**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<physDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<physDesc> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<physDesc> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<physDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<physDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<physDesc> → att.common → att.basic → att.id → @xml:id

## Member of

(physDesc isn't member of any model class)

## Contained By

**<item>** Single instance or exemplar of a source/manifestation.

<physDesc> → elements having physDesc as direct children → <item>

## May Contain

**<accMat>** Holds a description of any additional material bound with an item, such as non-contemporaneous documents or fragments.

<physDesc> → model.physDescPart → <accMat>

**<addDesc>** Provides a description of significant additions found within an item, such as marginalia or other annotations.

<physDesc> → model.physDescPart → <addDesc>

**<bindingDesc>** Describes the present and former bindings of an item.

<physDesc> → model.physDescPart → <bindingDesc>

**<captureMode>** The means used to record notation, sound, or images in the production of a source/manifestation (e.g., analogue, acoustic, electric, digital, optical etc.).

<physDesc> → model.physDescPart → <captureMode>

**<carrierForm>** The specific class of material to which the physical carrier of the source/manifestation belongs (e.g., sound cassette, videodisc, microfilm cartridge, transparency, etc.). The carrier for a manifestation comprising multiple physical components may include more than one form (e.g., a filmstrip with an accompanying booklet, a separate sound disc carrying the sound track for a film, etc.).

<physDesc> → model.physDescPart → <carrierForm>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<physDesc> → model.physDescPart → <catchwords>

**<colophon>** Contains a statement providing information regarding the date, place, agency, or reason for production of the item.

<physDesc> → model.physDescPart → <colophon>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<physDesc> → model.physDescPart → <condition>

**<decoDesc>** Contains a description of the decoration of an item.

<physDesc> → model.physDescPart → <decoDesc>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<physDesc> → model.physDescPart → <dimensions>

**<explicit>** Contains the explicit of a manuscript item; that is, the closing words of the text proper, exclusive of any rubric or colophon which might follow it.

<physDesc> → model.physDescPart → <explicit>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<physDesc> → model.physDescPart → <extent>

**<fileChar>** Standards or schemes used to encode the file (e.g., ASCII, SGML, etc.), physical characteristics of the file (e.g., recording density, parity, blocking, etc.), and other characteristics that have a bearing on how the file can be processed.

<physDesc> → model.physDescPart → <fileChar>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<physDesc> → model.physDescPart → <foliaDesc>

**<handList>** Container for one or more hand elements.

<physDesc> → model.physDescPart → <handList>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<physDesc> → model.headLike → <head>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<physDesc> → model.physDescPart → <heraldry>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<physDesc> → model.physDescPart → <history>

**<incip>** The opening music and/or words of a musical or textual work.

<physDesc> → model.physDescPart → model.incipLike → <incip>

**<inscription>** An inscription added to an item, such as a bookplate, a note designating the item as a gift, and/or the author's signature.

<physDesc> → model.physDescPart → <inscription>

**<layoutDesc>** Collects layout descriptions.

<physDesc> → model.physDescPart → <layoutDesc>

**<p>** One or more text phrases that form a logical prose passage.

<physDesc> → model.pLike → <p>

**<perfDuration>** Used to express the duration of performance of printed or manuscript music or the playing time for a sound recording, videorecording, etc.

<physDesc> → model.physDescPart → <perfDuration>

**<physMedium>** Records the physical materials used in the source, such as ink and paper.

<physDesc> → model.physDescPart → <physMedium>

**<plateNum>** Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

<physDesc> → model.physDescPart → <plateNum>

**<playingSpeed>** Playing speed for a sound recording is the speed at which the carrier must be operated to produce the sound intended (e.g., 33 1/3 rpm, 19 cm/s, etc.).

<physDesc> → model.physDescPart → <playingSpeed>

**<rubric>** Contains a string of words through which a manuscript signals the beginning or end of a text division, often with an assertion as to its author and title, which is in some way set off from the text itself, usually in red ink, or by use of different size or type of script, or some other such visual device.

<physDesc> → model.physDescPart → <rubric>

**<scoreFormat>** Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

<physDesc> → model.physDescPart → <scoreFormat>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<physDesc> → model.physDescPart → <scriptDesc>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<physDesc> → model.physDescPart → <sealDesc>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<physDesc> → model.physDescPart → <secFolio>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<physDesc> → model.physDescPart → <signatures>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<physDesc> → model.physDescPart → <soundChan>

**<specRepro>** The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

<physDesc> → model.physDescPart → <specRepro>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<physDesc> → model.physDescPart → <stamp>

**<supportDesc>** Groups elements describing the physical support material of an item.

<physDesc> → model.physDescPart → <supportDesc>

**<titlePage>** Contains a transcription of the title page of a text.

<physDesc> → model.physDescPart → <titlePage>

**<trackConfig>** Number of physical/input tracks on a sound medium (e.g., eight track, twelve track).

<physDesc> → model.physDescPart → <trackConfig>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<physDesc> → model.physDescPart → <typeDesc>

**<watermark>** Contains a description of a watermark or similar device.

<physDesc> → model.physDescPart → <watermark>

## Remarks

Dedicatory text and title page features may also be encoded here when they are not transcribed as part of the front or back matter; i.e., when they are considered to be meta-data rather than a transcription.

