of certainty ascribed to the transcription of the text contained within the **<unclear>** element. Where the difficulty in transcription arises from action (partial deletion, etc.) assignable to an identifiable hand, the hand attribute signifies the hand responsible for the action. The reason attribute indicates why the material is difficult to transcribe. The resp attribute indicates the individual responsible for the transcription of the word, phrase, or passage contained with the **<unclear>** element. The value of resp must point to one or more identifiers declared in the document header.

In no case should **<unclear>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<unclear>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the **unclear** element of the Text Encoding Initiative (TEI).

## <unpub>

(unpublished) – Used to explicitly indicate that a bibliographic resource is unpublished.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<unpub> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<unpub> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<unpub> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<unpub> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<unpub> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<unpub> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<unpub> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<unpub> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<unpub> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<unpub> → [att.lang](#) → @xml:lang

## Member of

[model.imprintPart](#) Groups elements that may appear as part of a bibliographic imprint.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<unpub> → [model.imprintPart](#) → <bibl>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<unpub> → [model.imprintPart](#) → <imprint>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<unpub> → elements having unpub as direct children → <pubStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<unpub> → [model.imprintPart](#) → <titlePage>

## May Contain

### Remarks

A short phrase indicating the nature of or the reason for the unpublished status may be given as the element's content.

### Declaration

```
<elementSpec ident="unpub" module="MEI.header">
  <gloss versionDate="2022-05-18" xml:lang="en">unpublished</gloss>
  <desc xml:lang="en">Used to explicitly indicate that a bibliographic resource is
  unpublished.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="att.bibl"/>
    <memberOf key="att.lang"/>
    <memberOf key="model.imprintPart"/>
  </classes>
  <content>
    <rng:text/>
  </content>
  <remarks xml:lang="en">
    <p>A short phrase indicating the nature of or the reason for the unpublished status may
    be given as the element's content.</p>
  </remarks>
</elementSpec>
```

## <useRestrict>

(usage restrictions) – Container for information about the conditions that affect use of a bibliographic item after access has been granted.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<useRestrict> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<useRestrict> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<useRestrict> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<useRestrict> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<useRestrict> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<useRestrict> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<useRestrict> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<useRestrict> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<useRestrict> → att.common → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<useRestrict> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<useRestrict> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<useRestrict> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<useRestrict> → att.lang → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

**Contained By**

**<titlePage>** Contains a transcription of the title page of a text.

<useRestrict> → model.titlePagePart → <titlePage>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<useRestrict> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<useRestrict> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<useRestrict> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<useRestrict> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<useRestrict> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

<useRestrict> may indicate limitations imposed by an owner, repository, or legal statute (for example, copyright law) regarding the reproduction, publication, or quotation of the item. It may also indicate the absence of restrictions, such as when rights have been ceded to the public domain. Do not confuse this element with the <accessRestrict> element, which holds information about conditions affecting the availability of the material.

The model of this element is based on the [userrestrict](#) element of the Encoded Archival Description (EAD).

## <vel>

(velocity) – MIDI Note-on/off velocity.

### Module

MEI.midi

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<vel> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkin → @follows

**@form** (*required*) Indicates whether this is note-on or note-off velocity data. Allowed values are: "**on**" (*Note-on velocity.*), "**off**" (*Note-off velocity.*)

<vel> → direct children → @form

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<vel> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<vel> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<vel> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkin → @next

**@num** (*required*) MIDI number in the range set by [data.MIDIVALE](#). Value conforms to [data.MIDIVALE](#).

<vel> → att.midiNumber → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\w][\w]+)"**, separated by spaces.

<vel> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<vel> → att.midi.event → att.partIdnt → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkng → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<vel> → att.midi.event → att.staffIdnt → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<vel> → att.common → att.linkng → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<vel> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<vel> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<vel> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<vel> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<vel> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<vel> → att.common → att.basic → att.id → @xml:id

### Member of

(vel isn't member of any model class)

### Contained By

## <verse>

Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

### Referenced in chapters

[4.2.5.2.1 Chords in CMN](#), [8.3 Vocally Performed Text Encoded Within Notes](#)

### Module

[MEI.lyrics](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<verse> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<verse> → [att.verse.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<verse> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<verse> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<verse> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<verse> → [att.common](#) → [att.linkin](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<verse> → [att.verse.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<verse> → [att.verse.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<verse> → [att.verse.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<verse> → [att.verse.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<verse> → [att.verse.vis](#) → [att.typography](#) → @fontweight

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<verse> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

<verse> → att.verse.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<verse> → att.verse.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<verse> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.linked → @next

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<verse> → att.verse.vis → att.placementRelStaff → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<verse> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<verse> → att.verse.vis → att.visualOffset.to → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<verse> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<verse> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<verse> → att.verse.vis → att.visualOffset.vo → @vo

**@voltasym** (*optional*) Specifies the symbol used to group lyrics. Allowed values are: "brace" (*Curved symbol, , {,}*), "bracket" (*Square symbol, , [, but with curved/angled top and bottom segments.*), "bracketsq" (*Square symbol, , [, with horizontal top and bottom segments.*), "line" (*Line symbol, , |, (wide) line without top and bottom curved/horizontal segments.*), "none" (*Grouping symbol missing.*))

<verse> → att.verse.vis → att.voltaGroupingSym → @voltasym

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<verse> → att.verse.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<verse> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<verse> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<verse> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<verse> → att.verse.vis → att.xy → @y

## Member of

[model.verseLike](#) Groups elements that contain a lyric verse.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <add>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<verse> → model.verseLike → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<verse> → model.verseLike → model.rdgPart.music → model.rdgPart → <lem>

**<note>** A single pitched event.

<verse> → model.verseLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<verse> → model.verseLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<verse> → model.verseLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<verse> → model.verseLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<app>** (apparatus) – Contains one or more alternative encodings.

<verse> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<verse> → model.editLike → <choice>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<verse> → direct children → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<verse> → direct children → <dynam>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<verse> → direct children → <label>

**<labelAbbr>** A label on the pages following the first.

<verse> → direct children → <labelAbbr>

**<lb>** An empty formatting element that forces text to begin on a new line.

<verse> → model.lbLike → <lb>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<verse> → direct children → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<verse> → model.editLike → <subst>

**<syl>** Individual lyric syllable.

<verse> → model.sylLike → <syl>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<verse> → direct children → <tempo>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<verse> → direct children → <volta>

## Remarks

The **<lb>** element is allowed here in order to facilitate karaoke applications. The func attribute on **<lb>** may be used to distinguish true line endings from those of line groups for these applications.

## Declaration

## <volta>

Sung text for a specific iteration of a repeated section of music.

### Module

[MEI.lyrics](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<volta> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<volta> → att.volta.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<volta> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<volta> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<volta> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<volta> → att.common → att.linkin → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<volta> → att.volta.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<volta> → att.volta.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<volta> → att.volta.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<volta> → att.volta.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<volta> → att.volta.vis → att.typography → @fontweight

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<volta> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<volta> → [att.volta.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<volta> → [att.volta.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<volta> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<volta> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<volta> → [att.volta.vis](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<volta> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<volta> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<volta> → [att.volta.vis](#) → [att.visualOffset.vo](#) → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<volta> → att.volta.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<volta> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<volta> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<volta> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<volta> → att.volta.vis → att.xy → @y

## Member of

[model.rdgPart.music](#) Groups elements that may appear as part of a musical variant.

[model.editTransPart.music](#) Groups elements that may appear as part of editorial and transcription elements in music notation.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<volta> → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<volta> → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<volta> → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<volta> → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<volta> → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<volta> → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<volta> → model.rdgPart.music → model.rdgPart → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<volta> → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<volta> → model.rdgPart.music → model.rdgPart → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<volta> → elements having volta as direct children → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<volta> → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<volta> → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<volta> → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<volta> → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<volta> → model.editTransPart.music → model.editTransPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<volta> → elements having volta as direct children → <verse>

## May Contain

**<app>** (apparatus) – Contains one or more alternative encodings.

<volta> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<volta> → model.editLike → <choice>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<volta> → direct children → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<volta> → direct children → <dynam>

**<lb>** An empty formatting element that forces text to begin on a new line.

<volta> → model.lbLike → <lb>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<volta> → direct children → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<volta> → model.editLike → <subst>

**<syl>** Individual lyric syllable.

<volta> → model.sylLike → <syl>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<volta> → direct children → <tempo>

## Remarks

The volta element is intended for those cases where the musical notation is repeated, but the accompanying lyrics are not.

VERSION

## <watermark>

Contains a description of a watermark or similar device.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<watermark> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<watermark> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<watermark> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<watermark> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<watermark> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<watermark> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<watermark> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<watermark> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<watermark> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<watermark> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<watermark> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<watermark> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<watermark> → att.lang → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<watermark> → model.msInline → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<watermark> → model.msInline → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<watermark> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<watermark> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<watermark> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<watermark> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<watermark> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<watermark> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<watermark> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<watermark> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<watermark> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<watermark> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<watermark> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<watermark> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<watermark> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<watermark> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<watermark> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<watermark> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<watermark> → model.msInline → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<watermark> → model.msInline → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<watermark> → model.msInline → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<watermark> → model.msInline → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<watermark> → model.msInline → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<watermark> → model.msInline → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<watermark> → model.msInline → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<watermark> → model.msInline → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<watermark> → model.msInline → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<watermark> → model.msInline → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<watermark> → model.msInline → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<watermark> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<watermark> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<watermark> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<watermark> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<watermark> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<watermark> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<watermark> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<watermark> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<watermark> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<watermark> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<watermark> → model.msInline → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<watermark> → model.msInline → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<watermark> → model.msInline → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<watermark> → model.msInline → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<watermark> → model.msInline → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<watermark> → model.msInline → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<watermark> → model.msInline → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<watermark> → model.msInline → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<watermark> → model.msInline → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<watermark> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<watermark> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<watermark> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<watermark> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<watermark> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<watermark> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<watermark> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<watermark> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<watermark> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<watermark> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<watermark> → model.msInline → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<watermark> → model.msInline → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<watermark> → model.msInline → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<watermark> → model.msInline → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<watermark> → model.msInline → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<watermark> → model.msInline → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<watermark> → model.msInline → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<watermark> → model.msInline → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<watermark> → model.msInline → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<watermark> → model.msInline → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<watermark> → model.msInline → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<watermark> → model.msInline → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<watermark> → model.msInline → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<watermark> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<watermark> → model.msInline → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<watermark> → model.msInline → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<watermark> → model.msInline → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<watermark> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<watermark> → model.msInline → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<watermark> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<watermark> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <locusGrp>

**<name>** Proper noun or noun phrase.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<watermark> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<watermark> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<watermark> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The `facsimile` attribute may be used to record the location of the watermark in a facsimile image.

The model of this element is based on the `watermark` element of the Text Encoding Initiative (TEI).

## Constraints

The `watermark` element may only appear as a descendant of the `physDesc` element.

## Declaration

```

</elementSpec>
```

## <when>

Indicates a point in time either absolutely (using the absolute attribute), or relative to another when element (using the since, interval and inttype attributes).

### Referenced in chapters

[10.1.1 General Relationships Between Elements](#), [12.2.1 Overview](#)

### Module

[MEI.performance](#)

### Attributes

**@absolute (optional)** Provides an absolute value for the time point. Value is plain text.

<when> → direct children → @absolute

**@abstype (optional)** Specifies the kind of values used in the absolute attribute. Value conforms to [data.BETYPE](#).

<when> → direct children → @abstype

**@class (optional)** Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof (optional)** Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<when> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp (optional)** Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linkin](#) → @corresp

**@data (optional)** Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<when> → [att.dataPointing](#) → @data

**@follows (optional)** points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linkin](#) → @follows

**@interval (optional)** Specifies the time interval between this time point and the one designated by the since attribute. This attribute can only be interpreted meaningfully in conjunction with the inttype attribute. Value must either conform to **a decimal number no smaller than 1 or time**.

<when> → direct children → @interval

**@inttype (optional)** Specifies the kind of values used in the interval attribute. Value conforms to [data.BETYPE](#).

<when> → direct children → @inttype

**@label (optional)** Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<when> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<when> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linking](#) → @sameas

**@since** (*optional*) Identifies the reference point for determining the time of the current when element, which is obtained by adding the interval to the time of the reference point. The value should be the ID of another when element within the same parent element. If the since attribute is omitted and the absolute attribute is not specified, then the reference point is understood to be the immediately preceding when element. Value conforms to [data.URI](#).

<when> → direct children → @since

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<when> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<when> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<when> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<when> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(when isn't member of any model class)

**Contained By**

**<clip>** Defines a time segment of interest within a recording or within a digital audio or video file.

<when> → elements having when as direct children → <clip>

**<recording>** A recorded performance.

<when> → elements having when as direct children → <recording>

**May Contain**

**<extData>** Provides a container element for non-MEI data formats.

<when> → direct children → <extData>

**Remarks**

The data attribute may be used to reference one or more features that occur at this point in time.

The model of this element is based on the [when](#) element of the Text Encoding Initiative (TEI).

**Constraints**

@since must be present when @interval is used.

The value in @since should correspond to the @xml:id attribute of a when element.

When @interval contains an integer value, @inttype cannot be 'time'.

When @interval contains a time value, @inttype must be 'time'.

When @absolute is present, @abstype should be present or @betype should be present on an ancestor.

@since attribute should have content.

The value in @since should correspond to the @xml:id attribute of a when element.

**Declaration**

DEVELOPMENT  
VERSION

## <width>

Description of the horizontal size of an object.

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<width> → [att.bibl](#) → @analog

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<width> → [att.quantity](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<width> → [att.quantity](#) → [att.ranging](#) → @atmost

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<width> → [att.quantity](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<width> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<width> → [att.common](#) → [att.labelled](#) → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<width> → [att.quantity](#) → [att.ranging](#) → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<width> → [att.quantity](#) → [att.ranging](#) → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<width> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linking](#) → @prev

**@quantity** (*optional*) Numeric value capturing a measurement or count. Can only be interpreted in combination with the unit attribute. Value is a decimal number.

<width> → [att.quantity](#) → @quantity

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<width> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<width> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<width> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "**byte**" (*Byte*), "**char**" (*Character*), "**cm**" (*Centimeter*), "**deg**" (*Degree*), "**in**" (*Inch*), "**issue**" (*Serial issue*), "**ft**" (*Foot*), "**m**" (*Meter*), "**mm**" (*Millimeter*), "**page**" (*Page*), "**pc**" (*Pica*), "**pt**" (*Point*), "**px**" (*Pixel*), "**rad**" (*Radian*), "**record**" (*Record*), "**vol**" (*Serial volume*), "**vu**" (*MEI virtual unit*).

<width> → [att.quantity](#) → [att.measurement](#) → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<width> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<width> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<width> → att.lang → @xml:lang

## Member of

[model.dimLike](#) Groups elements which describe a measurement forming part of the physical dimensions of an object.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<width> → model.dimLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<width> → model.dimLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<width> → model.dimLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<width> → model.dimLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<width> → model.dimLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<width> → model.dimLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<width> → model.dimLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<width> → model.dimLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<width> → model.dimLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<width> → model.dimLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<width> → model.dimLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<width> → model.dimLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<width> → model.dimLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<width> → model.dimLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<width> → model.dimLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<width> → model.dimLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<width> → model.dimLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<width> → model.dimLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<width> → model.dimLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<width> → model.dimLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<width> → model.dimLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<width> → model.dimLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<width> → model.dimLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<width> → model.dimLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<width> → model.dimLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<width> → model.dimLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<width> → model.dimLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<width> → model.dimLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<width> → model.dimLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<width> → model.dimLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<width> → model.dimLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<width> → model.dimLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<width> → model.dimLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<width> → model.dimLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<width> → model.dimLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<width> → model.dimLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<width> → model.dimLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<width> → model.dimLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<width> → model.dimLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<width> → model.dimLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<width> → model.dimLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<width> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<width> → model.dimLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<width> → model.dimLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<width> → model.dimLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<width> → model.dimLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<width> → model.dimLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<width> → model.dimLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<width> → model.dimLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<width> → model.dimLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<width> → model.dimLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<width> → model.dimLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<width> → model.dimLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<width> → model.dimLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<width> → model.dimLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<width> → model.dimLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<width> → model.dimLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<width> → model.dimLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<width> → model.dimLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<width> → model.dimLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<width> → model.dimLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<width> → model.dimLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<width> → model.dimLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<width> → model.dimLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<width> → model.dimLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<width> → model.dimLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<width> → model.dimLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<width> → model.dimLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<width> → model.dimLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<width> → model.dimLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<width> → model.dimLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<width> → model.dimLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<width> → model.dimLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<width> → model.dimLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<width> → model.dimLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<width> → model.dimLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<width> → model.dimLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<width> → model.dimLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<width> → model.dimLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<width> → model.dimLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<width> → model.dimLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<width> → model.dimLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<width> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<width> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<width> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<width> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<width> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<width> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<width> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<width> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<width> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<width> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<width> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<width> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<width> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<width> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<width> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<width> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<width> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<width> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<width> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<width> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<width> → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<width> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<width> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<width> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<width> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<width> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<width> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<width> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<width> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<width> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<width> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<width> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<width> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<width> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<width> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<width> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<width> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<width> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<width> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<width> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<width> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<width> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<width> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<width> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<width> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.  
<width> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.  
<width> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.  
<width> → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

```
<elementSpec ident="width" module="MEI.shared">
  <desc xml:lang="en">Description of the horizontal size of an object.</desc>

    </rng:zeroOrMore>
  </content>
</elementSpec>
```

## <work>

Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

### Referenced in chapters

[3.3.1 Title Statement](#), [3.5.1 FRBR Entities in MEI](#), [3.5.2 Component Parts in FRBR](#), [3.6 Work Description](#),  
[3.6.12 Classification](#), [3.6.13 Work Relationships](#), [3.8.2 Including non-MEI Metadata in MEI files](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<work> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<work> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<work> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<work> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<work> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<work> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<work> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<work> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<work> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<work> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<work> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<work> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<work> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<work> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<work> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<work> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<work> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<work> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<work> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<work> → att.common → att.basic → att.id → @xml:id

## Member of

[model.workLike](#) Collects work-like elements.

## Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.  
 <work> → [model.workLike](#) → <componentList>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.  
 <work> → elements having work as direct children → <workList>

## May Contain

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<work> → [model.respLikePart](#) → <arranger>

**<audience>** Defines the class of user for which the work is intended, as defined by age group (e.g., children, young adults, adults, etc.), educational level (e.g., primary, secondary, etc.), or other categorization.

<work> → direct children → <audience>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<work> → [model.respLikePart](#) → <author>

**<biblList>** List of bibliographic references.

<work> → direct children → <biblList>

**<classification>** Groups information which describes the nature or topic of an entity.

<work> → direct children → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

<work> → direct children → <componentList>

**<composer>** The name of the creator of the intellectual content of a musical work.

<work> → [model.respLikePart](#) → <composer>

**<contents>** List of the material contained within a resource.

<work> → direct children → <contents>

**<context>** The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

<work> → direct children → <context>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<work> → [model.respLikePart](#) → <contributor>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<work> → direct children → <creation>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<work> → [model.respLikePart](#) → <editor>

**<expressionList>** Gathers bibliographic expression entities.

<work> → direct children → <expressionList>

**<extMeta>** Provides a container element for non-MEI metadata formats.

<work> → direct children → <extMeta>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<work> → [model.respLikePart](#) → <funder>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<work> → [model.headLike](#) → <head>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<work> → direct children → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<work> → [model.identifierLike](#) → <identifier>

**<incip>** The opening music and/or words of a musical or textual work.

<work> → model.workIdent → model.incpLike → <incip>

**<key>** Key captures information about tonal center and mode.

<work> → model.workIdent → <key>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

<work> → direct children → <langUsage>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<work> → model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<work> → model.respLikePart → <lyricist>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

<work> → model.workIdent → <mensuration>

**<meter>** Captures information about the time signature within bibliographic descriptions.

<work> → model.workIdent → <meter>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

<work> → direct children → <notesStmt>

**<otherChar>** Any characteristic that serves to differentiate a work or expression from another.

<work> → direct children → <otherChar>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

<work> → direct children → <perfDuration>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

<work> → direct children → <perfMedium>

**<relationList>** Gathers relation elements.

<work> → direct children → <relationList>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<work> → model.respLikePart → <sponsor>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<work> → model.workIdent → <tempo>

**<title>** Title of a bibliographic entity.

<work> → model.titleLike → <title>

## Remarks

The <perfDuration> element captures the *intended duration* of the work.

## <workList>

(work list) – Grouping mechanism for information describing non-bibliographic aspects of a text.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.4.1.5 Notes Statement](#), [3.6 Work Description](#), [3.6.6 Language Usage](#)

### Module

[MEI.header](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<workList> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linked](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<workList> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<workList> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<workList> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<workList> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<workList> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<workList> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.headerPart](#) Groups elements that may appear as part of the MEI metadata header.

## Contained By

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<workList> → elements having workList as direct children → <meiHead>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<workList> → [model.headLike](#) → <head>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<workList> → direct children → <work>

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<zone> → att.common → att.typed → att.classest → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<zone> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<zone> → att.common → att.linking → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<zone> → att.dataPointing → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<zone> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<zone> → att.common → att.labelled → @label

**@lrx** (*optional*) Indicates the lower-right corner x coordinate. Value is a positive integer, including 0.

<zone> → att.coordinated → @lrx

**@lry** (*optional*) Indicates the lower-left corner x coordinate. Value is a positive integer, including 0.

<zone> → att.coordinated → @lry

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<zone> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<zone> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<zone> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<zone> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<zone> → [att.common](#) → [att.responsibility](#) → @resp

**@rotate** Indicates the amount by which the contents of this element have been rotated clockwise or, if applicable, how the orientation of the element self should be interpreted, with respect to the normal orientation of the parent surface. The orientation is expressed in arc degrees. Value conforms to [data.DEGREES](#).

<zone> → [att.coordinated](#) → @rotate

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<zone> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<zone> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMOKEN](#), separated by spaces.

<zone> → [att.common](#) → [att.typed](#) → @type

**@ulx** (*optional*) Indicates the upper-left corner x coordinate. Value is a positive integer, including 0.

<zone> → [att.coordinated](#) → @ulx

**@uly** (*optional*) Indicates the upper-left corner y coordinate. Value is a positive integer, including 0.

<zone> → [att.coordinated](#) → @uly

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<zone> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<zone> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(zone isn't member of any model class)

## Contained By

**<graphic>** Indicates the location of an inline graphic.

<zone> → elements having zone as direct children → <graphic>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

<zone> → elements having zone as direct children → <surface>

## May Contain

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<zone> → model.figDescLike → <figDesc>

**<graphic>** Indicates the location of an inline graphic.

<zone> → model.graphicLike → <graphic>

## Remarks

Scalable Vector Graphics (SVG) markup may be used when allowed by the graphicLike model.

The model of this element is based on the [zone](#) element of the Text Encoding Initiative (TEI).

## Declaration

```

VERSION

# Model Class Specifications

## model.addressLike

Groups elements used to represent a postal address.

### Module

MEI.shared

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

### Members

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

model.addressLike → <address>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.addressLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.addressLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.addressLike → <actor>

**<add>** Marks an addition to the text.

model.addressLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.addressLike → <addName>

**<addrLine>** Single line of a postal address.

model.addressLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.addressLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.addressLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.addressLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.addressLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.addressLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.addressLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.addressLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.addressLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.addressLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.addressLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.addressLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.addressLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.addressLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.addressLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.addressLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.addressLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.addressLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.addressLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.addressLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.addressLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.addressLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.addressLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.addressLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.addressLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.addressLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.addressLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.addressLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.addressLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.addressLike → <desc>

**<dim>** Any single dimensional specification.

model.addressLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.addressLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.addressLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.addressLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.addressLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.addressLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.addressLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.addressLike → <epigraph>

**<event>** Contains a free-text event description.

model.addressLike → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.addressLike → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.addressLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.addressLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.addressLike → <extent>

**<f>** Single element of a figured bass indication.

model.addressLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.addressLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.addressLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.addressLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.addressLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.addressLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.addressLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.addressLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.addressLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.addressLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.addressLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.addressLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.addressLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.addressLike → <head>

**<height>** Description of the vertical size of an object.

model.addressLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.addressLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.addressLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.addressLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.addressLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.addressLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.addressLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.addressLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.addressLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.addressLike → <lem>

**<li>** Single item in a <list>.

model.addressLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.addressLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.addressLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.addressLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.addressLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.addressLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.addressLike → <nameLink>

**<num>** Numeric information in any form.

model.addressLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.addressLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.addressLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.addressLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.addressLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.addressLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.addressLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.addressLike → <persName>

**<pgFoot>** A running footer.

model.addressLike → <pgFoot>

**<pgHead>** A running header.

model.addressLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.addressLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.addressLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.addressLike → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

model.addressLike → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.addressLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.addressLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.addressLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.addressLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.addressLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.addressLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.addressLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.addressLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.addressLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.addressLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.addressLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.addressLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.addressLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.addressLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.addressLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.addressLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.addressLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.addressLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.addressLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.addressLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.addressLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.addressLike → <sic>

**<signifLet>** Significantive letter(s).

model.addressLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.addressLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.addressLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.addressLike → <sponsor>

**<stack>** An inline table with a single column.

model.addressLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.addressLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.addressLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.addressLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.addressLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.addressLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.addressLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.addressLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.addressLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.addressLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.addressLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.addressLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.addressLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.addressLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.addressLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.addressLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.addressLike → <width>

## Declaration

```
<classSpec ident="model.addressLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to represent a postal address.</desc>
  <classes>

```

## model.addressPart

Groups elements used as part of a physical address.

### Module

[MEI.namesdates](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

#### Members

[model.geogNamePart](#) Groups elements which form part of a geographic name.

model.addressPart → model.addressPart

[\*\*<postBox>\*\*](#) (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

model.addressPart → <postBox>

[\*\*<postCode>\*\*](#) (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

model.addressPart → <postCode>

[\*\*<street>\*\*](#) full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.addressPart → <street>

#### Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.addressPart → <abbr>

[\*\*<acquisition>\*\*](#) Records information concerning the process by which an item was acquired by the holding institution.

model.addressPart → <acquisition>

[\*\*<actor>\*\*](#) Name of an actor appearing within a cast list.

model.addressPart → <actor>

[\*\*<add>\*\*](#) Marks an addition to the text.

model.addressPart → <add>

[\*\*<addName>\*\*](#) Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.addressPart → <addName>

[\*\*<addrLine>\*\*](#) Single line of a postal address.

model.addressPart → <addrLine>

[\*\*<address>\*\*](#) Contains a postal address, for example of a publisher, an organization, or an individual.

model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.addressPart → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.addressPart → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.addressPart → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.addressPart → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.addressPart → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.addressPart → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.addressPart → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.addressPart → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.addressPart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.addressPart → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.addressPart → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.addressPart → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.addressPart → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.addressPart → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.addressPart → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.addressPart → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.addressPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.addressPart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.addressPart → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.addressPart → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.addressPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.addressPart → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.addressPart → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.addressPart → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.addressPart → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.addressPart → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.addressPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.addressPart → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.addressPart → <desc>

**<dim>** Any single dimensional specification.

model.addressPart → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.addressPart → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.addressPart → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.addressPart → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.addressPart → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.addressPart → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.addressPart → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.addressPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.addressPart → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.addressPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.addressPart → <extent>

**<f>** Single element of a figured bass indication.

model.addressPart → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.addressPart → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.addressPart → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.addressPart → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.addressPart → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.addressPart → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.addressPart → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.addressPart → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.addressPart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.addressPart → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.addressPart → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.addressPart → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.addressPart → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.addressPart → <head>

**<height>** Description of the vertical size of an object.

model.addressPart → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.addressPart → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.addressPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.addressPart → <imprint>

**<l>** Contains a single line of text within a line group.

model.addressPart → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.addressPart → <label>

**<labelAbbr>** A label on the pages following the first.

model.addressPart → <labelAbbr>

**<language>** Description of a language used in the document.

model.addressPart → <language>

**<layoutDesc>** Collects layout descriptions.

model.addressPart → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.addressPart → <lem>

**<li>** Single item in a <list>.

model.addressPart → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.addressPart → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.addressPart → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.addressPart → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.addressPart → <metaMark>

**<name>** Proper noun or noun phrase.

model.addressPart → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.addressPart → <nameLink>

**<num>** Numeric information in any form.

model.addressPart → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.addressPart → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.addressPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.addressPart → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.addressPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.addressPart → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.addressPart → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.addressPart → <persName>

**<pgFoot>** A running footer.

model.addressPart → <pgFoot>

**<pgHead>** A running header.

model.addressPart → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.addressPart → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.addressPart → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.addressPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.addressPart → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.addressPart → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.addressPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.addressPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.addressPart → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.addressPart → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.addressPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.addressPart → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.addressPart → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.addressPart → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.addressPart → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.addressPart → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.addressPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.addressPart → <role>

**<roleDesc>** Describes a character's role in a drama.

model.addressPart → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.addressPart → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.addressPart → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.addressPart → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.addressPart → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.addressPart → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.addressPart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.addressPart → <sic>

**<signifLet>** Significantive letter(s).

model.addressPart → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.addressPart → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.addressPart → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.addressPart → <sponsor>

**<stack>** An inline table with a single column.

model.addressPart → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.addressPart → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.addressPart → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.addressPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.addressPart → <supportDesc>

**<syl>** Individual lyric syllable.

model.addressPart → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.addressPart → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.addressPart → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.addressPart → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.addressPart → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.addressPart → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.addressPart → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.addressPart → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.addressPart → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.addressPart → <unclear>

**<width>** Description of the horizontal size of an object.

model.addressPart → <width>

## Declaration

```
<classSpec ident="model.addressPart" module="MEI.namesdates" type="model">
  <desc xml:lang="en">Groups elements used as part of a physical address.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>
```

## model.annotLike

Groups annotation-like elements.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

#### Members

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

`model.annotLike` → `<annot>`

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.annotLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

`model.annotLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.

`model.annotLike` → `<actor>`

**<add>** Marks an addition to the text.

`model.annotLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.annotLike` → `<addName>`

**<addrLine>** Single line of a postal address.

`model.annotLike` → `<addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.annotLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

`model.annotLike` → `<annot>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

`model.annotLike` → `<arranger>`

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

`model.annotLike` → `<attacca>`

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.annotLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.annotLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.annotLike → <biblScope>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

model.annotLike → <biblStruct>

**<bindingDesc>** Describes the present and former bindings of an item.

model.annotLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.annotLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.annotLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.annotLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.annotLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.annotLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.annotLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.annotLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.annotLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.annotLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.annotLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.annotLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.annotLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.annotLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.annotLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.annotLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.annotLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.annotLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.annotLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.annotLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.annotLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.annotLike → <desc>

**<dim>** Any single dimensional specification.

model.annotLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.annotLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.annotLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.annotLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.annotLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.annotLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.annotLike → <editor>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.annotLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.annotLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.annotLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.annotLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.annotLike → <extent>

**<f>** Single element of a figured bass indication.

model.annotLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.annotLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.annotLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.annotLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.annotLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.annotLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.annotLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.annotLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.annotLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.annotLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.annotLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.annotLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.annotLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.annotLike → <head>

**<height>** Description of the vertical size of an object.

model.annotLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.annotLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.annotLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.annotLike → <imprint>

**<incip>** The opening music and/or words of a musical or textual work.

model.annotLike → <incip>

**<l>** Contains a single line of text within a line group.

model.annotLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.annotLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.annotLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.annotLike → <language>

**<layer>** An independent stream of events on a staff.

model.annotLike → <layer>

**<layoutDesc>** Collects layout descriptions.

model.annotLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.annotLike → <lem>

**<li>** Single item in a <list>.

model.annotLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.annotLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.annotLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.annotLike → <lyricist>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.annotLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.annotLike → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

model.annotLike → <monogr>

**<name>** Proper noun or noun phrase.

model.annotLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.annotLike → <nameLink>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

model.annotLike → <notesStmt>

**<num>** Numeric information in any form.

model.annotLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.annotLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.annotLike → <oStaff>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.annotLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.annotLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.annotLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.annotLike → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.annotLike → <part>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

model.annotLike → <perfMedium>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.annotLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.annotLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.annotLike → <persName>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.annotLike → <pgDesc>

**<pgFoot>** A running footer.

model.annotLike → <pgFoot>

**<pgHead>** A running header.

model.annotLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.annotLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.annotLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.annotLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.annotLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.annotLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.annotLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.annotLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.annotLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.annotLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.annotLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.annotLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.annotLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.annotLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.annotLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.annotLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.annotLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.annotLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.annotLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.annotLike → <roleName>

**<score>** Full score view of the musical content.

model.annotLike → <score>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.annotLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.annotLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.annotLike → <sealDesc>

**<section>** Segment of music data.

model.annotLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.annotLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.annotLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.annotLike → <sic>

**<signifLet>** Significantive letter(s).

model.annotLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.annotLike → <soundChan>

**<sp>** Contains an individual speech in a performance text.

model.annotLike → <sp>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.annotLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.annotLike → <sponsor>

**<stack>** An inline table with a single column.

model.annotLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.annotLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.annotLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.annotLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.annotLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.annotLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.annotLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.annotLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.annotLike → <syllable>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

model.annotLike → <symbolDef>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.annotLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.annotLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.annotLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.annotLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.annotLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.annotLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.annotLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.annotLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.annotLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.annotLike → <width>

## Declaration

```
<classSpec ident="model.annotLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups annotation-like elements.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>
```

## model.appLike

Groups elements that contain a critical apparatus entry.

### Module

[MEI.critapp](#)

### Attributes

#### Member of

(model.appLike isn't member of any model class)

#### Members

**<app>** (apparatus) – Contains one or more alternative encodings.

model.appLike → <app>

#### Contained By

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.appLike → <beam>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

model.appLike → <chord>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.appLike → <ending>

**<graceGrp>** A container for a sequence of grace notes.

model.appLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

model.appLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.appLike → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.appLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.appLike → <measure>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

model.appLike → <nc>

**<ncGrp>** Collection of one or more neume components.

model.appLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

model.appLike → <neume>

**<note>** A single pitched event.

model.appLike → <note>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.appLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.appLike → <oStaff>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.appLike → <part>

**<pgFoot>** A running footer.

model.appLike → <pgFoot>

**<pgHead>** A running header.

model.appLike → <pgHead>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.appLike → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

model.appLike → <refrain>

**<rest>** A non-sounding event found in the source being transcribed.

model.appLike → <rest>

**<score>** Full score view of the musical content.

model.appLike → <score>

**<section>** Segment of music data.

model.appLike → <section>

**<sp>** Contains an individual speech in a performance text.

model.appLike → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.appLike → <staff>

**<syl>** Individual lyric syllable.

model.appLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.appLike → <syllable>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.appLike → <tuplet>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

model.appLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

model.appLike → <volta>

**Declaration**

```
<classSpec ident="model.appLike" module="MEI.critapp" type="model">
  <desc xml:lang="en">Groups elements that contain a critical apparatus entry.</desc>
</classSpec>
```

DEVELOPMENT  
VERSION

## model.backLike

Groups elements that may contain back matter.

### Module

[MEI.text](#)

### Attributes

### Member of

(model.backLike isn't member of any model class)

### Members

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.  
model.backLike → <back>

### Contained By

### Declaration

```
<classSpec ident="model.backLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups elements that may contain back matter.</desc>
  <classes>
    <memberOf key="macro.musicPart"/>
  </classes>
</classSpec>
```

## model.biblLike

Groups elements containing a bibliographic description.

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

### Members

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

`model.biblLike` → `<bibl>`

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

`model.biblLike` → `<biblStruct>`

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.biblLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

`model.biblLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.

`model.biblLike` → `<actor>`

**<add>** Marks an addition to the text.

`model.biblLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.biblLike` → `<addName>`

**<addrLine>** Single line of a postal address.

`model.biblLike` → `<addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.biblLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

`model.biblLike` → `<annot>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.biblLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.biblLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.biblLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

model.biblLike → <biblList>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.biblLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.biblLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.biblLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.biblLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.biblLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.biblLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.biblLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.biblLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.biblLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.biblLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.biblLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.biblLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.biblLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.biblLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.biblLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.biblLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.biblLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.biblLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.biblLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.biblLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.biblLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.biblLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.biblLike → <desc>

**<dim>** Any single dimensional specification.

model.biblLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.biblLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.biblLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.biblLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.biblLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.biblLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.biblLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.biblLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.biblLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.biblLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.biblLike → <extent>

**<f>** Single element of a figured bass indication.

model.biblLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.biblLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.biblLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.biblLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.biblLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.biblLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.biblLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.biblLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.biblLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.biblLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.biblLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.biblLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.biblLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.biblLike → <head>

**<height>** Description of the vertical size of an object.

model.biblLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.biblLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.biblLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.biblLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.biblLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.biblLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.biblLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.biblLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.biblLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.biblLike → <lem>

**<li>** Single item in a <list>.

model.biblLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.biblLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.biblLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.biblLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.biblLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.biblLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.biblLike → <nameLink>

**<num>** Numeric information in any form.

model.biblLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.biblLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.biblLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.biblLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.biblLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.biblLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.biblLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.biblLike → <persName>

**<pgFoot>** A running footer.

model.biblLike → <pgFoot>

**<pgHead>** A running header.

model.biblLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.biblLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.biblLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.biblLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.biblLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.biblLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.biblLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.biblLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.biblLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.biblLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.biblLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.biblLike → <region>

**<relatedItem>** Contains or references another bibliographic item which is related to the present one.

model.biblLike → <relatedItem>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.biblLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.biblLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.biblLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.biblLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.biblLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.biblLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.biblLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.biblLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.biblLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.biblLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.biblLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.biblLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.biblLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.biblLike → <sic>

**<signifLet>** Significantive letter(s).

model.biblLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.biblLike → <soundChan>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

model.biblLike → <source>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.biblLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.biblLike → <sponsor>

**<stack>** An inline table with a single column.

model.biblLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.biblLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.biblLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.biblLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.biblLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.biblLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.biblLike → <syl>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

model.biblLike → <taxonomy>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.biblLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.biblLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.biblLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.biblLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.biblLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.biblLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.biblLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.biblLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.biblLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.biblLike → <width>

## Declaration

```

## model.biblPart

Groups elements that may appear as part of a bibliographic description.

### Module

MEI.shared

### Attributes

#### Member of

(model.biblPart isn't member of any model class)

#### Members

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.biblPart → <biblScope>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.biblPart → <creation>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.biblPart → <genre>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.biblPart → <imprint>

**model.editionLike** Groups elements containing bibliographic edition information.

model.biblPart → model.biblPart

**model.respLike** Groups elements that are used to indicate intellectual or other significant responsibility, for example within a bibliographic citation.

model.biblPart → model.biblPart

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

model.biblPart → <perfDuration>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

model.biblPart → <physLoc>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.biblPart → <recipient>

**<relatedItem>** Contains or references another bibliographic item which is related to the present one.

model.biblPart → <relatedItem>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.biblPart → <series>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.biblPart → <textLang>

#### Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.biblPart → <bibl>

#### Declaration

```
<classSpec ident="model.biblPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a bibliographic
  description.</desc>
</classSpec>
```

## model.bifoliumLike

Collects bifoliumlike elements.

### Module

MEI.header

### Attributes

### Member of

(model.bifoliumLike isn't member of any model class)

### Members

**<bifolium>** Describes a folded sheet of paper.

model.bifoliumLike → <bifolium>

### Contained By

**<bifolium>** Describes a folded sheet of paper.

model.bifoliumLike → <bifolium>

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

model.bifoliumLike → <cutout>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

model.bifoliumLike → <foliaDesc>

**<patch>** Describes a physical writing surface attached to the original document.

model.bifoliumLike → <patch>

### Declaration

```
<classSpec ident="model.bifoliumLike" type="model" module="MEI.header">
  <desc xml:lang="en">Collects bifoliumlike elements.</desc>
</classSpec>
```

## model.captionLike

Groups elements that contain the text of a caption or other text displayed along with a figure.

### Module

MEI.shared

### Attributes

### Member of

(model.captionLike isn't member of any model class)

### Members

**<caption>** A label which accompanies an illustration or a table.

model.captionLike → <caption>

### Contained By

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

model.captionLike → <fig>

**<table>** Contains text displayed in tabular form.

model.captionLike → <table>

### Declaration

```
<classSpec ident="model.captionLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that contain the text of a caption or other text
  displayed along with a figure.</desc>
</classSpec>
```

## model.choicePart

Groups elements that may appear as part of the content of a choice element.

### Referenced in chapters

[11.2 Editorial Markup](#)

### Module

[MEI.edittrans](#)

### Attributes

### Member of

(model.choicePart isn't member of any model class)

### Members

**<corr>** Contains the correct form of an apparent erroneous passage.

model.choicePart → <corr>

**model.editLike** Groups elements for editorial interventions that may be useful both in transcribing and in authoring processes.

model.choicePart → model.choicePart

**model.editorialLike** Groups editorial intervention elements.

model.choicePart → model.choicePart

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.choicePart → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.choicePart → <reg>

**<sic>** Contains apparently incorrect or inaccurate material.

model.choicePart → <sic>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.choicePart → <unclear>

### Contained By

**<choice>** Groups a number of alternative encodings for the same point in a text.

model.choicePart → <choice>

### Declaration

```
<classSpec ident="model.choicePart" module="MEI.edittrans" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of the content of a choice
  element.</desc>
</classSpec>
```

## model.chordPart

Groups elements that may appear as part of the content of a chord element.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.chordPart isn't member of any model class)

### Members

**<artic>** An indication of how to play a note or chord.

model.chordPart → <artic>

**<note>** A single pitched event.

model.chordPart → <note>

### Contained By

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

model.chordPart → <chord>

### Declaration

```
<classSpec ident="model.chordPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of the content of a chord
  element.</desc>
</classSpec>
```

## model.chordTableLike

Groups elements that group playable chord definitions.

### Module

[MEI.harmony](#)

### Attributes

### Member of

(model.chordTableLike isn't member of any model class)

### Members

**<chordTable>** Chord/tablature look-up table.

model.chordTableLike → <chordTable>

### Contained By

**<scoreDef>** Container for score meta-information.

model.chordTableLike → <scoreDef>

### Declaration

```
<classSpec ident="model.chordTableLike" module="MEI.harmony" type="model">
  <desc xml:lang="en">Groups elements that group playable chord definitions.</desc>
</classSpec>
```

## model.controlEventLike

Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

### Referenced in chapters

[4.2.1 The Role of the Measure Element](#), [4.2.6 Timestamps and Durations](#), [4.3.3 Dynamics in CMN](#), [4.3.4 Tuplets](#), [4.3.5.1 Arpeggio and Glissando](#), [4.3.5.2 Bend](#), [4.3.6.4 Fingering](#), [4.3.9.1 Tempo changes and other directives](#)

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.measurePart](#) Groups elements that may appear within a CMN measure.  
[model.staffPart.mensural](#) Groups elements that are components of a staff in the mensural repertoire.  
[model.syllablePart](#) Groups elements that may appear as part of the content of a syllable.  
[model.rdgPart.music](#) Groups elements that may appear as part of a musical variant.  
[model.editTransPart.music](#) Groups elements that may appear as part of editorial and transcription elements in music notation.

### Members

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.  
`model.controlEventLike → <bend>`

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.  
`model.controlEventLike → <caesura>`

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.  
`model.controlEventLike → <cpMark>`

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like [<tempo>](#), [<dynam>](#) or [<repeatMark>](#).  
`model.controlEventLike → <dir>`

**<dynam>** Indication of the volume of a note, phrase, or section of music.  
`model.controlEventLike → <dynam>`

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.  
`model.controlEventLike → <gliss>`

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as [<add>](#), [<del>](#), etc.  
`model.controlEventLike → <metaMark>`

**model.controlEventLike.harmony** Groups harmonic elements that function as control events; that is, those events that modify or otherwise depend on the existence of notated events.

model.controlEventLike → model.controlEventLike

**model.fingeringLike** Groups elements that capture performance instructions regarding the use of the fingers of the hand (or a subset of them).

model.controlEventLike → model.controlEventLike

**model.stageDirLike** Groups elements containing stage directions in performance texts.

model.controlEventLike → model.controlEventLike

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.controlEventLike → <ornam>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

model.controlEventLike → <phrase>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.controlEventLike → <repeatMark>

**<sp>** Contains an individual speech in a performance text.

model.controlEventLike → <sp>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.controlEventLike → <tempo>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.controlEventLike → <abbr>

**<add>** Marks an addition to the text.

model.controlEventLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.controlEventLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.controlEventLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.controlEventLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.controlEventLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.controlEventLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.controlEventLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.controlEventLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.controlEventLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.controlEventLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.controlEventLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.controlEventLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.controlEventLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.controlEventLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.controlEventLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.controlEventLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.controlEventLike → <unclear>

## Declaration

```

<classSpec ident="model.controlEventLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.</desc>
  <classes>

    <memberOf key="model.editTransPart.music"/>
  </classes>
</classSpec>

```

## model.controlEventLike.cmn

Groups control events that appear in CMN.

### Referenced in chapters

[4.3.5.1 Arpeggio and Glissando](#), [4.3.5.4 Fermata](#), [4.3.6.1 Breath Marks](#), [4.3.6.2 Harp Pedals](#), [4.3.6.3 Piano Pedal](#), [4.3.9.2 Rehearsal marks](#)

### Module

[MEI.cmn](#)

### Attributes

#### Member of

[model.measurePart](#) Groups elements that may appear within a CMN measure.

[model.rdgPart.music](#) Groups elements that may appear as part of a musical variant.

[model.editTransPart.music](#) Groups elements that may appear as part of editorial and transcription elements in music notation.

#### Members

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

model.controlEventLike.cmn → <arpeg>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.controlEventLike.cmn → <attacca>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

model.controlEventLike.cmn → <beamSpan>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

model.controlEventLike.cmn → <breath>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

model.controlEventLike.cmn → <fermata>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

model.controlEventLike.cmn → <hairpin>

**<harpPedal>** Harp pedal diagram.

model.controlEventLike.cmn → <harpPedal>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

model.controlEventLike.cmn → <lv>

**model.ornamentLike.cmn** Groups CMN ornament elements.

model.controlEventLike.cmn → model.ornamentLike.cmn

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.controlEventLike.cmn → <octave>

**<pedal>** Piano pedal mark.

model.controlEventLike.cmn → <pedal>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

model.controlEventLike.cmn → <reh>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

model.controlEventLike.cmn → <slur>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

model.controlEventLike.cmn → <tie>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

model.controlEventLike.cmn → <tupletSpan>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.controlEventLike.cmn → <abbr>

**<add>** Marks an addition to the text.

model.controlEventLike.cmn → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.controlEventLike.cmn → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.controlEventLike.cmn → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.controlEventLike.cmn → <del>

**<expan>** Contains the expansion of an abbreviation.

model.controlEventLike.cmn → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.controlEventLike.cmn → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.controlEventLike.cmn → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.controlEventLike.cmn → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.controlEventLike.cmn → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.controlEventLike.cmn → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.controlEventLike.cmn → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.controlEventLike.cmn → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.controlEventLike.cmn → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.controlEventLike.cmn → <unclear>

## Declaration

```

# model.controlEventLike.harmony

Groups harmonic elements that function as control events; that is, those events that modify or otherwise depend on the existence of notated events.

## Module

[MEI.harmony](#)

## Attributes

### Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

### Members

**[model.harmLike](#)** Groups elements that record indications of harmony.

model.controlEventLike.harmony → model.controlEventLike.harmony

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.controlEventLike.harmony → <abbr>

**<add>** Marks an addition to the text.

model.controlEventLike.harmony → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.controlEventLike.harmony → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.controlEventLike.harmony → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.controlEventLike.harmony → <del>

**<expan>** Contains the expansion of an abbreviation.

model.controlEventLike.harmony → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.controlEventLike.harmony → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.controlEventLike.harmony → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.controlEventLike.harmony → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.controlEventLike.harmony → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.controlEventLike.harmony → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.controlEventLike.harmony → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.controlEventLike.harmony → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.controlEventLike.harmony → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.controlEventLike.harmony → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.controlEventLike.harmony → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.controlEventLike.harmony → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.controlEventLike.harmony → <unclear>

## Declaration

  <desc xml:lang="en">Groups harmonic elements that function as control events; that is,
  those events that modify or otherwise depend on the existence of notated events.</desc>
  <classes>
    <memberOf key="model.controlEventLike"/>
  </classes>
</classSpec>
```

# model.dateLike

Groups elements containing date expressions.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Members

**<date>** A string identifying a point in time or the time period between two such points.

model.dateLike → <date>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.dateLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.dateLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.dateLike → <actor>

**<add>** Marks an addition to the text.

model.dateLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.dateLike → <addName>

**<addrLine>** Single line of a postal address.

model.dateLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.dateLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.dateLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.dateLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.dateLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.dateLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.dateLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.dateLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.dateLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.dateLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.dateLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.dateLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.dateLike → <caption>

**<change>** Individual change within the revision description.

model.dateLike → <change>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.dateLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.dateLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.dateLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.dateLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.dateLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.dateLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.dateLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.dateLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.dateLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.dateLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.dateLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.dateLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.dateLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.dateLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.dateLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.dateLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.dateLike → <desc>

**<dim>** Any single dimensional specification.

model.dateLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.dateLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.dateLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.dateLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.dateLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.dateLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.dateLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.dateLike → <epigraph>

**<event>** Contains a free-text event description.

model.dateLike → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.dateLike → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.dateLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.dateLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.dateLike → <extent>

**<f>** Single element of a figured bass indication.

model.dateLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.dateLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.dateLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.dateLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.dateLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.dateLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.dateLike → <genName>

**<genState>** Describes a distinctive state in the textual development of a work.

model.dateLike → <genState>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.dateLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.dateLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.dateLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.dateLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.dateLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.dateLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.dateLike → <head>

**<height>** Description of the vertical size of an object.

model.dateLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.dateLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.dateLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.dateLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.dateLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.dateLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.dateLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.dateLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.dateLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.dateLike → <lem>

**<li>** Single item in a <list>.

model.dateLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.dateLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.dateLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.dateLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.dateLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.dateLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.dateLike → <nameLink>

**<num>** Numeric information in any form.

model.dateLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.dateLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.dateLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.dateLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.dateLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.dateLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.dateLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.dateLike → <persName>

**<pgFoot>** A running footer.

model.dateLike → <pgFoot>

**<pgHead>** A running header.

model.dateLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.dateLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.dateLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.dateLike → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

model.dateLike → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.dateLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.dateLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.dateLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.dateLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.dateLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.dateLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.dateLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.dateLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.dateLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.dateLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.dateLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.dateLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.dateLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.dateLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.dateLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.dateLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.dateLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.dateLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.dateLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.dateLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.dateLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.dateLike → <sic>

**<signifLet>** Significantive letter(s).

model.dateLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.dateLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.dateLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.dateLike → <sponsor>

**<stack>** An inline table with a single column.

model.dateLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.dateLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.dateLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.dateLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.dateLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.dateLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.dateLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.dateLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.dateLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.dateLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.dateLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.dateLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.dateLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.dateLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.dateLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.dateLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.dateLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.dateLike → <width>

# model.dimLike

Groups elements which describe a measurement forming part of the physical dimensions of an object.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

### Members

**<depth>** Description of a measurement taken through a three-dimensional object.

`model.dimLike` → `<depth>`

**<dim>** Any single dimensional specification.

`model.dimLike` → `<dim>`

**<height>** Description of the vertical size of an object.

`model.dimLike` → `<height>`

**<width>** Description of the horizontal size of an object.

`model.dimLike` → `<width>`

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.dimLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

`model.dimLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.

`model.dimLike` → `<actor>`

**<add>** Marks an addition to the text.

`model.dimLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.dimLike` → `<addName>`

**<addrLine>** Single line of a postal address.

`model.dimLike` → `<addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.dimLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.dimLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.dimLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.dimLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.dimLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.dimLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.dimLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.dimLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.dimLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.dimLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.dimLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.dimLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.dimLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.dimLike → <contentitem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.dimLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.dimLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.dimLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.dimLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.dimLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.dimLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.dimLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.dimLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.dimLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.dimLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.dimLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.dimLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.dimLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.dimLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.dimLike → <desc>

**<dim>** Any single dimensional specification.

model.dimLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**,

**<dynam>** or **<repeatMark>**.

model.dimLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.dimLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.dimLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.dimLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.dimLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.dimLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.dimLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.dimLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.dimLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.dimLike → <extent>

**<f>** Single element of a figured bass indication.

model.dimLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.dimLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.dimLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.dimLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.dimLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.dimLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.dimLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.dimLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.dimLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.dimLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.dimLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.dimLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.dimLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.dimLike → <head>

**<height>** Description of the vertical size of an object.

model.dimLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.dimLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.dimLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.dimLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.dimLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.dimLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.dimLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.dimLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.dimLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.dimLike → <lem>

**<li>** Single item in a <list>.

model.dimLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.dimLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.dimLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.dimLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.dimLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.dimLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.dimLike → <nameLink>

**<num>** Numeric information in any form.

model.dimLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.dimLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.dimLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.dimLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.dimLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.dimLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.dimLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.dimLike → <persName>

**<pgFoot>** A running footer.

model.dimLike → <pgFoot>

**<pgHead>** A running header.

model.dimLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.dimLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.dimLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.dimLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.dimLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.dimLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.dimLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.dimLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.dimLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.dimLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.dimLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.dimLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.dimLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.dimLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.dimLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.dimLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.dimLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.dimLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.dimLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.dimLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.dimLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.dimLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.dimLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.dimLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.dimLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.dimLike → <sic>

**<signifLet>** Significantive letter(s).

model.dimLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.dimLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.dimLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.dimLike → <sponsor>

**<stack>** An inline table with a single column.

model.dimLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.dimLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.dimLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.dimLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.dimLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.dimLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.dimLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.dimLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.dimLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.dimLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.dimLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.dimLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.dimLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.dimLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.dimLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.dimLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.dimLike → <width>

## Declaration

```

<classSpec ident="model.dimLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements which describe a measurement forming part of the
  physical dimensions of an object.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>

```

## model.divLike

Groups elements used to represent generic structural divisions of text.

### Module

[MEI.text](#)

### Attributes

### Member of

(model.divLike isn't member of any model class)

### Members

**<div>** Major structural division of text, such as a preface, chapter or section.

model.divLike → <div>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.divLike → <abbr>

**<add>** Marks an addition to the text.

model.divLike → <add>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.divLike → <back>

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

model.divLike → <body>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.divLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.divLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.divLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.divLike → <div>

**<expan>** Contains the expansion of an abbreviation.

model.divLike → <expan>

**<front>** Bundles prefatory text found before the start of the musical text.

model.divLike → <front>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.divLike → <history>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.divLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.divLike → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.divLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.divLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.divLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.divLike → <restore>

**<score>** Full score view of the musical content.

model.divLike → <score>

**<section>** Segment of music data.

model.divLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.divLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.divLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.divLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.divLike → <unclear>

## Declaration

```
<classSpec ident="model.divLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups elements used to represent generic structural divisions of
  text.</desc>
</classSpec>
```

## model.editLike

Groups elements for editorial interventions that may be useful both in transcribing and in authoring processes.

### Referenced in chapters

[11.2 Editorial Markup](#)

### Module

[MEI.edittrans](#)

### Attributes

### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

### Members

**<choice>** Groups a number of alternative encodings for the same point in a text.

model.editLike → <choice>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

model.editLike → <subst>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.editLike → <abbr>

**<add>** Marks an addition to the text.

model.editLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.editLike → <addName>

**<addrLine>** Single line of a postal address.

model.editLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.editLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.editLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.editLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.editLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.editLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

model.editLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

model.editLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

model.editLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.editLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.editLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.editLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.editLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

model.editLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.editLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.editLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.editLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.editLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.editLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.editLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.editLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.editLike → <expan>

**<f>** Single element of a figured bass indication.

model.editLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.editLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

model.editLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

model.editLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

model.editLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

model.editLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.editLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.editLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.editLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

model.editLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.editLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.editLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.editLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.editLike → <imprimatur>

**<l>** Contains a single line of text within a line group.

model.editLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.editLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.editLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

model.editLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.editLike → <lem>

**<li>** Single item in a <list>.

model.editLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.editLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.editLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.editLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.editLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.editLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

model.editLike → <nc>

**<ncGrp>** Collection of one or more neume components.

model.editLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

model.editLike → <neume>

**<note>** A single pitched event.

model.editLike → <note>

**<num>** Numeric information in any form.

model.editLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.editLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.editLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.editLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.editLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.editLike → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.editLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.editLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.editLike → <persName>

**<pgFoot>** A running footer.

model.editLike → <pgFoot>

**<pgHead>** A running header.

model.editLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

model.editLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

model.editLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.editLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.editLike → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

model.editLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.editLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.editLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.editLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.editLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

model.editLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.editLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.editLike → <roleName>

**<score>** Full score view of the musical content.

model.editLike → <score>

**<section>** Segment of music data.

model.editLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.editLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.editLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.editLike → <sic>

**<signifLet>** Significantive letter(s).

model.editLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.editLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.editLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.editLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.editLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.editLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.editLike → <supplied>

**<syl>** Individual lyric syllable.

model.editLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.editLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.editLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.editLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.editLike → <th>

**<title>** Title of a bibliographic entity.

model.editLike → <title>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

model.editLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.editLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.editLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

model.editLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

model.editLike → <volta>

```

## model.editionLike

Groups elements containing bibliographic edition information.

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

### Members

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.editionLike → <edition>

### Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.editionLike → <bibl>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

model.editionLike → <editionStmt>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

model.editionLike → <monogr>

**<titlePage>** Contains a transcription of the title page of a text.

model.editionLike → <titlePage>

### Declaration

    <memberOf key="model.titlePagePart"/>
  </classes>
</classSpec>
```

## model.editorialDeclPart

Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

### Module

[MEI.header](#)

### Attributes

#### Member of

(model.editorialDeclPart isn't member of any model class)

#### Members

**<correction>** States how and under what circumstances corrections have been made in the text.

model.editorialDeclPart → <correction>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

model.editorialDeclPart → <interpretation>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

model.editorialDeclPart → <normalization>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

model.editorialDeclPart → <segmentation>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

model.editorialDeclPart → <stdVals>

#### Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

model.editorialDeclPart → <editorialDecl>

#### Declaration

  <desc xml:lang="en">Groups elements that may appear as part of a description of the
  editorial process applied to the encoding of notation.</desc>
</classSpec>
```

## model.editorialLike

Groups editorial intervention elements.

### Referenced in chapters

[11.2 Editorial Markup](#)

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

### Members

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.editorialLike → <abbr>

**<expan>** Contains the expansion of an abbreviation.

model.editorialLike → <expan>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.editorialLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.editorialLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.editorialLike → <actor>

**<add>** Marks an addition to the text.

model.editorialLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.editorialLike → <addName>

**<addrLine>** Single line of a postal address.

model.editorialLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.editorialLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.editorialLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.editorialLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.editorialLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.editorialLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.editorialLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.editorialLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.editorialLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.editorialLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.editorialLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.editorialLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.editorialLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

model.editorialLike → <choice>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.editorialLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.editorialLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.editorialLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.editorialLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.editorialLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.editorialLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.editorialLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.editorialLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.editorialLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.editorialLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.editorialLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.editorialLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.editorialLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.editorialLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.editorialLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.editorialLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.editorialLike → <desc>

**<dim>** Any single dimensional specification.

model.editorialLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.editorialLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.editorialLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.editorialLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.editorialLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.editorialLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.editorialLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.editorialLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.editorialLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.editorialLike → <extent>

**<f>** Single element of a figured bass indication.

model.editorialLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.editorialLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.editorialLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.editorialLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.editorialLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.editorialLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.editorialLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.editorialLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.editorialLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.editorialLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.editorialLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.editorialLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.editorialLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.editorialLike → <head>

**<height>** Description of the vertical size of an object.

model.editorialLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.editorialLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.editorialLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.editorialLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.editorialLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.editorialLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.editorialLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.editorialLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.editorialLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.editorialLike → <lem>

**<li>** Single item in a <list>.

model.editorialLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.editorialLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.editorialLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.editorialLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.editorialLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.editorialLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.editorialLike → <nameLink>

**<num>** Numeric information in any form.

model.editorialLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.editorialLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.editorialLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.editorialLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.editorialLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.editorialLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.editorialLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.editorialLike → <persName>

**<pgFoot>** A running footer.

model.editorialLike → <pgFoot>

**<pgHead>** A running header.

model.editorialLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.editorialLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.editorialLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.editorialLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.editorialLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.editorialLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.editorialLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.editorialLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.editorialLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.editorialLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.editorialLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.editorialLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.editorialLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.editorialLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.editorialLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.editorialLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.editorialLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.editorialLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.editorialLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.editorialLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.editorialLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.editorialLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.editorialLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.editorialLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.editorialLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.editorialLike → <sic>

**<signifLet>** Significantive letter(s).

model.editorialLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.editorialLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.editorialLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.editorialLike → <sponsor>

**<stack>** An inline table with a single column.

model.editorialLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.editorialLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.editorialLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.editorialLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.editorialLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.editorialLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.editorialLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.editorialLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.editorialLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.editorialLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.editorialLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.editorialLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.editorialLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.editorialLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.editorialLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.editorialLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.editorialLike → <width>

## model.encodingPart

Groups elements that may appear as part of the description of the encoding process.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.encodingPart isn't member of any model class)

### Members

**<appInfo>** Groups information about applications which have acted upon the MEI file.

model.encodingPart → <appInfo>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

model.encodingPart → <editorialDecl>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

model.encodingPart → <projectDesc>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

model.encodingPart → <samplingDecl>

# model.endingLike

Groups elements that represent alternative endings.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.scorePart](#) Groups elements that may appear as part of a score.

[model.sectionPart](#) Groups elements that may appear as part of a section.

### Members

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.endingLike → <ending>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.endingLike → <abbr>

**<add>** Marks an addition to the text.

model.endingLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.endingLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.endingLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.endingLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.endingLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.endingLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.endingLike → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.endingLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.endingLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.endingLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.endingLike → <restore>

**<score>** Full score view of the musical content.

model.endingLike → <score>

**<section>** Segment of music data.

model.endingLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.endingLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.endingLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.endingLike → <unclear>

```

## model.eventLike

Groups event elements that occur in all notational repertoires.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [4.2.1 The Role of the Measure Element](#), [4.2.2 Defining Score Parameters for CMN](#)

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.layerPart](#) Groups notated events that may appear at the layer level in all repertoires.

#### Members

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.  
`model.eventLike → <barLine>`

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.  
`model.eventLike → <chord>`

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.  
`model.eventLike → <clef>`

**<clefGrp>** A set of simultaneously-occurring clefs.  
`model.eventLike → <clefGrp>`

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".  
`model.eventLike → <custos>`

**model.keySigLike** Groups elements that have the same function as a key signature.  
`model.eventLike → model.eventLike`

**model.meterSigLike** Groups elements that represent a meter signature.  
`model.eventLike → model.eventLike`

**<note>** A single pitched event.  
`model.eventLike → <note>`

**<pad>** An indication of extra visual space between notational elements.  
`model.eventLike → <pad>`

**<rest>** A non-sounding event found in the source being transcribed.  
`model.eventLike → <rest>`

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.  
`model.eventLike → <space>`

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.eventLike → <abbr>

**<add>** Marks an addition to the text.

model.eventLike → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.eventLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.eventLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.eventLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.eventLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.eventLike → <expan>

**<graceGrp>** A container for a sequence of grace notes.

model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

model.eventLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.eventLike → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.eventLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.eventLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.eventLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.eventLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.eventLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.eventLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.eventLike → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.eventLike → <unclear>

## Declaration

```
<classSpec ident="model.eventLike" module="MEI.shared" type="model">

```

## model.eventLike.cmn

Groups events that appear in CMN.

### Referenced in chapters

[4.3.5.3 Tremoland](#)

### Module

[MEI.cmn](#)

### Attributes

### Member of

[model.layerPart.cmn](#) Groups notated events that may appear at the layer level in CMN.

### Members

**<bTrem>** A rapid alternation on a single pitch or chord.

model.eventLike.cmn → <bTrem>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.eventLike.cmn → <beam>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

model.eventLike.cmn → <beatRpt>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

model.eventLike.cmn → <fTrem>

**<graceGrp>** A container for a sequence of grace notes.

model.eventLike.cmn → <graceGrp>

**<halfmRpt>** A half-measure repeat in any meter.

model.eventLike.cmn → <halfmRpt>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.eventLike.cmn → <tuplet>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.eventLike.cmn → <abbr>

**<add>** Marks an addition to the text.

model.eventLike.cmn → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.eventLike.cmn → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.eventLike.cmn → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.eventLike.cmn → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.eventLike.cmn → <del>

**<expan>** Contains the expansion of an abbreviation.

model.eventLike.cmn → <expan>

**<graceGrp>** A container for a sequence of grace notes.

model.eventLike.cmn → <graceGrp>

**<layer>** An independent stream of events on a staff.

model.eventLike.cmn → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.eventLike.cmn → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.eventLike.cmn → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.eventLike.cmn → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.eventLike.cmn → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.eventLike.cmn → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.eventLike.cmn → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.eventLike.cmn → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.eventLike.cmn → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.eventLike.cmn → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.eventLike.cmn → <unclear>

## Declaration

DEVELOPMENT  
VERSION

# model.eventLike.measureFilling

Groups events that completely fill a CMN measure.

## Module

[MEI.cmn](#)

## Attributes

### Member of

[model.layerPart.cmn](#) Groups notated events that may appear at the layer level in CMN.

## Members

**<mRest>** Complete measure rest in any meter.

model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

model.eventLike.measureFilling → <mSpace>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

model.eventLike.measureFilling → <multiRpt>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.eventLike.measureFilling → <abbr>

**<add>** Marks an addition to the text.

model.eventLike.measureFilling → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.eventLike.measureFilling → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.eventLike.measureFilling → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.eventLike.measureFilling → <del>

**<expan>** Contains the expansion of an abbreviation.

model.eventLike.measureFilling → <expan>

**<layer>** An independent stream of events on a staff.

model.eventLike.measureFilling → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.eventLike.measureFilling → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.eventLike.measureFilling → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.eventLike.measureFilling → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.eventLike.measureFilling → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.eventLike.measureFilling → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.eventLike.measureFilling → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.eventLike.measureFilling → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.eventLike.measureFilling → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.eventLike.measureFilling → <unclear>

## Declaration

```
<classSpec ident="model.eventLike.measureFilling" module="MEI.cmn" type="model">
  <desc xml:lang="en">Groups events that completely fill a CMN measure.</desc>

```

# model.eventLike.mensural

Groups event elements that occur in the mensural repertoire.

## Module

[MEI.mensural](#)

## Attributes

### Member of

[model.layerPart.mensural](#) Groups notated events that may appear at the layer level in the mensural repertoire.

### Members

**<dot>** Dot of augmentation or division.

model.eventLike.mensural → <dot>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.eventLike.mensural → <ligature>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

model.eventLike.mensural → <mensur>

**<proport>** Description of note duration as arithmetic ratio.

model.eventLike.mensural → <proport>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.eventLike.mensural → <abbr>

**<add>** Marks an addition to the text.

model.eventLike.mensural → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.eventLike.mensural → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.eventLike.mensural → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.eventLike.mensural → <del>

**<expan>** Contains the expansion of an abbreviation.

model.eventLike.mensural → <expan>

**<layer>** An independent stream of events on a staff.

model.eventLike.mensural → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.eventLike.mensural → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.eventLike.mensural → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.eventLike.mensural → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.eventLike.mensural → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.eventLike.mensural → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.eventLike.mensural → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.eventLike.mensural → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.eventLike.mensural → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.eventLike.mensural → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.eventLike.mensural → <unclear>

## Declaration

```
<classSpec ident="model.eventLike.mensural" module="MEI.mensural" type="model">
  <desc xml:lang="en">Groups event elements that occur in the mensural repertoire.</desc>
  <classes>
    <memberOf key="model.layerPart.mensural"/>
  </classes>
</classSpec>
```

# model.eventLike.neumes

Groups event elements that occur in the neume repertoire.

## Module

[MEI.neumes](#)

## Attributes

### Member of

[model.layerPart.neumes](#) Groups notated events that may appear at the layer level in the neume repertoire.

[model.syllablePart](#) Groups elements that may appear as part of the content of a syllable.

## Members

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

model.eventLike.neumes → <divLine>

**<neume>** Sign representing one or more musical pitches.

model.eventLike.neumes → <neume>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.eventLike.neumes → <abbr>

**<add>** Marks an addition to the text.

model.eventLike.neumes → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.eventLike.neumes → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.eventLike.neumes → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.eventLike.neumes → <del>

**<expan>** Contains the expansion of an abbreviation.

model.eventLike.neumes → <expan>

**<layer>** An independent stream of events on a staff.

model.eventLike.neumes → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.eventLike.neumes → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.eventLike.neumes → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.eventLike.neumes → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.eventLike.neumes → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.eventLike.neumes → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.eventLike.neumes → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.eventLike.neumes → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.eventLike.neumes → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.eventLike.neumes → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.eventLike.neumes → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.eventLike.neumes → <unclear>

## Declaration

```
<classSpec ident="model.eventLike.neumes" module="MEI.neumes" type="model">
  <desc xml:lang="en">Groups event elements that occur in the neume repertoire.</desc>
  <classes>
    <memberOf key="model.layerPart.neumes"/>
    <memberOf key="model.syllablePart"/>
  </classes>
</classSpec>
```

## model.eventPart

Groups elements that may be used to provide a structured description of an event.

### Module

MEI.header

### Attributes

#### Member of

(model.eventPart isn't member of any model class)

#### Members

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.eventPart → <desc>

**model.addressLike** Groups elements used to represent a postal address.

model.eventPart → model.eventPart

**model.dateLike** Groups elements containing date expressions.

model.eventPart → model.eventPart

**model.nameLike.agent** Groups elements which contain names of individuals or corporate bodies.

model.eventPart → model.eventPart

**model.nameLike.geogName** Groups geographic name elements.

model.eventPart → model.eventPart

**<name>** Proper noun or noun phrase.

model.eventPart → <name>

### Contained By

**<event>** Contains a free-text event description.

model.eventPart → <event>

### Declaration

```
<classSpec ident="model.eventPart" type="model" module="MEI.header">
  <desc xml:lang="en">Groups elements that may be used to provide a structured description
  of an event.</desc>
</classSpec>
```

## model.expressionLike

Collects FRBR expression-like elements.

### Module

[MEI.frbr](#)

### Attributes

#### Member of

(model.expressionLike isn't member of any model class)

#### Members

**<expression>** Intellectual or artistic realization of a work.

model.expressionLike → <expression>

#### Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

model.expressionLike → <componentList>

**<expressionList>** Gathers bibliographic expression entities.

model.expressionLike → <expressionList>

#### Declaration

```
<classSpec ident="model.expressionLike" type="model" module="MEI.frbr">
  <desc xml:lang="en">Collects FRBR expression-like elements.</desc>
</classSpec>
```

# model.fLike

Groups elements that represent single figured bass elements.

## Module

[MEI.harmony](#)

## Attributes

### Member of

(model.fLike isn't member of any model class)

### Members

**<f>** Single element of a figured bass indication.

model.fLike → <f>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.fLike → <abbr>

**<add>** Marks an addition to the text.

model.fLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.fLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.fLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.fLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.fLike → <expan>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

model.fLike → <fb>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.fLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.fLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.fLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.fLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.fLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.fLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.fLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.fLike → <unclear>

## Declaration

```
<classSpec ident="model.fLike" module="MEI.harmony" type="model">
  <desc xml:lang="en">Groups elements that represent single figured bass elements.</desc>
</classSpec>
```

## model.figDescLike

Groups elements that provide a brief prose description of the appearance or content of a graphic figure.

### Module

[MEI.figtable](#)

### Attributes

### Member of

(model.figDescLike isn't member of any model class)

### Members

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.figDescLike → <figDesc>

### Contained By

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

model.figDescLike → <surface>

**<zone>** Defines an area of interest within a **<surface>** or graphic file.

model.figDescLike → <zone>

### Declaration

```
<classSpec ident="model.figDescLike" module="MEI.figtable" type="model">
  <desc xml:lang="en">Groups elements that provide a brief prose description of the
  appearance or content of a graphic figure.</desc>
</classSpec>
```

## model.figbassLike

Groups elements that record figured bass.

### Module

[MEI.harmony](#)

### Attributes

### Member of

(model.figbassLike isn't member of any model class)

### Members

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

model.figbassLike → <fb>

### Contained By

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.figbassLike → <harm>

### Declaration

```
<classSpec ident="model.figbassLike" module="MEI.harmony" type="model">
  <desc xml:lang="en">Groups elements that record figured bass.</desc>
</classSpec>
```

## model.figureLike

Groups elements representing or containing graphic information such as an illustration or figure.

### Module

[MEI.figtable](#)

### Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

### Members

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.  
`model.figureLike` → `<fig>`

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
`model.figureLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.  
`model.figureLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.  
`model.figureLike` → `<actor>`

**<add>** Marks an addition to the text.  
`model.figureLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.  
`model.figureLike` → `<addName>`

**<addrLine>** Single line of a postal address.  
`model.figureLike` → `<addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.  
`model.figureLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.  
`model.figureLike` → `<annot>`

**<argument>** Contains a formal list or prose description of topics addressed.  
`model.figureLike` → `<argument>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.  
`model.figureLike` → `<arranger>`

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.figureLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.figureLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.figureLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.figureLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.figureLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.figureLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.figureLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.figureLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.figureLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.figureLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.figureLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.figureLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.figureLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.figureLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.figureLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.figureLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.figureLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.figureLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.figureLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.figureLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.figureLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.figureLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.figureLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.figureLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.figureLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.figureLike → <desc>

**<dim>** Any single dimensional specification.

model.figureLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.figureLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.figureLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.figureLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.figureLike → <div>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.figureLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.figureLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.figureLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.figureLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.figureLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.figureLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.figureLike → <extent>

**<f>** Single element of a figured bass indication.

model.figureLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.figureLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.figureLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.figureLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.figureLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.figureLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.figureLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.figureLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.figureLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.figureLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.figureLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.figureLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.figureLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.figureLike → <head>

**<height>** Description of the vertical size of an object.

model.figureLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.figureLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.figureLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.figureLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.figureLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.figureLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.figureLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.figureLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.figureLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.figureLike → <lem>

**<li>** Single item in a <list>.

model.figureLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.figureLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.figureLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.figureLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.figureLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.figureLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.figureLike → <nameLink>

**<num>** Numeric information in any form.

model.figureLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.figureLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.figureLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.figureLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.figureLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.figureLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.figureLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.figureLike → <persName>

**<pgFoot>** A running footer.

model.figureLike → <pgFoot>

**<pgHead>** A running header.

model.figureLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.figureLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.figureLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.figureLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.figureLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.figureLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.figureLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.figureLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.figureLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.figureLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.figureLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.figureLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.figureLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.figureLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.figureLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.figureLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.figureLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.figureLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.figureLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.figureLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.figureLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.figureLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.figureLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.figureLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.figureLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.figureLike → <sic>

**<signifLet>** Significantive letter(s).

model.figureLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.figureLike → <soundChan>

**<sp>** Contains an individual speech in a performance text.

model.figureLike → <sp>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.figureLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.figureLike → <sponsor>

**<stack>** An inline table with a single column.

model.figureLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.figureLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.figureLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.figureLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.figureLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.figureLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.figureLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.figureLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.figureLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.figureLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.figureLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.figureLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.figureLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.figureLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.figureLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.figureLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.figureLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.figureLike → <width>

## Declaration

```

# model.fingeringLike

Groups elements that capture performance instructions regarding the use of the fingers of the hand (or a subset of them).

## Referenced in chapters

[4.3.6.4 Fingering](#)

## Module

[MEI.fingering](#)

## Attributes

### Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

### Members

**<fing>** finger – An individual finger in a fingering indication.  
model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.  
model.fingeringLike → <fingGrp>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
model.fingeringLike → <abbr>

**<add>** Marks an addition to the text.  
model.fingeringLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.  
model.fingeringLike → <corr>

**<damage>** Contains an area of damage to the physical medium.  
model.fingeringLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.  
model.fingeringLike → <del>

**<expan>** Contains the expansion of an abbreviation.  
model.fingeringLike → <expan>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.  
model.fingeringLike → <fingGrp>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.  
model.fingeringLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.fingeringLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.  
 model.fingeringLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.fingeringLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.fingeringLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.fingeringLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.fingeringLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.fingeringLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.fingeringLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.fingeringLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.fingeringLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.fingeringLike → <unclear>

## Declaration

```

  </classes>
</classSpec>
```

## model.foliumLike

Collects foliumlike elements.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.foliumLike isn't member of any model class)

### Members

**<folium>** Describes a single leaf of paper.

model.foliumLike → <folium>

### Contained By

**<bifolium>** Describes a folded sheet of paper.

model.foliumLike → <bifolium>

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

model.foliumLike → <cutout>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

model.foliumLike → <foliaDesc>

**<patch>** Describes a physical writing surface attached to the original document.

model.foliumLike → <patch>

### Declaration

```
<classSpec ident="model.foliumLike" type="model" module="MEI.header">
  <desc xml:lang="en">Collects foliumlike elements.</desc>
</classSpec>
```

## model.frontAndBackPart

Groups elements that may appear as part of auxiliary material preceding or following the text proper.

### Module

MEI.header

### Attributes

### Member of

(model.frontAndBackPart isn't member of any model class)

### Members

**<titlePage>** Contains a transcription of the title page of a text.

model.frontAndBackPart → <titlePage>

### Contained By

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.frontAndBackPart → <back>

**<front>** Bundles prefatory text found before the start of the musical text.

model.frontAndBackPart → <front>

### Declaration

```
<classSpec ident="model.frontAndBackPart" module="MEI.header" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of auxiliary material
  preceding or following the text proper.</desc>
</classSpec>
```

## model.frontLike

Groups elements that may contain front matter.

### Module

[MEI.text](#)

### Attributes

### Member of

(model.frontLike isn't member of any model class)

### Members

**<front>** Bundles prefatory text found before the start of the musical text.

model.frontLike → <front>

### Contained By

### Declaration

```
<classSpec ident="model.frontLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups elements that may contain front matter.</desc>
  <classes>
    <memberOf key="macro.musicPart"/>
  </classes>
</classSpec>
```

# model.geogNamePart

Groups elements which form part of a geographic name.

## Module

[MEI.namesdates](#)

## Attributes

### Member of

[model.addressPart](#) Groups elements used as part of a physical address.

## Members

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.geogNamePart → <bloc>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.geogNamePart → <country>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.geogNamePart → <district>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.geogNamePart → <geogFeat>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.geogNamePart → <region>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.geogNamePart → <settlement>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.geogNamePart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.geogNamePart → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.geogNamePart → <actor>

**<add>** Marks an addition to the text.

model.geogNamePart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.geogNamePart → <addName>

**<addrLine>** Single line of a postal address.

model.geogNamePart → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

model.geogNamePart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.geogNamePart → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.geogNamePart → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.geogNamePart → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.geogNamePart → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.geogNamePart → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.geogNamePart → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.geogNamePart → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.geogNamePart → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.geogNamePart → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.geogNamePart → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.geogNamePart → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.geogNamePart → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.geogNamePart → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.geogNamePart → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.geogNamePart → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.geogNamePart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.geogNamePart → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.geogNamePart → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.geogNamePart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.geogNamePart → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.geogNamePart → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.geogNamePart → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.geogNamePart → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.geogNamePart → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.geogNamePart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.geogNamePart → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.geogNamePart → <desc>

**<dim>** Any single dimensional specification.

model.geogNamePart → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like [\*\*<tempo>\*\*](#), [\*\*<dynam>\*\*](#) or [\*\*<repeatMark>\*\*](#).

model.geogNamePart → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.geogNamePart → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.geogNamePart → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.geogNamePart → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.geogNamePart → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.geogNamePart → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.geogNamePart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.geogNamePart → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.geogNamePart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.geogNamePart → <extent>

**<f>** Single element of a figured bass indication.

model.geogNamePart → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.geogNamePart → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.geogNamePart → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.geogNamePart → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.geogNamePart → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.geogNamePart → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.geogNamePart → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.geogNamePart → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.geogNamePart → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.geogNamePart → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.geogNamePart → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.geogNamePart → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.geogNamePart → <head>

**<height>** Description of the vertical size of an object.

model.geogNamePart → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.geogNamePart → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.geogNamePart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.geogNamePart → <imprint>

**<l>** Contains a single line of text within a line group.

model.geogNamePart → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.geogNamePart → <label>

**<labelAbbr>** A label on the pages following the first.

model.geogNamePart → <labelAbbr>

**<language>** Description of a language used in the document.

model.geogNamePart → <language>

**<layoutDesc>** Collects layout descriptions.

model.geogNamePart → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.geogNamePart → <lem>

**<li>** Single item in a <list>.

model.geogNamePart → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.geogNamePart → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.geogNamePart → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.geogNamePart → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.geogNamePart → <metaMark>

**<name>** Proper noun or noun phrase.

model.geogNamePart → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.geogNamePart → <nameLink>

**<num>** Numeric information in any form.

model.geogNamePart → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.geogNamePart → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.geogNamePart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.geogNamePart → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.geogNamePart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.geogNamePart → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.geogNamePart → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.geogNamePart → <persName>

**<pgFoot>** A running footer.

model.geogNamePart → <pgFoot>

**<pgHead>** A running header.

model.geogNamePart → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.geogNamePart → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.geogNamePart → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.geogNamePart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.geogNamePart → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.geogNamePart → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.geogNamePart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.geogNamePart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.geogNamePart → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.geogNamePart → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.geogNamePart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.geogNamePart → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.geogNamePart → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.geogNamePart → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.geogNamePart → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.geogNamePart → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.geogNamePart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.geogNamePart → <role>

**<roleDesc>** Describes a character's role in a drama.

model.geogNamePart → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.geogNamePart → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.geogNamePart → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.geogNamePart → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.geogNamePart → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.geogNamePart → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.geogNamePart → <sic>

**<signifLet>** Significantive letter(s).

model.geogNamePart → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.geogNamePart → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.geogNamePart → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.geogNamePart → <sponsor>

**<stack>** An inline table with a single column.

model.geogNamePart → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.geogNamePart → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.geogNamePart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.geogNamePart → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.geogNamePart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.geogNamePart → <supportDesc>

**<syl>** Individual lyric syllable.

model.geogNamePart → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.geogNamePart → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.geogNamePart → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.geogNamePart → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.geogNamePart → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.geogNamePart → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.geogNamePart → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.geogNamePart → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.geogNamePart → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.geogNamePart → <unclear>

**<width>** Description of the horizontal size of an object.

model.geogNamePart → <width>

## Declaration