The model of this element is based on the [physdesc](#) element of the Encoded Archival Description (EAD).

## <physLoc>

(physical location) – Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

### Referenced in chapters

[3.7 Encoding Sources in MEI](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<physLoc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<physLoc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<physLoc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<physLoc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<physLoc> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<physLoc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<physLoc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<physLoc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<physLoc> → [model.biblPart](#) → <bibl>

**<item>** Single instance or exemplar of a source/manifestation.

<physLoc> → elements having physLoc as direct children → <item>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<physLoc> → [model.headLike](#) → <head>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<physLoc> → direct children → <history>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<physLoc> → [model.identifierLike](#) → <identifier>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<physLoc> → model.repositoryLike → <repository>

## Remarks

The model of this element is based on the [physloc](#) element of the Encoded Archival Description (EAD).

# <physMedium>

(physical medium) – Records the physical materials used in the source, such as ink and paper.

## Module

[MEI.header](#)

## Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<physMedium> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<physMedium> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
 <physMedium> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<physMedium> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<physMedium> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<physMedium> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<physMedium> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<physMedium> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<physMedium> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<physMedium> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<physMedium> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<physMedium> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<physMedium> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<physMedium> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<physMedium> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<physMedium> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<physMedium> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<physMedium> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<physMedium> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<physMedium> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<physMedium> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<physMedium> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

All materials may be described in a single <physMedium> element or multiple elements may be used, one for each medium.

The model of this element is based on respective elements of the Encoded Archival Description (EAD). It has the same function as the **material** element of the Text Encoding Initiative (TEI).

## Declaration

```

DEVELOPMENT  
VERSION

## <plateNum>

(plate number) – Designation assigned to a resource by a music publisher, usually printed at the bottom of each page, and sometimes appearing also on the title page.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<plateNum> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<plateNum> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.linking](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<plateNum> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<plateNum> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<plateNum> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<plateNum> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<plateNum> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<plateNum> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<plateNum> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<plateNum> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<plateNum> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<plateNum> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<plateNum> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<plateNum> → model.physDescPart → <physDesc>

**<titlePage>** Contains a transcription of the title page of a text.

<plateNum> → model.titlePagePart → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<plateNum> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<plateNum> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<plateNum> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<plateNum> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<plateNum> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

While it is often called a "plate number", it does not always contain numbers. The `facs` attribute may be used to record the location of the plate number in a facsimile image.

## Declaration

```

<elementSpec ident="plateNum" module="MEI.header">

</elementSpec>

```

## <playingSpeed>

Playing speed for a sound recording is the speed at which the carrier must be operated to produce the sound intended (e.g., 33 1/3 rpm, 19 cm/s, etc.).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<playingSpeed> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<playingSpeed> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<playingSpeed> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<playingSpeed> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<playingSpeed> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<playingSpeed> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<playingSpeed> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<playingSpeed> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<playingSpeed> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<playingSpeed> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<playingSpeed> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<playingSpeed> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<playingSpeed> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<playingSpeed> → [macro.struc-unstrucContent](#) → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<playingSpeed> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<playingSpeed> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<playingSpeed> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

<width> Description of the horizontal size of an object.

<playingSpeed> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Declaration

```

MEI.mensural

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<plica> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<plica> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<plica> → att.common → att.linkin → @corresp

**@dir** (*optional*) Describes the direction of a stem. Value conforms to [data.STEMDIRECTION.basic](#).

<plica> → att.plica.vis → @dir

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<plica> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<plica> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<plica> → att.common → att.labelled → @label

**@len** (*optional*) Encodes the stem length. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<plica> → att.plica.vis → @len

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<plica> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<plica> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<plica> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<plica> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<plica> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<plica> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<plica> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<plica> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<plica> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<plica> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(plica isn't member of any model class)

## Contained By

**<note>** A single pitched event.

## <port>

MIDI port.