```
<classSpec ident="model.geogNamePart" module="MEI.namesdates" type="model">
  <desc xml:lang="en">Groups elements which form part of a geographic name.</desc>
  <classes>
    <memberOf key="model.addressPart"/>
  </classes>
</classSpec>
```

## model.graphicLike

Groups elements that indicate the location of an inline graphic, illustration, or figure.

### Module

[MEI.figtable](#)

### Attributes

### Member of

(model.graphicLike isn't member of any model class)

### Members

**<graphic>** Indicates the location of an inline graphic.

model.graphicLike → <graphic>

### Contained By

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

model.graphicLike → <fig>

**<incip>** The opening music and/or words of a musical or textual work.

model.graphicLike → <incip>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

model.graphicLike → <surface>

**<zone>** Defines an area of interest within a **<surface>** or graphic file.

model.graphicLike → <zone>

### Declaration

```
<classSpec ident="model.graphicLike" module="MEI.figtable" type="model">
  <desc xml:lang="en">Groups elements that indicate the location of an inline graphic,
  illustration, or figure.</desc>
</classSpec>
```

# model.graphicPrimitiveLike

Groups elements that function as drawing primitives.

## Referenced in chapters

[2.4.1.3 Model Classes](#)

## Module

[MEI.usersymbols](#)

## Attributes

## Member of

(model.graphicPrimitiveLike isn't member of any model class)

## Members

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.graphicPrimitiveLike → <anchoredText>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

model.graphicPrimitiveLike → <curve>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.graphicPrimitiveLike → <line>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.graphicPrimitiveLike → <abbr>

**<add>** Marks an addition to the text.

model.graphicPrimitiveLike → <add>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.graphicPrimitiveLike → <attacca>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.graphicPrimitiveLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.graphicPrimitiveLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.graphicPrimitiveLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like [<tempo>](#), [<dynam>](#) or [<repeatMark>](#).

model.graphicPrimitiveLike → <dir>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.graphicPrimitiveLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.graphicPrimitiveLike → <expan>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.graphicPrimitiveLike → <harm>

**<layer>** An independent stream of events on a staff.

model.graphicPrimitiveLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.graphicPrimitiveLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.graphicPrimitiveLike → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.graphicPrimitiveLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.graphicPrimitiveLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.graphicPrimitiveLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.graphicPrimitiveLike → <ornam>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.graphicPrimitiveLike → <part>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.graphicPrimitiveLike → <pgDesc>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.graphicPrimitiveLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.graphicPrimitiveLike → <reg>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.graphicPrimitiveLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.graphicPrimitiveLike → <restore>

**<score>** Full score view of the musical content.

model.graphicPrimitiveLike → <score>

**<section>** Segment of music data.

model.graphicPrimitiveLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.graphicPrimitiveLike → <sic>

**<signifLet>** Significantive letter(s).

model.graphicPrimitiveLike → <signifLet>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.graphicPrimitiveLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.graphicPrimitiveLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.graphicPrimitiveLike → <syllable>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

model.graphicPrimitiveLike → <symbolDef>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.graphicPrimitiveLike → <tempo>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.graphicPrimitiveLike → <unclear>

## Declaration

```
<classSpec ident="model.graphicPrimitiveLike" module="MEI.usersymbols" type="model">
  <desc xml:lang="en">Groups elements that function as drawing primitives.</desc>
</classSpec>
```

## model.harmLike

Groups elements that record indications of harmony.

### Module

[MEI.harmony](#)

### Attributes

### Member of

[model.controlEventLike.harmony](#) Groups harmonic elements that function as control events; that is, those events that modify or otherwise depend on the existence of notated events.

### Members

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.  
model.harmLike → <harm>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
model.harmLike → <abbr>

**<add>** Marks an addition to the text.  
model.harmLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.  
model.harmLike → <corr>

**<damage>** Contains an area of damage to the physical medium.  
model.harmLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.  
model.harmLike → <del>

**<expan>** Contains the expansion of an abbreviation.  
model.harmLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.  
model.harmLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.  
model.harmLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.  
model.harmLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.  
model.harmLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.harmLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.harmLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.harmLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.harmLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.harmLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.harmLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.harmLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.harmLike → <unclear>

## Declaration

```
<classSpec ident="model.harmLike" module="MEI.harmony" type="model">
  <desc xml:lang="en">Groups elements that record indications of harmony.</desc>
  <classes>
    <memberOf key="model.controlEventLike.harmony" />
  </classes>
</classSpec>
```

## model.headLike

Groups elements used to provide a heading at the start of a text division or other markup component.

### Module

MEI.shared

### Attributes

#### Member of

(model.headLike isn't member of any model class)

#### Members

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.headLike → <head>

#### Contained By

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.headLike → <acquisition>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.headLike → <annot>

**<appInfo>** Groups information about applications which have acted upon the MEI file.

model.headLike → <appInfo>

**<argument>** Contains a formal list or prose description of topics addressed.

model.headLike → <argument>

**<biblList>** List of bibliographic references.

model.headLike → <biblList>

**<castList>** Contains a single cast list or dramatis personae.

model.headLike → <castList>

**<classDecls>** Groups information which describes the nature or topic of an entity.

model.headLike → <classDecls>

**<classification>** Groups information which describes the nature or topic of an entity.

model.headLike → <classification>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

model.headLike → <componentList>

**<contents>** List of the material contained within a resource.

model.headLike → <contents>

**<correction>** States how and under what circumstances corrections have been made in the text.

model.headLike → <correction>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.headLike → <creation>

**<dedication>** Contains a dedicatory statement.

model.headLike → <dedication>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.headLike → <div>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

model.headLike → <editionStmt>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

model.headLike → <editorialDecl>

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

model.headLike → <encodingDesc>

**<event>** Contains a free-text event description.

model.headLike → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.headLike → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.headLike → <exhibHist>

**<expression>** Intellectual or artistic realization of a work.

model.headLike → <expression>

**<expressionList>** Gathers bibliographic expression entities.

model.headLike → <expressionList>

**<handList>** Container for one or more hand elements.

model.headLike → <handList>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.headLike → <history>

**<incip>** The opening music and/or words of a musical or textual work.

model.headLike → <incip>

**<incipText>** Opening words of a musical composition.

model.headLike → <incipText>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

model.headLike → <interpretation>

**<item>** Single instance or exemplar of a source/manifestation.

model.headLike → <item>

**<itemList>** Gathers bibliographic item entities.

model.headLike → <itemList>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

model.headLike → <langUsage>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

model.headLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

model.headLike → <list>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

model.headLike → <manifestation>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

model.headLike → <manifestationList>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

model.headLike → <normalization>

**<notesStmt>** (notes statement)- Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

model.headLike → <notesStmt>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

model.headLike → <perfMedium>

**<perfResList>** Several instrumental or vocal resources treated as a group.

model.headLike → <perfResList>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

model.headLike → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

model.headLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

model.headLike → <price>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

model.headLike → <projectDesc>

**<provenance>** The record of ownership or custodianship of an item.

model.headLike → <provenance>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

model.headLike → <pubStmt>

**<relationList>** Gathers relation elements.

model.headLike → <relationList>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

model.headLike → <respStmt>

**<revisionDesc>** Container for information about alterations that have been made to an MEI file.

model.headLike → <revisionDesc>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

model.headLike → <samplingDecl>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

model.headLike → <segmentation>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

model.headLike → <seriesStmt>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

model.headLike → <source>

**<sourceDesc>** A container for the descriptions of the source(s) used in the creation of the electronic file.

model.headLike → <sourceDesc>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

model.headLike → <stdVals>

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

model.headLike → <tagsDecl>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

model.headLike → <taxonomy>

**<termList>** Collection of text phrases which describe a resource.

model.headLike → <termList>

**<titlePage>** Contains a transcription of the title page of a text.

model.headLike → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

model.headLike → <titleStmt>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.headLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.headLike → <treatSched>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.headLike → <work>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.

model.headLike → <workList>

### Declaration

```
<classSpec ident="model.headLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to provide a heading at the start of a text
  division or other markup component.</desc>
</classSpec>
```

## model.headerPart

Groups elements that may appear as part of the MEI metadata header.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.headerPart isn't member of any model class)

### Members

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

model.headerPart → <encodingDesc>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.

model.headerPart → <workList>

### Contained By

### Declaration

```
<classSpec ident="model.headerPart" module="MEI.header" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of the MEI metadata
  header.</desc>
</classSpec>
```

## model.identifierLike

Groups identifier-like elements.

### Module

[MEI.shared](#)

### Attributes

#### Member of

- [model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.
- [model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.
- [model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

### Members

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.identifierLike → <identifier>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
model.identifierLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.  
model.identifierLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.  
model.identifierLike → <actor>

**<add>** Marks an addition to the text.  
model.identifierLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.  
model.identifierLike → <addName>

**<addrLine>** Single line of a postal address.  
model.identifierLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.  
model.identifierLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.  
model.identifierLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.identifierLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.identifierLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.identifierLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.identifierLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.identifierLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.identifierLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.identifierLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.identifierLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.identifierLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.identifierLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.identifierLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.identifierLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.identifierLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.identifierLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.identifierLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.identifierLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.identifierLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.identifierLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.identifierLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.identifierLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.identifierLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.identifierLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.identifierLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.identifierLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.identifierLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.identifierLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.identifierLike → <desc>

**<dim>** Any single dimensional specification.

model.identifierLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.identifierLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.identifierLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.identifierLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.identifierLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.identifierLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.identifierLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.identifierLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.identifierLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.identifierLike → <expan>

**<expression>** Intellectual or artistic realization of a work.

model.identifierLike → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.identifierLike → <extent>

**<f>** Single element of a figured bass indication.

model.identifierLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.identifierLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.identifierLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.identifierLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.identifierLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.identifierLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.identifierLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.identifierLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.identifierLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.identifierLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.identifierLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.identifierLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.identifierLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.identifierLike → <head>

**<height>** Description of the vertical size of an object.

model.identifierLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.identifierLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.identifierLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.identifierLike → <imprint>

**<item>** Single instance or exemplar of a source/manifestation.

model.identifierLike → <item>

**<l>** Contains a single line of text within a line group.

model.identifierLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.identifierLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.identifierLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.identifierLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.identifierLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.identifierLike → <lem>

**<li>** Single item in a <list>.

model.identifierLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.identifierLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.identifierLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.identifierLike → <lyricist>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

model.identifierLike → <manifestation>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.identifierLike → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

model.identifierLike → <monogr>

**<name>** Proper noun or noun phrase.

model.identifierLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.identifierLike → <nameLink>

**<num>** Numeric information in any form.

model.identifierLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.identifierLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.identifierLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.identifierLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.identifierLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.identifierLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.identifierLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.identifierLike → <persName>

**<pgFoot>** A running footer.

model.identifierLike → <pgFoot>

**<pgHead>** A running header.

model.identifierLike → <pgHead>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

model.identifierLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

model.identifierLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.identifierLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.identifierLike → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

model.identifierLike → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.identifierLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.identifierLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.identifierLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.identifierLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.identifierLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.identifierLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.identifierLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.identifierLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.identifierLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.identifierLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.identifierLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.identifierLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.identifierLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.identifierLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.identifierLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.identifierLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.identifierLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.identifierLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.identifierLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.identifierLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.identifierLike → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

model.identifierLike → <seriesStmt>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.identifierLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.identifierLike → <sic>

**<signifLet>** Significantive letter(s).

model.identifierLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.identifierLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.identifierLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.identifierLike → <sponsor>

**<stack>** An inline table with a single column.

model.identifierLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.identifierLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.identifierLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.identifierLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.identifierLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.identifierLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.identifierLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.identifierLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.identifierLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.identifierLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.identifierLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.identifierLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.identifierLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.identifierLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.identifierLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.identifierLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.identifierLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.identifierLike → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.identifierLike → <work>

## Declaration

```
<classSpec ident="model.identifierLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups identifier-like elements.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
```

```
<memberOf key="model.pubStmtPart"/>
<memberOf key="model.titlePagePart"/>
</classes>
</classSpec>
```

DEVELOPMENT  
VERSION

## model.imprintPart

Groups elements that may appear as part of a bibliographic imprint.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.imprintPart isn't member of any model class)

### Members

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

model.imprintPart → <availability>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.imprintPart → <distributor>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.imprintPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.imprintPart → <publisher>

**<unpub>** Used to explicitly indicate that a bibliographic resource is unpublished.

model.imprintPart → <unpub>

### Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.imprintPart → <bibl>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.imprintPart → <imprint>

**<titlePage>** Contains a transcription of the title page of a text.

model.imprintPart → <titlePage>

### Declaration

```
<classSpec ident="model.imprintPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a bibliographic
  imprint.</desc>
</classSpec>
```

## model.incipLike

Groups elements used to represent a textual or musical incipit.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

[model.workIdent](#) Groups elements that assist in the identification of a work.

#### Members

**<incip>** The opening music and/or words of a musical or textual work.

model.incipLike → <incip>

#### Contained By

**<expression>** Intellectual or artistic realization of a work.

model.incipLike → <expression>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

model.incipLike → <physDesc>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.incipLike → <work>

### Declaration

```
<classSpec ident="model.incipLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to represent a textual or musical incipit.</desc>
  <classes>
    <memberOf key="model.physDescPart"/>
    <memberOf key="model.workIdent"/>
  </classes>
</classSpec>
```

## model.instrDefLike

Groups elements used to declare a MIDI instrument.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.instrDefLike isn't member of any model class)

### Members

**<instrDef>** MIDI instrument declaration.

model.instrDefLike → <instrDef>

### Contained By

**<instrGrp>** Collects MIDI instrument definitions.

model.instrDefLike → <instrGrp>

**<layerDef>** Container for layer meta-information.

model.instrDefLike → <layerDef>

**<staffDef>** Container for staff meta-information.

model.instrDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

model.instrDefLike → <staffGrp>

### Declaration

```
<classSpec ident="model.instrDefLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to declare a MIDI instrument.</desc>
</classSpec>
```

## model.itemLike

Collects FRBR item-like elements.

### Module

[MEI.frbr](#)

### Attributes

### Member of

(model.itemLike isn't member of any model class)

### Members

**<item>** Single instance or exemplar of a source/manifestation.

model.itemLike → <item>

### Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

model.itemLike → <componentList>

**<itemList>** Gathers bibliographic item entities.

model.itemLike → <itemList>

### Declaration

```
<classSpec ident="model.itemLike" type="model" module="MEI.frbr">
  <desc xml:lang="en">Collects FRBR item-like elements.</desc>
</classSpec>
```

## model.keyAccidLike

Groups elements that represent accidentals in a key signature.

### Module

MEI.shared

### Attributes

#### Member of

(model.keyAccidLike isn't member of any model class)

#### Members

**<keyAccid>** Accidental in a key signature.

model.keyAccidLike → <keyAccid>

#### Contained By

**<add>** Marks an addition to the text.

model.keyAccidLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.keyAccidLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.keyAccidLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.keyAccidLike → <del>

**<keySig>** Written key signature.

model.keyAccidLike → <keySig>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.keyAccidLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.keyAccidLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.keyAccidLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.keyAccidLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.keyAccidLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.keyAccidLike → <unclear>

**Declaration**

```
<classSpec ident="model.keyAccidLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent accidentals in a key signature.</desc>
</classSpec>
```

DEVELOPMENT  
VERSION

## model.keySigLike

Groups elements that have the same function as a key signature.

### Module

MEI.shared

### Attributes

#### Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

[model.staffDefPart](#) Groups elements that may appear in the declaration of staff features.

#### Members

**<keySig>** Written key signature.

model.keySigLike → <keySig>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.keySigLike → <abbr>

**<add>** Marks an addition to the text.

model.keySigLike → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.keySigLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.keySigLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.keySigLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.keySigLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.keySigLike → <expan>

**<graceGrp>** A container for a sequence of grace notes.

model.keySigLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

model.keySigLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.keySigLike → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.keySigLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.keySigLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.keySigLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.keySigLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.keySigLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.keySigLike → <restore>

**<scoreDef>** Container for score meta-information.

model.keySigLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

model.keySigLike → <sic>

**<staffDef>** Container for staff meta-information.

model.keySigLike → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.keySigLike → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.keySigLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.keySigLike → <unclear>

## Declaration

```
<classSpec ident="model.keySigLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that have the same function as a key signature.</desc>
  <classes>
    <memberOf key="model.eventLike"/>
    <memberOf key="model.staffDefPart"/>
  </classes>
</classSpec>
```

## model.lLike

Groups elements representing metrical components such as verse lines.

### Module

[MEI.text](#)

### Attributes

### Member of

(model.lLike isn't member of any model class)

### Members

**<l>** Contains a single line of text within a line group.

model.lLike → <l>

### Contained By

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.  
model.lLike → <lg>

**<sp>** Contains an individual speech in a performance text.

model.lLike → <sp>

### Declaration

```
<classSpec ident="model.lLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups elements representing metrical components such as verse
  lines.</desc>
</classSpec>
```

## model.labelLike

Groups elements used to assign a label to other parts of a document.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.labelLike isn't member of any model class)

### Members

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.labelLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.labelLike → <labelAbbr>

### Contained By

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

model.labelLike → <grpSym>

**<layerDef>** Container for layer meta-information.

model.labelLike → <layerDef>

**<staffDef>** Container for staff meta-information.

model.labelLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

model.labelLike → <staffGrp>

### Declaration

```
<classSpec ident="model.labelLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to assign a label to other parts of a
  document.</desc>
</classSpec>
```

## model.layerDefLike

Groups elements that permit declaration of layer properties.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.layerDefLike isn't member of any model class)

### Members

**<layerDef>** Container for layer meta-information.

model.layerDefLike → <layerDef>

### Contained By

**<staffDef>** Container for staff meta-information.

model.layerDefLike → <staffDef>

### Declaration

```
<classSpec ident="model.layerDefLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that permit declaration of layer properties.</desc>
</classSpec>
```

# model.layerLike

Groups elements that function as notational layers within a staff.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.staffPart](#) Groups elements that are components of a staff.

[model.rdgPart.music](#) Groups elements that may appear as part of a musical variant.

[model.editTransPart.music](#) Groups elements that may appear as part of editorial and transcription elements in music notation.

## Members

**<layer>** An independent stream of events on a staff.

model.layerLike → <layer>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerLike → <abbr>

**<add>** Marks an addition to the text.

model.layerLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.layerLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.layerLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.layerLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerLike → <lem>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.layerLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerLike → <orig>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

model.layerLike → <ossia>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.layerLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.layerLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerLike → <unclear>

## Declaration

```

```

# model.layerPart

Groups notated events that may appear at the layer level in all repertoires.

## Module

[MEI.shared](#)

## Attributes

### Member of

(model.layerPart isn't member of any model class)

## Members

**[model.eventLike](#)** Groups event elements that occur in all notational repertoires.

model.layerPart → model.layerPart

**[model.layerPart.cmn](#)** Groups notated events that may appear at the layer level in CMN.

model.layerPart → model.layerPart

**[model.layerPart.mensuralAndNeumes](#)** Groups notated events at the layer level that are shared by the mensural and neume repertoires.

model.layerPart → model.layerPart

## Contained By

**[<abbr>](#)** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerPart → <abbr>

**[<add>](#)** Marks an addition to the text.

model.layerPart → <add>

**[<corr>](#)** Contains the correct form of an apparent erroneous passage.

model.layerPart → <corr>

**[<damage>](#)** Contains an area of damage to the physical medium.

model.layerPart → <damage>

**[<del>](#)** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerPart → <del>

**[<expan>](#)** Contains the expansion of an abbreviation.

model.layerPart → <expan>

**[<layer>](#)** An independent stream of events on a staff.

model.layerPart → <layer>

**[<lem>](#)** (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerPart → <lem>

**[<oLayer>](#)** A layer that contains an alternative to material in another layer.

model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerPart → <unclear>

## Declaration

```

  <desc xml:lang="en">Groups notated events that may appear at the layer level in all
  repertoires.</desc>
</classSpec>
```

# model.layerPart.cmn

Groups notated events that may appear at the layer level in CMN.

## Module

[MEI.cmn](#)

## Attributes

### Member of

[model.layerPart](#) Groups notated events that may appear at the layer level in all repertoires.

## Members

[model.eventLike.cmn](#) Groups events that appear in CMN.

model.layerPart.cmn → model.layerPart.cmn

[model.eventLike.measureFilling](#) Groups events that completely fill a CMN measure.

model.layerPart.cmn → model.layerPart.cmn

## Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerPart.cmn → <abbr>

[\*\*<add>\*\*](#) Marks an addition to the text.

model.layerPart.cmn → <add>

[\*\*<corr>\*\*](#) Contains the correct form of an apparent erroneous passage.

model.layerPart.cmn → <corr>

[\*\*<damage>\*\*](#) Contains an area of damage to the physical medium.

model.layerPart.cmn → <damage>

[\*\*<del>\*\*](#) Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerPart.cmn → <del>

[\*\*<expan>\*\*](#) Contains the expansion of an abbreviation.

model.layerPart.cmn → <expan>

[\*\*<layer>\*\*](#) An independent stream of events on a staff.

model.layerPart.cmn → <layer>

[\*\*<lem>\*\*](#) (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerPart.cmn → <lem>

[\*\*<oLayer>\*\*](#) A layer that contains an alternative to material in another layer.

model.layerPart.cmn → <oLayer>

[\*\*<orig>\*\*](#) Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerPart.cmn → <orig>

[\*\*<rdg>\*\*](#) (reading) – Contains a single reading within a textual variation.

model.layerPart.cmn → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerPart.cmn → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerPart.cmn → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerPart.cmn → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerPart.cmn → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerPart.cmn → <unclear>

# model.layerPart.mensural

Groups notated events that may appear at the layer level in the mensural repertoire.

## Module

[MEI.mensural](#)

## Attributes

### Member of

[model.layerPart.mensuralAndNeumes](#) Groups notated events at the layer level that are shared by the mensural and neume repertoires.

### Members

[model.eventLike.mensural](#) Groups event elements that occur in the mensural repertoire.

model.layerPart.mensural → model.layerPart.mensural

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerPart.mensural → <abbr>

**<add>** Marks an addition to the text.

model.layerPart.mensural → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.layerPart.mensural → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.layerPart.mensural → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerPart.mensural → <del>

**<expan>** Contains the expansion of an abbreviation.

model.layerPart.mensural → <expan>

**<layer>** An independent stream of events on a staff.

model.layerPart.mensural → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerPart.mensural → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.layerPart.mensural → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerPart.mensural → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.layerPart.mensural → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerPart.mensural → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerPart.mensural → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerPart.mensural → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerPart.mensural → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerPart.mensural → <unclear>

## Declaration

# model.layerPart.mensuralAndNeumes

Groups notated events at the layer level that are shared by the mensural and neume repertoires.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.layerPart](#) Groups notated events that may appear at the layer level in all repertoires.

## Members

**model.layerPart.mensural** Groups notated events that may appear at the layer level in the mensural repertoire.

model.layerPart.mensuralAndNeumes → model.layerPart.mensuralAndNeumes

**model.layerPart.neumes** Groups notated events that may appear at the layer level in the neume repertoire.

model.layerPart.mensuralAndNeumes → model.layerPart.mensuralAndNeumes

**model.midiLike** Groups elements which group MIDI-like elements.

model.layerPart.mensuralAndNeumes → model.layerPart.mensuralAndNeumes

**model.noteModifierLike** Groups elements that modify note-like features.

model.layerPart.mensuralAndNeumes → model.layerPart.mensuralAndNeumes

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerPart.mensuralAndNeumes → <abbr>

**<add>** Marks an addition to the text.

model.layerPart.mensuralAndNeumes → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.layerPart.mensuralAndNeumes → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.layerPart.mensuralAndNeumes → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerPart.mensuralAndNeumes → <del>

**<expan>** Contains the expansion of an abbreviation.

model.layerPart.mensuralAndNeumes → <expan>

**<layer>** An independent stream of events on a staff.

model.layerPart.mensuralAndNeumes → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerPart.mensuralAndNeumes → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.layerPart.mensuralAndNeumes → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerPart.mensuralAndNeumes → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.layerPart.mensuralAndNeumes → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerPart.mensuralAndNeumes → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerPart.mensuralAndNeumes → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerPart.mensuralAndNeumes → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerPart.mensuralAndNeumes → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerPart.mensuralAndNeumes → <unclear>

## Declaration

```

## model.layerPart.neumes

Groups notated events that may appear at the layer level in the neume repertoire.

### Module

[MEI.neumes](#)

### Attributes

#### Member of

[model.layerPart.mensuralAndNeumes](#) Groups notated events at the layer level that are shared by the mensural and neume repertoires.

#### Members

**model.eventLike.neumes** Groups event elements that occur in the neume repertoire.

model.layerPart.neumes → model.layerPart.neumes

**model.syllableLike** Groups elements that accommodate neumed text.

model.layerPart.neumes → model.layerPart.neumes

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.layerPart.neumes → <abbr>

**<add>** Marks an addition to the text.

model.layerPart.neumes → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.layerPart.neumes → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.layerPart.neumes → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.layerPart.neumes → <del>

**<expan>** Contains the expansion of an abbreviation.

model.layerPart.neumes → <expan>

**<layer>** An independent stream of events on a staff.

model.layerPart.neumes → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.layerPart.neumes → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.layerPart.neumes → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.layerPart.neumes → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.layerPart.neumes → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.layerPart.neumes → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.layerPart.neumes → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.layerPart.neumes → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.layerPart.neumes → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.layerPart.neumes → <unclear>

## Declaration

```
<classSpec ident="model.layerPart.neumes" module="MEI.neumes" type="model">
  <desc xml:lang="en">Groups notated events that may appear at the layer level in the neume
  repertoire.</desc>
  <classes>
    <memberOf key="model.layerPart.mensuralAndNeumes"/>
  </classes>
</classSpec>
```

# model.IbLike

Groups elements that function like line beginnings.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.milestoneLike.text](#) Groups milestone-style elements found in text.

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the [model.textPhraseLike](#) class without the pb element.

## Members

**<lb>** An empty formatting element that forces text to begin on a new line.

model.IbLike → <lb>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.IbLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.IbLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.IbLike → <actor>

**<add>** Marks an addition to the text.

model.IbLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.IbLike → <addName>

**<addrLine>** Single line of a postal address.

model.IbLike → <addrLine>

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

model.IbLike → <altId>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.IbLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.IbLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.IbLike → <argument>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.IbLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.IbLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.IbLike → <author>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.IbLike → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.IbLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.IbLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.IbLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.IbLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.IbLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.IbLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.IbLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.IbLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.IbLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.IbLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.IbLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.IbLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.IbLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.IbLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.IbLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.IbLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.IbLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.IbLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.IbLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.IbLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.IbLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.IbLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.IbLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.IbLike → <desc>

**<dim>** Any single dimensional specification.

model.IbLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.IbLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.IbLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.IbLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.IbLike → <div>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.IbLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.IbLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.IbLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.IbLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.IbLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.IbLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.IbLike → <extent>

**<f>** Single element of a figured bass indication.

model.IbLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.IbLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.IbLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.IbLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.IbLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

model.IbLike → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.IbLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.IbLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.IbLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.IbLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.IbLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.IbLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.IbLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.IbLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.IbLike → <head>

**<height>** Description of the vertical size of an object.

model.IbLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.IbLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.IbLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.IbLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.IbLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.IbLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.IbLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.IbLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.IbLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.IbLike → <lem>

**<li>** Single item in a <list>.

model.IbLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.IbLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.IbLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.IbLike → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on **<measure>** does not adequately capture the appearance or placement of the measure number/label.

model.IbLike → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.IbLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.IbLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.IbLike → <nameLink>

**<num>** Numeric information in any form.

model.IbLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.IbLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.IbLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.IbLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.IbLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.IbLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.IbLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.IbLike → <persName>

**<pgFoot>** A running footer.

model.IbLike → <pgFoot>

**<pgHead>** A running header.

model.IbLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.IbLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.IbLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.IbLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.IbLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.IbLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.IbLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.IbLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.IbLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.IbLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

model.IbLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.IbLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.IbLike → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

model.IbLike → <reh>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.IbLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.IbLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.IbLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.IbLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.IbLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.IbLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.IbLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.IbLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.IbLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.IbLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.IbLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.IbLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.IbLike → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.IbLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.IbLike → <sic>

**<signifLet>** Significantive letter(s).

model.IbLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.IbLike → <soundChan>

**<sp>** Contains an individual speech in a performance text.

model.IbLike → <sp>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.IbLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.IbLike → <sponsor>

**<stack>** An inline table with a single column.

model.IbLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.IbLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.IbLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.IbLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.IbLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.IbLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.IbLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.IbLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.IbLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.IbLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.IbLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.IbLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.IbLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.IbLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.IbLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.IbLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.IbLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

model.IbLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

model.IbLike → <volta>

**<width>** Description of the horizontal size of an object.

model.lbLike → <width>

## Declaration

```
<classSpec ident="model.lbLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that function like line beginnings.</desc>
  <classes>
    <memberOf key="model.milestoneLike.text"/>
    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>
```

# model.IgLike

Groups elements that have a line-grouping function.

## Module

[MEI.text](#)

## Attributes

### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

[model.textComponentLike](#) Groups block-level text elements.

## Members

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

model.IgLike → <lg>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.IgLike → <abbr>

**<add>** Marks an addition to the text.

model.IgLike → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.IgLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.IgLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.IgLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.IgLike → <damage>

**<dedication>** Contains a dedicatory statement.

model.IgLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.IgLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.IgLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.IgLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.IgLike → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.IgLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.IgLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.IgLike → <imprimatur>

**<incipText>** Opening words of a musical composition.

model.IgLike → <incipText>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.IgLike → <lem>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

model.IgLike → <lg>

**<li>** Single item in a <list>.

model.IgLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.IgLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.IgLike → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.IgLike → <pgDesc>

**<pgFoot>** A running footer.

model.IgLike → <pgFoot>

**<pgHead>** A running header.

model.IgLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.IgLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.IgLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.IgLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.IgLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.lgLike → <sic>

**<sp>** Contains an individual speech in a performance text.

model.lgLike → <sp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.lgLike → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.lgLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.lgLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.lgLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.lgLike → <unclear>

## Declaration

```
<classSpec ident="model.lgLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups elements that have a line-grouping function.</desc>

```

## model.listLike

Groups list-like elements.

### Module

[MEI.text](#)

### Attributes

#### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

[model.textComponentLike](#) Groups block-level text elements.

### Members

**<biblList>** List of bibliographic references.

model.listLike → <biblList>

**<castList>** Contains a single cast list or dramatis personae.

model.listLike → <castList>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.listLike → <eventList>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

model.listLike → <list>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.listLike → <abbr>

**<add>** Marks an addition to the text.

model.listLike → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.listLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.listLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.listLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.listLike → <damage>

**<dedication>** Contains a dedicatory statement.

model.listLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.listLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.listLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.listLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.listLike → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.listLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.listLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.listLike → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.listLike → <lem>

**<li>** Single item in a <list>.

model.listLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.listLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.listLike → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.listLike → <pgDesc>

**<pgFoot>** A running footer.

model.listLike → <pgFoot>

**<pgHead>** A running header.

model.listLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.listLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.listLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.listLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.listLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.listLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.listLike → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.listLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.listLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.listLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.listLike → <unclear>

## Declaration

```
<classSpec ident="model.listLike" module="MEI.text" type="model">
  <desc xml:lang="en">Groups list-like elements.</desc>

</classSpec>
```

## model.locrefLike

Groups elements used for purposes of location and reference.

### Module

[MEI.ptrref](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

#### Members

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.  
`model.locrefLike → <ptr>`

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.  
`model.locrefLike → <ref>`

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
`model.locrefLike → <abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.  
`model.locrefLike → <acquisition>`

**<actor>** Name of an actor appearing within a cast list.  
`model.locrefLike → <actor>`

**<add>** Marks an addition to the text.  
`model.locrefLike → <add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.  
`model.locrefLike → <addName>`

**<addrLine>** Single line of a postal address.  
`model.locrefLike → <addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.  
`model.locrefLike → <anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.  
`model.locrefLike → <annot>`

**<application>** Provides information about an application which has acted upon the current document.  
`model.locrefLike → <application>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.locrefLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.locrefLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.locrefLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.locrefLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.locrefLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.locrefLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.locrefLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.locrefLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.locrefLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.locrefLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.locrefLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.locrefLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.locrefLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.locrefLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.locrefLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.locrefLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.locrefLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.locrefLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.locrefLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.locrefLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.locrefLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.locrefLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.locrefLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.locrefLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.locrefLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.locrefLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.locrefLike → <desc>

**<dim>** Any single dimensional specification.

model.locrefLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.locrefLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.locrefLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.locrefLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.locrefLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.locrefLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.locrefLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.locrefLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.locrefLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.locrefLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.locrefLike → <extent>

**<f>** Single element of a figured bass indication.

model.locrefLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.locrefLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.locrefLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.locrefLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.locrefLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.locrefLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.locrefLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.locrefLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.locrefLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.locrefLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.locrefLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.locrefLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.locrefLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.locrefLike → <head>

**<height>** Description of the vertical size of an object.

model.locrefLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.locrefLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.locrefLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.locrefLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.locrefLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.locrefLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.locrefLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.locrefLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.locrefLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.locrefLike → <lem>

**<li>** Single item in a <list>.

model.locrefLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.locrefLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.locrefLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.locrefLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.locrefLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.locrefLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.locrefLike → <nameLink>

**<num>** Numeric information in any form.

model.locrefLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.locrefLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.locrefLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.locrefLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.locrefLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.locrefLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.locrefLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.locrefLike → <persName>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.locrefLike → <pgDesc>

**<pgFoot>** A running footer.

model.locrefLike → <pgFoot>

**<pgHead>** A running header.

model.locrefLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.locrefLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.locrefLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.locrefLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.locrefLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.locrefLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.locrefLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.locrefLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.locrefLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.locrefLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.locrefLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.locrefLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.locrefLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.locrefLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.locrefLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.locrefLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.locrefLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.locrefLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.locrefLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.locrefLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.locrefLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.locrefLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.locrefLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.locrefLike → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.locrefLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.locrefLike → <sic>

**<signifLet>** Significantive letter(s).

model.locrefLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.locrefLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.locrefLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.locrefLike → <sponsor>

**<stack>** An inline table with a single column.

model.locrefLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.locrefLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.locrefLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.locrefLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.locrefLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.locrefLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.locrefLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.locrefLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.locrefLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.locrefLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.locrefLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.locrefLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.locrefLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.locrefLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.locrefLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.locrefLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.locrefLike → <width>

## Declaration

```
<classSpec ident="model.locrefLike" module="MEI.ptrref" type="model">
  <desc xml:lang="en">Groups elements used for purposes of location and reference.</desc>
  <classes>

  </classes>
</classSpec>
```

## model.manifestationLike

Collects FRBR manifestation-like elements.

### Module

[MEI.frbr](#)

### Attributes

### Member of

(model.manifestationLike isn't member of any model class)

### Members

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

model.manifestationLike → <manifestation>

### Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

model.manifestationLike → <componentList>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

model.manifestationLike → <manifestationList>

### Declaration

```
<classSpec ident="model.manifestationLike" type="model" module="MEI.frbr">
  <desc xml:lang="en">Collects FRBR manifestation-like elements.</desc>
</classSpec>
```

## model.mdivLike

Groups elements used to represent generic structural divisions of music notation.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.mdivLike isn't member of any model class)

### Members

**<mdiv>** Contains a subdivision of the body of a musical text.

model.mdivLike → <mdiv>

### Contained By

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

model.mdivLike → <body>

**<mdiv>** Contains a subdivision of the body of a musical text.

model.mdivLike → <mdiv>

### Declaration

```
<classSpec ident="model.mdivLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements used to represent generic structural divisions of
  music notation.</desc>

```

## model.measureLike

Groups CMN measure-like elements.

### Module

[MEI.cmn](#)

### Attributes

#### Member of

[model.sectionPart.cmn](#) Groups elements that may appear as part of a section.

#### Members

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.measureLike → <measure>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.measureLike → <abbr>

**<add>** Marks an addition to the text.

model.measureLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.measureLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.measureLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.measureLike → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.measureLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.measureLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.measureLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.measureLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.measureLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.measureLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.measureLike → <restore>

**<section>** Segment of music data.

model.measureLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.measureLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.measureLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.measureLike → <unclear>

## Declaration

```
<classSpec ident="model.measureLike" module="MEI.cmn" type="model">
  <desc xml:lang="en">Groups CMN measure-like elements.</desc>
  <classes>
    <memberOf key="model.sectionPart.cmn"/>
  </classes>
</classSpec>
```

## model.measurePart

Groups elements that may appear within a CMN measure.

### Module

[MEI.cmn](#)

### Attributes

#### Member of

(model.measurePart isn't member of any model class)

#### Members

**model.controlEventLike** Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

model.measurePart → model.measurePart

**model.controlEventLike.cmn** Groups control events that appear in CMN.

model.measurePart → model.measurePart

**model.midiLike** Groups elements which group MIDI-like elements.

model.measurePart → model.measurePart

**model.ossiaLike** Groups elements that function like ossia.

model.measurePart → model.measurePart

**model.staffLike** Groups elements that function like staves.

model.measurePart → model.measurePart

#### Contained By

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.measurePart → <measure>

### Declaration

```
<classSpec ident="model.measurePart" module="MEI.cmn" type="model">
  <desc xml:lang="en">Groups elements that may appear within a CMN measure.</desc>
</classSpec>
```

# model.measurementLike

Groups elements that represent a measurement.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

## Members

[model.numLike](#) Groups elements that denote a number or a quantity.

`model.measurementLike` → `model.measurementLike`

## Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.measurementLike` → `<abbr>`

[\*\*<acquisition>\*\*](#) Records information concerning the process by which an item was acquired by the holding institution.

`model.measurementLike` → `<acquisition>`

[\*\*<actor>\*\*](#) Name of an actor appearing within a cast list.

`model.measurementLike` → `<actor>`

[\*\*<add>\*\*](#) Marks an addition to the text.

`model.measurementLike` → `<add>`

[\*\*<addName>\*\*](#) Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.measurementLike` → `<addName>`

[\*\*<addrLine>\*\*](#) Single line of a postal address.

`model.measurementLike` → `<addrLine>`

[\*\*<anchoredText>\*\*](#) Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.measurementLike` → `<anchoredText>`

[\*\*<annot>\*\*](#) Provides a statement explaining the text or indicating the basis for an assertion.

`model.measurementLike` → `<annot>`

[\*\*<arranger>\*\*](#) A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

`model.measurementLike` → `<arranger>`

[\*\*<attacca>\*\*](#) An instruction to begin the next section or movement of a composition without pause.

`model.measurementLike` → `<attacca>`

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.measurementLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.measurementLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.measurementLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.measurementLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.measurementLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.measurementLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.measurementLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.measurementLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.measurementLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.measurementLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.measurementLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.measurementLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.measurementLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.measurementLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.measurementLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.measurementLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.measurementLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.measurementLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.measurementLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.measurementLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.measurementLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.measurementLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.measurementLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.measurementLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.measurementLike → <desc>

**<dim>** Any single dimensional specification.

model.measurementLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.measurementLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.measurementLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.measurementLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.measurementLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.measurementLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.measurementLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.measurementLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.measurementLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.measurementLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.measurementLike → <extent>

**<f>** Single element of a figured bass indication.

model.measurementLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.measurementLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.measurementLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.measurementLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.measurementLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.measurementLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.measurementLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.measurementLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.measurementLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.measurementLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.measurementLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.measurementLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.measurementLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.measurementLike → <head>

**<height>** Description of the vertical size of an object.

model.measurementLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.measurementLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.measurementLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.measurementLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.measurementLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.measurementLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.measurementLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.measurementLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.measurementLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.measurementLike → <lem>

**<li>** Single item in a <list>.

model.measurementLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.measurementLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.measurementLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.measurementLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.measurementLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.measurementLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.measurementLike → <nameLink>

**<num>** Numeric information in any form.

model.measurementLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.measurementLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.measurementLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.measurementLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.measurementLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.measurementLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.measurementLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.measurementLike → <persName>

**<pgFoot>** A running footer.

model.measurementLike → <pgFoot>

**<pgHead>** A running header.

model.measurementLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.measurementLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.measurementLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.measurementLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.measurementLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.measurementLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.measurementLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.measurementLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.measurementLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.measurementLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.measurementLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.measurementLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.measurementLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.measurementLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.measurementLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.measurementLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.measurementLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.measurementLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.measurementLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.measurementLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.measurementLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.measurementLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.measurementLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.measurementLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.measurementLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.measurementLike → <sic>

**<signifLet>** Significative letter(s).

model.measurementLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.measurementLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.measurementLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.measurementLike → <sponsor>

**<stack>** An inline table with a single column.

model.measurementLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.measurementLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.measurementLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.measurementLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.measurementLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.measurementLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.measurementLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.measurementLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.measurementLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.measurementLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.measurementLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.measurementLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.measurementLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.measurementLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.measurementLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.measurementLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.measurementLike → <width>

## Declaration

```
<classSpec ident="model.measurementLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent a measurement.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>
```

## model.meterSigLike

Groups elements that represent a meter signature.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

[model.staffDefPart](#) Groups elements that may appear in the declaration of staff features.

#### Members

**<meterSig>** Written meter signature.

model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

model.meterSigLike → <meterSigGrp>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.meterSigLike → <abbr>

**<add>** Marks an addition to the text.

model.meterSigLike → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.meterSigLike → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.meterSigLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.meterSigLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.meterSigLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.meterSigLike → <expan>

**<graceGrp>** A container for a sequence of grace notes.

model.meterSigLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

model.meterSigLike → <layer>

**<layerDef>** Container for layer meta-information.

model.meterSigLike → <layerDef>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.meterSigLike → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.meterSigLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.meterSigLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.meterSigLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.meterSigLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.meterSigLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.meterSigLike → <restore>

**<scoreDef>** Container for score meta-information.

model.meterSigLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

model.meterSigLike → <sic>

**<staffDef>** Container for staff meta-information.

model.meterSigLike → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.meterSigLike → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.meterSigLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.meterSigLike → <unclear>

## Declaration

```
<classSpec ident="model.meterSigLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent a meter signature.</desc>
  <classes>
    <memberOf key="model.eventLike"/>
    <memberOf key="model.staffDefPart"/>
  </classes>
</classSpec>
```

## model.midiLike

Groups elements which group MIDI-like elements.

### Module

MEI.midi

### Attributes

#### Member of

[model.layerPart.mensuralAndNeumes](#) Groups notated events at the layer level that are shared by the mensural and neume repertoires.

[model.measurePart](#) Groups elements that may appear within a CMN measure.

[model.syllablePart](#) Groups elements that may appear as part of the content of a syllable.

### Members

**<midi>** Container for elements that contain information useful when generating MIDI output.

model.midiLike → <midi>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.midiLike → <abbr>

**<add>** Marks an addition to the text.

model.midiLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.midiLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.midiLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.midiLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.midiLike → <expan>

**<layer>** An independent stream of events on a staff.

model.midiLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.midiLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.midiLike → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.midiLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.midiLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.midiLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.midiLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.midiLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.midiLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.midiLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.midiLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.midiLike → <unclear>

## Declaration

```
<classSpec ident="model.midiLike" module="MEI.midi" type="model">
  <desc xml:lang="en">Groups elements which group MIDI-like elements.</desc>

```

## model.milestoneLike.music

Groups milestone-style elements found in music notation.

### Module

[MEI.shared](#)

### Attributes

#### Member of

(model.milestoneLike.music isn't member of any model class)

#### Members

**<cb>** An empty formatting element that forces text to begin in a new column.

model.milestoneLike.music → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

model.milestoneLike.music → <colLayout>

**model.pbLike** Groups page beginning-like elements.

model.milestoneLike.music → model.milestoneLike.music

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

model.milestoneLike.music → <sb>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.milestoneLike.music → <abbr>

**<add>** Marks an addition to the text.

model.milestoneLike.music → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.milestoneLike.music → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.milestoneLike.music → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.milestoneLike.music → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., *prima volta*, *seconda volta*, etc.

model.milestoneLike.music → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.milestoneLike.music → <expan>

**<layer>** An independent stream of events on a staff.

model.milestoneLike.music → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.milestoneLike.music → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.milestoneLike.music → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.milestoneLike.music → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.milestoneLike.music → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.milestoneLike.music → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.milestoneLike.music → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.milestoneLike.music → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.milestoneLike.music → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.milestoneLike.music → <restore>

**<score>** Full score view of the musical content.

model.milestoneLike.music → <score>

**<section>** Segment of music data.

model.milestoneLike.music → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.milestoneLike.music → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.milestoneLike.music → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.milestoneLike.music → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.milestoneLike.music → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.milestoneLike.music → <unclear>

## Declaration

DEVELOPMENT  
VERSION

# model.milestoneLike.text

Groups milestone-style elements found in text.

## Module

[MEI.shared](#)

## Attributes

### Member of

(model.milestoneLike.text isn't member of any model class)

## Members

**<cb>** An empty formatting element that forces text to begin in a new column.

model.milestoneLike.text → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

model.milestoneLike.text → <colLayout>

**model.lbLike** Groups elements that function like line beginnings.

model.milestoneLike.text → model.milestoneLike.text

**model.pbLike** Groups page beginning-like elements.

model.milestoneLike.text → model.milestoneLike.text

## Contained By

**<argument>** Contains a formal list or prose description of topics addressed.

model.milestoneLike.text → <argument>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.milestoneLike.text → <back>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.milestoneLike.text → <div>

**<front>** Bundles prefatory text found before the start of the musical text.

model.milestoneLike.text → <front>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.milestoneLike.text → <series>

**<sp>** Contains an individual speech in a performance text.

model.milestoneLike.text → <sp>

**<titlePage>** Contains a transcription of the title page of a text.

model.milestoneLike.text → <titlePage>

## Declaration

```
<classSpec ident="model.milestoneLike.text" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups milestone-style elements found in text.</desc>
</classSpec>
```

## model.msInline

Groups elements that may appear inline when the msdesc module is active.

### Module

MEI.msDesc

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

#### Members

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

model.msInline → <catchwords>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

model.msInline → <heraldry>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

model.msInline → <locusGrp>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

model.msInline → <secFolio>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

model.msInline → <signatures>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

model.msInline → <stamp>

**<watermark>** Contains a description of a watermark or similar device.

model.msInline → <watermark>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.msInline → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.msInline → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.msInline → <actor>

**<add>** Marks an addition to the text.

model.msInline → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.msInline → <addName>

**<addrLine>** Single line of a postal address.

model.msInline → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.msInline → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.msInline → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.msInline → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.msInline → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.msInline → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.msInline → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.msInline → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.msInline → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.msInline → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.msInline → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.msInline → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.msInline → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.msInline → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.msInline → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.msInline → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.msInline → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.msInline → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.msInline → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.msInline → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.msInline → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.msInline → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.msInline → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.msInline → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.msInline → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.msInline → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.msInline → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.msInline → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.msInline → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.msInline → <desc>

**<dim>** Any single dimensional specification.

model.msInline → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.msInline → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.msInline → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.msInline → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.msInline → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.msInline → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.msInline → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.msInline → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.msInline → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.msInline → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.msInline → <extent>

**<f>** Single element of a figured bass indication.

model.msInline → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.msInline → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.msInline → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.msInline → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.msInline → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.msInline → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.msInline → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.msInline → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.msInline → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.msInline → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.msInline → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.msInline → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.msInline → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.msInline → <head>

**<height>** Description of the vertical size of an object.

model.msInline → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.msInline → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.msInline → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.msInline → <imprint>

**<l>** Contains a single line of text within a line group.

model.msInline → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.msInline → <label>

**<labelAbbr>** A label on the pages following the first.

model.msInline → <labelAbbr>

**<language>** Description of a language used in the document.

model.msInline → <language>

**<layoutDesc>** Collects layout descriptions.

model.msInline → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.msInline → <lem>

**<li>** Single item in a <list>.

model.msInline → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.msInline → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.msInline → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.msInline → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.msInline → <metaMark>

**<name>** Proper noun or noun phrase.

model.msInline → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.msInline → <nameLink>

**<num>** Numeric information in any form.

model.msInline → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.msInline → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.msInline → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.msInline → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.msInline → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.msInline → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.msInline → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.msInline → <persName>

**<pgFoot>** A running footer.

model.msInline → <pgFoot>

**<pgHead>** A running header.

model.msInline → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.msInline → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.msInline → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.msInline → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.msInline → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.msInline → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.msInline → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.msInline → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.msInline → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.msInline → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.msInline → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.msInline → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.msInline → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.msInline → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.msInline → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.msInline → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.msInline → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.msInline → <role>

**<roleDesc>** Describes a character's role in a drama.

model.msInline → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.msInline → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.msInline → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.msInline → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.msInline → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.msInline → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.msInline → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.msInline → <sic>

**<signifLet>** Significantive letter(s).

model.msInline → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.msInline → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.msInline → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.msInline → <sponsor>

**<stack>** An inline table with a single column.

model.msInline → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.msInline → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.msInline → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.msInline → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.msInline → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.msInline → <supportDesc>

**<syI>** Individual lyric syllable.

model.msInline → <syI>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.msInline → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.msInline → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.msInline → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.msInline → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.msInline → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.msInline → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.msInline → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.msInline → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.msInline → <unclear>

**<width>** Description of the horizontal size of an object.

model.msInline → <width>

## Declaration

```
<classSpec ident="model.msInline" type="model" module="MEI.msDesc">
  <desc xml:lang="en">Groups elements that may appear inline when the msdesc module is active.</desc>

    <memberOf key="model.textPhraseLike.limited"/>
  </classes>
</classSpec>
```

## model.nameLike

Groups elements that contain names.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

#### Members

**[model.nameLike.agent](#)** Groups elements which contain names of individuals or corporate bodies.

`model.nameLike → model.nameLike`

**[model.nameLike.place](#)** Groups place name elements.

`model.nameLike → model.nameLike`

**[<name>](#)** Proper noun or noun phrase.

`model.nameLike → <name>`

#### Contained By

**[<abbr>](#)** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.nameLike → <abbr>`

**[<acquisition>](#)** Records information concerning the process by which an item was acquired by the holding institution.

`model.nameLike → <acquisition>`

**[<actor>](#)** Name of an actor appearing within a cast list.

`model.nameLike → <actor>`

**[<add>](#)** Marks an addition to the text.

`model.nameLike → <add>`

**[<addName>](#)** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.nameLike → <addName>`

**[<addrLine>](#)** Single line of a postal address.

`model.nameLike → <addrLine>`

**[<anchoredText>](#)** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.nameLike → <anchoredText>`

**[<annot>](#)** Provides a statement explaining the text or indicating the basis for an assertion.

`model.nameLike → <annot>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.nameLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.nameLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.nameLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.nameLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.nameLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.nameLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.nameLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.nameLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.nameLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.nameLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.nameLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.nameLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.nameLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.nameLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.nameLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.nameLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.nameLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.nameLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.nameLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.nameLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.nameLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.nameLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.nameLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.nameLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.nameLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.nameLike → <desc>

**<dim>** Any single dimensional specification.

model.nameLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.nameLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.nameLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.nameLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.nameLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.nameLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.nameLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.nameLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.nameLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.nameLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.nameLike → <extent>

**<f>** Single element of a figured bass indication.

model.nameLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.nameLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.nameLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.nameLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.nameLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.nameLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.nameLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.nameLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.nameLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.nameLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.nameLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.nameLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.nameLike → <head>

**<height>** Description of the vertical size of an object.

model.nameLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.nameLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.nameLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.nameLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.nameLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.nameLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.nameLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.nameLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.nameLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.nameLike → <lem>

**<li>** Single item in a <list>.

model.nameLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.nameLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.nameLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.nameLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.nameLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.nameLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.nameLike → <nameLink>

**<num>** Numeric information in any form.

model.nameLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.nameLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.nameLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.nameLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.nameLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.nameLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike → <persName>

**<pgFoot>** A running footer.

model.nameLike → <pgFoot>

**<pgHead>** A running header.

model.nameLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.nameLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.nameLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.nameLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.nameLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.nameLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.nameLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.nameLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.nameLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.nameLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.nameLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.nameLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.nameLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.nameLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.nameLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.nameLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.nameLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.nameLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.nameLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.nameLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.nameLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.nameLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.nameLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.nameLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.nameLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.nameLike → <sic>

**<signifLet>** Significantive letter(s).

model.nameLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.nameLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.nameLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.nameLike → <sponsor>

**<stack>** An inline table with a single column.

model.nameLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.nameLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.nameLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.nameLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.nameLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.nameLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.nameLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.nameLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.nameLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.nameLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.nameLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.nameLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.nameLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.nameLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.nameLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.nameLike → <width>

## model.nameLike.agent

Groups elements which contain names of individuals or corporate bodies.

### Module

[MEI.namesdates](#)

### Attributes

#### Member of

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

[model.nameLike](#) Groups elements that contain names.

#### Members

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike.agent → <corpName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike.agent → <persName>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.nameLike.agent → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.nameLike.agent → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.nameLike.agent → <actor>

**<add>** Marks an addition to the text.

model.nameLike.agent → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.nameLike.agent → <addName>

**<addrLine>** Single line of a postal address.

model.nameLike.agent → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.nameLike.agent → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.nameLike.agent → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.nameLike.agent → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.nameLike.agent → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.nameLike.agent → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.nameLike.agent → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.nameLike.agent → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.nameLike.agent → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.nameLike.agent → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.nameLike.agent → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.nameLike.agent → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.nameLike.agent → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.nameLike.agent → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.nameLike.agent → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.nameLike.agent → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.nameLike.agent → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.nameLike.agent → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.nameLike.agent → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.nameLike.agent → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.nameLike.agent → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.nameLike.agent → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.nameLike.agent → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.nameLike.agent → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.nameLike.agent → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.nameLike.agent → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.nameLike.agent → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.nameLike.agent → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.nameLike.agent → <desc>

**<dim>** Any single dimensional specification.

model.nameLike.agent → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.nameLike.agent → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.nameLike.agent → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.nameLike.agent → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.nameLike.agent → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.nameLike.agent → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.nameLike.agent → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.nameLike.agent → <epigraph>

**<event>** Contains a free-text event description.

model.nameLike.agent → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.nameLike.agent → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.nameLike.agent → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.nameLike.agent → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.nameLike.agent → <extent>

**<f>** Single element of a figured bass indication.

model.nameLike.agent → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.nameLike.agent → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.nameLike.agent → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.nameLike.agent → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.nameLike.agent → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.nameLike.agent → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.nameLike.agent → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.nameLike.agent → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.nameLike.agent → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike.agent → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.nameLike.agent → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.nameLike.agent → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.nameLike.agent → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.nameLike.agent → <head>

**<height>** Description of the vertical size of an object.

model.nameLike.agent → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.nameLike.agent → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.nameLike.agent → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.nameLike.agent → <imprint>

**<l>** Contains a single line of text within a line group.

model.nameLike.agent → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.nameLike.agent → <label>

**<labelAbbr>** A label on the pages following the first.

model.nameLike.agent → <labelAbbr>

**<language>** Description of a language used in the document.

model.nameLike.agent → <language>

**<layoutDesc>** Collects layout descriptions.

model.nameLike.agent → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.nameLike.agent → <lem>

**<li>** Single item in a <list>.

model.nameLike.agent → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.nameLike.agent → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.nameLike.agent → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.nameLike.agent → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.nameLike.agent → <metaMark>

**<name>** Proper noun or noun phrase.

model.nameLike.agent → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.nameLike.agent → <nameLink>

**<num>** Numeric information in any form.

model.nameLike.agent → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.nameLike.agent → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.nameLike.agent → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.nameLike.agent → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.nameLike.agent → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.nameLike.agent → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike.agent → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike.agent → <persName>

**<pgFoot>** A running footer.

model.nameLike.agent → <pgFoot>

**<pgHead>** A running header.

model.nameLike.agent → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.nameLike.agent → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.nameLike.agent → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.nameLike.agent → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.nameLike.agent → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.nameLike.agent → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.nameLike.agent → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.nameLike.agent → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.nameLike.agent → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.nameLike.agent → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.nameLike.agent → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.nameLike.agent → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.nameLike.agent → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.nameLike.agent → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.nameLike.agent → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.nameLike.agent → <resp>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

model.nameLike.agent → <respStmt>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.nameLike.agent → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.nameLike.agent → <role>

**<roleDesc>** Describes a character's role in a drama.

model.nameLike.agent → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.nameLike.agent → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.nameLike.agent → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.nameLike.agent → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.nameLike.agent → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.nameLike.agent → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.nameLike.agent → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.nameLike.agent → <sic>

**<signifLet>** Significantive letter(s).

model.nameLike.agent → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.nameLike.agent → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragmant.

model.nameLike.agent → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.nameLike.agent → <sponsor>

**<stack>** An inline table with a single column.

model.nameLike.agent → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.nameLike.agent → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.nameLike.agent → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike.agent → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.nameLike.agent → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.nameLike.agent → <supportDesc>

**<syl>** Individual lyric syllable.

model.nameLike.agent → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.nameLike.agent → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.nameLike.agent → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.nameLike.agent → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.nameLike.agent → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.nameLike.agent → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.nameLike.agent → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.nameLike.agent → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.nameLike.agent → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.nameLike.agent → <unclear>

**<width>** Description of the horizontal size of an object.

model.nameLike.agent → <width>

## Declaration

```
<classSpec ident="model.nameLike.agent" module="MEI.namesdates" type="model">
  <desc xml:lang="en">Groups elements which contain names of individuals or corporate bodies.</desc>

```

# model.nameLike.geogName

Groups geographic name elements.

## Module

[MEI.namesdates](#)

## Attributes

### Member of

[model.eventPart](#) Groups elements that may be used to provide a structured description of an event.

[model.nameLike.place](#) Groups place name elements.

### Members

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike.geogName → <geogName>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.nameLike.geogName → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.nameLike.geogName → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.nameLike.geogName → <actor>

**<add>** Marks an addition to the text.

model.nameLike.geogName → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.nameLike.geogName → <addName>

**<addrLine>** Single line of a postal address.

model.nameLike.geogName → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.nameLike.geogName → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.nameLike.geogName → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.nameLike.geogName → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.nameLike.geogName → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.nameLike.geogName → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.nameLike.geogName → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.nameLike.geogName → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.nameLike.geogName → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.nameLike.geogName → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.nameLike.geogName → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.nameLike.geogName → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.nameLike.geogName → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.nameLike.geogName → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.nameLike.geogName → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.nameLike.geogName → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike.geogName → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.nameLike.geogName → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.nameLike.geogName → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.nameLike.geogName → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.nameLike.geogName → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.nameLike.geogName → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.nameLike.geogName → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.nameLike.geogName → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.nameLike.geogName → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.nameLike.geogName → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.nameLike.geogName → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.nameLike.geogName → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.nameLike.geogName → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.nameLike.geogName → <desc>

**<dim>** Any single dimensional specification.

model.nameLike.geogName → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.nameLike.geogName → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.nameLike.geogName → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.nameLike.geogName → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.nameLike.geogName → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.nameLike.geogName → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.nameLike.geogName → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.nameLike.geogName → <epigraph>

**<event>** Contains a free-text event description.

model.nameLike.geogName → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

model.nameLike.geogName → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.nameLike.geogName → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.nameLike.geogName → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.nameLike.geogName → <extent>

**<f>** Single element of a figured bass indication.

model.nameLike.geogName → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.nameLike.geogName → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.nameLike.geogName → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.nameLike.geogName → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.nameLike.geogName → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.nameLike.geogName → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.nameLike.geogName → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.nameLike.geogName → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.nameLike.geogName → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike.geogName → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.nameLike.geogName → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.nameLike.geogName → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.nameLike.geogName → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.nameLike.geogName → <head>

**<height>** Description of the vertical size of an object.

model.nameLike.geogName → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.nameLike.geogName → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.nameLike.geogName → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.nameLike.geogName → <imprint>

**<l>** Contains a single line of text within a line group.

model.nameLike.geogName → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.nameLike.geogName → <label>

**<labelAbbr>** A label on the pages following the first.

model.nameLike.geogName → <labelAbbr>

**<language>** Description of a language used in the document.

model.nameLike.geogName → <language>

**<layoutDesc>** Collects layout descriptions.

model.nameLike.geogName → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.nameLike.geogName → <lem>

**<li>** Single item in a <list>.

model.nameLike.geogName → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.nameLike.geogName → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.nameLike.geogName → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.nameLike.geogName → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.nameLike.geogName → <metaMark>

**<name>** Proper noun or noun phrase.

model.nameLike.geogName → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.nameLike.geogName → <nameLink>

**<num>** Numeric information in any form.

model.nameLike.geogName → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.nameLike.geogName → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.nameLike.geogName → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.nameLike.geogName → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.nameLike.geogName → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.nameLike.geogName → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike.geogName → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike.geogName → <persName>

**<pgFoot>** A running footer.

model.nameLike.geogName → <pgFoot>

**<pgHead>** A running header.

model.nameLike.geogName → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.nameLike.geogName → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.nameLike.geogName → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.nameLike.geogName → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.nameLike.geogName → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.nameLike.geogName → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.nameLike.geogName → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.nameLike.geogName → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.nameLike.geogName → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.nameLike.geogName → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.nameLike.geogName → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.nameLike.geogName → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.nameLike.geogName → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.nameLike.geogName → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.nameLike.geogName → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.nameLike.geogName → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.nameLike.geogName → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.nameLike.geogName → <role>

**<roleDesc>** Describes a character's role in a drama.

model.nameLike.geogName → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.nameLike.geogName → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.nameLike.geogName → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.nameLike.geogName → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.nameLike.geogName → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.nameLike.geogName → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.nameLike.geogName → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.nameLike.geogName → <sic>

**<signifLet>** Significantive letter(s).

model.nameLike.geogName → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.nameLike.geogName → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.nameLike.geogName → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.nameLike.geogName → <sponsor>

**<stack>** An inline table with a single column.

model.nameLike.geogName → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.nameLike.geogName → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.nameLike.geogName → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike.geogName → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.nameLike.geogName → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.nameLike.geogName → <supportDesc>

**<syl>** Individual lyric syllable.

model.nameLike.geogName → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.nameLike.geogName → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.nameLike.geogName → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.nameLike.geogName → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.nameLike.geogName → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.nameLike.geogName → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.nameLike.geogName → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.nameLike.geogName → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.nameLike.geogName → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.nameLike.geogName → <unclear>

**<width>** Description of the horizontal size of an object.

model.nameLike.geogName → <width>

## Declaration

```
<classSpec ident="model.nameLike.geogName" module="MEI.namesdates" type="model">

```

## model.nameLike.label

Groups elements that serve as stylistic labels.

### Module

[MEI.namesdates](#)

### Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

### Members

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike.label → <periodName>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike.label → <styleName>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.nameLike.label → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.nameLike.label → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.nameLike.label → <actor>

**<add>** Marks an addition to the text.

model.nameLike.label → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.nameLike.label → <addName>

**<addrLine>** Single line of a postal address.

model.nameLike.label → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.nameLike.label → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.nameLike.label → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.nameLike.label → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.nameLike.label → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.nameLike.label → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.nameLike.label → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.nameLike.label → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.nameLike.label → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.nameLike.label → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.nameLike.label → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.nameLike.label → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.nameLike.label → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.nameLike.label → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.nameLike.label → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.nameLike.label → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike.label → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.nameLike.label → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.nameLike.label → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.nameLike.label → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.nameLike.label → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.nameLike.label → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.nameLike.label → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.nameLike.label → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.nameLike.label → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.nameLike.label → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.nameLike.label → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.nameLike.label → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.nameLike.label → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.nameLike.label → <desc>

**<dim>** Any single dimensional specification.

model.nameLike.label → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.nameLike.label → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.nameLike.label → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.nameLike.label → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.nameLike.label → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.nameLike.label → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.nameLike.label → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.nameLike.label → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.nameLike.label → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.nameLike.label → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.nameLike.label → <extent>

**<f>** Single element of a figured bass indication.

model.nameLike.label → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.nameLike.label → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.nameLike.label → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.nameLike.label → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.nameLike.label → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.nameLike.label → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.nameLike.label → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.nameLike.label → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.nameLike.label → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike.label → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.nameLike.label → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.nameLike.label → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.nameLike.label → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.nameLike.label → <head>

**<height>** Description of the vertical size of an object.

model.nameLike.label → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.nameLike.label → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.nameLike.label → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.nameLike.label → <imprint>

**<l>** Contains a single line of text within a line group.

model.nameLike.label → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.nameLike.label → <label>

**<labelAbbr>** A label on the pages following the first.

model.nameLike.label → <labelAbbr>

**<language>** Description of a language used in the document.

model.nameLike.label → <language>

**<layoutDesc>** Collects layout descriptions.

model.nameLike.label → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.nameLike.label → <lem>

**<li>** Single item in a <list>.

model.nameLike.label → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.nameLike.label → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.nameLike.label → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.nameLike.label → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.nameLike.label → <metaMark>

**<name>** Proper noun or noun phrase.

model.nameLike.label → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.nameLike.label → <nameLink>

**<num>** Numeric information in any form.

model.nameLike.label → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.nameLike.label → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.nameLike.label → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.nameLike.label → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.nameLike.label → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.nameLike.label → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike.label → <persName>

**<pgFoot>** A running footer.

model.nameLike.label → <pgFoot>

**<pgHead>** A running header.

model.nameLike.label → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.nameLike.label → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.nameLike.label → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.nameLike.label → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.nameLike.label → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.nameLike.label → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.nameLike.label → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.nameLike.label → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.nameLike.label → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.nameLike.label → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.nameLike.label → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.nameLike.label → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.nameLike.label → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.nameLike.label → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.nameLike.label → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.nameLike.label → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.nameLike.label → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.nameLike.label → <role>

**<roleDesc>** Describes a character's role in a drama.

model.nameLike.label → <roleDesc>

**< roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.nameLike.label → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.nameLike.label → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.nameLike.label → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.nameLike.label → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.nameLike.label → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.nameLike.label → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.nameLike.label → <sic>

**<signifLet>** Significantive letter(s).

model.nameLike.label → <signifLet>

**<sounChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.nameLike.label → <sounChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.nameLike.label → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.nameLike.label → <sponsor>

**<stack>** An inline table with a single column.

model.nameLike.label → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.nameLike.label → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.nameLike.label → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike.label → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.nameLike.label → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.nameLike.label → <supportDesc>

**<syl>** Individual lyric syllable.

model.nameLike.label → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.nameLike.label → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.nameLike.label → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.nameLike.label → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.nameLike.label → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.nameLike.label → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.nameLike.label → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.nameLike.label → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.nameLike.label → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.nameLike.label → <unclear>

**<width>** Description of the horizontal size of an object.

model.nameLike.label → <width>

## Declaration

# model.nameLike.place

Groups place name elements.

## Module

[MEI.namesdates](#)

## Attributes

### Member of

[model.nameLike](#) Groups elements that contain names.

### Members

[model.nameLike.geogName](#) Groups geographic name elements.

model.nameLike.place → model.nameLike.place

[model.repositoryLike](#) Groups elements that denote a corporate entity that holds a bibliographic item.

model.nameLike.place → model.nameLike.place

### Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.nameLike.place → <abbr>

[\*\*<acquisition>\*\*](#) Records information concerning the process by which an item was acquired by the holding institution.

model.nameLike.place → <acquisition>

[\*\*<actor>\*\*](#) Name of an actor appearing within a cast list.

model.nameLike.place → <actor>

[\*\*<add>\*\*](#) Marks an addition to the text.

model.nameLike.place → <add>

[\*\*<addName>\*\*](#) Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.nameLike.place → <addName>

[\*\*<addrLine>\*\*](#) Single line of a postal address.

model.nameLike.place → <addrLine>

[\*\*<anchoredText>\*\*](#) Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.nameLike.place → <anchoredText>

[\*\*<annot>\*\*](#) Provides a statement explaining the text or indicating the basis for an assertion.

model.nameLike.place → <annot>

[\*\*<arranger>\*\*](#) A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.nameLike.place → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.nameLike.place → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.nameLike.place → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.nameLike.place → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.nameLike.place → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.nameLike.place → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.nameLike.place → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.nameLike.place → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.nameLike.place → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.nameLike.place → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.nameLike.place → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.nameLike.place → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.nameLike.place → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.nameLike.place → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.nameLike.place → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.nameLike.place → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.nameLike.place → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.nameLike.place → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.nameLike.place → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.nameLike.place → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.nameLike.place → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.nameLike.place → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.nameLike.place → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.nameLike.place → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.nameLike.place → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.nameLike.place → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.nameLike.place → <desc>

**<dim>** Any single dimensional specification.

model.nameLike.place → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.nameLike.place → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.nameLike.place → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.nameLike.place → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.nameLike.place → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.nameLike.place → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.nameLike.place → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.nameLike.place → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.nameLike.place → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.nameLike.place → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.nameLike.place → <extent>

**<f>** Single element of a figured bass indication.

model.nameLike.place → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.nameLike.place → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.nameLike.place → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.nameLike.place → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.nameLike.place → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.nameLike.place → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.nameLike.place → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.nameLike.place → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.nameLike.place → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.nameLike.place → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.nameLike.place → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.nameLike.place → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.nameLike.place → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.nameLike.place → <head>

**<height>** Description of the vertical size of an object.

model.nameLike.place → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.nameLike.place → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.nameLike.place → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.nameLike.place → <imprint>

**<l>** Contains a single line of text within a line group.

model.nameLike.place → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.nameLike.place → <label>

**<labelAbbr>** A label on the pages following the first.

model.nameLike.place → <labelAbbr>

**<language>** Description of a language used in the document.

model.nameLike.place → <language>

**<layoutDesc>** Collects layout descriptions.

model.nameLike.place → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.nameLike.place → <lem>

**<li>** Single item in a <list>.

model.nameLike.place → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.nameLike.place → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.nameLike.place → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.nameLike.place → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.nameLike.place → <metaMark>

**<name>** Proper noun or noun phrase.

model.nameLike.place → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.nameLike.place → <nameLink>

**<num>** Numeric information in any form.

model.nameLike.place → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.nameLike.place → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.nameLike.place → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.nameLike.place → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.nameLike.place → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.nameLike.place → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.nameLike.place → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.nameLike.place → <persName>

**<pgFoot>** A running footer.

model.nameLike.place → <pgFoot>

**<pgHead>** A running header.

model.nameLike.place → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.nameLike.place → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.nameLike.place → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.nameLike.place → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.nameLike.place → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.nameLike.place → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.nameLike.place → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.nameLike.place → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.nameLike.place → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.nameLike.place → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.nameLike.place → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.nameLike.place → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.nameLike.place → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.nameLike.place → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.nameLike.place → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.nameLike.place → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.nameLike.place → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.nameLike.place → <role>

**<roleDesc>** Describes a character's role in a drama.

model.nameLike.place → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.nameLike.place → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.nameLike.place → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.nameLike.place → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.nameLike.place → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.nameLike.place → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.nameLike.place → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.nameLike.place → <sic>

**<signifLet>** Significantive letter(s).

model.nameLike.place → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.nameLike.place → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.nameLike.place → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.nameLike.place → <sponsor>

**<stack>** An inline table with a single column.

model.nameLike.place → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.nameLike.place → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.nameLike.place → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.nameLike.place → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.nameLike.place → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.nameLike.place → <supportDesc>

**<syl>** Individual lyric syllable.

model.nameLike.place → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.nameLike.place → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.nameLike.place → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.nameLike.place → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.nameLike.place → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.nameLike.place → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.nameLike.place → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.nameLike.place → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.nameLike.place → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.nameLike.place → <unclear>

**<width>** Description of the horizontal size of an object.

model.nameLike.place → <width>

# model.neumeComponentModifierLike

Groups elements that modify neume components.

## Module

[MEI.neumes](#)

## Attributes

### Member of

(model.neumeComponentModifierLike isn't member of any model class)

### Members

**<liqueſcent>** Liquescent.

model.neumeComponentModifierLike → <liqueſcent>

**<oriscus>** Oriscus.

model.neumeComponentModifierLike → <oriscus>

**<quilisma>** Quilisma.

model.neumeComponentModifierLike → <quilisma>

**<strophicus>** Strophicus.

model.neumeComponentModifierLike → <strophicus>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.neumeComponentModifierLike → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.neumeComponentModifierLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.neumeComponentModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.neumeComponentModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.neumeComponentModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.neumeComponentModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

model.neumeComponentModifierLike → <nc>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.neumeComponentModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.neumeComponentModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.neumeComponentModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.neumeComponentModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.neumeComponentModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.neumeComponentModifierLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.neumeComponentModifierLike → <unclear>

## model.neumeModifierLike

Groups elements that modify neume-like features.

### Module

[MEI.neumes](#)

### Attributes

### Member of

(model.neumeModifierLike isn't member of any model class)

### Members

**<episema>** Episema.

model.neumeModifierLike → <episema>

**<hispanTick>** Hispanic tick.

model.neumeModifierLike → <hispanTick>

**<signifLet>** Significantive letter(s).

model.neumeModifierLike → <signifLet>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.neumeModifierLike → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.neumeModifierLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.neumeModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.neumeModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.neumeModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.neumeModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

model.neumeModifierLike → <nc>

**<ncGrp>** Collection of one or more neume components.

model.neumeModifierLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

model.neumeModifierLike → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.neumeModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.neumeModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.neumeModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.neumeModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.neumeModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.neumeModifierLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.neumeModifierLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.neumeModifierLike → <unclear>

## model.noteModifierLike

Groups elements that modify note-like features.

### Module

MEI.shared

### Attributes

### Member of

model.layerPart.mensuralAndNeumes Groups notated events at the layer level that are shared by the mensural and neume repertoires.

### Members

**<accid>** Records a temporary alteration to the pitch of a note.

model.noteModifierLike → <accid>

**<artic>** An indication of how to play a note or chord.

model.noteModifierLike → <artic>

**<dot>** Dot of augmentation or division.

model.noteModifierLike → <dot>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.noteModifierLike → <abbr>

**<add>** Marks an addition to the text.

model.noteModifierLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.noteModifierLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.noteModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.noteModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.noteModifierLike → <expan>

**<layer>** An independent stream of events on a staff.

model.noteModifierLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.noteModifierLike → <lem>

**<note>** A single pitched event.

model.noteModifierLike → <note>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.noteModifierLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.noteModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.noteModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.noteModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.noteModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.noteModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.noteModifierLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.noteModifierLike → <unclear>

## Declaration

```

```

## model.numLike

Groups elements that denote a number or a quantity.

### Module

MEI.shared

### Attributes

#### Member of

[model.measurementLike](#) Groups elements that represent a measurement.

#### Members

**<num>** Numeric information in any form.

model.numLike → <num>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.numLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.numLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.numLike → <actor>

**<add>** Marks an addition to the text.

model.numLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.numLike → <addName>

**<addrLine>** Single line of a postal address.

model.numLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.numLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.numLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.numLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.numLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.numLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.numLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.numLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.numLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.numLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.numLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.numLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.numLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.numLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.numLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.numLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.numLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.numLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.numLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.numLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.numLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.numLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.numLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.numLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.numLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.numLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.numLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.numLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.numLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.numLike → <desc>

**<dim>** Any single dimensional specification.

model.numLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.numLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.numLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.numLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.numLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.numLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.numLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.numLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.numLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.numLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.numLike → <extent>

**<f>** Single element of a figured bass indication.

model.numLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.numLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.numLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.numLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.numLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.numLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.numLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.numLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.numLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.numLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.numLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.numLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.numLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.numLike → <head>

**<height>** Description of the vertical size of an object.

model.numLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.numLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.numLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.numLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.numLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.numLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.numLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.numLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.numLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.numLike → <lem>

**<li>** Single item in a <list>.

model.numLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.numLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.numLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.numLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.numLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.numLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.numLike → <nameLink>

**<num>** Numeric information in any form.

model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.numLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.numLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.numLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.numLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.numLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.numLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.numLike → <persName>

**<pgFoot>** A running footer.

model.numLike → <pgFoot>

**<pgHead>** A running header.

model.numLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.numLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.numLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.numLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.numLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.numLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.numLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.numLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.numLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.numLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.numLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.numLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.numLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.numLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.numLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.numLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.numLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.numLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.numLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.numLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.numLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.numLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.numLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.numLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.numLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.numLike → <sic>

**<signifLet>** Significative letter(s).

model.numLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.numLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.numLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.numLike → <sponsor>

**<stack>** An inline table with a single column.

model.numLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.numLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.numLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.numLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.numLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.numLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.numLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.numLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.numLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.numLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.numLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.numLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.numLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.numLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.numLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.numLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.numLike → <width>

## Declaration

```
<classSpec ident="model.numLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that denote a number or a quantity.</desc>
  <classes>
    <memberOf key="model.measurementLike"/>
  </classes>
</classSpec>
```

# model.ornamentLike.cmn

Groups CMN ornament elements.

## Module

[MEI.cmnOrnaments](#)

## Attributes

### Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Members

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

model.ornamentLike.cmn → <mordent>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

model.ornamentLike.cmn → <trill>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

model.ornamentLike.cmn → <turn>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.ornamentLike.cmn → <abbr>

**<add>** Marks an addition to the text.

model.ornamentLike.cmn → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.ornamentLike.cmn → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.ornamentLike.cmn → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.ornamentLike.cmn → <del>

**<expan>** Contains the expansion of an abbreviation.

model.ornamentLike.cmn → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.ornamentLike.cmn → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.ornamentLike.cmn → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.ornamentLike.cmn → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.ornamentLike.cmn → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.ornamentLike.cmn → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.ornamentLike.cmn → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.ornamentLike.cmn → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.ornamentLike.cmn → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.ornamentLike.cmn → <unclear>

## Declaration

```

  <desc xml:lang="en">Groups CMN ornament elements.</desc>
  <classes>
    <memberOf key="model.controlEventLike.cmn"/>
  </classes>
</classSpec>
```

## model.ossiaLike

Groups elements that function like ossia.

### Module

[MEI.cmn](#)

### Attributes

### Member of

[model.measurePart](#) Groups elements that may appear within a CMN measure.

[model.staffPart](#) Groups elements that are components of a staff.

### Members

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

model.ossiaLike → <ossia>

### Contained By

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.ossiaLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.ossiaLike → <oStaff>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.ossiaLike → <staff>

### Declaration

```
<classSpec ident="model.ossiaLike" module="MEI.cmn" type="model">
  <desc xml:lang="en">Groups elements that function like ossia.</desc>
  <classes>
    <memberOf key="model.measurePart"/>
    <memberOf key="model.staffPart"/>
  </classes>
</classSpec>
```

## model.pLike

Groups paragraph-like elements.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.textComponentLike](#) Groups block-level text elements.

#### Members

**<p>** One or more text phrases that form a logical prose passage.

model.pLike → <p>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.pLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.pLike → <acquisition>

**<add>** Marks an addition to the text.

model.pLike → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.pLike → <annot>

**<application>** Provides information about an application which has acted upon the current document.

model.pLike → <application>

**<argument>** Contains a formal list or prose description of topics addressed.

model.pLike → <argument>

**<changeDesc>** Description of a revision of the MEI file.

model.pLike → <changeDesc>

**<contents>** List of the material contained within a resource.

model.pLike → <contents>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.pLike → <corr>

**<correction>** States how and under what circumstances corrections have been made in the text.

model.pLike → <correction>

**<damage>** Contains an area of damage to the physical medium.

model.pLike → <damage>

**<dedication>** Contains a dedicatory statement.

model.pLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.pLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.pLike → <div>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

model.pLike → <editorialDecl>

**<event>** Contains a free-text event description.

model.pLike → <event>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.pLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.pLike → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.pLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.pLike → <history>

**<incipText>** Opening words of a musical composition.

model.pLike → <incipText>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

model.pLike → <interpretation>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.pLike → <lem>

**<li>** Single item in a <list>.

model.pLike → <li>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

model.pLike → <normalization>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.pLike → <orig>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.pLike → <pgDesc>

**<pgFoot>** A running footer.

model.pLike → <pgFoot>

**<pgHead>** A running header.

model.pLike → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

model.pLike → <physDesc>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

model.pLike → <projectDesc>

**<provenance>** The record of ownership or custodianship of an item.

model.pLike → <provenance>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.pLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.pLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.pLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.pLike → <restore>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

model.pLike → <samplingDecl>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

model.pLike → <segmentation>

**<sic>** Contains apparently incorrect or inaccurate material.

model.pLike → <sic>

**<sp>** Contains an individual speech in a performance text.

model.pLike → <sp>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

model.pLike → <stdVals>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.pLike → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.pLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.pLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.pLike → <titlePage>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.pLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.pLike → <treatSched>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.pLike → <unclear>

## Declaration

```
<classSpec ident="model.pLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups paragraph-like elements.</desc>
  <classes>
    <memberOf key="model.textComponentLike"/>
  </classes>
</classSpec>
```

## model.paperModLike

Groups elements dealing with modifications of document pages.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.paperModLike isn't member of any model class)

### Members

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

model.paperModLike → <cutout>

**<patch>** Describes a physical writing surface attached to the original document.

model.paperModLike → <patch>

### Contained By

**<bifolium>** Describes a folded sheet of paper.

model.paperModLike → <bifolium>

**<folium>** Describes a single leaf of paper.

model.paperModLike → <folium>

### Declaration

```
<classSpec ident="model.paperModLike" type="model" module="MEI.header">
  <desc xml:lang="en">Groups elements dealing with modifications of document pages.</desc>
</classSpec>
```

## model.paracontentPart

Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

### Module

[MEI.shared](#)

### Attributes

#### Member of

(model.paracontentPart isn't member of any model class)

#### Members

**[model.editLike](#)** Groups elements for editorial interventions that may be useful both in transcribing and in authoring processes.

model.paracontentPart → model.paracontentPart

**[model.lgLike](#)** Groups elements that have a line-grouping function.

model.paracontentPart → model.paracontentPart

**[model.listLike](#)** Groups list-like elements.

model.paracontentPart → model.paracontentPart

**[model.quoteLike](#)** Groups elements used to directly contain quotations.

model.paracontentPart → model.paracontentPart

**[model.stageDirLike](#)** Groups elements containing stage directions in performance texts.

model.paracontentPart → model.paracontentPart

**[model.tableLike](#)** Groups table-like elements.

model.paracontentPart → model.paracontentPart

**[model.textPhraseLike](#)** Groups textual elements that occur at the level of individual words or phrases.

model.paracontentPart → model.paracontentPart

**[model.transcriptionLike](#)** Groups elements used for editorial transcription of pre-existing source materials.

model.paracontentPart → model.paracontentPart

#### Contained By

**[<epigraph>](#)** Contains a quotation, anonymous or attributed, appearing on a title page.

model.paracontentPart → <epigraph>

**[<imprimatur>](#)** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.paracontentPart → <imprimatur>

**[<p>](#)** One or more text phrases that form a logical prose passage.

model.paracontentPart → <p>

**[<quote>](#)** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.paracontentPart → <quote>

## Declaration

```
<classSpec ident="model.paracontentPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements which may appear as part of the paragraph content
  model. A paragraph may contain inline elements and all other block-level elements except
  itself.</desc>
</classSpec>
```

## model.partLike

Groups elements that represent a separate performer part.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.partLike isn't member of any model class)

### Members

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.partLike → <part>

### Contained By

**<parts>** Provides a container for performers' parts.

model.partLike → <parts>

### Declaration

```
<classSpec ident="model.partLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent a separate performer part.</desc>
</classSpec>
```

## model.partsLike

Groups elements that collect separate performer parts.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.partsLike isn't member of any model class)

### Members

[\*\*<parts>\*\*](#) Provides a container for performers' parts.

model.partsLike → <parts>

### Contained By

[\*\*<mdiv>\*\*](#) Contains a subdivision of the body of a musical text.

model.partsLike → <mdiv>

### Declaration

## model.pbLike

Groups page beginning-like elements.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.milestoneLike.music](#) Groups milestone-style elements found in music notation.

[model.milestoneLike.text](#) Groups milestone-style elements found in text.

[model.textPhraseLike](#) Groups textual elements that occur at the level of individual words or phrases.

### Members

**<pb>** An empty formatting element that forces text to begin on a new page.

model.pbLike → <pb>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.pbLike → <abbr>

**<add>** Marks an addition to the text.

model.pbLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.pbLike → <addName>

**<addrLine>** Single line of a postal address.

model.pbLike → <addrLine>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.pbLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.pbLike → <argument>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.pbLike → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.pbLike → <bibl>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.pbLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

model.pbLike → <caption>

**<contentItem>** Contains a single entry within a content description element.

model.pbLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.pbLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.pbLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.pbLike → <country>

**<damage>** Contains an area of damage to the physical medium.

model.pbLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.pbLike → <date>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.pbLike → <del>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.pbLike → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.pbLike → <div>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.pbLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.pbLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.pbLike → <expan>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.pbLike → <famName>

**<foreName>** Contains a forename, given or baptismal name.

model.pbLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

model.pbLike → <front>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.pbLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.pbLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.pbLike → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.pbLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.pbLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.pbLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.pbLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.pbLike → <l>

**<layer>** An independent stream of events on a staff.

model.pbLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.pbLike → <lem>

**<li>** Single item in a <list>.

model.pbLike → <li>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.pbLike → <measure>

**<name>** Proper noun or noun phrase.

model.pbLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.pbLike → <nameLink>

**<num>** Numeric information in any form.

model.pbLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.pbLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.pbLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.pbLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.pbLike → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.pbLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.pbLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.pbLike → <persName>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.pbLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.pbLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.pbLike → <rdg>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.pbLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.pbLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.pbLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.pbLike → <rend>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.pbLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.pbLike → <roleName>

**<score>** Full score view of the musical content.

model.pbLike → <score>

**<section>** Segment of music data.

model.pbLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.pbLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.pbLike → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.pbLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.pbLike → <sic>

**<sp>** Contains an individual speech in a performance text.

model.pbLike → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.pbLike → <staff>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.pbLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.pbLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.pbLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.pbLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.pbLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.pbLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.pbLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.pbLike → <unclear>

## model.persNamePart

Groups elements which form part of a personal name.

### Module

[MEI.namesdates](#)

### Attributes

### Member of

(model.persNamePart isn't member of any model class)

### Members

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.persNamePart → <addName>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.persNamePart → <famName>

**<foreName>** Contains a forename, given or baptismal name.

model.persNamePart → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.persNamePart → <genName>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.persNamePart → <nameLink>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.persNamePart → <roleName>

### Contained By

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.persNamePart → <persName>

  <desc xml:lang="en">Groups elements which form part of a personal name.</desc>
</classSpec>
```

# model.physDescPart

Groups elements that may appear as part of the physical description of a bibliographic item.

## Module

[MEI.header](#)

## Attributes

### Member of

(model.physDescPart isn't member of any model class)

### Members

**<accMat>** Holds a description of any additional material bound with an item, such as non-contemporaneous documents or fragments.

model.physDescPart → <accMat>

**<addDesc>** Provides a description of significant additions found within an item, such as marginalia or other annotations.

model.physDescPart → <addDesc>

**<bindingDesc>** Describes the present and former bindings of an item.

model.physDescPart → <bindingDesc>

**<captureMode>** The means used to record notation, sound, or images in the production of a source/manifestation (e.g., analogue, acoustic, electric, digital, optical etc.).

model.physDescPart → <captureMode>

**<carrierForm>** The specific class of material to which the physical carrier of the source/manifestation belongs (e.g., sound cassette, videodisc, microfilm cartridge, transparency, etc.). The carrier for a manifestation comprising multiple physical components may include more than one form (e.g., a filmstrip with an accompanying booklet, a separate sound disc carrying the sound track for a film, etc.).

model.physDescPart → <carrierForm>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

model.physDescPart → <catchwords>

**<colophon>** Contains a statement providing information regarding the date, place, agency, or reason for production of the item.

model.physDescPart → <colophon>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

model.physDescPart → <condition>

**<decoDesc>** Contains a description of the decoration of an item.

model.physDescPart → <decoDesc>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

model.physDescPart → <dimensions>

**<explicit>** Contains the explicit of a manuscript item; that is, the closing words of the text proper, exclusive of any rubric or colophon which might follow it.

model.physDescPart → <explicit>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.physDescPart → <extent>

**<fileChar>** Standards or schemes used to encode the file (e.g., ASCII, SGML, etc.), physical characteristics of the file (e.g., recording density, parity, blocking, etc.), and other characteristics that have a bearing on how the file can be processed.

model.physDescPart → <fileChar>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

model.physDescPart → <foliaDesc>

**<handList>** Container for one or more hand elements.

model.physDescPart → <handList>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

model.physDescPart → <heraldry>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.physDescPart → <history>

**<inscription>** An inscription added to an item, such as a bookplate, a note designating the item as a gift, and/or the author's signature.

model.physDescPart → <inscription>

**<layoutDesc>** Collects layout descriptions.

model.physDescPart → <layoutDesc>

**model.incipitLike** Groups elements used to represent a textual or musical incipit.

model.physDescPart → model.physDescPart

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

model.physDescPart → <perfDuration>

**<physMedium>** Records the physical materials used in the source, such as ink and paper.

model.physDescPart → <physMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

model.physDescPart → <plateNum>

**<playingSpeed>** Playing speed for a sound recording is the speed at which the carrier must be operated to produce the sound intended (e.g., 33 1/3 rpm, 19 cm/s, etc.).

model.physDescPart → <playingSpeed>

**<rubric>** Contains a string of words through which a manuscript signals the beginning or end of a text division, often with an assertion as to its author and title, which is in some way set off from the text itself, usually in red ink, or by use of different size or type of script, or some other such visual device.

model.physDescPart → <rubric>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

model.physDescPart → <scoreFormat>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.physDescPart → <scriptDesc>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.physDescPart → <sealDesc>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

model.physDescPart → <secFolio>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

model.physDescPart → <signatures>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.physDescPart → <soundChan>

**<specRepro>** The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

model.physDescPart → <specRepro>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

model.physDescPart → <stamp>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.physDescPart → <supportDesc>

**<titlePage>** Contains a transcription of the title page of a text.

model.physDescPart → <titlePage>

**<trackConfig>** Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

model.physDescPart → <trackConfig>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.physDescPart → <typeDesc>

**<watermark>** Contains a description of a watermark or similar device.

model.physDescPart → <watermark>

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

model.physDescPart → <physDesc>

## Declaration

```
<classSpec ident="model.physDescPart" module="MEI.header" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of the physical description of
  a bibliographic item.</desc>
</classSpec>
```

## model.pubStmtPart

Groups elements that may appear as part of the publication statement for a bibliographic item.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#)

### Module

[MEI.header](#)

### Attributes

### Member of

(model.pubStmtPart isn't member of any model class)

### Members

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

model.pubStmtPart → <availability>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.pubStmtPart → <distributor>

**model.addressLike** Groups elements used to represent a postal address.

model.pubStmtPart → model.pubStmtPart

**model.dateLike** Groups elements containing date expressions.

model.pubStmtPart → model.pubStmtPart

**model.identifierLike** Groups identifier-like elements.

model.pubStmtPart → model.pubStmtPart

**<pubPlace>** Name of the place where a bibliographic item was published.

model.pubStmtPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.pubStmtPart → <publisher>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

model.pubStmtPart → <respStmt>

### Contained By

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

model.pubStmtPart → <pubStmt>

### Declaration

```
<classSpec ident="model.pubStmtPart" module="MEI.header" type="model">
<desc xml:lang="en">Groups elements that may appear as part of the publication statement
for a bibliographic item.</desc>
</classSpec>
```

DEVELOPMENT  
VERSION

## model.qLike

Groups elements related to highlighting which can appear at the phrase-level.

### Module

[MEI.text](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

#### Members

**<qp>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use [<quote>](#) for block-level quotations.

model.qLike → <qp>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.qLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.qLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.qLike → <actor>

**<add>** Marks an addition to the text.

model.qLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.qLike → <addName>

**<addrLine>** Single line of a postal address.

model.qLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.qLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.qLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.qLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.qLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.qLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.qLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.qLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.qLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.qLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.qLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.qLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.qLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.qLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.qLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.qLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.qLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.qLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.qLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.qLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.qLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.qLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.qLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.qLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.qLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.qLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.qLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.qLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.qLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.qLike → <desc>

**<dim>** Any single dimensional specification.

model.qLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.qLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.qLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.qLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.qLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.qLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.qLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.qLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.qLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.qLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.qLike → <extent>

**<f>** Single element of a figured bass indication.

model.qLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.qLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.qLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.qLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.qLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.qLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.qLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.qLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.qLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.qLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.qLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.qLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.qLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.qLike → <head>

**<height>** Description of the vertical size of an object.

model.qLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.qLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.qLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.qLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.qLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.qLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.qLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.qLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.qLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.qLike → <lem>

**<li>** Single item in a <list>.

model.qLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.qLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.qLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.qLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.qLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.qLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.qLike → <nameLink>

**<num>** Numeric information in any form.

model.qLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.qLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.qLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.qLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.qLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.qLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.qLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.qLike → <persName>

**<pgFoot>** A running footer.

model.qLike → <pgFoot>

**<pgHead>** A running header.

model.qLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.qLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.qLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.qLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.qLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.qLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.qLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.qLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.qLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.qLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.qLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.qLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.qLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.qLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.qLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.qLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.qLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.qLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.qLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.qLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.qLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.qLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.qLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.qLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.qLike → <sic>

**<signifLet>** Significantive letter(s).

model.qLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.qLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.qLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.qLike → <sponsor>

**<stack>** An inline table with a single column.

model.qLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.qLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.qLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.qLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.qLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.qLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.qLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.qLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.qLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.qLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.qLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.qLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.qLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.qLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.qLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.qLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.qLike → <width>

## Declaration

```
<classSpec ident="model.qLike" module="MEI.text" type="model">

```

# model.quoteLike

Groups elements used to directly contain quotations.

## Module

[MEI.text](#)

## Attributes

### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

[model.textComponentLike](#) Groups block-level text elements.

## Members

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.quoteLike → <quote>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.quoteLike → <abbr>

**<add>** Marks an addition to the text.

model.quoteLike → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.quoteLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.quoteLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.quoteLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.quoteLike → <damage>

**<dedication>** Contains a dedicatory statement.

model.quoteLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.quoteLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.quoteLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.quoteLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.quoteLike → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.quoteLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.quoteLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.quoteLike → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.quoteLike → <lem>

**<li>** Single item in a <list>.

model.quoteLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.quoteLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.quoteLike → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.quoteLike → <pgDesc>

**<pgFoot>** A running footer.

model.quoteLike → <pgFoot>

**<pgHead>** A running header.

model.quoteLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.quoteLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.quoteLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.quoteLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.quoteLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.quoteLike → <sic>

**<sp>** Contains an individual speech in a performance text.

model.quoteLike → <sp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.quoteLike → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.quoteLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.quoteLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.quoteLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.quoteLike → <unclear>

## Declaration

  </classes>
</classSpec>
```

## model.rdgPart

Groups elements that may appear as part of a textual or musical variant.

### Module

MEI.critapp

### Attributes

#### Member of

(model.rdgPart isn't member of any model class)

#### Members

**model.rdgPart.music** Groups elements that may appear as part of a musical variant.

model.rdgPart → model.rdgPart

**model.rdgPart.text** Groups elements that may appear as part of a textual variant.

model.rdgPart → model.rdgPart

**model.sylLike** Groups elements that contain a lyric syllable.

model.rdgPart → model.rdgPart

#### Contained By

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.rdgPart → <lem>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.rdgPart → <rdg>

### Declaration

```
<classSpec ident="model.rdgPart" module="MEI.critapp" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a textual or musical
  variant.</desc>
</classSpec>
```

## model.rdgPart.music

Groups elements that may appear as part of a musical variant.

### Module

[MEI.critapp](#)

### Attributes

#### Member of

[model.rdgPart](#) Groups elements that may appear as part of a textual or musical variant.

#### Members

**[model.controlEventLike](#)** Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

model.rdgPart.music → model.rdgPart.music

**[model.controlEventLike.cmn](#)** Groups control events that appear in CMN.

model.rdgPart.music → model.rdgPart.music

**[model.layerLike](#)** Groups elements that function as notational layers within a staff.

model.rdgPart.music → model.rdgPart.music

**[model.verseLike](#)** Groups elements that contain a lyric verse.

model.rdgPart.music → model.rdgPart.music

**<volta>** Sung text for a specific iteration of a repeated section of music.

model.rdgPart.music → <volta>

### Contained By

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.rdgPart.music → <lem>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.rdgPart.music → <rdg>

### Declaration

```
<classSpec ident="model.rdgPart.music" module="MEI.critapp" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a musical variant.</desc>
  <classes>
    <memberOf key="model.rdgPart"/>
  </classes>
</classSpec>
```

## model.rdgPart.text

Groups elements that may appear as part of a textual variant.

### Module

MEI.critapp

### Attributes

#### Member of

[model.rdgPart](#) Groups elements that may appear as part of a textual or musical variant.

#### Members

[model.textComponentLike](#) Groups block-level text elements.

model.rdgPart.text → model.rdgPart.text

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

model.rdgPart.text → model.rdgPart.text

#### Contained By

[<lem>](#) (lemma) – Contains the lemma, or base text, of a textual variation.

model.rdgPart.text → <lem>

[<rdg>](#) (reading) – Contains a single reading within a textual variation.

model.rdgPart.text → <rdg>

### Declaration

```
<classSpec ident="model.rdgPart.text" module="MEI.critapp" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a textual variant.</desc>
  <classes>
    <memberOf key="model.rdgPart"/>
  </classes>
</classSpec>
```

## model.relationLike

Collects elements that express a relationship.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

#### Members

**<relation>** Describes a relationship or linkage amongst entities.

`model.relationLike` → `<relation>`

**<relationList>** Gathers relation elements.

`model.relationLike` → `<relationList>`

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.relationLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

`model.relationLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.

`model.relationLike` → `<actor>`

**<add>** Marks an addition to the text.

`model.relationLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.relationLike` → `<addName>`

**<addrLine>** Single line of a postal address.

`model.relationLike` → `<addrLine>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.relationLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

`model.relationLike` → `<annot>`

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

`model.relationLike` → `<arranger>`

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.relationLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.relationLike → <author>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

model.relationLike → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.relationLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.relationLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.relationLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.relationLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.relationLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.relationLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.relationLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.relationLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.relationLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.relationLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.relationLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.relationLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.relationLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.relationLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.relationLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.relationLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.relationLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.relationLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.relationLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.relationLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.relationLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.relationLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.relationLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.relationLike → <desc>

**<dim>** Any single dimensional specification.

model.relationLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.relationLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.relationLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.relationLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.relationLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.relationLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.relationLike → <editor>

**<ending>** Alternative ending for a repeated passage of music; i.e., *prima volta*, *seconda volta*, etc.

model.relationLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.relationLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.relationLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.relationLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.relationLike → <extent>

**<f>** Single element of a figured bass indication.

model.relationLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.relationLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.relationLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.relationLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.relationLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

model.relationLike → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.relationLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.relationLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.relationLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.relationLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.relationLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.relationLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.relationLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.relationLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.relationLike → <head>

**<height>** Description of the vertical size of an object.

model.relationLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.relationLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.relationLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.relationLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.relationLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.relationLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.relationLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.relationLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.relationLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.relationLike → <lem>

**<li>** Single item in a <list>.

model.relationLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.relationLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.relationLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.relationLike → <lyricist>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.relationLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.relationLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.relationLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.relationLike → <nameLink>

**<num>** Numeric information in any form.

model.relationLike → <num>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.relationLike → <oStaff>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.relationLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.relationLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.relationLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.relationLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.relationLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.relationLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.relationLike → <persName>

**<pgFoot>** A running footer.

model.relationLike → <pgFoot>

**<pgHead>** A running header.

model.relationLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.relationLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.relationLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.relationLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.relationLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.relationLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.relationLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.relationLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.relationLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.relationLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.relationLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.relationLike → <region>

**<relationList>** Gathers relation elements.

model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.relationLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.relationLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.relationLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.relationLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.relationLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.relationLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.relationLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.relationLike → <roleName>

**<score>** Full score view of the musical content.

model.relationLike → <score>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.relationLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.relationLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.relationLike → <sealDesc>

**<section>** Segment of music data.

model.relationLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.relationLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.relationLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.relationLike → <sic>

**<signifLet>** Significantive letter(s).

model.relationLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.relationLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.relationLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.relationLike → <sponsor>

**<stack>** An inline table with a single column.

model.relationLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.relationLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.relationLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.relationLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.relationLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.relationLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.relationLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.relationLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.relationLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.relationLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.relationLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.relationLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.relationLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.relationLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.relationLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.relationLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.relationLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.relationLike → <width>

DEVELOPMENT  
VERSION

# model.rendLike

Groups elements that mark typographical features.

## Module

[MEI.shared](#)

## Attributes

### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the `model.textPhraseLike` class without the `pb` element.

### Members

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

`model.rendLike` → `<rend>`

**<stack>** An inline table with a single column.

`model.rendLike` → `<stack>`

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

`model.rendLike` → `<abbr>`

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

`model.rendLike` → `<acquisition>`

**<actor>** Name of an actor appearing within a cast list.

`model.rendLike` → `<actor>`

**<add>** Marks an addition to the text.

`model.rendLike` → `<add>`

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

`model.rendLike` → `<addName>`

**<addrLine>** Single line of a postal address.

`model.rendLike` → `<addrLine>`

**<altId>** May contain a bibliographic identifier that does not fit within the `meiHead` element's `id` attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

`model.rendLike` → `<altId>`

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

`model.rendLike` → `<anchoredText>`

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.rendLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.rendLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.rendLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.rendLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.rendLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.rendLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.rendLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.rendLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.rendLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.rendLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.rendLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.rendLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.rendLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.rendLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.rendLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.rendLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.rendLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.rendLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.rendLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.rendLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.rendLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.rendLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.rendLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.rendLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.rendLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.rendLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.rendLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.rendLike → <desc>

**<dim>** Any single dimensional specification.

model.rendLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**,

**<dynam>** or **<repeatMark>**.

model.rendLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.rendLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.rendLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.rendLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.rendLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.rendLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.rendLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.rendLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.rendLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.rendLike → <extent>

**<f>** Single element of a figured bass indication.

model.rendLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.rendLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.rendLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.rendLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.rendLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.rendLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.rendLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.rendLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.rendLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.rendLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.rendLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.rendLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.rendLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.rendLike → <head>

**<height>** Description of the vertical size of an object.

model.rendLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.rendLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.rendLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.rendLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.rendLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.rendLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.rendLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.rendLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.rendLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.rendLike → <lem>

**<li>** Single item in a <list>.

model.rendLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.rendLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.rendLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.rendLike → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on <measure> does not adequately capture the appearance or placement of the measure number/label.

model.rendLike → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.rendLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.rendLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.rendLike → <nameLink>

**<num>** Numeric information in any form.

model.rendLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.rendLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.rendLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.rendLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.rendLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.rendLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.rendLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.rendLike → <persName>

**<pgFoot>** A running footer.

model.rendLike → <pgFoot>

**<pgHead>** A running header.

model.rendLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.rendLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.rendLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.rendLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.rendLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.rendLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.rendLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.rendLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.rendLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.rendLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.rendLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.rendLike → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

model.rendLike → <reh>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.rendLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.rendLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.rendLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.rendLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.rendLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.rendLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.rendLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.rendLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.rendLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.rendLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.rendLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.rendLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.rendLike → <sic>

**<signifLet>** Significantive letter(s).

model.rendLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.rendLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.rendLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.rendLike → <sponsor>

**<stack>** An inline table with a single column.

model.rendLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.rendLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.rendLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.rendLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.rendLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.rendLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.rendLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.rendLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.rendLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.rendLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.rendLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.rendLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.rendLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.rendLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.rendLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.rendLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.rendLike → <width>

## model.repositoryLike

Groups elements that denote a corporate entity that holds a bibliographic item.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.nameLike.place](#) Groups place name elements.

#### Members

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.repositoryLike → <repository>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.repositoryLike → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.repositoryLike → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.repositoryLike → <actor>

**<add>** Marks an addition to the text.

model.repositoryLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.repositoryLike → <addName>

**<addrLine>** Single line of a postal address.

model.repositoryLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.repositoryLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.repositoryLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.repositoryLike → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.repositoryLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.repositoryLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.repositoryLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.repositoryLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.repositoryLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.repositoryLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.repositoryLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.repositoryLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.repositoryLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.repositoryLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.repositoryLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.repositoryLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.repositoryLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.repositoryLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.repositoryLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.repositoryLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.repositoryLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.repositoryLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.repositoryLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.repositoryLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.repositoryLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.repositoryLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.repositoryLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.repositoryLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.repositoryLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.repositoryLike → <desc>

**<dim>** Any single dimensional specification.

model.repositoryLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.repositoryLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.repositoryLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.repositoryLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.repositoryLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.repositoryLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.repositoryLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.repositoryLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.repositoryLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.repositoryLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.repositoryLike → <extent>

**<f>** Single element of a figured bass indication.

model.repositoryLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.repositoryLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.repositoryLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.repositoryLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.repositoryLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.repositoryLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.repositoryLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.repositoryLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.repositoryLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.repositoryLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.repositoryLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.repositoryLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.repositoryLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.repositoryLike → <head>

**<height>** Description of the vertical size of an object.

model.repositoryLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.repositoryLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.repositoryLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.repositoryLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.repositoryLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.repositoryLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.repositoryLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.repositoryLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.repositoryLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.repositoryLike → <lem>

**<li>** Single item in a <list>.

model.repositoryLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.repositoryLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.repositoryLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.repositoryLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.repositoryLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.repositoryLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.repositoryLike → <nameLink>

**<num>** Numeric information in any form.

model.repositoryLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.repositoryLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.repositoryLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.repositoryLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.repositoryLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.repositoryLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.repositoryLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.repositoryLike → <persName>

**<pgFoot>** A running footer.

model.repositoryLike → <pgFoot>

**<pgHead>** A running header.

model.repositoryLike → <pgHead>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

model.repositoryLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

model.repositoryLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.repositoryLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.repositoryLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.repositoryLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.repositoryLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.repositoryLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.repositoryLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.repositoryLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.repositoryLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.repositoryLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.repositoryLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.repositoryLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.repositoryLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.repositoryLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.repositoryLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.repositoryLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.repositoryLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.repositoryLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.repositoryLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.repositoryLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.repositoryLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.repositoryLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.repositoryLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.repositoryLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.repositoryLike → <sic>

**<signifLet>** Significantive letter(s).

model.repositoryLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.repositoryLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.repositoryLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.repositoryLike → <sponsor>

**<stack>** An inline table with a single column.

model.repositoryLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.repositoryLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.repositoryLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.repositoryLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.repositoryLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.repositoryLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.repositoryLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.repositoryLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.repositoryLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.repositoryLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.repositoryLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.repositoryLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.repositoryLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.repositoryLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.repositoryLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.repositoryLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.repositoryLike → <width>

## Declaration

```
<classSpec ident="model.repositoryLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that denote a corporate entity that holds a
  bibliographic item.</desc>
  <classes>
    <memberOf key="model.nameLike.place"/>
  </classes>
</classSpec>
```

## model.resourceLike

Groups non-text components that represent the content of the musical text.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.resourceLike isn't member of any model class)

### Members

**<facsimile>** Contains a representation of a written source in the form of a set of images rather than as transcribed or encoded text.

model.resourceLike → <facsimile>

**<genDesc>** (genetic description) - Bundles information about the textual development of a work.

model.resourceLike → <genDesc>

**<performance>** A presentation of one or more musical works.

model.resourceLike → <performance>

### Contained By

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an étude, opera, song cycle, symphony, or anthology of piano solos.

model.resourceLike → <music>

### Declaration

```
<classSpec ident="model.resourceLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups non-text components that represent the content of the musical
  text.</desc>
</classSpec>
```

## model.respLike

Groups elements that are used to indicate intellectual or other significant responsibility, for example within a bibliographic citation.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

#### Members

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

model.respLike → model.respLike

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

model.respLike → <respStmt>

#### Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.respLike → <bibl>

**<titleStmt>** Container for title and responsibility meta-data.

model.respLike → <titleStmt>

### Declaration

```
<classSpec ident="model.respLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that are used to indicate intellectual or other
  significant responsibility, for example within a bibliographic citation.</desc>
  <classes>
    <memberOf key="model.biblPart"/>
  </classes>
</classSpec>
```

## **model.respLikePart**

Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### **Module**

[MEI.shared](#)

### **Attributes**

#### **Member of**

[model.respLike](#) Groups elements that are used to indicate intellectual or other significant responsibility, for example within a bibliographic citation.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

#### **Members**

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.respLikePart → <author>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.respLikePart → <composer>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.respLikePart → <contributor>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.respLikePart → <editor>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.respLikePart → <funder>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.respLikePart → <lyricist>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.respLikePart → <sponsor>

### **Contained By**

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.respLikePart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.respLikePart → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

model.respLikePart → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

model.respLikePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

model.respLikePart → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.respLikePart → <work>

## Declaration

```
<classSpec ident="model.respLikePart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.</desc>
  <classes>
    <memberOf key="model.respLike"/>
    <memberOf key="model.titlePagePart"/>
  </classes>
</classSpec>
```

## model.scoreDefLike

Groups elements that provide score meta-information.

### Module

MEI.shared

### Attributes

#### Member of

model.sectionPart Groups elements that may appear as part of a section.

#### Members

**<scoreDef>** Container for score meta-information.

model.scoreDefLike → <scoreDef>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.scoreDefLike → <abbr>

**<add>** Marks an addition to the text.

model.scoreDefLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.scoreDefLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.scoreDefLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.scoreDefLike → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.scoreDefLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.scoreDefLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.scoreDefLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.scoreDefLike → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.scoreDefLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.scoreDefLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.scoreDefLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.scoreDefLike → <restore>

**<score>** Full score view of the musical content.

model.scoreDefLike → <score>

**<section>** Segment of music data.

model.scoreDefLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.scoreDefLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.scoreDefLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.scoreDefLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.scoreDefLike → <unclear>

## Declaration

```
<classSpec ident="model.scoreDefLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that provide score meta-information.</desc>
  <classes>
    <memberOf key="model.sectionPart"/>
  </classes>
</classSpec>
```

## model.scoreLike

Groups elements that represent a score.

### Module

MEI.shared

### Attributes

### Member of

(model.scoreLike isn't member of any model class)

### Members

**<score>** Full score view of the musical content.

model.scoreLike → <score>

### Contained By

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

model.scoreLike → <fig>

**<incip>** The opening music and/or words of a musical or textual work.

model.scoreLike → <incip>

**<mdiv>** Contains a subdivision of the body of a musical text.

model.scoreLike → <mdiv>

### Declaration

```
<classSpec ident="model.scoreLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent a score.</desc>
</classSpec>
```

## model.scorePart

Groups elements that may appear as part of a score.

### Module

MEI.shared

### Attributes

### Member of

(model.scorePart isn't member of any model class)

### Members

**model.endingLike** Groups elements that represent alternative endings.

model.scorePart → model.scorePart

**model.sectionLike** Groups elements that represent a segment of music notation.

model.scorePart → model.scorePart

### Contained By

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.scorePart → <part>

**<score>** Full score view of the musical content.

model.scorePart → <score>

### Declaration

```
<classSpec ident="model.scorePart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a score.</desc>
</classSpec>
```

## model.sectionLike

Groups elements that represent a segment of music notation.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.scorePart](#) Groups elements that may appear as part of a score.

[model.sectionPart](#) Groups elements that may appear as part of a section.

#### Members

**<section>** Segment of music data.

model.sectionLike → <section>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.sectionLike → <abbr>

**<add>** Marks an addition to the text.

model.sectionLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.sectionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.sectionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.sectionLike → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.sectionLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.sectionLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.sectionLike → <lem>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as [<add>](#), [<del>](#), etc.

model.sectionLike → <metaMark>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.sectionLike → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.sectionLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.sectionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.sectionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.sectionLike → <restore>

**<score>** Full score view of the musical content.

model.sectionLike → <score>

**<section>** Segment of music data.

model.sectionLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.sectionLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.sectionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.sectionLike → <unclear>

## Declaration

```
<classSpec ident="model.sectionLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that represent a segment of music notation.</desc>
  <classes>
    <memberOf key="model.scorePart"/>
    <memberOf key="model.sectionPart"/>
  </classes>
</classSpec>
```

## model.sectionPart

Groups elements that may appear as part of a section.

### Module

[MEI.shared](#)

### Attributes

#### Member of

(model.sectionPart isn't member of any model class)

#### Members

**[model.endingLike](#)** Groups elements that represent alternative endings.

model.sectionPart → model.sectionPart

**[model.scoreDefLike](#)** Groups elements that provide score meta-information.

model.sectionPart → model.sectionPart

**[model.sectionLike](#)** Groups elements that represent a segment of music notation.

model.sectionPart → model.sectionPart

**[model.sectionPart.cmn](#)** Groups elements that may appear as part of a section.

model.sectionPart → model.sectionPart

**[model.sectionPart.mensuralAndNeumes](#)** Groups elements that may appear as part of a section in the mensural and neume repertoires.

model.sectionPart → model.sectionPart

**[model.staffDefLike](#)** Groups elements that permit declaration of staff properties.

model.sectionPart → model.sectionPart

#### Contained By

**[<abbr>](#)** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.sectionPart → <abbr>

**[<add>](#)** Marks an addition to the text.

model.sectionPart → <add>

**[<corr>](#)** Contains the correct form of an apparent erroneous passage.

model.sectionPart → <corr>

**[<damage>](#)** Contains an area of damage to the physical medium.

model.sectionPart → <damage>

**[<del>](#)** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.sectionPart → <del>

**[<expan>](#)** Contains the expansion of an abbreviation.

model.sectionPart → <expan>

**[<lem>](#)** (lemma) – Contains the lemma, or base text, of a textual variation.

model.sectionPart → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.sectionPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.sectionPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.sectionPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.sectionPart → <restore>

**<section>** Segment of music data.

model.sectionPart → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.sectionPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.sectionPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.sectionPart → <unclear>

## Declaration

```
<classSpec ident="model.sectionPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a section.</desc>
</classSpec>
```

## model.sectionPart.cmn

Groups elements that may appear as part of a section.

### Module

[MEI.cmn](#)

### Attributes

#### Member of

[model.sectionPart](#) Groups elements that may appear as part of a section.

#### Members

**[model.measureLike](#)** Groups CMN measure-like elements.

model.sectionPart.cmn → model.sectionPart.cmn

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.sectionPart.cmn → <abbr>

**<add>** Marks an addition to the text.

model.sectionPart.cmn → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.sectionPart.cmn → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.sectionPart.cmn → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.sectionPart.cmn → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.sectionPart.cmn → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.sectionPart.cmn → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.sectionPart.cmn → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.sectionPart.cmn → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.sectionPart.cmn → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.sectionPart.cmn → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.sectionPart.cmn → <restore>

**<section>** Segment of music data.

model.sectionPart.cmn → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.sectionPart.cmn → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.sectionPart.cmn → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.sectionPart.cmn → <unclear>

## Declaration

```

## model.sectionPart.mensuralAndNeumes

Groups elements that may appear as part of a section in the mensural and neume repertoires.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.sectionPart](#) Groups elements that may appear as part of a section.

#### Members

[model.staffLike](#) Groups elements that function like staves.

model.sectionPart.mensuralAndNeumes → model.sectionPart.mensuralAndNeumes

#### Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.sectionPart.mensuralAndNeumes → <abbr>

[\*\*<add>\*\*](#) Marks an addition to the text.

model.sectionPart.mensuralAndNeumes → <add>

[\*\*<corr>\*\*](#) Contains the correct form of an apparent erroneous passage.

model.sectionPart.mensuralAndNeumes → <corr>

[\*\*<damage>\*\*](#) Contains an area of damage to the physical medium.

model.sectionPart.mensuralAndNeumes → <damage>

[\*\*<del>\*\*](#) Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.sectionPart.mensuralAndNeumes → <del>

[\*\*<ending>\*\*](#) Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.sectionPart.mensuralAndNeumes → <ending>

[\*\*<expan>\*\*](#) Contains the expansion of an abbreviation.

model.sectionPart.mensuralAndNeumes → <expan>

[\*\*<lem>\*\*](#) (lemma) – Contains the lemma, or base text, of a textual variation.

model.sectionPart.mensuralAndNeumes → <lem>

[\*\*<orig>\*\*](#) Contains material which is marked as following the original, rather than being normalized or corrected.

model.sectionPart.mensuralAndNeumes → <orig>

[\*\*<rdg>\*\*](#) (reading) – Contains a single reading within a textual variation.

model.sectionPart.mensuralAndNeumes → <rdg>

[\*\*<reg>\*\*](#) Contains material which has been regularized or normalized in some sense.

model.sectionPart.mensuralAndNeumes → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.sectionPart.mensuralAndNeumes → <restore>

**<section>** Segment of music data.

model.sectionPart.mensuralAndNeumes → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.sectionPart.mensuralAndNeumes → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.sectionPart.mensuralAndNeumes → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.sectionPart.mensuralAndNeumes → <unclear>

## Declaration

```
<classSpec ident="model.sectionPart.mensuralAndNeumes" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a section in the mensural
  and neume repertoires.</desc>
  <classes>
    <memberOf key="model.sectionPart"/>
  </classes>
</classSpec>
```

## model.staffDefLike

Groups elements that permit declaration of staff properties.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.sectionPart](#) Groups elements that may appear as part of a section.

#### Members

**<staffDef>** Container for staff meta-information.

model.staffDefLike → <staffDef>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.staffDefLike → <abbr>

**<add>** Marks an addition to the text.

model.staffDefLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.staffDefLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.staffDefLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.staffDefLike → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., *prima volta*, *seconda volta*, etc.

model.staffDefLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.staffDefLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.staffDefLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.staffDefLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.staffDefLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.staffDefLike → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.staffDefLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.staffDefLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.staffDefLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.staffDefLike → <restore>

**<score>** Full score view of the musical content.

model.staffDefLike → <score>

**<section>** Segment of music data.

model.staffDefLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.staffDefLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.staffDefLike → <staff>

**<staffGrp>** A group of bracketed or braced staves.

model.staffDefLike → <staffGrp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.staffDefLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.staffDefLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.staffDefLike → <unclear>

## Declaration

```
<classSpec ident="model.staffDefLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that permit declaration of staff properties.</desc>
  <classes>
    <memberOf key="model.sectionPart"/>
  </classes>
</classSpec>
```

## model.staffDefPart

Groups elements that may appear in the declaration of staff features.

### Module

[MEI.shared](#)

### Attributes

### Member of

(model.staffDefPart isn't member of any model class)

### Members

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

model.staffDefPart → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

model.staffDefPart → <clefGrp>

**model.keySigLike** Groups elements that have the same function as a key signature.

model.staffDefPart → model.staffDefPart

**model.meterSigLike** Groups elements that represent a meter signature.

model.staffDefPart → model.staffDefPart

**model.staffDefPart.mensural** Groups elements that may appear in the declaration of staff features.

model.staffDefPart → model.staffDefPart

### Contained By

**<staffDef>** Container for staff meta-information.

model.staffDefPart → <staffDef>

### Declaration

```
<classSpec ident="model.staffDefPart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear in the declaration of staff
  features.</desc>
</classSpec>
```

## model.staffDefPart.mensural

Groups elements that may appear in the declaration of staff features.

### Module

[MEI.mensural](#)

### Attributes

### Member of

[model.staffDefPart](#) Groups elements that may appear in the declaration of staff features.

### Members

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

model.staffDefPart.mensural → <mensur>

**<proport>** Description of note duration as arithmetic ratio.

model.staffDefPart.mensural → <proport>

### Contained By

**<staffDef>** Container for staff meta-information.

model.staffDefPart.mensural → <staffDef>

### Declaration

```
<classSpec ident="model.staffDefPart.mensural" module="MEI.mensural" type="model">
  <desc xml:lang="en">Groups elements that may appear in the declaration of staff
  features.</desc>
  <classes>
    <memberOf key="model.staffDefPart"/>
  </classes>
</classSpec>
```

## model.staffGrpLike

Groups elements that permit declaration of staff group properties.

### Module

MEI.shared

### Attributes

#### Member of

(model.staffGrpLike isn't member of any model class)

#### Members

**<staffGrp>** A group of bracketed or braced staves.

model.staffGrpLike → <staffGrp>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.staffGrpLike → <abbr>

**<add>** Marks an addition to the text.

model.staffGrpLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.staffGrpLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.staffGrpLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.staffGrpLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.staffGrpLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.staffGrpLike → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.staffGrpLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.staffGrpLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.staffGrpLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.staffGrpLike → <restore>

**<scoreDef>** Container for score meta-information.

model.staffGrpLike → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

model.staffGrpLike → <sic>

**<staffGrp>** A group of bracketed or braced staves.

model.staffGrpLike → <staffGrp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.staffGrpLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.staffGrpLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.staffGrpLike → <unclear>

## Declaration

```
<classSpec ident="model.staffGrpLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that permit declaration of staff group
  properties.</desc>
</classSpec>
```

## model.staffLike

Groups elements that function like staves.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.sectionPart.mensuralAndNeumes](#) Groups elements that may appear as part of a section in the mensural and neume repertoires.

[model.measurePart](#) Groups elements that may appear within a CMN measure.

### Members

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.staffLike → <staff>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.staffLike → <abbr>

**<add>** Marks an addition to the text.

model.staffLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.staffLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.staffLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.staffLike → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.staffLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

model.staffLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.staffLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.staffLike → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.staffLike → <orig>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

model.staffLike → <ossia>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.staffLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.staffLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.staffLike → <restore>

**<section>** Segment of music data.

model.staffLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

model.staffLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.staffLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.staffLike → <unclear>

## Declaration

```

  </classes>
</classSpec>
```

## model.staffPart.mensuralAndNeumes

Groups elements that are components of a staff in the mensural and neume repertoires.

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.staffPart](#) Groups elements that are components of a staff.

### Members

[model.staffPart.mensural](#) Groups elements that are components of a staff in the mensural repertoire.

model.staffPart.mensuralAndNeumes → model.staffPart.mensuralAndNeumes

### Contained By

[<oStaff>](#) A staff that holds an alternative passage which may be played instead of the original material.

model.staffPart.mensuralAndNeumes → <oStaff>

[<staff>](#) A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.staffPart.mensuralAndNeumes → <staff>

### Declaration

```
<classSpec ident="model.staffPart.mensuralAndNeumes" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that are components of a staff in the mensural and neume repertoires.</desc>
  <classes>
    <memberOf key="model.staffPart"/>
  </classes>
</classSpec>
```

## model.stageDirLike

Groups elements containing stage directions in performance texts.

### Module

MEI.drama

### Attributes

#### Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

[model.paraccontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

### Members

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.stageDirLike → <stageDir>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.stageDirLike → <abbr>

**<add>** Marks an addition to the text.

model.stageDirLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.stageDirLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.stageDirLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.stageDirLike → <del>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.stageDirLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.stageDirLike → <expan>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.stageDirLike → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.stageDirLike → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.stageDirLike → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.stageDirLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.stageDirLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.stageDirLike → <p>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.stageDirLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.stageDirLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.stageDirLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.stageDirLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.stageDirLike → <sic>

**<sp>** Contains an individual speech in a performance text.

model.stageDirLike → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.stageDirLike → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.stageDirLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.stageDirLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.stageDirLike → <unclear>

## Declaration

```

<classSpec ident="model.stageDirLike" module="MEI.drama" type="model">
  <desc xml:lang="en">Groups elements containing stage directions in performance texts.</desc>

## model.startLike.corpus

Groups elements that may be document elements when the corpus module is invoked.

### Module

[MEI.corpus](#)

### Attributes

### Member of

(model.startLike.corpus isn't member of any model class)

### Members

**<meiCorpus>** A group of related MEI documents, consisting of a header for the group, and one or more **<mei>** elements, each with its own complete header.

model.startLike.corpus → <meiCorpus>

### Contained By

### Declaration

```
<classSpec ident="model.startLike.corpus" module="MEI.corpus" type="model">
  <desc xml:lang="en">Groups elements that may be document elements when the corpus module
  is invoked.</desc>
</classSpec>
```

## **model.startLike.header**

Groups elements that may be document elements when the header module is invoked.

### **Module**

[MEI.header](#)

### **Attributes**

### **Member of**

(model.startLike.header isn't member of any model class)

### **Members**

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

model.startLike.header → <meiHead>

### **Contained By**

### **Declaration**

```
<classSpec ident="model.startLike.header" module="MEI.header" type="model">
  <desc xml:lang="en">Groups elements that may be document elements when the header module
  is invoked.</desc>
</classSpec>
```

## model.sylLike

Groups elements that contain a lyric syllable.

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.editTransPart](#) Groups elements that may appear as part of editorial and transcription elements.

[model.rdgPart](#) Groups elements that may appear as part of a textual or musical variant.

[model.syllablePart](#) Groups elements that may appear as part of the content of a syllable.

### Members

**<syl>** Individual lyric syllable.

model.sylLike → <syl>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.sylLike → <abbr>

**<add>** Marks an addition to the text.

model.sylLike → <add>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

model.sylLike → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.sylLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.sylLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.sylLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.sylLike → <expan>

**<l>** Contains a single line of text within a line group.

model.sylLike → <l>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.sylLike → <lem>

**<note>** A single pitched event.

model.sylLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.sylLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.sylLike → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

model.sylLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.sylLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.sylLike → <restore>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.sylLike → <seg>

**<sic>** Contains apparently incorrect or inaccurate material.

model.sylLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.sylLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.sylLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.sylLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

model.sylLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

model.sylLike → <volta>

## Declaration

```

# model.syllableLike

Groups elements that accommodate neumed text.

## Module

[MEI.neumes](#)

## Attributes

### Member of

[model.layerPart.neumes](#) Groups notated events that may appear at the layer level in the neume repertoire.

## Members

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.syllableLike → <syllable>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.syllableLike → <abbr>

**<add>** Marks an addition to the text.

model.syllableLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.syllableLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.syllableLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.syllableLike → <del>

**<expan>** Contains the expansion of an abbreviation.

model.syllableLike → <expan>

**<layer>** An independent stream of events on a staff.

model.syllableLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.syllableLike → <lem>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.syllableLike → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.syllableLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.syllableLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.syllableLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.syllableLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.syllableLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.syllableLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.syllableLike → <unclear>

## Declaration

```
<classSpec ident="model.syllableLike" module="MEI.neumes" type="model">
  <desc xml:lang="en">Groups elements that accommodate neumed text.</desc>
  <classes>
    <memberOf key="model.layerPart.neumes"/>
  </classes>
</classSpec>
```

## model.syllablePart

Groups elements that may appear as part of the content of a syllable.

### Module

[MEI.neumes](#)

### Attributes

### Member of

(model.syllablePart isn't member of any model class)

### Members

**<accid>** Records a temporary alteration to the pitch of a note.

model.syllablePart → <accid>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

model.syllablePart → <clef>

**model.controlEventLike** Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

model.syllablePart → model.syllablePart

**model.eventLike.neumes** Groups event elements that occur in the neume repertoire.

model.syllablePart → model.syllablePart

**model.midiLike** Groups elements which group MIDI-like elements.

model.syllablePart → model.syllablePart

**model.sylLike** Groups elements that contain a lyric syllable.

model.syllablePart → model.syllablePart

**model.verseLike** Groups elements that contain a lyric verse.

model.syllablePart → model.syllablePart

### Contained By

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.syllablePart → <syllable>

### Declaration

```
<classSpec ident="model.syllablePart" module="MEI.neumes" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of the content of a
  syllable.</desc>
</classSpec>
```

## model.symbolTableLike

Groups elements that group symbol definitions.

### Referenced in chapters

[2.4.1.3 Model Classes](#)

### Module

[MEI.usersymbols](#)

### Attributes

### Member of

(model.symbolTableLike isn't member of any model class)

### Members

**<symbolTable>** Contains a set of user-defined symbols.

model.symbolTableLike → <symbolTable>

### Contained By

**<scoreDef>** Container for score meta-information.

model.symbolTableLike → <scoreDef>

### Declaration

```
<classSpec ident="model.symbolTableLike" module="MEI.usersymbols" type="model">
  <desc xml:lang="en">Groups elements that group symbol definitions.</desc>
</classSpec>
```

## model.tableLike

Groups table-like elements.

### Module

[MEI.figtable](#)

### Attributes

#### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

[model.textComponentLike](#) Groups block-level text elements.

### Members

**<table>** Contains text displayed in tabular form.

model.tableLike → <table>

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.tableLike → <abbr>

**<add>** Marks an addition to the text.

model.tableLike → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.tableLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

model.tableLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.tableLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.tableLike → <damage>

**<dedication>** Contains a dedicatory statement.

model.tableLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.tableLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

model.tableLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.tableLike → <epigraph>

**<event>** Contains a free-text event description.

model.tableLike → <event>

**<expan>** Contains the expansion of an abbreviation.

model.tableLike → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.tableLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

model.tableLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.tableLike → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.tableLike → <lem>

**<li>** Single item in a <list>.

model.tableLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.tableLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

model.tableLike → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

model.tableLike → <pgDesc>

**<pgFoot>** A running footer.

model.tableLike → <pgFoot>

**<pgHead>** A running header.

model.tableLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.tableLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.tableLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.tableLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.tableLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.tableLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.tableLike → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.tableLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.tableLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.tableLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.tableLike → <unclear>

## Declaration

```
<classSpec ident="model.tableLike" module="MEI.figtable" type="model">
  <desc xml:lang="en">Groups table-like elements.</desc>
  <classes>
    <memberOf key="model.paracontentPart"/>

```

## model.textPhraseLike

Groups textual elements that occur at the level of individual words or phrases.

### Module

[MEI.shared](#)

### Attributes

### Member of

[model.paracontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

### Members

[model.pbLike](#) Groups page beginning-like elements.

model.textPhraseLike → model.textPhraseLike

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

model.textPhraseLike → model.textPhraseLike

### Contained By

[\*\*<addName>\*\*](#) Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.textPhraseLike → <addName>

[\*\*<addrLine>\*\*](#) Single line of a postal address.

model.textPhraseLike → <addrLine>

[\*\*<annot>\*\*](#) Provides a statement explaining the text or indicating the basis for an assertion.

model.textPhraseLike → <annot>

[\*\*<bibl>\*\*](#) Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.textPhraseLike → <bibl>

[\*\*<bloc>\*\*](#) Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.textPhraseLike → <bloc>

[\*\*<caption>\*\*](#) A label which accompanies an illustration or a table.

model.textPhraseLike → <caption>

[\*\*<contentItem>\*\*](#) Contains a single entry within a content description element.

model.textPhraseLike → <contentItem>

[\*\*<corpName>\*\*](#) Identifies an organization or group of people that acts as a single entity.

model.textPhraseLike → <corpName>

[\*\*<country>\*\*](#) Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.textPhraseLike → <country>

[\*\*<date>\*\*](#) A string identifying a point in time or the time period between two such points.

model.textPhraseLike → <date>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.textPhraseLike → <district>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.textPhraseLike → <epigraph>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.textPhraseLike → <famName>

**<foreName>** Contains a forename, given or baptismal name.

model.textPhraseLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.textPhraseLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.textPhraseLike → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.textPhraseLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.textPhraseLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.textPhraseLike → <l>

**<li>** Single item in a <list>.

model.textPhraseLike → <li>

**<name>** Proper noun or noun phrase.

model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

model.textPhraseLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

model.textPhraseLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.textPhraseLike → <persName>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.textPhraseLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.textPhraseLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.textPhraseLike → <rend>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.textPhraseLike → <roleName>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.textPhraseLike → <settlement>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.textPhraseLike → <styleName>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.textPhraseLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.textPhraseLike → <th>

DEVELOPMENT  
VERSION

## model.textPhraseLike.limited

Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the model.textPhraseLike class without the pb element.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.rdgPart.text](#) Groups elements that may appear as part of a textual variant.

[model.editTransPart.text](#) Groups elements that may appear as part of editorial and transcription elements in prose.

[model.textPhraseLike](#) Groups textual elements that occur at the level of individual words or phrases.

### Members

**<dedicatee>** Entity to whom a creative work is formally offered.

model.textPhraseLike.limited → <dedicatee>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

model.textPhraseLike.limited → <dimensions>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.textPhraseLike.limited → <extent>

**model.addressLike** Groups elements used to represent a postal address.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.addressPart** Groups elements used as part of a physical address.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.annotLike** Groups annotation-like elements.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.biblLike** Groups elements containing a bibliographic description.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.dateLike** Groups elements containing date expressions.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.dimLike** Groups elements which describe a measurement forming part of the physical dimensions of an object.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.editorialLike** Groups editorial intervention elements.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.figureLike** Groups elements representing or containing graphic information such as an illustration or figure.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.identifierLike** Groups identifier-like elements.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.lbLike** Groups elements that function like line beginnings.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.locrefLike** Groups elements used for purposes of location and reference.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.measurementLike** Groups elements that represent a measurement.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.msInline** Groups elements that may appear inline when the msdesc module is active.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.nameLike** Groups elements that contain names.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.nameLike.label** Groups elements that serve as stylistic labels.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.qLike** Groups elements related to highlighting which can appear at the phrase-level.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.relationLike** Collects elements that express a relationship.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.rendLike** Groups elements that mark typographical features.

model.textPhraseLike.limited → model.textPhraseLike.limited

**model.titleLike** Groups elements that denote the name of a bibliographic item.

model.textPhraseLike.limited → model.textPhraseLike.limited

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.textPhraseLike.limited → <seg>

**<symbol>** A reference to a previously defined symbol.

model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

model.textPhraseLike.limited → <term>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.textPhraseLike.limited → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

model.textPhraseLike.limited → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.textPhraseLike.limited → <addName>

**<addrLine>** Single line of a postal address.

model.textPhraseLike.limited → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.textPhraseLike.limited → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.textPhraseLike.limited → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.textPhraseLike.limited → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.textPhraseLike.limited → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.textPhraseLike.limited → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.textPhraseLike.limited → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.textPhraseLike.limited → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.textPhraseLike.limited → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.textPhraseLike.limited → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.textPhraseLike.limited → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.textPhraseLike.limited → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.textPhraseLike.limited → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.textPhraseLike.limited → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.textPhraseLike.limited → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.textPhraseLike.limited → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.textPhraseLike.limited → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.textPhraseLike.limited → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.textPhraseLike.limited → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.textPhraseLike.limited → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.textPhraseLike.limited → <head>

**<height>** Description of the vertical size of an object.

model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.textPhraseLike.limited → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.textPhraseLike.limited → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.textPhraseLike.limited → <imprint>

**<l>** Contains a single line of text within a line group.

model.textPhraseLike.limited → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.textPhraseLike.limited → <lem>

**<li>** Single item in a <list>.

model.textPhraseLike.limited → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

model.textPhraseLike.limited → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.textPhraseLike.limited → <nameLink>

**<num>** Numeric information in any form.

model.textPhraseLike.limited → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.textPhraseLike.limited → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.textPhraseLike.limited → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.textPhraseLike.limited → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.textPhraseLike.limited → <persName>

**<pgFoot>** A running footer.

model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.textPhraseLike.limited → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.textPhraseLike.limited → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.textPhraseLike.limited → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.textPhraseLike.limited → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.textPhraseLike.limited → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.textPhraseLike.limited → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.textPhraseLike.limited → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.textPhraseLike.limited → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.textPhraseLike.limited → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.textPhraseLike.limited → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.textPhraseLike.limited → <sic>

**<signifLet>** Significantive letter(s).

model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.textPhraseLike.limited → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.textPhraseLike.limited → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.textPhraseLike.limited → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.textPhraseLike.limited → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.textPhraseLike.limited → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.textPhraseLike.limited → <unclear>

**<width>** Description of the horizontal size of an object.

model.textPhraseLike.limited → <width>

</classSpec>
```

## model.titleLike

Groups elements that denote the name of a bibliographic item.

### Module

[MEI.shared](#)

### Attributes

#### Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the [model.textPhraseLike](#) class without the pb element.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

### Members

**<title>** Title of a bibliographic entity.

[model.titleLike](#) → [<title>](#)

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

[model.titleLike](#) → [<abbr>](#)

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

[model.titleLike](#) → [<acquisition>](#)

**<actor>** Name of an actor appearing within a cast list.

[model.titleLike](#) → [<actor>](#)

**<add>** Marks an addition to the text.

[model.titleLike](#) → [<add>](#)

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

[model.titleLike](#) → [<addName>](#)

**<addrLine>** Single line of a postal address.

[model.titleLike](#) → [<addrLine>](#)

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

[model.titleLike](#) → [<anchoredText>](#)

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

[model.titleLike](#) → [<annot>](#)

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

[model.titleLike](#) → [<arranger>](#)

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.titleLike → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

model.titleLike → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

model.titleLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

model.titleLike → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

model.titleLike → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.titleLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

model.titleLike → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.titleLike → <byline>

**<caption>** A label which accompanies an illustration or a table.

model.titleLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

model.titleLike → <composer>

**<contentItem>** Contains a single entry within a content description element.

model.titleLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

model.titleLike → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.titleLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.titleLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.titleLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.titleLike → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

model.titleLike → <creation>

**<damage>** Contains an area of damage to the physical medium.

model.titleLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

model.titleLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

model.titleLike → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

model.titleLike → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

model.titleLike → <dedicatee>

**<dedication>** Contains a dedicatory statement.

model.titleLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.titleLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

model.titleLike → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.titleLike → <desc>

**<dim>** Any single dimensional specification.

model.titleLike → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.titleLike → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

model.titleLike → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.titleLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.titleLike → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

model.titleLike → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

model.titleLike → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.titleLike → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

model.titleLike → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

model.titleLike → <expan>

**<expression>** Intellectual or artistic realization of a work.

model.titleLike → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

model.titleLike → <extent>

**<f>** Single element of a figured bass indication.

model.titleLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.titleLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

model.titleLike → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

model.titleLike → <fing>

**<foreName>** Contains a forename, given or baptismal name.

model.titleLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

model.titleLike → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.titleLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

model.titleLike → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.titleLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.titleLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

model.titleLike → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

model.titleLike → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.titleLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.titleLike → <head>

**<height>** Description of the vertical size of an object.

model.titleLike → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.titleLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.titleLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.titleLike → <imprint>

**<l>** Contains a single line of text within a line group.

model.titleLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.titleLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.titleLike → <labelAbbr>

**<language>** Description of a language used in the document.

model.titleLike → <language>

**<layoutDesc>** Collects layout descriptions.

model.titleLike → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.titleLike → <lem>

**<li>** Single item in a <list>.

model.titleLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

model.titleLike → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

model.titleLike → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

model.titleLike → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.titleLike → <metaMark>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

model.titleLike → <monogr>

**<name>** Proper noun or noun phrase.

model.titleLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.titleLike → <nameLink>

**<num>** Numeric information in any form.

model.titleLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

model.titleLike → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.titleLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.titleLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.titleLike → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

model.titleLike → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.titleLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.titleLike → <persName>

**<pgFoot>** A running footer.

model.titleLike → <pgFoot>

**<pgHead>** A running header.

model.titleLike → <pgHead>

**<price>** The cost of access to a bibliographic item.

model.titleLike → <price>

**<provenance>** The record of ownership or custodianship of an item.

model.titleLike → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

model.titleLike → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

model.titleLike → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

model.titleLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.titleLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.titleLike → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

model.titleLike → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

model.titleLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.titleLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.titleLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.titleLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.titleLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

model.titleLike → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

model.titleLike → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.titleLike → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

model.titleLike → <role>

**<roleDesc>** Describes a character's role in a drama.

model.titleLike → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.titleLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

model.titleLike → <scriptDesc>

**<seal>** A single seal or similar attachment.

model.titleLike → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

model.titleLike → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.titleLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.titleLike → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

model.titleLike → <seriesStmt>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.titleLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.titleLike → <sic>

**<signifLet>** Significantive letter(s).

model.titleLike → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

model.titleLike → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.titleLike → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

model.titleLike → <sponsor>

**<stack>** An inline table with a single column.

model.titleLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.titleLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.titleLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.titleLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.titleLike → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

model.titleLike → <supportDesc>

**<syl>** Individual lyric syllable.

model.titleLike → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.titleLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.titleLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

model.titleLike → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

model.titleLike → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.titleLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

model.titleLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

model.titleLike → <titlePart>

**<titleStmt>** Container for title and responsibility meta-data.

model.titleLike → <titleStmt>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

model.titleLike → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

model.titleLike → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

model.titleLike → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.titleLike → <unclear>

**<width>** Description of the horizontal size of an object.

model.titleLike → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.titleLike → <work>

## Declaration

```
<classSpec ident="model.titleLike" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that denote the name of a bibliographic item.</desc>
  <classes>
    <memberOf key="model.textPhraseLike.limited"/>
    <memberOf key="model.titlePagePart"/>
  </classes>
</classSpec>
```

## model.titlePagePart

Groups elements that may appear as part of a title page transcription.

### Module

MEI.shared

### Attributes

### Member of

(model.titlePagePart isn't member of any model class)

### Members

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

model.titlePagePart → <accessRestrict>

**<argument>** Contains a formal list or prose description of topics addressed.

model.titlePagePart → <argument>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

model.titlePagePart → <byline>

**<contents>** List of the material contained within a resource.

model.titlePagePart → <contents>

**<dedication>** Contains a dedicatory statement.

model.titlePagePart → <dedication>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.titlePagePart → <epigraph>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.titlePagePart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.titlePagePart → <imprint>

**model.dateLike** Groups elements containing date expressions.

model.titlePagePart → model.titlePagePart

**model.editionLike** Groups elements containing bibliographic edition information.

model.titlePagePart → model.titlePagePart

**model.identifierLike** Groups identifier-like elements.

model.titlePagePart → model.titlePagePart

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

model.titlePagePart → model.titlePagePart

**model.titleLike** Groups elements that denote the name of a bibliographic item.

model.titlePagePart → model.titlePagePart

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

model.titlePagePart → <perfDuration>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

model.titlePagePart → <perfMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

model.titlePagePart → <plateNum>

**<price>** The cost of access to a bibliographic item.

model.titlePagePart → <price>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

model.titlePagePart → <series>

**<sysReq>** System requirements for using the electronic item.

model.titlePagePart → <sysReq>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

model.titlePagePart → <titlePart>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

model.titlePagePart → <useRestrict>

## Contained By

**<titlePage>** Contains a transcription of the title page of a text.

model.titlePagePart → <titlePage>

## Declaration

```
<classSpec ident="model.titlePagePart" module="MEI.shared" type="model">
  <desc xml:lang="en">Groups elements that may appear as part of a title page
  transcription.</desc>
</classSpec>
```

## model.transcriptionLike

Groups elements used for editorial transcription of pre-existing source materials.

### Module

[MEI.edittrans](#)

### Attributes

### Member of

[model.paraccontentPart](#) Groups elements which may appear as part of the paragraph content model. A paragraph may contain inline elements and all other block-level elements except itself.

### Members

**<add>** Marks an addition to the text.

model.transcriptionLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.transcriptionLike → <del>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.transcriptionLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.transcriptionLike → <unclear>

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

model.transcriptionLike → <abbr>

**<add>** Marks an addition to the text.

model.transcriptionLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

model.transcriptionLike → <addName>

**<addrLine>** Single line of a postal address.

model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

model.transcriptionLike → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

model.transcriptionLike → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

model.transcriptionLike → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

model.transcriptionLike → <neume>

**<note>** A single pitched event.

model.transcriptionLike → <note>

**<num>** Numeric information in any form.

model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

model.transcriptionLike → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

model.transcriptionLike → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

model.transcriptionLike → <score>

**<section>** Segment of music data.

model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.transcriptionLike → <unclear>

**Declaration**

## model.verseLike

Groups elements that contain a lyric verse.

### Module

MEI.lyrics

### Attributes

#### Member of

model.syllablePart Groups elements that may appear as part of the content of a syllable.

model.rdgPart.music Groups elements that may appear as part of a musical variant.

model.editTransPart.music Groups elements that may appear as part of editorial and transcription elements in music notation.

#### Members

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.  
model.verseLike → <refrain>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.  
model.verseLike → <verse>

#### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.  
model.verseLike → <abbr>

**<add>** Marks an addition to the text.  
model.verseLike → <add>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.  
model.verseLike → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.  
model.verseLike → <corr>

**<damage>** Contains an area of damage to the physical medium.  
model.verseLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.  
model.verseLike → <del>

**<expan>** Contains the expansion of an abbreviation.  
model.verseLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.  
model.verseLike → <lem>

**<note>** A single pitched event.  
model.verseLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

model.verseLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

model.verseLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

model.verseLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

model.verseLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

model.verseLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

model.verseLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

model.verseLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

model.verseLike → <unclear>

## Declaration

```
<classSpec ident="model.verseLike" module="MEI.lyrics" type="model">
  <desc xml:lang="en">Groups elements that contain a lyric verse.</desc>
  <classes>
    <memberOf key="model.syllablePart"/>
    <memberOf key="model.rdgPart.music"/>
    <memberOf key="model.editTransPart.music"/>
  </classes>
</classSpec>
```

## model.workIdent

Groups elements that assist in the identification of a work.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.workIdent isn't member of any model class)

### Members

**<key>** Key captures information about tonal center and mode.

model.workIdent → <key>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

model.workIdent → <mensuration>

**<meter>** Captures information about the time signature within bibliographic descriptions.

model.workIdent → <meter>

**model.incipLike** Groups elements used to represent a textual or musical incipit.

model.workIdent → model.workIdent

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

model.workIdent → <tempo>

### Contained By

**<expression>** Intellectual or artistic realization of a work.

model.workIdent → <expression>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.workIdent → <work>

### Declaration

```
<classSpec ident="model.workIdent" module="MEI.header" type="model">
  <desc xml:lang="en">Groups elements that assist in the identification of a work.</desc>
</classSpec>
```

## model.workLike

Collects work-like elements.

### Module

[MEI.header](#)

### Attributes

### Member of

(model.workLike isn't member of any model class)

### Members

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

model.workLike → <work>

### Contained By

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

model.workLike → <componentList>

### Declaration

```
<classSpec ident="model.workLike" type="model" module="MEI.header">
  <desc xml:lang="en">Collects work-like elements.</desc>
</classSpec>
```

# Macro Group Specifications

## macro.anyXML

Permits any XML elements except those from the MEI or SVG namespace.

### Module

MEI.shared

### Contained By

**<extData>** Provides a container element for non-MEI data formats.

macro.anyXML → <extData>

**<extMeta>** Provides a container element for non-MEI metadata formats.

macro.anyXML → <extMeta>

### May Contain

#### Declaration

```
<macroSpec ident="macro.anyXML" module="MEI.shared" type="pe">
  <desc xml:lang="en">Permits any XML elements except those from the MEI or SVG
  namespace.</desc>

## macro.availabilityPart

Groups elements that may appear as part of a description of the availability of and access to a bibliographic item.

### Module

[MEI.header](#)

### Contained By

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

macro.availabilityPart → <availability>

### May Contain

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

macro.availabilityPart → <accessRestrict>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

macro.availabilityPart → <address>

**<date>** A string identifying a point in time or the time period between two such points.

macro.availabilityPart → <date>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

macro.availabilityPart → <distributor>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

macro.availabilityPart → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

macro.availabilityPart → <identifier>

**<price>** The cost of access to a bibliographic item.

macro.availabilityPart → <price>

**<sysReq>** System requirements for using the electronic item.

macro.availabilityPart → <sysReq>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

macro.availabilityPart → <useRestrict>

### Declaration

```
<macroSpec ident="macro.availabilityPart" module="MEI.header" type="pe">
  <desc xml:lang="en">Groups elements that may appear as part of a description of the
  availability of and access to a bibliographic item.</desc>

  </rng:choice>
</rng:zeroOrMore>
</rng:group>
<rng:text/>
</rng:choice>
</content>
</macroSpec>
```

## macro.bibldescPart

Groups manifestation- and item-specific elements that may appear as part of a bibliographic description.

### Module

MEI.header

### Contained By

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.  
macro.bibldescPart → <manifestation>

### May Contain

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

macro.bibldescPart → <availability>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

macro.bibldescPart → <editionStmt>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

macro.bibldescPart → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

macro.bibldescPart → <physLoc>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

macro.bibldescPart → <pubStmt>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

macro.bibldescPart → <seriesStmt>

### Declaration

```
<macroSpec ident="macro.bibldescPart" module="MEI.header" type="pe">
  <desc xml:lang="en">Groups manifestation- and item-specific elements that may appear as
  part of a bibliographic description.</desc>
  <content>
    <rng:optional>
      <rng:ref name="editionStmt"/>
    </rng:optional>
    <rng:optional>
      <rng:ref name="pubStmt"/>
    </rng:optional>
    <rng:optional>
      <rng:ref name="availability"/>
    </rng:optional>
  </content>

```

```
</rng:optional>
<rng:zeroOrMore>
  <rng:ref name="physDesc"/>
</rng:zeroOrMore>
<rng:zeroOrMore>
  <rng:ref name="physLoc"/>
</rng:zeroOrMore>
<rng:zeroOrMore>
  <rng:ref name="seriesStmt"/>
</rng:zeroOrMore>
</content>
</macroSpec>
```

## macro.metaLike.page

Groups elements that contain meta-data about a single page.

### Module

[MEI.shared](#)

### Contained By

**<pb>** An empty formatting element that forces text to begin on a new page.

macro.metaLike.page → <pb>

### May Contain

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

macro.metaLike.page → <pgDesc>

**<pgFoot>** A running footer.

macro.metaLike.page → <pgFoot>

**<pgHead>** A running header.

macro.metaLike.page → <pgHead>

### Declaration

```
<macroSpec ident="macro.metaLike.page" module="MEI.shared" type="pe">
  <desc xml:lang="en">Groups elements that contain meta-data about a single page.</desc>
  <content>
    <rng:optional>
      <rng:ref name="pgHead"/>
    </rng:optional>
    <rng:optional>
      <rng:ref name="pgFoot"/>
    </rng:optional>
    <rng:optional>
      <rng:ref name="pgDesc"/>
    </rng:optional>
  </content>
</macroSpec>
```

## macro.musicPart

Groups elements that may appear as part of the music element.

### Module

[MEI.shared](#)

### Contained By

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an étude, opera, song cycle, symphony, or anthology of piano solos.

macro.musicPart → <music>

### May Contain

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

macro.musicPart → <back>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

macro.musicPart → <back>

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

macro.musicPart → <body>

**<front>** Bundles prefatory text found before the start of the musical text.

macro.musicPart → <front>

**<front>** Bundles prefatory text found before the start of the musical text.

macro.musicPart → <front>

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

macro.musicPart → <group>

### Declaration

```
<macroSpec ident="macro.musicPart" module="MEI.shared" type="pe">
  <desc xml:lang="en">Groups elements that may appear as part of the music element.</desc>
  <content>
    <rng:optional>
      <rng:ref name="model.frontLike"/>
    </rng:optional>
    <rng:optional>
      <rng:choice>
        <rng:ref name="body"/>
        <rng:ref name="group"/>
      </rng:choice>
    </rng:optional>
  </content>
</macroSpec>
```

```
<rng:optional>
  <rng:ref name="model.backLike"/>
</rng:optional>
</content>
</macroSpec>
```

DEVELOPMENT  
VERSION

## macro.struc-unstrucContent

Provides a choice between structured and unstructured/mixed content.

### Module

[MEI.shared](#)

### Contained By

**<accMat>** Holds a description of any additional material bound with an item, such as non-contemporaneous documents or fragments.

macro.struc-unstrucContent → <accMat>

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

macro.struc-unstrucContent → <accessRestrict>

**<addDesc>** Provides a description of significant additions found within an item, such as marginalia or other annotations.

macro.struc-unstrucContent → <addDesc>

**<audience>** Defines the class of user for which the work is intended, as defined by age group (e.g., children, young adults, adults, etc.), educational level (e.g., primary, secondary, etc.), or other categorization.

macro.struc-unstrucContent → <audience>

**<captureMode>** The means used to record notation, sound, or images in the production of a source/manifestation (e.g., analogue, acoustic, electric, digital, optical etc.).

macro.struc-unstrucContent → <captureMode>

**<carrierForm>** The specific class of material to which the physical carrier of the source/manifestation belongs (e.g., sound cassette, videodisc, microfilm cartridge, transparency, etc.). The carrier for a manifestation comprising multiple physical components may include more than one form (e.g., a filmstrip with an accompanying booklet, a separate sound disc carrying the sound track for a film, etc.).

macro.struc-unstrucContent → <carrierForm>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

macro.struc-unstrucContent → <catchwords>

**<collation>** Records a description of how the leaves or bifolia of an item are physically arranged.

macro.struc-unstrucContent → <collation>

**<colophon>** Contains a statement providing information regarding the date, place, agency, or reason for production of the item.

macro.struc-unstrucContent → <colophon>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

macro.struc-unstrucContent → <condition>

**<context>** The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

macro.struc-unstrucContent → <context>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

macro.struc-unstrucContent → <dimensions>

**<explicit>** Contains the explicit of a manuscript item; that is, the closing words of the text proper, exclusive of any rubric or colophon which might follow it.

macro.struc-unstrucContent → <explicit>

**<fileChar>** Standards or schemes used to encode the file (e.g., ASCII, SGML, etc.), physical characteristics of the file (e.g., recording density, parity, blocking, etc.), and other characteristics that have a bearing on how the file can be processed.

macro.struc-unstrucContent → <fileChar>

**<foliation>** Describes the numbering system or systems used to count the leaves or pages in a codex.

macro.struc-unstrucContent → <foliation>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

macro.struc-unstrucContent → <heraldry>

**<inscription>** An inscription added to an item, such as a bookplate, a note designating the item as a gift, and/or the author's signature.

macro.struc-unstrucContent → <inscription>

**<layout>** Describes how text is laid out on the page, including information about any ruling, pricking, or other evidence of page-preparation techniques.

macro.struc-unstrucContent → <layout>

**<otherChar>** Any characteristic that serves to differentiate a work or expression from another.

macro.struc-unstrucContent → <otherChar>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

macro.struc-unstrucContent → <perfDuration>

**<physMedium>** Records the physical materials used in the source, such as ink and paper.

macro.struc-unstrucContent → <physMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

macro.struc-unstrucContent → <plateNum>

**<playingSpeed>** Playing speed for a sound recording is the speed at which the carrier must be operated to produce the sound intended (e.g., 33 1/3 rpm, 19 cm/s, etc.).

macro.struc-unstrucContent → <playingSpeed>

**<rubric>** Contains a string of words through which a manuscript signals the beginning or end of a text division, often with an assertion as to its author and title, which is in some way set off from the text itself, usually in red ink, or by use of different size or type of script, or some other such visual device.

macro.struc-unstrucContent → <rubric>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

macro.struc-unstrucContent → <scoreFormat>

**<scriptNote>** Describes a particular script distinguished within the description of an autographic item.

macro.struc-unstrucContent → <scriptNote>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

macro.struc-unstrucContent → <secFolio>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

macro.struc-unstrucContent → <signatures>

**<specRepro>** The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

macro.struc-unstrucContent → <specRepro>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

macro.struc-unstrucContent → <stamp>

**<sysReq>** System requirements for using the electronic item.

macro.struc-unstrucContent → <sysReq>

**<trackConfig>** Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

macro.struc-unstrucContent → <trackConfig>

**<typeNote>** Describes a particular font or other significant typographic feature of a printed resource.

macro.struc-unstrucContent → <typeNote>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

macro.struc-unstrucContent → <useRestrict>

**<watermark>** Contains a description of a watermark or similar device.

macro.struc-unstrucContent → <watermark>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

macro.struc-unstrucContent → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

macro.struc-unstrucContent → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

macro.struc-unstrucContent → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

macro.struc-unstrucContent → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

macro.struc-unstrucContent → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

macro.struc-unstrucContent → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

macro.struc-unstrucContent → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

macro.struc-unstrucContent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

macro.struc-unstrucContent → <country>

**<date>** A string identifying a point in time or the time period between two such points.

macro.struc-unstrucContent → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

macro.struc-unstrucContent → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

macro.struc-unstrucContent → <depth>

**<dim>** Any single dimensional specification.

macro.struc-unstrucContent → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

macro.struc-unstrucContent → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

macro.struc-unstrucContent → <district>

**<expan>** Contains the expansion of an abbreviation.

macro.struc-unstrucContent → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

macro.struc-unstrucContent → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

macro.struc-unstrucContent → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

macro.struc-unstrucContent → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

macro.struc-unstrucContent → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

macro.struc-unstrucContent → <head>

**<height>** Description of the vertical size of an object.

macro.struc-unstrucContent → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

macro.struc-unstrucContent → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

macro.struc-unstrucContent → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

macro.struc-unstrucContent → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

macro.struc-unstrucContent → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

macro.struc-unstrucContent → <locusGrp>

**<name>** Proper noun or noun phrase.

macro.struc-unstrucContent → <name>

**<num>** Numeric information in any form.

macro.struc-unstrucContent → <num>

**<p>** One or more text phrases that form a logical prose passage.

macro.struc-unstrucContent → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

macro.struc-unstrucContent → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

macro.struc-unstrucContent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

macro.struc-unstrucContent → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

macro.struc-unstrucContent → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

macro.struc-unstrucContent → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

macro.struc-unstrucContent → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

macro.struc-unstrucContent → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

macro.struc-unstrucContent → <region>

**<relation>** Describes a relationship or linkage amongst entities.

macro.struc-unstrucContent → <relation>

**<relationList>** Gathers relation elements.

macro.struc-unstrucContent → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

macro.struc-unstrucContent → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

macro.struc-unstrucContent → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

macro.struc-unstrucContent → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

macro.struc-unstrucContent → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

macro.struc-unstrucContent → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

macro.struc-unstrucContent → <signatures>

**<stack>** An inline table with a single column.

macro.struc-unstrucContent → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

macro.struc-unstrucContent → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

macro.struc-unstrucContent → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

macro.struc-unstrucContent → <styleName>

**<symbol>** A reference to a previously defined symbol.

macro.struc-unstrucContent → <symbol>

**<term>** Keyword or phrase which describes a resource.

macro.struc-unstrucContent → <term>

**<title>** Title of a bibliographic entity.

macro.struc-unstrucContent → <title>

**<watermark>** Contains a description of a watermark or similar device.

macro.struc-unstrucContent → <watermark>

**<width>** Description of the horizontal size of an object.

macro.struc-unstrucContent → <width>

## macro.titlePart

Groups elements that may appear as part of a bibliographic title.

### Module

MEI.shared

### Contained By

**<title>** Title of a bibliographic entity.

macro.titlePart → <title>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

macro.titlePart → <titlePart>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

macro.titlePart → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

macro.titlePart → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

macro.titlePart → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

macro.titlePart → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

macro.titlePart → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

macro.titlePart → <bloc>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

macro.titlePart → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

macro.titlePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

macro.titlePart → <date>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

macro.titlePart → <district>

**<expan>** Contains the expansion of an abbreviation.

macro.titlePart → <expan>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

macro.titlePart → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

macro.titlePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

macro.titlePart → <geogName>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

macro.titlePart → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

macro.titlePart → <lb>

**<name>** Proper noun or noun phrase.

macro.titlePart → <name>

**<num>** Numeric information in any form.

macro.titlePart → <num>

**<pb>** An empty formatting element that forces text to begin on a new page.

macro.titlePart → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

macro.titlePart → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

macro.titlePart → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

macro.titlePart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

macro.titlePart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

macro.titlePart → <ptr>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

macro.titlePart → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

macro.titlePart → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

macro.titlePart → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

macro.titlePart → <repository>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

macro.titlePart → <settlement>

**<stack>** An inline table with a single column.

macro.titlePart → <stack>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

macro.titlePart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

macro.titlePart → <styleName>

**<symbol>** A reference to a previously defined symbol.

macro.titlePart → <symbol>

# Attribute Class Specifications

## att.accid.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<accid>** Records a temporary alteration to the pitch of a note.  
att.accid.anl → <accid>

#### Declaration

```
<classSpec ident="att.accid.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.accid.ges

Gestural domain attributes.

### Module

[MEI.gestural](#)

### Attributes

`@accid.ges` (*optional*) Records the performed pitch inflection. Value conforms to [data.ACCIDENTAL.GESTURAL](#).

`att.accid.ges` → `@accid.ges`

### Available at

`<accid>` Records a temporary alteration to the pitch of a note.

`att.accid.ges` → `<accid>`

### Declaration

```
<classSpec ident="att.accid.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
  <classes>
    <memberOf key="att.accidental.ges"/>
  </classes>
</classSpec>
```

# att.accid.log

Logical domain attributes.

## Module

[MEI.shared](#)

## Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).

att.accid.log → @accid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

att.accid.log → @evaluate

**@func** (*optional*) Records the function of an accidental. Allowed values are: "**caution**" (*Cautionary accidental.*), "**edit**" (*Editorial accidental.*)

att.accid.log → @func

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.accid.log → @layer

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

att.accid.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

att.accid.log → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

att.accid.log → @plist

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.accid.log → @staff

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.accid.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.accid.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).  
att.accid.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.accid.log → @when

## Available at

**<accid>** Records a temporary alteration to the pitch of a note.

att.accid.log → <accid>

## Declaration

```
<classSpec ident="att.accid.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.accidental"/>
    <memberOf key="att.controlEvent"/>

        <valItem ident="caution">
          <desc xml:lang="en">Cautionary accidental.</desc>
        </valItem>
        <valItem ident="edit">
          <desc xml:lang="en">Editorial accidental.</desc>
        </valItem>
      </valList>
    </attDef>
  </attList>
</classSpec>
```

# att.accid.vis

Visual domain attributes.

## Module

[MEI.visual](#)

## Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a `<symbolDef>` element elsewhere in the document. Value conforms to [data.URI](#).

att.accid.vis → @altsym

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.accid.vis → @color

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

att.accid.vis → @enclose

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

att.accid.vis → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

att.accid.vis → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

att.accid.vis → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

att.accid.vis → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

att.accid.vis → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

att.accid.vis → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

att.accid.vis → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

att.accid.vis → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

att.accid.vis → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.accid.vis → @ho

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

att.accid.vis → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

att.accid.vis → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

att.accid.vis → @loc

**@oloc** (*optional*) Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

att.accid.vis → @oloc

**@onstaff** (*optional*) Indicates the placement of the item within the staff. A value of 'true' means on the staff, and 'false' off the staff. Value conforms to [data.BOOLEAN](#).

att.accid.vis → @onstaff

**@place** (*optional*) Captures the placement of the item with respect to the event with which it is associated. Value conforms to [data.STAFFREL](#).

att.accid.vis → @place

**@ploc** (*optional*) Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

att.accid.vis → @ploc

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.accid.vis → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.accid.vis → @x

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.accid.vis → @y

## Available at

**<accid>** Records a temporary alteration to the pitch of a note.

att.accid.vis → <accid>

## Declaration

```
<classSpec ident="att.accid.vis" module="MEI.visual" type="atts">
```

```
<desc xml:lang="en">Visual domain attributes.</desc>
<classes>

  <memberOf key="att.typography"/>
  <memberOf key="att.visualOffset.ho"/>
  <memberOf key="att.visualOffset.vo"/>
  <memberOf key="att.xy"/>
</classes>
</classSpec>
```

## att.accidental

Attributes for capturing momentary pitch inflection.

### Module

MEI.shared

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).  
att.accidental → @accid

### Available at

**<accid>** Records a temporary alteration to the pitch of a note.  
att.accidental → <accid>

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.  
att.accidental → <ambNote>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line.  
Sometimes called a "direct".  
att.accidental → <custos>

**<key>** Key captures information about tonal center and mode.  
att.accidental → <key>

**<keyAccid>** Accidental in a key signature.  
att.accidental → <keyAccid>

**<keySig>** Written key signature.  
att.accidental → <keySig>

**<note>** A single pitched event.  
att.accidental → <note>

### Declaration

```
<classSpec ident="att.accidental" module="MEI.shared" type="atts">
  <desc xml:lang="en">Attributes for capturing momentary pitch inflection.</desc>
  <attList>
    <attDef ident="accid" usage="opt">
      <desc xml:lang="en">Captures a written accidental.</desc>
      <datatype>
        <rng:ref name="data.ACIDENTAL.WRITTEN"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

# att.accidental.ges

Attributes for capturing momentary pitch inflection in the gestural domain.

## Module

[MEI.gestural](#)

## Attributes

**@accid.ges** (*optional*) Records the performed pitch inflection. Value conforms to [data.ACCIDENTAL.GESTURAL](#).

att.accidental.ges → @accid.ges

## Available at

**<accid>** Records a temporary alteration to the pitch of a note.

att.accidental.ges → <accid>

**<chordMember>** An individual pitch in a chord defined by a **<chordDef>** element.

att.accidental.ges → <chordMember>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

att.accidental.ges → <nc>

**<note>** A single pitched event.

att.accidental.ges → <note>

## Constraints

The value of @accid.ges should not duplicate the value of @accid.

## Declaration

```

<classSpec ident="att.accidental.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Attributes for capturing momentary pitch inflection in the gestural
  domain.</desc>
  <attList>
    <attDef ident="accid.ges" usage="opt">
      <desc xml:lang="en">Records the performed pitch inflection.</desc>
      <datatype>
        <rng:ref name="data.ACCIDENTAL.GESTURAL"/>
      </datatype>
      <constraintSpec ident="check_accid_duplication" scheme="schematron">
        <constraint>
          <sch:rule context="@accid.ges">
            <sch:assert role="warning" test="not(. eq ../../@accid)">The value of
            @accid.ges should not duplicate the value of @accid.</sch:assert>
          </sch:rule>
        </constraint>
      </constraintSpec>
    </attDef>
  </attList>
</classSpec>

```

```
</attDef>
</attList>
</classSpec>
```

DEVELOPMENT  
VERSION

## att.adlibitum

Attributes that describe a performance resource as ad libitum (optional).

### Module

[MEI.header](#)

### Attributes

**@adlib** (*optional*) Marks a performance resource as ad libitum (optional). Value conforms to [data.BOOLEAN](#).

att.adlibitum → @adlib

### Available at

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

att.adlibitum → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

att.adlibitum → <perfResList>

### Remarks

The technical term “ad libitum” has several meanings depending on the context in which it occurs:

- 1 indicates an optional performance resource (instrumental or vocal part or group),
- 2 marks a passage to be played freely or free in time,
- 3 requests or invites to improvise a passage of music,
- 4 indicates that the number repetitions can be set individually or spontaneously.

Currently only the use within a performance resource (case 1) is supported.

### Declaration

```

<classSpec ident="att.adlibitum" module="MEI.header" type="atts">
  <desc xml:lang="en">Attributes that describe a performance resource as ad libitum

```

## att.agentIdent

Attributes for the identification of a causative agent.

### Module

[MEI.edittrans](#)

### Attributes

**@agent** (*optional*) Signifies the causative agent of damage, illegibility, or other loss of original text. Value is plain text.

att.agentIdent → @agent

### Available at

**<damage>** Contains an area of damage to the physical medium.

att.agentIdent → <damage>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

att.agentIdent → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

att.agentIdent → <unclear>

### Declaration

```

<classSpec ident="att.agentIdent" module="MEI.edittrans" type="atts">
  <desc xml:lang="en">Attributes for the identification of a causative agent.</desc>
  <attList>
    <attDef ident="agent" usage="opt">
      <desc xml:lang="en">Signifies the causative agent of damage, illegibility, or other loss of original text.</desc>

        <rng:data type="string"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>

```

## att.alignment

Temporal alignment attributes.

### Referenced in chapters

[10.1.1 General Relationships Between Elements](#)

### Module

[MEI.performance](#)

### Attributes

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.alignment → @when

### Available at

**<accid>** Records a temporary alteration to the pitch of a note.

att.alignment → <accid>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.alignment → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.alignment → <arpeg>

**<artic>** An indication of how to play a note or chord.

att.alignment → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.alignment → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

att.alignment → <bTrem>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.alignment → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.alignment → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.alignment → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

att.alignment → <bend>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

att.alignment → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

att.alignment → <breath>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.alignment → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

att.alignment → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

att.alignment → <clefGrp>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

att.alignment → <cpMark>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

att.alignment → <dir>

**<dot>** Dot of augmentation or division.

att.alignment → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

att.alignment → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

att.alignment → <ending>

**<episema>** Episema.

att.alignment → <episema>

**<f>** Single element of a figured bass indication.

att.alignment → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

att.alignment → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

att.alignment → <fermata>

**<fing>** finger – An individual finger in a fingering indication.

att.alignment → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

att.alignment → <fingGrp>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

att.alignment → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

att.alignment → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

att.alignment → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

att.alignment → <halfmRpt>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

att.alignment → <harm>

**<harpPedal>** Harp pedal diagram.

att.alignment → <harpPedal>

**<hispanTick>** Hispanic tick.

att.alignment → <hispanTick>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

att.alignment → <line>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

att.alignment → <lv>

**<mRest>** Complete measure rest in any meter.

att.alignment → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

att.alignment → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

att.alignment → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

att.alignment → <mSpace>

**<mdiv>** Contains a subdivision of the body of a musical text.

att.alignment → <mdiv>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

att.alignment → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

att.alignment → <metaMark>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

att.alignment → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

att.alignment → <multiRest>

**<multiRpt>** Multiple repeated measures.

att.alignment → <multiRpt>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

att.alignment → <nc>

**<ncGrp>** Collection of one or more neume components.

att.alignment → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

att.alignment → <neume>

**<note>** A single pitched event.

att.alignment → <note>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

att.alignment → <octave>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

att.alignment → <ornam>

**<pad>** An indication of extra visual space between notational elements.

att.alignment → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

att.alignment → <pb>

**<pedal>** Piano pedal mark.

att.alignment → <pedal>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

att.alignment → <phrase>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

att.alignment → <reh>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

att.alignment → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

att.alignment → <rest>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

att.alignment → <sb>

**<section>** Segment of music data.

att.alignment → <section>

**<signifLet>** Significantive letter(s).

att.alignment → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

att.alignment → <slur>

**<sp>** Contains an individual speech in a performance text.

att.alignment → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

att.alignment → <space>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

att.alignment → <stageDir>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

att.alignment → <syllable>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

att.alignment → <tempo>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

att.alignment → <tie>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

att.alignment → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

att.alignment → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

att.alignment → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

att.alignment → <turn>

## Constraints

@when attribute should have content.

A value in @when should correspond to the @xml:id attribute of a when element.

## Declaration

```
<classSpec ident="att.alignment" module="MEI.performance" type="atts">
  <desc xml:lang="en">Temporal alignment attributes.</desc>
  <constraintSpec ident="check_whenTarget" scheme="schematron">
    <constraint>
      <sch:rule context="@when">
        <sch:assert role="warning" test="not(normalize-space(.) eq '')">@when attribute
        should have content.</sch:assert>
        <sch:assert role="warning" test="every $i in tokenize(., '\s+') satisfies
          substring($i,2)=//mei:when/@xml:id">A value in @when should correspond to the
          @xml:id attribute of a when element.</sch:assert>
      </sch:rule>
    </constraint>
  </constraintSpec>
<attList>
```

```
<attDef ident="when" usage="opt">
  <desc xml:lang="en">Indicates the point of occurrence of this feature along a time

</attList>
</classSpec>
```

## att.altSym

Attributes supplying pointers to user-defined symbols.

### Module

[MEI.usersymbols](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.altSym → @altsym

### Available at

**<accid>** Records a temporary alteration to the pitch of a note.

att.altSym → <accid>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.altSym → <arpeg>

**<artic>** An indication of how to play a note or chord.

att.altSym → <artic>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.altSym → <barLine>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.altSym → <beatRpt>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

att.altSym → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

att.altSym → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

att.altSym → <caesura>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.altSym → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

att.altSym → <clef>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

att.altSym → <cpMark>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

att.altSym → <custos>

**<dot>** Dot of augmentation or division.

att.altSym → <dot>

**<episema>** Episema.

att.altSym → <episema>

**<f>** Single element of a figured bass indication.

att.altSym → <f>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

att.altSym → <fermata>

**<fing>** finger – An individual finger in a fingering indication.

att.altSym → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

att.altSym → <fingGrp>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

att.altSym → <gliss>

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

att.altSym → <grpSym>

**<halfmRpt>** A half-measure repeat in any meter.

att.altSym → <halfmRpt>

**<harpPedal>** Harp pedal diagram.

att.altSym → <harpPedal>

**<hispanTick>** Hispanic tick.

att.altSym → <hispanTick>

**<keyAccid>** Accidental in a key signature.

att.altSym → <keyAccid>

**<liquecent>** Liquescent.

att.altSym → <liquecent>

**<mRest>** Complete measure rest in any meter.

att.altSym → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

att.altSym → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

att.altSym → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

att.altSym → <mSpace>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

att.altSym → <mensur>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

att.altSym → <mensuration>

**<meterSig>** Written meter signature.

att.altSym → <meterSig>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

att.altSym → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

att.altSym → <multiRest>

**<multiRpt>** Multiple repeated measures.

att.altSym → <multiRpt>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

att.altSym → <nc>

**<neume>** Sign representing one or more musical pitches.

att.altSym → <neume>

**<note>** A single pitched event.

att.altSym → <note>

**<oriscus>** Oriscus.

att.altSym → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

att.altSym → <ornam>

**<pedal>** Piano pedal mark.

att.altSym → <pedal>

**<proprt>** Description of note duration as arithmetic ratio.

att.altSym → <proprt>

**<quilisma>** Quilisma.

att.altSym → <quilisma>

**<rest>** A non-sounding event found in the source being transcribed.

att.altSym → <rest>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

att.altSym → <sb>

**<signifLet>** Significantive letter(s).

att.altSym → <signifLet>

**<strophicus>** Strophicus.

att.altSym → <strophicus>

**<symbol>** A reference to a previously defined symbol.

att.altSym → <symbol>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

att.altSym → <trill>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

att.altSym → <turn>

## Constraints

@altsym attribute should have content.

The value in @altsym should correspond to the @xml:id attribute of a symbolDef element.

The value in @altsym must not correspond to the @xml:id attribute of a symbolDef ancestor.

## Declaration

```
<classSpec ident="att.altSym" module="MEI.usersymbols" type="atts">
  <desc xml:lang="en">Attributes supplying pointers to user-defined symbols.</desc>

## att.ambNote.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.

att.ambNote.anl → <ambNote>

#### Declaration

```
<classSpec ident="att.ambNote.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.ambNote.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

#### Available at

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.

att.ambNote.ges → <ambNote>

#### Declaration

```
<classSpec ident="att.ambNote.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
</classSpec>
```

## att.ambNote.log

Logical domain attributes.

### Module

MEI.shared

### Attributes

**@accid** (*optional*) Captures a written accidental. Value conforms to [data.ACIDENTAL.WRITTEN](#).

att.ambNote.log → @accid

**@colored** (*optional*) Indicates this feature is 'colored'; that is, it is a participant in a change in rhythmic values. In mensural notation, coloration is indicated by colored notes (red, black, etc.) where void notes would otherwise occur. In CMN, coloration is indicated by an inverse color; that is, the note head is void when it would otherwise be filled and vice versa. Value conforms to [data.BOOLEAN](#).

att.ambNote.log → @colored

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the [data.DURATION](#) datatype. Value conforms to [data.DURATION](#).

att.ambNote.log → @dur

**@oct** (*optional*) Captures written octave information. Value conforms to [data.OCTAVE](#).

att.ambNote.log → @oct

**@pname** (*optional*) Contains a written pitch name. Value conforms to [data.PITCHNAME](#).

att.ambNote.log → @pname

### Available at

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.

att.ambNote.log → <ambNote>

### Declaration

```
<classSpec ident="att.ambNote.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.accidental"/>
    <memberOf key="att.coloration"/>
    <memberOf key="att.duration.log"/>
    <memberOf key="att.pitched"/>
  </classes>
</classSpec>
```

# att.ambNote.vis

Visual domain attributes.

## Module

[MEI.visual](#)

## Attributes

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.ambNote.vis → @color

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

att.ambNote.vis → @enclose

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

att.ambNote.vis → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

att.ambNote.vis → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

att.ambNote.vis → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

att.ambNote.vis → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

att.ambNote.vis → @fontweight

**@head.altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.ambNote.vis → @head.altsym

**@head.auth** (*optional*) A name or label associated with the controlled vocabulary from which a numerical value of head.shape is taken. Allowed values are: "smufl" (*Standard Music Font Layout*.)

att.ambNote.vis → @head.auth

**@head.color** (*optional*) Captures the overall color of a notehead. Value conforms to [data.COLOR](#).

att.ambNote.vis → @head.color

**@head.fill** (*optional*) Describes how/if the notehead is filled. Value conforms to [data.FILL](#).

att.ambNote.vis → @head.fill

**@head.fillcolor** (*optional*) Captures the fill color of a notehead if different from the overall note color. Value conforms to [data.COLOR](#).

att.ambNote.vis → @head.fillcolor

**@head.mod** (*optional*) Records any additional symbols applied to the notehead. One or more values from [data.NOTEHEADMODIFIER](#), separated by spaces.

att.ambNote.vis → @head.mod

**@head.rotation** (*optional*) Describes rotation applied to the basic notehead shape. A positive value rotates the notehead in a counter-clockwise fashion, while negative values produce clockwise rotation. Value conforms to [data.ROTATION](#).

att.ambNote.vis → @head.rotation

**@head.shape** (*optional*) Used to override the head shape normally used for the given duration. Value conforms to [data.HEADSHAPE](#).

att.ambNote.vis → @head.shape

**@head.visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

att.ambNote.vis → @head.visible

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

att.ambNote.vis → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

att.ambNote.vis → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

att.ambNote.vis → @loc

**@stem.dir** (*optional*) Describes the direction of a stem. Value conforms to [data.STEMDIRECTION](#).

att.ambNote.vis → @stem.dir

**@stem.form** (*optional*) Records the form of the stem. Value conforms to [data.STEMFORM.mensural](#).

att.ambNote.vis → @stem.form

**@stem.len** (*optional*) Encodes the stem length. Value conforms to [data.MEASUREMENTUNSIGNED](#).

att.ambNote.vis → @stem.len

**@stem.mod** (*optional*) Encodes any stem "modifiers"; that is, symbols rendered on the stem, such as tremolo or Sprechstimme indicators. Value conforms to [data.STEMMODIFIER](#).

att.ambNote.vis → @stem.mod

**@stem.pos** (*optional*) Records the position of the stem in relation to the note head(s). Value conforms to [data.STEMPOSITION](#).

att.ambNote.vis → @stem.pos

**@stem.sameas** (*optional*) Points to a note element in a different layer whose stem is shared. The linked notes should be rendered like a chord though they are part of different layers. Value conforms to [data.URI](#).

att.ambNote.vis → @stem.sameas

**@stem.visible** (*optional*) Determines whether a stem should be displayed. Value conforms to [data.BOOLEAN](#).

att.ambNote.vis → @stem.visible

**@stem.with** (*optional*) Contains an indication of which staff a note or chord that logically belongs to the current staff should be visually placed on; that is, the one above or the one below. Value conforms to data.NEIGHBORINGLAYER.

att.ambNote.vis → @stem.with

**@stem.x** (*optional*) Records the output x coordinate of the stem's attachment point. Value is a decimal number.

att.ambNote.vis → @stem.x

**@stem.y** (*optional*) Records the output y coordinate of the stem's attachment point. Value is a decimal number.

att.ambNote.vis → @stem.y

## Available at

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.

att.ambNote.vis → <ambNote>

## Declaration

```
<classSpec ident="att.ambNote.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.color"/>

[MEI.visual](#)

## Attributes

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.anchoredText.vis → @ho

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

att.anchoredText.vis → @to

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.anchoredText.vis → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.anchoredText.vis → @x

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.anchoredText.vis → @y

## Available at

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

att.anchoredText.vis → <anchoredText>

## Declaration

```
<classSpec ident="att.anchoredText.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.visualOffset"/>
    <memberOf key="att.xy"/>
  </classes>
</classSpec>
```

## att.annot.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.annot.anl → <annot>

#### Declaration

```
<classSpec ident="att.annot.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.annot.ges

Gestural domain attributes.

### Module

[MEI.gestural](#)

### Attributes

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

att.annot.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration.

Value conforms to [data.DURATION.GESTURAL](#).

att.annot.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

att.annot.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

att.annot.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

att.annot.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip** value. Value is a [token](#).

att.annot.ges → @dur.recip

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.annot.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.annot.ges → @tstamp.real

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.annot.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.annot.ges → @tstamp2.real

### Available at

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.annot.ges → <annot>

### Declaration

```
<classSpec ident="att.annot.ges" module="MEI.gestural" type="atts">
```

```
<desc xml:lang="en">Gestural domain attributes.</desc>
<classes>
  <memberOf key="att.duration.ges"/>
  <memberOf key="att.timestamp.ges"/>
  <memberOf key="att.timestamp2.ges"/>
</classes>
</classSpec>
```

DEVELOPMENT  
VERSION

## att.annot.log

Logical domain attributes for annot. Values for the type attribute can be taken from any convenient typology of annotation suitable to the work in hand; e.g., annotation, gloss, citation, digression, preliminary, temporary, etc.

### Module

[MEI.shared](#)

### Attributes

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

att.annot.log → @dur

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.annot.log → @endid

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.annot.log → @layer

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

att.annot.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

att.annot.log → @partstaff

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.annot.log → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.annot.log → @startid

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.annot.log → @tstamp

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.annot.log → @tstamp2

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.annot.log → @when

## Available at

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.annot.log → <annot>

## Declaration

```
<classSpec ident="att.annot.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes for annot. Values for the type attribute can
  be taken from any convenient typology of annotation suitable to the work in hand;
    <abbr>e.g.</abbr>
    , annotation, gloss, citation, digression, preliminary, temporary, etc.</desc>
  <!-- Some attributes defined in att.controlEvent (att.timestamp.log, att.timestamp.ges,
  att.staffIdent, and att.layerIdent) are provided here directly instead of making annot a
  member of att.controlEvent. -->

```

## att.annot.vis

Visual domain attributes.

### Module

MEI.visual

### Attributes

**@place** (*optional*) Location of the annotation. One or more values from [data.PLACEMENT](#), separated by spaces.

att.annot.vis → @place

### Available at

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.annot.vis → <annot>

### Declaration

```
<classSpec ident="att.annot.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <attList>
    <attDef ident="place" usage="opt">
      <desc xml:lang="en">Location of the annotation.</desc>
      <datatype maxOccurs="unbounded">
        <rng:ref name="data.PLACEMENT"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

## att.arpeg.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".  
att.arpeg.anl → <arpeg>

#### Declaration

```
<classSpec ident="att.arpeg.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.arpeg.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

#### Available at

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.arpeg.ges → <arpeg>

#### Declaration

```
<classSpec ident="att.arpeg.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
</classSpec>
```

## att.arpeg.log

Logical domain attributes.

### Module

[MEI.cmn](#)

### Attributes

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)  
att.arpeg.log → @evaluate

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.  
att.arpeg.log → @layer

**@order** (*optional*) Describes the direction in which an arpeggio is to be performed. Allowed values are: "**up**" (*Lowest to highest pitch.*), "**down**" (*Highest to lowest pitch.*), "**nonarp**" (*Non-arpeggiated style (usually rendered with a preceding bracket instead of a wavy line).*)  
att.arpeg.log → @order

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.  
att.arpeg.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(\%all|\d+(-\d+)?)"**, separated by spaces.  
att.arpeg.log → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.  
att.arpeg.log → @plist

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.  
att.arpeg.log → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).  
att.arpeg.log → @startid

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.arpeg.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.arpeg.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.arpeg.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.arpeg.log → @when

## Available at

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.arpeg.log → <arpeg>

## Declaration

```

<classSpec ident="att.arpeg.log" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.controlEvent"/>
    <memberOf key="att.startId"/>
  </classes>
  <attList>
    <attDef ident="order" usage="opt">
      <desc xml:lang="en">Describes the direction in which an arpeggio is to be
      performed.</desc>
      <valList type="closed">
        <valItem ident="up">
          <desc xml:lang="en">Lowest to highest pitch.</desc>
        </valItem>
        <valItem ident="down">
          <desc xml:lang="en">Highest to lowest pitch.</desc>
        </valItem>
        <valItem ident="nonarp">
          <desc xml:lang="en">Non-arpeggiated style (usually rendered with a preceding
          bracket instead of a wavy line).</desc>
        </valItem>
      </valList>
    </attDef>
  </attList>
</classSpec>

```

## att.arpeg.vis

Visual domain attributes.

### Module

[MEI.visual](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.arpeg.vis → @altsym

**@arrow** (*optional*) Indicates if an arrowhead is to be drawn as part of the arpeggiation symbol. Value conforms to [data.BOOLEAN](#).

att.arpeg.vis → @arrow

**@arrow.color** (*optional*) Captures the overall color of the arrow. Value conforms to [data.COLOR](#).

att.arpeg.vis → @arrow.color

**@arrow.fillcolor** (*optional*) Captures the fill color of the arrow if different from the line color. Value conforms to [data.COLOR](#).

att.arpeg.vis → @arrow.fillcolor

**@arrow.shape** (*optional*) Symbol rendered at end of the line. Value conforms to [data.LINESTARTENDSYMBOL](#).

att.arpeg.vis → @arrow.shape

**@arrow.size** (*optional*) Holds the relative size of the arrow symbol. Value conforms to [data.FONTSCALE](#).

att.arpeg.vis → @arrow.size

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.arpeg.vis → @color

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

att.arpeg.vis → @enclose

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

att.arpeg.vis → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

att.arpeg.vis → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

att.arpeg.vis → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

att.arpeg.vis → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

att.arpeg.vis → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout.*)

att.arpeg.vis → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

att.arpeg.vis → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

att.arpeg.vis → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

att.arpeg.vis → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.arpeg.vis → @ho

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

att.arpeg.vis → @letterspacing

**@line.form** (*optional*) Visual form of the line. Value conforms to [data.LINEFORM](#).

att.arpeg.vis → @line.form

**@line.width** (*optional*) Width of the line. Value conforms to [data.LINEWIDTH](#).

att.arpeg.vis → @line.width

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

att.arpeg.vis → @lineheight

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

att.arpeg.vis → @to

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.arpeg.vis → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.arpeg.vis → @x

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.arpeg.vis → @y

## Available at

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.arpeg.vis → <arpeg>

## Declaration

## att.artic.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<artic>** An indication of how to play a note or chord.

att.artic.anl → <artic>

#### Declaration

```
<classSpec ident="att.artic.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.artic.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

**@artic.ges** (*optional*) Records performed articulation that differs from the written value. One or more values from [data.ARTICULATION](#), separated by spaces.

att.artic.ges → @artic.ges

### Available at

**<artic>** An indication of how to play a note or chord.

att.artic.ges → <artic>

### Declaration

```
<classSpec ident="att.artic.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
  <classes>
    <memberOf key="att.articulation.ges"/>
  </classes>
</classSpec>
```

## att.artic.log

Logical domain attributes.

### Module

[MEI.shared](#)

### Attributes

**@artic** (*optional*) Encodes the written articulation(s). Articulations are normally encoded in order from the note head outward; that is, away from the stem. See additional notes at att.vis.note. Only articulations should be encoded in the artic attribute; for example, fingerings should be encoded using the [<fing>](#) element. One or more values from [data.ARTICULATION](#), separated by spaces.

att.artic.log → @artic

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

att.artic.log → @evaluate

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.artic.log → @layer

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

att.artic.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

att.artic.log → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

att.artic.log → @plist

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.artic.log → @staff

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.artic.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.artic.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).  
att.artic.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.artic.log → @when

## Available at

**<artic>** An indication of how to play a note or chord.

att.artic.log → <artic>

## Declaration

```
<classSpec ident="att.artic.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.articulation"/>
    <memberOf key="att.controlEvent"/>
  </classes>
</classSpec>
```

## att.artic.vis

Visual domain attributes.

### Module

[MEI.visual](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.artic.vis → @altsym

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.artic.vis → @color

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

att.artic.vis → @enclose

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

att.artic.vis → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

att.artic.vis → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

att.artic.vis → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

att.artic.vis → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

att.artic.vis → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

att.artic.vis → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

att.artic.vis → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

att.artic.vis → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

att.artic.vis → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.artic.vis → @ho

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

att.artic.vis → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

att.artic.vis → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

att.artic.vis → @loc

**@oloc** (*optional*) Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

att.artic.vis → @oloc

**@onstaff** (*optional*) Indicates the placement of the item within the staff. A value of 'true' means on the staff, and 'false' off the staff. Value conforms to [data.BOOLEAN](#).

att.artic.vis → @onstaff

**@place** (*optional*) Captures the placement of the item with respect to the event with which it is associated. Value conforms to [data.STAFFREL](#).

att.artic.vis → @place

**@ploc** (*optional*) Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

att.artic.vis → @ploc

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

att.artic.vis → @to

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.artic.vis → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.artic.vis → @x

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.artic.vis → @y

## Available at

**<artic>** An indication of how to play a note or chord.

att.artic.vis → <artic>

## Declaration

```
<classSpec ident="att.artic.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.altSym"/>

    <memberOf key="att.placementRelEvent"/>
    <memberOf key="att.staffLoc"/>
    <memberOf key="att.staffLoc.pitched"/>
    <memberOf key="att.typography"/>
    <memberOf key="att.visualOffset"/>
    <memberOf key="att.xy"/>
  </classes>
</classSpec>
```

# att.articulation

Attributes for capturing the written signs that describe the method of performance.

## Module

[MEI.shared](#)

## Attributes

**@artic** (*optional*) Encodes the written articulation(s). Articulations are normally encoded in order from the note head outward; that is, away from the stem. See additional notes at att.vis.note. Only articulations should be encoded in the artic attribute; for example, fingerings should be encoded using the [`<fing>`](#) element. One or more values from [data.ARTICULATION](#), separated by spaces.

att.articulation → @artic

## Available at

**<artic>** An indication of how to play a note or chord.

att.articulation → <artic>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.articulation → <chord>

**<note>** A single pitched event.

att.articulation → <note>

## Declaration

```

<classSpec ident="att.articulation" module="MEI.shared" type="atts">
  <desc xml:lang="en">Attributes for capturing the written signs that describe the method of
  performance.</desc>
  <attList>
    <attDef ident="artic" usage="opt">
      <desc xml:lang="en">Encodes the written articulation(s). Articulations are normally
      encoded in order from the note head outward; that is, away from the stem. See
      additional notes at att.vis.note. Only articulations should be encoded in the artic
      attribute; for example, fingerings should be encoded using the
        <gi scheme="MEI">fing</gi>
      element.</desc>
      <datatype maxOccurs="unbounded">
        <rng:ref name="data.ARTICULATION"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>

```

## att.articulation.ges

Attributes describing the method of performance.

### Module

MEI.gestural

### Attributes

**@artic.ges** (*optional*) Records performed articulation that differs from the written value. One or more values from [data.ARTICULATION](#), separated by spaces.

att.articulation.ges → @artic.ges

### Available at

**<artic>** An indication of how to play a note or chord.

att.articulation.ges → <artic>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.articulation.ges → <chord>

**<episema>** Episema.

att.articulation.ges → <episema>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

att.articulation.ges → <nc>

**<note>** A single pitched event.

att.articulation.ges → <note>

### Declaration

```
<classSpec ident="att.articulation.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Attributes describing the method of performance.</desc>
  <attList>
    <attDef ident="artic.ges" usage="opt">
      <desc xml:lang="en">Records performed articulation that differs from the written
      value.</desc>
      <datatype maxOccurs="unbounded">
        <rng:ref name="data.ARTICULATION"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

## att.attacca.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.attacca.anl → <attacca>

#### Declaration

```
<classSpec ident="att.attacca.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.attacca.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.attacca.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.attacca.ges → @tstamp2.real

### Available at

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.attacca.ges → <attacca>

### Declaration

```
<classSpec ident="att.attacca.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
  <classes>
    <memberOf key="att.timestamp2.ges"/>
  </classes>
</classSpec>
```

# att.attacca.log

Logical domain attributes.

## Module

[MEI.shared](#)

## Attributes

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.attacca.log → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

att.attacca.log → @evaluate

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.attacca.log → @layer

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

att.attacca.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

att.attacca.log → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

att.attacca.log → @plist

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.attacca.log → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.attacca.log → @startid

**@target** (*optional*) Indicates the next section or movement to be performed. Value conforms to [data.URI](#).

att.attacca.log → @target

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.attacca.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.attacca.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.attacca.log → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.attacca.log → @tstamp2

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [`<when>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.attacca.log → @when

## Available at

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.attacca.log → <attacca>

## Constraints

@target attribute should have content.

The value in @target should correspond to the @xml:id attribute of a section or mdiv element.

## Declaration

```
<classSpec ident="att.attacca.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.controlEvent"/>
    <memberOf key="att.startEndId"/>
    <memberOf key="att.timestamp2.log"/>
  </classes>
  <attList>
    <attDef ident="target" usage="opt">
      <desc xml:lang="en">Indicates the next section or movement to be performed.</desc>
      <datatype>
        <rng:ref name="data.URI"/>
      </datatype>
      <constraintSpec ident="check_attaccaTarget" scheme="schematron">
        <constraint>
          <sch:rule context="mei:attacca/@target">
            <sch:assert role="warning" test="not(normalize-space(.) eq '')">@target
              attribute should have content.</sch:assert>
          </sch:rule>
        </constraint>
      </constraintSpec>
    </attDef>
  </attList>
</classSpec>
```

```
<sch:assert role="warning" test="every $i in tokenize(., '\s+') satisfies
substring($i,2)=//mei:*[local-name() eq 'section' or local-name() eq
'mdiv']/@xml:id">The value in @target should correspond to the @xml:id
attribute of a section or mdiv element.</sch:assert>
</sch:rule>
</constraint>
</constraintSpec>
</attDef>
</attList>
</classSpec>
```

## att.attacca.vis

Visual domain attributes.

### Module

[MEI.visual](#)

### Attributes

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

att.attacca.vis → @endho

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

att.attacca.vis → @endto

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

att.attacca.vis → @extender

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.attacca.vis → @ho

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

att.attacca.vis → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

att.attacca.vis → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).

att.attacca.vis → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

att.attacca.vis → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).

att.attacca.vis → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

att.attacca.vis → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).

att.attacca.vis → @lwidth

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

att.attacca.vis → @place

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

att.attacca.vis → @startho

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

att.attacca.vis → @startto

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

att.attacca.vis → @to

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

att.attacca.vis → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

att.attacca.vis → @vo

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.attacca.vis → @x

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

att.attacca.vis → @y

## Available at

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.attacca.vis → <attacca>

## Declaration

```
<classSpec ident="att.attacca.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.extender"/>
    <memberOf key="att.placementRelStaff"/>
    <memberOf key="att.verticalGroup"/>
    <memberOf key="att.visualOffset"/>
    <memberOf key="att.visualOffset2.ho"/>
    <memberOf key="att.visualOffset2.to"/>
    <memberOf key="att.xy"/>
  </classes>
</classSpec>
```

## att.audience

Attributes that describe the intended audience.

### Module

MEI.shared

### Attributes

**@audience** (*optional*) The intended audience. Allowed values are: "private" (*Internal use only.*), "public" (*Available to all audiences.*)

att.audience → @audience

### Available at

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.audience → <annot>

### Declaration

```
<classSpec ident="att.audience" module="MEI.shared" type="atts">
  <desc xml:lang="en">Attributes that describe the intended audience.</desc>
  <attList>
    <attDef ident="audience" usage="opt">
      <desc xml:lang="en">The intended audience.</desc>
      <valList type="closed">
        <valItem ident="private">
          <desc xml:lang="en">Internal use only.</desc>
        </valItem>
        <valItem ident="public">
          <desc xml:lang="en">Available to all audiences.</desc>
        </valItem>
      </valList>
    </attDef>
  </attList>
</classSpec>
```

## att.augmentDots

Attributes that record the number of dots of augmentation.

### Module

[MEI.shared](#)

### Attributes

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

att.augmentDots → @dots

### Available at

**<bTrem>** A rapid alternation on a single pitch or chord.

att.augmentDots → <bTrem>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.augmentDots → <chord>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

att.augmentDots → <fTrem>

**<note>** A single pitched event.

att.augmentDots → <note>

**<rest>** A non-sounding event found in the source being transcribed.

att.augmentDots → <rest>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

att.augmentDots → <space>

### Remarks

The dots attribute records the number of augmentation dots necessary to represent a non-power-of-two duration. This is usually, but not always, the number of dots displayed. For example, a note with this attribute will result in displayed dots, while a glissando will not.

### Constraints

An element with a dots attribute must also have a dur attribute.

### Declaration

```
<classSpec ident="att.augmentDots" module="MEI.shared" type="atts">
  <desc xml:lang="en">Attributes that record the number of dots of augmentation.</desc>
  <attList>
    <attDef ident="dots" usage="opt">
```

```
<desc xml:lang="en">Records the number of augmentation dots required by a written  
dotted duration.</desc>  
<datatype>  
    <rng:ref name="data.AUGMENTDOT"/>  
</datatype>  
<constraintSpec ident="dots_attribute_requires_dur" scheme="schematron">  
    <constraint>  
        <sch:rule context="mei:*[@dots]">  
            <sch:assert test="@dur">An element with a dots attribute must also have a  
            dur attribute.</sch:assert>  
        </sch:rule>  
    </constraint>  
</constraintSpec>  
</attDef>  
</attList>  
<remarks xml:lang="en">  
    <p>The <att>dots</att> attribute records the number of augmentation dots necessary to  
    represent a non-power-of-two duration. This is usually, but not always, the number of  
    dots displayed. For example, a note with this attribute will result in displayed dots,  
    while a glissando will not.</p>  
</remarks>  
</classSpec>
```

## att.authorized

Attributes that describe the source of a controlled value.

### Module

[MEI.shared](#)

### Attributes

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

att.authorized → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
att.authorized → @auth.uri

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

att.authorized → @codedval

### Available at

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

att.authorized → <accessRestrict>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

att.authorized → <addName>

**<audience>** Defines the class of user for which the work is intended, as defined by age group (e.g., children, young adults, adults, etc.), educational level (e.g., primary, secondary, etc.), or other categorization.

att.authorized → <audience>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

att.authorized → <bloc>

**<captureMode>** The means used to record notation, sound, or images in the production of a source/manifestation (e.g., analogue, acoustic, electric, digital, optical etc.).

att.authorized → <captureMode>

**<carrierForm>** The specific class of material to which the physical carrier of the source/manifestation belongs (e.g., sound cassette, videodisc, microfilm cartridge, transparency, etc.). The carrier for a manifestation comprising multiple physical components may include more than one form (e.g., a filmstrip with an accompanying booklet, a separate sound disc carrying the sound track for a film, etc.).

att.authorized → <carrierForm>

**<catRel>** Contains the name of a related category.

att.authorized → <catRel>

**<category>** Contains an individual descriptive category in a user-defined taxonomy, possibly nested within a superordinate category.

att.authorized → <category>

**<context>** The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

att.authorized → <context>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

att.authorized → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

att.authorized → <country>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

att.authorized → <district>

**<expression>** Intellectual or artistic realization of a work.

att.authorized → <expression>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

att.authorized → <famName>

**<foreName>** Contains a forename, given or baptismal name.

att.authorized → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

att.authorized → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

att.authorized → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

att.authorized → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

att.authorized → <geogName>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

att.authorized → <identifier>

**<item>** Single instance or exemplar of a source/manifestation.

att.authorized → <item>

**<language>** Description of a language used in the document.

att.authorized → <language>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

att.authorized → <manifestation>

**<name>** Proper noun or noun phrase.

att.authorized → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

att.authorized → <nameLink>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

att.authorized → <perfMedium>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

att.authorized → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

att.authorized → <perfResList>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

att.authorized → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

att.authorized → <persName>

**<physMedium>** Records the physical materials used in the source, such as ink and paper.

att.authorized → <physMedium>

**<reg>** Contains material which has been regularized or normalized in some sense.

att.authorized → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

att.authorized → <region>

**<relation>** Describes a relationship or linkage amongst entities.

att.authorized → <relation>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

att.authorized → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

att.authorized → <resp>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

att.authorized → <roleName>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

att.authorized → <scoreFormat>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

att.authorized → <settlement>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

att.authorized → <soundChan>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

att.authorized → <source>

**<specRepro>** The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

att.authorized → <specRepro>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

att.authorized → <styleName>

**<title>** Title of a bibliographic entity.

att.authorized → <title>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

att.authorized → <titlePart>

**<trackConfig>** Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

att.authorized → <trackConfig>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

att.authorized → <useRestrict>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

att.authorized → <work>

## att.bTrem.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<bTrem>** A rapid alternation on a single pitch or chord.

att.bTrem.anl → <bTrem>

#### Declaration

```
<classSpec ident="att.bTrem.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

# att.bTrem.ges

Gestural domain attributes.

## Module

MEI.gestural

## Attributes

@unitdur (*optional*) The performed duration of an individual note in a measured tremolo. Value conforms to [data.DURATION.cmn](#).

att.bTrem.ges → @unitdur

## Available at

**<bTrem>** A rapid alternation on a single pitch or chord.

att.bTrem.ges → <bTrem>

## Declaration

```
<classSpec ident="att.bTrem.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
  <classes>
    <memberOf key="att.tremMeasured"/>
  </classes>
</classSpec>
```

## att.bTrem.log

Logical domain attributes.

### Module

[MEI.cmn](#)

### Attributes

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

att.bTrem.log → @dots

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the data.DURATION datatype. Value conforms to [data.DURATION](#).

att.bTrem.log → @dur

**@form** (*optional*) Indicates whether the tremolo is measured or unmeasured. Allowed values are:

"**meas**" (*Measured tremolo.*), "**unmeas**" (*Unmeasured tremolo.*)

att.bTrem.log → @form

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.bTrem.log → @layer

**@num** (*optional*) Records a number or count accompanying a notational feature. Value is a positive integer.

att.bTrem.log → @num

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.bTrem.log → @staff

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.bTrem.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.bTrem.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.bTrem.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.bTrem.log → @when

### Available at

**<bTrem>** A rapid alternation on a single pitch or chord.

att.bTrem.log → <bTrem>

## Declaration

```

```

## att.bTrem.vis

Visual domain attributes.

### Module

MEI.visual

### Attributes

**@num.place** (*optional*) States where the tuplet number will be placed in relation to the note heads.

Value conforms to [data.STAFFREL.basic](#).

att.bTrem.vis → @num.place

**@num.visible** (*optional*) Determines if the tuplet number is visible. Value conforms to [data.BOOLEAN](#).

att.bTrem.vis → @num.visible

### Available at

**<bTrem>** A rapid alternation on a single pitch or chord.

att.bTrem.vis → <bTrem>

### Declaration

```
<classSpec ident="att.bTrem.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.numberPlacement"/>

```

## att.barLine.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.barLine.anl → <barLine>

#### Declaration

```
<classSpec ident="att.barLine.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.barLine.ges

Gestural domain attributes.

### Module

[MEI.gestural](#)

### Attributes

#### Available at

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.barLine.ges → <barLine>

#### Declaration

```
<classSpec ident="att.barLine.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
</classSpec>
```

# att.barLine.log

Logical domain attributes.

## Module

[MEI.shared](#)

## Attributes

**@control** (*optional*) Indicates whether or not a bar line is "controlling"; that is, if it indicates a point of alignment across all the parts. Bar lines within a score are usually controlling; that is, they "line up". Bar lines within parts may or may not be controlling. When applied to [<measure>](#), this attribute indicates the nature of the right bar line but not the left. Value conforms to [data.BOOLEAN](#).

att.barLine.log → @control

**@form** (*optional*) Records the appearance and usually the function of the bar line. Value conforms to [data.BARRENDITION](#).

att.barLine.log → @form

**@metcon** (*optional*) Indicates the relationship between the content of a measure and the prevailing meter. Value conforms to [data.BOOLEAN](#).

att.barLine.log → @metcon

## Available at

[<barLine>](#) Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.barLine.log → <barLine>

## Declaration

```
<classSpec ident="att.barLine.log" module="MEI.shared" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.meterConformance.bar"/>
  </classes>
  <attList>
    <attDef ident="form" usage="opt">

      <datatype>
        <rng:ref name="data.BARRENDITION"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

## att.barLine.vis

Visual domain attributes.

### Module

[MEI.visual](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.barLine.vis → @altsym

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.barLine.vis → @color

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

att.barLine.vis → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

att.barLine.vis → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

att.barLine.vis → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

att.barLine.vis → @glyph.uri

**@len** (*optional*) States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

att.barLine.vis → @len

**@method** (*optional*) Records the method of barring. Value conforms to [data.BARMETHOD](#).

att.barLine.vis → @method

**@place** (*optional*) Denotes the staff location of the bar line if its length is non-standard. Value conforms to [data.STAFFLOC](#).

att.barLine.vis → @place

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

att.barLine.vis → @visible

**@width** (*optional*) Measurement of the horizontal dimension of an entity. Value conforms to [data.MEASUREMENTUNSIGNED](#).

att.barLine.vis → @width

### Available at

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.barLine.vis → <barLine>

## Declaration

```

<classSpec ident="att.barLine.vis" module="MEI.visual" type="atts">

  .</p>
</remarks>
</attDef>
</attList>
</classSpec>
```

# att.barring

Attributes that capture the placement of bar lines.

## Module

[MEI.shared](#)

## Attributes

**@bar.len** (*optional*) States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

att.barring → @bar.len

**@bar.method** (*optional*) Records the method of barring. Value conforms to [data.BARMETHOD](#).

att.barring → @bar.method

**@bar.place** (*optional*) Denotes the staff location of bar lines, if the length is non-standard; that is, not equal to 2 times (the number of staff lines - 1). Value conforms to [data.STAFFLOC](#).

att.barring → @bar.place

## Available at

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

att.barring → <measure>

**<scoreDef>** Container for score meta-information.

att.barring → <scoreDef>

**<staffDef>** Container for staff meta-information.

att.barring → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

att.barring → <staffGrp>

## Constraints

"mensur" not allowed in this context.

## Declaration

DEVELOPMENT  
VERSION

## att.basic

Attributes that form the basis of the att.common class.

### Referenced in chapters

[2.3.1 Attributes from the XML-namespace](#)

### Module

[MEI.shared](#)

### Attributes

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

att.basic → @xml:id

### Available at

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

att.basic → <abbr>

**<accMat>** Holds a description of any additional material bound with an item, such as non-contemporaneous documents or fragments.

att.basic → <accMat>

**<accessRestrict>** Describes the conditions that affect the accessibility of material.

att.basic → <accessRestrict>

**<accid>** Records a temporary alteration to the pitch of a note.

att.basic → <accid>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

att.basic → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

att.basic → <actor>

**<add>** Marks an addition to the text.

att.basic → <add>

**<addDesc>** Provides a description of significant additions found within an item, such as marginalia or other annotations.

att.basic → <addDesc>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

att.basic → <addName>

**<addrLine>** Single line of a postal address.

att.basic → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

att.basic → <address>

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

att.basic → <altId>

**<ambNote>** Highest or lowest pitch in a score, staff, or layer.

att.basic → <ambNote>

**<ambitus>** Range of a voice, instrument or piece.

att.basic → <ambitus>

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

att.basic → <analytic>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

att.basic → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

att.basic → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

att.basic → <app>

**<applInfo>** Groups information about applications which have acted upon the MEI file.

att.basic → <applInfo>

**<application>** Provides information about an application which has acted upon the current document.

att.basic → <application>

**<argument>** Contains a formal list or prose description of topics addressed.

att.basic → <argument>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

att.basic → <arpeg>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

att.basic → <arranger>

**<artic>** An indication of how to play a note or chord.

att.basic → <artic>

**<attUsage>** Documents the usage of a specific attribute of the element.

att.basic → <attUsage>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

att.basic → <attacca>

**<audience>** Defines the class of user for which the work is intended, as defined by age group (e.g., children, young adults, adults, etc.), educational level (e.g., primary, secondary, etc.), or other categorization.

att.basic → <audience>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

att.basic → <author>

**<avFile>** References an external digital audio or video file.

att.basic → <avFile>

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

att.basic → <availability>

**<bTrem>** A rapid alternation on a single pitch or chord.

att.basic → <bTrem>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

att.basic → <back>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

att.basic → <barLine>

**<barre>** A barre in a chord tablature grid.

att.basic → <barre>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.basic → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.basic → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.basic → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

att.basic → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

att.basic → <bibl>

**<biblList>** List of bibliographic references.

att.basic → <biblList>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

att.basic → <biblScope>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

att.basic → <biblStruct>

**<bifolium>** Describes a folded sheet of paper.

att.basic → <bifolium>

**<binding>** Contains a description of one binding, i.e., type of covering, boards, etc. applied to an item.

att.basic → <binding>

**<bindingDesc>** Describes the present and former bindings of an item.

att.basic → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

att.basic → <bloc>

**<body>** Contains the whole of a single musical text, excluding any front or back matter.

att.basic → <body>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

att.basic → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

att.basic → <breath>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

att.basic → <byline>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

att.basic → <caesura>

**<caption>** A label which accompanies an illustration or a table.

att.basic → <caption>

**<captureMode>** The means used to record notation, sound, or images in the production of a source/manifestation (e.g., analogue, acoustic, electric, digital, optical etc.).

att.basic → <captureMode>

**<carrierForm>** The specific class of material to which the physical carrier of the source/manifestation belongs (e.g., sound cassette, videodisc, microfilm cartridge, transparency, etc.). The carrier for a manifestation comprising multiple physical components may include more than one form (e.g., a filmstrip with an accompanying booklet, a separate sound disc carrying the sound track for a film, etc.).

att.basic → <carrierForm>

**<castGrp>** Groups one or more individual castItem elements within a cast list.

att.basic → <castGrp>

**<castItem>** Contains a single entry within a cast list, describing either a single role or a list of non-speaking roles.

att.basic → <castItem>

**<castList>** Contains a single cast list or dramatis personae.

att.basic → <castList>

**<catRel>** Contains the name of a related category.

att.basic → <catRel>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

att.basic → <catchwords>

**<category>** Contains an individual descriptive category in a user-defined taxonomy, possibly nested within a superordinate category.

att.basic → <category>

**<cb>** An empty formatting element that forces text to begin in a new column.

att.basic → <cb>

**<cc>** MIDI parameter/control change.

att.basic → <cc>

**<chan>** MIDI channel assignment.

att.basic → <chan>

**<chanPr>** MIDI channel pressure/after touch.

att.basic → <chanPr>

**<change>** Individual change within the revision description.

att.basic → <change>

**<changeDesc>** Description of a revision of the MEI file.

att.basic → <changeDesc>

**<choice>** Groups a number of alternative encodings for the same point in a text.

att.basic → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.basic → <chord>

**<chordDef>** Chord tablature definition.

att.basic → <chordDef>

**<chordMember>** An individual pitch in a chord defined by a <chordDef> element.

att.basic → <chordMember>

**<chordTable>** Chord/tablature look-up table.

att.basic → <chordTable>

**<classDecls>** Groups information which describes the nature or topic of an entity.

att.basic → <classDecls>

**<classification>** Groups information which describes the nature or topic of an entity.

att.basic → <classification>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

att.basic → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

att.basic → <clefGrp>

**<clip>** Defines a time segment of interest within a recording or within a digital audio or video file.

att.basic → <clip>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

att.basic → <colLayout>

**<collation>** Records a description of how the leaves or bifolia of an item are physically arranged.

att.basic → <collation>

**<colophon>** Contains a statement providing information regarding the date, place, agency, or reason for production of the item.

att.basic → <colophon>

**<componentList>** Container for intellectual or physical component parts of a bibliographic entity.

att.basic → <componentList>

**<composer>** The name of the creator of the intellectual content of a musical work.

att.basic → <composer>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

att.basic → <condition>

**<contentItem>** Contains a single entry within a content description element.

att.basic → <contentItem>

**<contents>** List of the material contained within a resource.

att.basic → <contents>

**<context>** The historical, social, intellectual, artistic, or other context within which the work was originally conceived (e.g., the 17th century restoration of the monarchy in England, the aesthetic movement of the late 19th century, etc.) or the historical, social, intellectual, artistic, or other context within which the expression was realized.

att.basic → <context>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

att.basic → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

att.basic → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

att.basic → <corr>

**<correction>** States how and under what circumstances corrections have been made in the text.

att.basic → <correction>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

att.basic → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

att.basic → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

att.basic → <creation>

**<cue>** MIDI cue point.

att.basic → <cue>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

att.basic → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

att.basic → <custos>

**<cutout>** A cutout is a section of a document sheet that has been removed and is now missing.

att.basic → <cutout>

**<damage>** Contains an area of damage to the physical medium.

att.basic → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

att.basic → <date>

**<decoDesc>** Contains a description of the decoration of an item.

att.basic → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

att.basic → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

att.basic → <dedicatee>

**<dedication>** Contains a dedicatory statement.

att.basic → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

att.basic → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

att.basic → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

att.basic → <desc>

**<dim>** Any single dimensional specification.

att.basic → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

att.basic → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

att.basic → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

att.basic → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

att.basic → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

att.basic → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

att.basic → <divLine>

**<domainsDecl>** Indicates which domains are included in the encoding.

att.basic → <domainsDecl>

**<dot>** Dot of augmentation or division.

att.basic → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

att.basic → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

att.basic → <edition>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

att.basic → <editionStmt>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

att.basic → <editor>

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

att.basic → <editorialDecl>

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

att.basic → <encodingDesc>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

att.basic → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

att.basic → <epigraph>

**<episema>** Episema.

att.basic → <episema>

**<event>** Contains a free-text event description.

att.basic → <event>

**<eventList>** Contains historical information given as a sequence of significant past events.

att.basic → <eventList>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

att.basic → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

att.basic → <expan>

**<expansion>** Indicates how a section may be programmatically expanded into its 'through-composed' form.

att.basic → <expansion>

**<explicit>** Contains the explicit of a manuscript item; that is, the closing words of the text proper, exclusive of any rubric or colophon which might follow it.

att.basic → <explicit>

**<expression>** Intellectual or artistic realization of a work.

att.basic → <expression>

**<expressionList>** Gathers bibliographic expression entities.

att.basic → <expressionList>

**<extData>** Provides a container element for non-MEI data formats.

att.basic → <extData>

**<extMeta>** Provides a container element for non-MEI metadata formats.

att.basic → <extMeta>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

att.basic → <extent>

**<f>** Single element of a figured bass indication.

att.basic → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

att.basic → <fTrem>

**<facsimile>** Contains a representation of a written source in the form of a set of images rather than as transcribed or encoded text.

att.basic → <facsimile>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

att.basic → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

att.basic → <fb>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

att.basic → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

att.basic → <fig>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

att.basic → <figDesc>

**<fileChar>** Standards or schemes used to encode the file (e.g., ASCII, SGML, etc.), physical characteristics of the file (e.g., recording density, parity, blocking, etc.), and other characteristics that have a bearing on how the file can be processed.

att.basic → <fileChar>

**<fileDesc>** Contains a full bibliographic description of the MEI file.

att.basic → <fileDesc>

**<fing>** finger – An individual finger in a fingering indication.

att.basic → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

att.basic → <fingGrp>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

att.basic → <foliaDesc>

**<foliation>** Describes the numbering system or systems used to count the leaves or pages in a codex.

att.basic → <foliation>

**<folium>** Describes a single leaf of paper.

att.basic → <folium>

**<foreName>** Contains a forename, given or baptismal name.

att.basic → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

att.basic → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

att.basic → <funder>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

att.basic → <gap>

**<genDesc>** (genetic description) - Bundles information about the textual development of a work.

att.basic → <genDesc>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

att.basic → <genName>

**<genState>** Describes a distinctive state in the textual development of a work.

att.basic → <genState>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

att.basic → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

att.basic → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

att.basic → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

att.basic → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

att.basic → <graceGrp>

**<graphic>** Indicates the location of an inline graphic.

att.basic → <graphic>

**<group>** Contains a composite musical text, grouping together a sequence of distinct musical texts (or groups of such musical texts) which are regarded as a unit for some purpose, for example, the collected works of a composer.

att.basic → <group>

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

att.basic → <grpSym>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

att.basic → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

att.basic → <halfmRpt>

**<hand>** Defines a distinct scribe or handwriting style.

att.basic → <hand>

**<handList>** Container for one or more hand elements.

att.basic → <handList>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

att.basic → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

att.basic → <harm>

**<harpPedal>** Harp pedal diagram.

att.basic → <harpPedal>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

att.basic → <head>

**<height>** Description of the vertical size of an object.

att.basic → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

att.basic → <heraldry>

**<hex>** Arbitrary MIDI data in hexadecimal form.

att.basic → <hex>

**<hispanTick>** Hispanic tick.

att.basic → <hispanTick>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

att.basic → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

att.basic → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

att.basic → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

att.basic → <imprint>

**<incip>** The opening music and/or words of a musical or textual work.

att.basic → <incip>

**<incipCode>** Incipit coded in a non-XML, plain text format, such as Plaine & Easie Code.

att.basic → <incipCode>

**<incipText>** Opening words of a musical composition.

att.basic → <incipText>

**<inscription>** An inscription added to an item, such as a bookplate, a note designating the item as a gift, and/or the author's signature.

att.basic → <inscription>

**<instrDef>** MIDI instrument declaration.

att.basic → <instrDef>

**<instrGrp>** Collects MIDI instrument definitions.

att.basic → <instrGrp>

**<interpretation>** Describes the scope of any analytic or interpretive information added to the transcription of the music.

att.basic → <interpretation>

**<item>** Single instance or exemplar of a source/manifestation.

att.basic → <item>

**<itemList>** Gathers bibliographic item entities.

att.basic → <itemList>

**<key>** Key captures information about tonal center and mode.

att.basic → <key>

**<keyAccid>** Accidental in a key signature.

att.basic → <keyAccid>

**<keySig>** Written key signature.

att.basic → <keySig>

**<l>** Contains a single line of text within a line group.

att.basic → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

att.basic → <label>

**<labelAbbr>** A label on the pages following the first.

att.basic → <labelAbbr>

**<langUsage>** Groups elements describing the languages, sub-languages, dialects, etc., represented within the encoded resource.

att.basic → <langUsage>

**<language>** Description of a language used in the document.

att.basic → <language>

**<layer>** An independent stream of events on a staff.

att.basic → <layer>

**<layerDef>** Container for layer meta-information.

att.basic → <layerDef>

**<layout>** Describes how text is laid out on the page, including information about any ruling, pricking, or other evidence of page-preparation techniques.

att.basic → <layout>

**<layoutDesc>** Collects layout descriptions.

att.basic → <layoutDesc>

**<lb>** An empty formatting element that forces text to begin on a new line.

att.basic → <lb>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

att.basic → <lem>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

att.basic → <lg>

**<li>** Single item in a <list>.

att.basic → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

att.basic → <librettist>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

att.basic → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

att.basic → <line>

**<liquefiant>** Liquescent.

att.basic → <liquefiant>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

att.basic → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

att.basic → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

att.basic → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

att.basic → <lv>

**<lyricist>** Person or organization who is a writer of the text of a song.

att.basic → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on [<measure>](#) does not adequately capture the appearance or placement of the measure number/label.

att.basic → <mNum>

**<mRest>** Complete measure rest in any meter.

att.basic → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

att.basic → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

att.basic → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

att.basic → <mSpace>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

att.basic → <manifestation>

**<manifestationList>** A container for the descriptions of physical embodiments of an expression of a work.

att.basic → <manifestationList>

**<mapping>** One or more characters which are related to the parent symbol in some respect, as specified by the type attribute.

att.basic → <mapping>

**<marker>** MIDI marker meta-event.

att.basic → <marker>

**<mdiv>** Contains a subdivision of the body of a musical text.

att.basic → <mdiv>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

att.basic → <measure>

**<meiCorpus>** A group of related MEI documents, consisting of a header for the group, and one or more [<mei>](#) elements, each with its own complete header.

att.basic → <meiCorpus>

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

att.basic → <meiHead>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

att.basic → <mensur>

**<mensuration>** Captures information about mensuration within bibliographic descriptions.

att.basic → <mensuration>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as [<add>](#), [<del>](#), etc.

att.basic → <metaMark>

**<metaText>** MIDI text meta-event.

att.basic → <metaText>

**<meter>** Captures information about the time signature within bibliographic descriptions.

att.basic → <meter>

**<meterSig>** Written meter signature.

att.basic → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

att.basic → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

att.basic → <midi>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

att.basic → <monogr>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

att.basic → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

att.basic → <multiRest>

**<multiRpt>** Multiple repeated measures.

att.basic → <multiRpt>

**<music>** Contains a single musical text of any kind, whether unitary or composite, for example, an etude, opera, song cycle, symphony, or anthology of piano solos.

att.basic → <music>

**<name>** Proper noun or noun phrase.

att.basic → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

att.basic → <nameLink>

**<namespace>** Supplies the formal name of the namespace to which the elements documented by its children belong.

att.basic → <namespace>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

att.basic → <nc>

**<ncGrp>** Collection of one or more neume components.

att.basic → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

att.basic → <neume>

**<normalization>** Indicates the extent of normalization or regularization of the original source carried out in converting it to electronic form.

att.basic → <normalization>

**<note>** A single pitched event.

att.basic → <note>

**<noteOff>** MIDI note-off event.

att.basic → <noteOff>

**<noteOn>** MIDI note-on event.

att.basic → <noteOn>

**<notesStmt>** (notes statement)– Collects any notes providing information about a text additional to that recorded in other parts of the bibliographic description.

att.basic → <notesStmt>

**<num>** Numeric information in any form.

att.basic → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

att.basic → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

att.basic → <oStaff>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

att.basic → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

att.basic → <orig>

**<oriscus>** Oriscus.

att.basic → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

att.basic → <ornam>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

att.basic → <ossia>

**<otherChar>** Any characteristic that serves to differentiate a work or expression from another.

att.basic → <otherChar>

**<p>** One or more text phrases that form a logical prose passage.

att.basic → <p>

**<pad>** An indication of extra visual space between notational elements.

att.basic → <pad>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

att.basic → <part>

**<parts>** Provides a container for performers' parts.

att.basic → <parts>

**<patch>** Describes a physical writing surface attached to the original document.

att.basic → <patch>

**<pb>** An empty formatting element that forces text to begin on a new page.

att.basic → <pb>

**<pedal>** Piano pedal mark.

att.basic → <pedal>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

att.basic → <perfDuration>

**<perfMedium>** Indicates the number and character of the performing forces used in a musical composition.

att.basic → <perfMedium>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

att.basic → <perfRes>

**<perfResList>** Several instrumental or vocal resources treated as a group.

att.basic → <perfResList>

**<performance>** A presentation of one or more musical works.

att.basic → <performance>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

att.basic → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

att.basic → <persName>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

att.basic → <pgDesc>

**<pgFoot>** A running footer.

att.basic → <pgFoot>

**<pgHead>** A running header.

att.basic → <pgHead>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

att.basic → <phrase>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

att.basic → <physDesc>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

att.basic → <physLoc>

**<physMedium>** Records the physical materials used in the source, such as ink and paper.

att.basic → <physMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

att.basic → <plateNum>

**<playingSpeed>** Playing speed for a sound recording is the speed at which the carrier must be operated to produce the sound intended (e.g., 33 1/3 rpm, 19 cm/s, etc.).

att.basic → <playingSpeed>

**<plica>** Plica

att.basic → <plica>

**<port>** MIDI port.

att.basic → <port>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

att.basic → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

att.basic → <postCode>

**<price>** The cost of access to a bibliographic item.

att.basic → <price>

**<prog>** MIDI program change.

att.basic → <prog>

**<projectDesc>** Project-level meta-data describing the aim or purpose for which the electronic file was encoded, funding agencies, etc. together with any other relevant information concerning the process by which it was assembled or collected.

att.basic → <projectDesc>

**<propName>** Name of a property of the symbol.

att.basic → <propName>

**<propValue>** A single property value.

att.basic → <propValue>

**<proport>** Description of note duration as arithmetic ratio.

att.basic → <proport>

**<provenance>** The record of ownership or custodianship of an item.

att.basic → <provenance>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

att.basic → <ptr>

**<pubPlace>** Name of the place where a bibliographic item was published.

att.basic → <pubPlace>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

att.basic → <pubStmt>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

att.basic → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

att.basic → <q>

**<quilisma>** Quilisma.

att.basic → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

att.basic → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

att.basic → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

att.basic → <recipient>

**<recording>** A recorded performance.

att.basic → <recording>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

att.basic → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

att.basic → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

att.basic → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

att.basic → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

att.basic → <reh>

**<relatedItem>** Contains or references another bibliographic item which is related to the present one.

att.basic → <relatedItem>

**<relation>** Describes a relationship or linkage amongst entities.

att.basic → <relation>

**<relationList>** Gathers relation elements.

att.basic → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

att.basic → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

att.basic → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

att.basic → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

att.basic → <resp>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

att.basic → <respStmt>

**<rest>** A non-sounding event found in the source being transcribed.

att.basic → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

att.basic → <restore>

**<revisionDesc>** Container for information about alterations that have been made to an MEI file.

att.basic → <revisionDesc>

**<role>** Name of a dramatic role, as given in a cast list.

att.basic → <role>

**<roleDesc>** Describes a character's role in a drama.

att.basic → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

att.basic → <roleName>

**<rubric>** Contains a string of words through which a manuscript signals the beginning or end of a text division, often with an assertion as to its author and title, which is in some way set off from the text itself, usually in red ink, or by use of different size or type of script, or some other such visual device.

att.basic → <rubric>

**<samplingDecl>** Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

att.basic → <samplingDecl>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

att.basic → <sb>

**<score>** Full score view of the musical content.

att.basic → <score>

**<scoreDef>** Container for score meta-information.

att.basic → <scoreDef>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

att.basic → <scoreFormat>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

att.basic → <scriptDesc>

**<scriptNote>** Describes a particular script distinguished within the description of an autographic item.

att.basic → <scriptNote>

**<seal>** A single seal or similar attachment.

att.basic → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

att.basic → <sealDesc>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

att.basic → <secFolio>

**<section>** Segment of music data.

att.basic → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

att.basic → <seg>

**<segmentation>** Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

att.basic → <segmentation>

**<seqNum>** MIDI sequence number.

att.basic → <seqNum>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

att.basic → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

att.basic → <seriesStmt>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

att.basic → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

att.basic → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

att.basic → <signatures>

**<signifLet>** Significantive letter(s).

att.basic → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

att.basic → <slur>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

att.basic → <soundChan>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

att.basic → <source>

**<sourceDesc>** A container for the descriptions of the source(s) used in the creation of the electronic file.

att.basic → <sourceDesc>

**<sp>** Contains an individual speech in a performance text.

att.basic → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

att.basic → <space>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

att.basic → <speaker>

**<specRepro>** The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

att.basic → <specRepro>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

att.basic → <sponsor>

**<stack>** An inline table with a single column.

att.basic → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

att.basic → <staff>

**<staffDef>** Container for staff meta-information.

att.basic → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

att.basic → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

att.basic → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

att.basic → <stamp>

**<stdVals>** Specifies the format used when standardized date or number values are supplied.

att.basic → <stdVals>

**<stem>** A stem element.

att.basic → <stem>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

att.basic → <street>

**<strophicus>** Strophicus.

att.basic → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

att.basic → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

att.basic → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

att.basic → <supplied>

**<support>** Provides a description of the physical support material of a written item.

att.basic → <support>

**<supportDesc>** Groups elements describing the physical support material of an item.

att.basic → <supportDesc>

**<surface>** Defines a writing surface in terms of a rectangular coordinate space, optionally grouping one or more graphic representations of that space, and rectangular zones of interest within it.

att.basic → <surface>

**<syl>** Individual lyric syllable.

att.basic → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

att.basic → <syllable>

**<symName>** Contains the name of a symbol, expressed following Unicode conventions.

att.basic → <symName>

**<symProp>** Provides a name and value for some property of the parent symbol.

att.basic → <symProp>

**<symbol>** A reference to a previously defined symbol.

att.basic → <symbol>

**<symbolDef>** Declaration of an individual symbol in a symbolTable.

att.basic → <symbolDef>

**<symbolTable>** Contains a set of user-defined symbols.

att.basic → <symbolTable>

**<sysReq>** System requirements for using the electronic item.

att.basic → <sysReq>

**<table>** Contains text displayed in tabular form.

att.basic → <table>

**<tagUsage>** Documents the usage of a specific element within the document.

att.basic → <tagUsage>

**<tagsDecl>** Provides detailed information about the tagging applied to a document.

att.basic → <tagsDecl>

**<taxonomy>** Defines a typology either implicitly, by means of a bibliographic citation, or explicitly by a structured taxonomy.

att.basic → <taxonomy>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

att.basic → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

att.basic → <tempo>

**<term>** Keyword or phrase which describes a resource.

att.basic → <term>

**<termList>** Collection of text phrases which describe a resource.

att.basic → <termList>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

att.basic → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

att.basic → <th>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

att.basic → <tie>

**<title>** Title of a bibliographic entity.

att.basic → <title>

**<titlePage>** Contains a transcription of the title page of a text.

att.basic → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

att.basic → <titlePart>

**<titleStmt>** Container for title and responsibility meta-data.

att.basic → <titleStmt>

**<tr>** A formatting element that contains one or more cells (intersection of a row and a column) in a <table>.

att.basic → <tr>

**<trackConfig>** Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

att.basic → <trackConfig>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

att.basic → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

att.basic → <treatSched>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

att.basic → <trill>

**<trkName>** MIDI track/sequence name.

att.basic → <trkName>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

att.basic → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

att.basic → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

att.basic → <turn>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

att.basic → <typeDesc>

**<typeNote>** Describes a particular font or other significant typographic feature of a printed resource.

att.basic → <typeNote>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

att.basic → <unclear>

**<unpub>** Used to explicitly indicate that a bibliographic resource is unpublished.

att.basic → <unpub>

**<useRestrict>** Container for information about the conditions that affect use of a bibliographic item after access has been granted.

att.basic → <useRestrict>

**<vel>** MIDI Note-on/off velocity.

att.basic → <vel>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

att.basic → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

att.basic → <volta>

**<watermark>** Contains a description of a watermark or similar device.

att.basic → <watermark>

**<when>** Indicates a point in time either absolutely (using the absolute attribute), or relative to another when element (using the since, interval and inttype attributes).

att.basic → <when>

**<width>** Description of the horizontal size of an object.

att.basic → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

att.basic → <work>

**<workList>** Grouping mechanism for information describing non-bibliographic aspects of a text.

att.basic → <workList>

**<zone>** Defines an area of interest within a <surface> or graphic file.

att.basic → <zone>

## Declaration

</classSpec>
```

## att.beam.log

Logical domain attributes.

### Module

MEI.cmn

### Attributes

**@beam.with** (*optional*) In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below. Value conforms to [data.NEIGHBORINGLAYER](#).

att.beam.log → @beam.with

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.beam.log → @layer

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.beam.log → @staff

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beam.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beam.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.beam.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.beam.log → @when

### Available at

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.beam.log → <beam>

### Declaration

```
<classSpec ident="att.beam.log" module="MEI.cmn" type="atts">

  <classes>
    <memberOf key="att.event"/>
    <memberOf key="att.beamedWith"/>
  </classes>
```

</classSpec>

DEVELOPMENT  
VERSION

## att.beam.vis

Visual domain attributes.

### Module

MEI.visual

### Attributes

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.beam.vis → @color

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

att.beam.vis → @cue

**@form** (*optional*) Captures whether a beam is "feathered" and in which direction. Allowed values are:

"**acc**" (*means that the secondary beams become progressively more distant toward the end of the beam.*),

"**mixed**" (*for beams that are "feathered" in both directions.*), "**rit**" (*indicates that the secondary beams get progressively closer together toward the end of the beam.*), "**norm**" (*indicates that the secondary beams are equidistant along the course of the beam.*)

att.beam.vis → @form

**@place** (*optional*) Records the placement of the beam relative to the events it affects. Value conforms to [data.BEAMPLACE](#).

att.beam.vis → @place

**@slash** (*optional*) Indicates presence of slash through the beam. Value conforms to [data.BOOLEAN](#).

att.beam.vis → @slash

**@slope** (*optional*) Records the slope of the beam. Value is a decimal number.

att.beam.vis → @slope

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

att.beam.vis → @visible

### Available at

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.beam.vis → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beam.vis → <beamSpan>

### Declaration

```
<classSpec ident="att.beam.vis" module="MEI.visual" type="atts">

DEVELOPMENT  
VERSION

## att.beamPresent

Attributes that indicate whether an event lies under a beam.

### Module

[MEI.cmn](#)

### Attributes

**@beam** (*optional*) Indicates that this event is "under a beam". One or more values from [data.BEAM](#), separated by spaces.

att.beamPresent → @beam

### Available at

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.  
att.beamPresent → <chord>

**<note>** A single pitched event.

att.beamPresent → <note>

**<rest>** A non-sounding event found in the source being transcribed.

att.beamPresent → <rest>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

att.beamPresent → <space>

### Declaration

```
<classSpec ident="att.beamPresent" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Attributes that indicate whether an event lies under a beam.</desc>
  <attList>
    <attDef ident="beam" usage="opt">
      <desc xml:lang="en">Indicates that this event is "under a beam".</desc>

        <rng:ref name="data.BEAM"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

## att.beamRend

Attributes that record the visual rendition of beams.

### Module

[MEI.cmn](#)

### Attributes

**@form** (*optional*) Captures whether a beam is "feathered" and in which direction. Allowed values are: "**acc**" (*means that the secondary beams become progressively more distant toward the end of the beam.*), "**mixed**" (*for beams that are "feathered" in both directions.*), "**rit**" (*indicates that the secondary beams get progressively closer together toward the end of the beam.*), "**norm**" (*indicates that the secondary beams are equidistant along the course of the beam.*)

att.beamRend → @form

**@place** (*optional*) Records the placement of the beam relative to the events it affects. Value conforms to [data.BEAMPLACE](#).

att.beamRend → @place

**@slash** (*optional*) Indicates presence of slash through the beam. Value conforms to [data.BOOLEAN](#).

att.beamRend → @slash

**@slope** (*optional*) Records the slope of the beam. Value is a decimal number.

att.beamRend → @slope

### Available at

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.beamRend → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamRend → <beamSpan>

### Constraints

Stem direction must be specified for all notes and chords under the beam.

Opposing stem directions are required for a beam with @place="mixed".

Opposing stem directions are required for a beam with @place="mixed".

### Declaration

```

<classSpec ident="att.beamRend" module="MEI.cmn" type="atts">

## att.beamSecondary

Attributes that capture information about secondary beaming.

### Module

[MEI.cmn](#)

### Attributes

**@breaksec** (*optional*) Presence of this attribute indicates that the secondary beam should be broken following this note/chord. The value of the attribute records the number of beams which should remain unbroken. Value is a positive integer.

att.beamSecondary → @breaksec

### Available at

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

att.beamSecondary → <chord>

**<note>** A single pitched event.

att.beamSecondary → <note>

**<rest>** A non-sounding event found in the source being transcribed.

att.beamSecondary → <rest>

### Declaration

```
<classSpec ident="att.beamSecondary" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Attributes that capture information about secondary beaming.</desc>
  <attList>
    <attDef ident="breaksec" usage="opt">
      <desc xml:lang="en">Presence of this attribute indicates that the secondary beam should be broken following this note/chord. The value of the attribute records the number of beams which should remain unbroken.</desc>
      <datatype>
        <rng:data type="positiveInteger"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>
```

## att.beamSpan.anl

Analytical domain attributes.

### Module

[MEI.analytical](#)

### Attributes

#### Available at

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamSpan.anl → <beamSpan>

#### Declaration

```
<classSpec ident="att.beamSpan.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.beamSpan.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

att.beamSpan.ges → @dots.ges

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration.

Value conforms to [data.DURATION.GESTURAL](#).

att.beamSpan.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

att.beamSpan.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

att.beamSpan.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

att.beamSpan.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

att.beamSpan.ges → @dur.recip

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.beamSpan.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.beamSpan.ges → @tstamp2.real

### Available at

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamSpan.ges → <beamSpan>

### Declaration

```
<classSpec ident="att.beamSpan.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
  <classes>
    <memberOf key="att.duration.ges"/>
    <memberOf key="att.timestamp2.ges"/>
  </classes>
```

</classSpec>

DEVELOPMENT  
VERSION

## att.beamSpan.log

Logical domain attributes.

### Module

[MEI.cmn](#)

### Attributes

**@beam.with** (*optional*) In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below. Value conforms to [data.NEIGHBORINGLAYER](#).

att.beamSpan.log → @beam.with

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

att.beamSpan.log → @dur

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.beamSpan.log → @endid

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

att.beamSpan.log → @evaluate

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.beamSpan.log → @layer

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

att.beamSpan.log → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

att.beamSpan.log → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

att.beamSpan.log → @plist

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.beamSpan.log → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

att.beamSpan.log → @startid

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beamSpan.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beamSpan.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.beamSpan.log → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

att.beamSpan.log → @tstamp2

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.beamSpan.log → @when

## Available at

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamSpan.log → <beamSpan>

## Declaration

```

<classSpec ident="att.beamSpan.log" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.controlEvent"/>
    <memberOf key="att.beamedWith"/>
    <memberOf key="att.duration.additive"/>
    <memberOf key="att.startEndId"/>
    <memberOf key="att.timestamp2.log"/>
  </classes>
</classSpec>

```

## att.beamSpan.vis

Visual domain attributes.

### Module

MEI.visual

### Attributes

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.beamSpan.vis → @color

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

att.beamSpan.vis → @cue

**@form** (*optional*) Captures whether a beam is "feathered" and in which direction. Allowed values are:

"**acc**" (*means that the secondary beams become progressively more distant toward the end of the beam.*),

"**mixed**" (*for beams that are "feathered" in both directions.*), "**rit**" (*indicates that the secondary beams get progressively closer together toward the end of the beam.*), "**norm**" (*indicates that the secondary beams are equidistant along the course of the beam.*)

att.beamSpan.vis → @form

**@place** (*optional*) Records the placement of the beam relative to the events it affects. Value conforms to [data.BEAMPLACE](#).

att.beamSpan.vis → @place

**@slash** (*optional*) Indicates presence of slash through the beam. Value conforms to [data.BOOLEAN](#).

att.beamSpan.vis → @slash

**@slope** (*optional*) Records the slope of the beam. Value is a decimal number.

att.beamSpan.vis → @slope

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

att.beamSpan.vis → @visible

### Available at

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamSpan.vis → <beamSpan>

### Declaration

```
<classSpec ident="att.beamSpan.vis" module="MEI.visual" type="atts">
  <desc xml:lang="en">Visual domain attributes.</desc>
  <classes>
    <memberOf key="att.beam.vis"/>
  </classes>
</classSpec>
```

## att.beamedWith

Attributes indicating cross-staff beaming.

### Module

[MEI.cmn](#)

### Attributes

**@beam.with** (*optional*) In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below. Value conforms to [data.NEIGHBORINGLAYER](#).

att.beamedWith → @beam.with

### Available at

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

att.beamedWith → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

att.beamedWith → <beamSpan>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

att.beamedWith → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

att.beamedWith → <tupletSpan>

### Declaration

```

<classSpec ident="att.beamedWith" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Attributes indicating cross-staff beaming.</desc>
  <attList>
    <attDef ident="beam.with" usage="opt">
      <desc xml:lang="en">In the case of cross-staff beams, the beam.with attribute is used to indicate which staff the beam is connected to; that is, the staff above or the staff below.</desc>
      <datatype>
        <rng:ref name="data.NEIGHBORINGLAYER"/>
      </datatype>
    </attDef>
  </attList>
</classSpec>

```

## att.beaming.log

Used by layerDef, staffDef, and scoreDef to provide default values for attributes in the logical domain related to beaming.

### Module

[MEI.cmn](#)

### Attributes

**@beam.group** (*optional*) Provides an example of how automated beaming (including secondary beams) is to be performed. Value is plain text.

att.beaming.log → @beam.group

**@beam.rests** (*optional*) Indicates whether automatically-drawn beams should include rests shorter than a quarter note duration. Value conforms to [data.BOOLEAN](#).

att.beaming.log → @beam.rests

### Available at

**<layerDef>** Container for layer meta-information.

att.beaming.log → <layerDef>

**<scoreDef>** Container for score meta-information.

att.beaming.log → <scoreDef>

**<staffDef>** Container for staff meta-information.

att.beaming.log → <staffDef>

### Remarks

The beam.group attribute can be used to set a default beaming pattern to be used when no beaming is indicated at the event level. beam.group must contain a comma-separated list of time values that add up to a measure, e.g., in 4/4 time '4,4,4,4' indicates each quarter note worth of shorter notes would be beamed together. Parentheses can be used to indicate sub-groupings of secondary beams. For example, '(4.,4.,4.)' in 9/8 meter indicates one outer beam per measure with secondary beams broken at each dotted quarter duration, while a measure of 16th notes in 4/4 with beam.group equal to '(4,4),(4,4)' will result in a primary beam covering all the notes and secondary beams for each group of 4 notes. This beaming "directive" can be overridden by using **<beam>** elements. If neither **<beam>** elements or the beam.group attribute is used, then no beaming is rendered. Beaming can be explicitly 'turned off' by setting beam.group to an empty string.

### Declaration

```
<classSpec ident="att.beaming.log" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Used by layerDef, staffDef, and scoreDef to provide default values for attributes in the logical domain related to beaming.</desc>
  <attList>

If neither <gi scheme="MEI">beam</gi> elements or the <att>beam.group</att> attribute is used, then no beaming is rendered. Beaming can be explicitly 'turned off' by setting <att>beam.group</att> to an empty string.</p>
</remarks>
</classSpec>

```

## att.beaming.vis

Used by layerDef, staffDef, and scoreDef to provide default values for attributes in the visual domain related to beaming.

### Module

[MEI.visual](#)

### Attributes

**@beam.color** (*optional*) Color of beams, including those associated with tuplets. Value conforms to [data.COLOR](#).

att.beaming.vis → @beam.color

**@beam.rend** (*optional*) Encodes whether a beam is "feathered" and in which direction. Allowed values are: "**acc**" (*Beam lines grow farther apart from left to right.*), "**rit**" (*Beam lines grow closer together from left to right.*), "**norm**" (*Beam lines are equally-spaced over the entire length of the beam.*)

att.beaming.vis → @beam.rend

**@beam.slope** (*optional*) Captures beam slope. Value is a decimal number.

att.beaming.vis → @beam.slope

### Available at

**<layerDef>** Container for layer meta-information.

att.beaming.vis → <layerDef>

**<scoreDef>** Container for score meta-information.

att.beaming.vis → <scoreDef>

**<staffDef>** Container for staff meta-information.

att.beaming.vis → <staffDef>

### Declaration

```

</attDef>
</attList>
</classSpec>
```

## att.beatRpt.anl

Analytical domain attributes.

### Module

MEI.analytical

### Attributes

#### Available at

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.beatRpt.anl → <beatRpt>

#### Declaration

```
<classSpec ident="att.beatRpt.anl" module="MEI.analytical" type="atts">
  <desc xml:lang="en">Analytical domain attributes.</desc>
</classSpec>
```

## att.beatRpt.ges

Gestural domain attributes.

### Module

MEI.gestural

### Attributes

#### Available at

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.beatRpt.ges → <beatRpt>

#### Declaration

```
<classSpec ident="att.beatRpt.ges" module="MEI.gestural" type="atts">
  <desc xml:lang="en">Gestural domain attributes.</desc>
</classSpec>
```

## att.beatRpt.log

Logical domain attributes.

### Module

MEI.cmn

### Attributes

**@beatdef** (*optional*) Indicates the performed duration represented by the beatRpt symbol; expressed in time signature denominator units. Value is a decimal number.

att.beatRpt.log → @beatdef

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

att.beatRpt.log → @layer

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

att.beatRpt.log → @staff

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beatRpt.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

att.beatRpt.log → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

att.beatRpt.log → @tstamp.real

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

att.beatRpt.log → @when

### Available at

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.beatRpt.log → <beatRpt>

### Declaration

```
<classSpec ident="att.beatRpt.log" module="MEI.cmn" type="atts">
  <desc xml:lang="en">Logical domain attributes.</desc>
  <classes>
    <memberOf key="att.event"/>
  </classes>
  <attList>
    <attDef ident="beatdef" usage="opt">
```

```
<desc xml:lang="en">Indicates the performed duration represented by the beatRpt symbol; expressed in time signature denominator units.</desc>
<datatype>
  <rng:data type="decimal">
    <rng:param name="pattern">\d+(\.\d+)?</rng:param>
  </rng:data>
</datatype>
</attDef>
</attList>
</classSpec>
```

## att.beatRpt.vis

Visual domain attributes.

### Module

MEI.visual

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a `<symbolDef>` element elsewhere in the document. Value conforms to [data.URI](#).

att.beatRpt.vis → @altsym

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

att.beatRpt.vis → @color

**@expand** (*optional*) Indicates whether to render a repeat symbol or the source material to which it refers. A value of 'true' renders the source material, while 'false' displays the repeat symbol. Value conforms to [data.BOOLEAN](#).

att.beatRpt.vis → @expand

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

att.beatRpt.vis → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

att.beatRpt.vis → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

att.beatRpt.vis → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

att.beatRpt.vis → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

att.beatRpt.vis → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

att.beatRpt.vis → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

att.beatRpt.vis → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

att.beatRpt.vis → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

att.beatRpt.vis → @glyph.uri

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

att.beatRpt.vis → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

att.beatRpt.vis → @lineheight

**@slash** (*required*) Indicates the number of slashes required to render the appropriate beat repeat symbol. When a single beat consisting of a single note or chord is repeated, the repetition symbol is a single thick, slanting slash; therefore, the value 1 should be used. When the beat is divided into even notes, the following values should be used: 4ths or 8ths=1, 16ths=2, 32nds=3, 64ths=4, 128ths=5. When the beat is comprised of mixed duration values, the default rendition is 2 slashes and 2 dots. Value conforms to [data.BEATRPT.REND](#).

att.beatRpt.vis → @slash

## Available at

**<beatRpt>** An indication that material on a preceding beat should be repeated.

att.beatRpt.vis → <beatRpt>

## Declaration