### Module

[MEI.midi](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<port> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<port> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<port> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<port> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linked → @next

**@num** (*required*) MIDI number in the range set by [data.MIDIVALUE](#). Value conforms to [data.MIDIVALUE](#).

<port> → att.midiNumber → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<port> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<port> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<port> → att.midi.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<port> → att.common → att.linkin → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<port> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<port> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<port> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<port> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<port> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<port> → att.common → att.basic → att.id → @xml:id

## Member of

(port isn't member of any model class)

**Contained By**

<**midi**> Container for elements that contain information useful when generating MIDI output.  
<port> → elements having port as direct children → <midi>

## <postBox>

(postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

### Module

[MEI.namesdates](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<postBox> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<postBox> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<postBox> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<postBox> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<postBox> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<postBox> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<postBox> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<postBox> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<postBox> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<postBox> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<postBox> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<postBox> → att.lang → @xml:lang

## Member of

[model.addressPart](#) Groups elements used as part of a physical address.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<postBox> → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<postBox> → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<postBox> → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<postBox> → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<postBox> → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<postBox> → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<postBox> → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<postBox> → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<postBox> → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<postBox> → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<postBox> → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<postBox> → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<postBox> → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<postBox> → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<postBox> → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<postBox> → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<postBox> → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<postBox> → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<postBox> → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<postBox> → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<postBox> → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<postBox> → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<postBox> → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<postBox> → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<postBox> → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<postBox> → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<postBox> → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<postBox> → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<postBox> → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<postBox> → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<postBox> → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<postBox> → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<postBox> → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<postBox> → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<postBox> → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<postBox> → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<postBox> → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<postBox> → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<postBox> → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<postBox> → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<postBox> → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<postBox> → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<postBox> → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<postBox> → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<postBox> → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<postBox> → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<postBox> → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<postBox> → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<postBox> → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<postBox> → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<postBox> → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<postBox> → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<postBox> → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<postBox> → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<postBox> → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<postBox> → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<postBox> → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<postBox> → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<postBox> → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<postBox> → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<postBox> → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<postBox> → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<postBox> → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<postBox> → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<postBox> → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<postBox> → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<postBox> → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<postBox> → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<postBox> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<postBox> → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<add>** Marks an addition to the text.

<postBox> → model.transcriptionLike → <add>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<postBox> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<postBox> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<postBox> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<postBox> → model.transcriptionLike → <del>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<postBox> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<postBox> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<postBox> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<postBox> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<postBox> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<postBox> → model.transcriptionLike → <sic>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<postBox> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<postBox> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<postBox> → model.transcriptionLike → <unclear>

## Remarks

The model of this element is based on the **postBox** element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <postCode>

(postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

### Module

[MEI.namesdates](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.typed → att.classest → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<postCode> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<postCode> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<postCode> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<postCode> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<postCode> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<postCode> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<postCode> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<postCode> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<postCode> → att.lang → @xml:lang

## Member of

[model.addressPart](#) Groups elements used as part of a physical address.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<postCode> → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<postCode> → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<postCode> → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<postCode> → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<postCode> → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<postCode> → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<postCode> → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<postCode> → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<postCode> → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<postCode> → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<postCode> → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<postCode> → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<postCode> → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<postCode> → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<postCode> → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<postCode> → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<postCode> → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<postCode> → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<postCode> → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<postCode> → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<postCode> → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<postCode> → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<postCode> → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<postCode> → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<postCode> → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<postCode> → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<postCode> → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<postCode> → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<postCode> → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<postCode> → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<postCode> → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<postCode> → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<postCode> → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<postCode> → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<postCode> → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<postCode> → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<postCode> → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<postCode> → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<postCode> → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<postCode> → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<postCode> → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<postCode> → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<postCode> → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<postCode> → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<postCode> → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<postCode> → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<postCode> → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<postCode> → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<postCode> → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<postCode> → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<postCode> → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<postCode> → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<postCode> → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<postCode> → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<postCode> → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<postCode> → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<postCode> → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<postCode> → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<postCode> → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<postCode> → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<postCode> → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<postCode> → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<postCode> → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<postCode> → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<postCode> → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<postCode> → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<postCode> → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<postCode> → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<postCode> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<postCode> → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<add>** Marks an addition to the text.

<postCode> → model.transcriptionLike → <add>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<postCode> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<postCode> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<postCode> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<postCode> → model.transcriptionLike → <del>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<postCode> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<postCode> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<postCode> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<postCode> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<postCode> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<postCode> → model.transcriptionLike → <sic>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<postCode> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<postCode> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<postCode> → model.transcriptionLike → <unclear>

## Remarks

The model of this element is based on the `postCode` element of the Text Encoding Initiative (TEI).

## Declaration

```

</elementSpec>

DEVELOPMENT  
VERSION

## <price>

The cost of access to a bibliographic item.

### Referenced in chapters

3.4.1.3 Publication, Distribution, etc.

### Module

MEI.header

### Attributes

**@amount** (*optional*) Numeric value capturing a cost. Can only be interpreted in combination with the currency attribute. Value is a decimal number.

<price> → direct children → @amount

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<price> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<price> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linkin → @corresp

**@currency** (*optional*) Monetary unit. Value is a [NMOKEN](#).

<price> → direct children → @currency

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<price> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<price> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<price> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<price> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<price> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<price> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<price> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<price> → att.lang → @xml:lang

## Member of

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<titlePage>** Contains a transcription of the title page of a text.

<price> → [model.titlePagePart](#) → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<price> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<price> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<price> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<price> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<price> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<price> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<price> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<price> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<price> → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<price> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<price> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<price> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<price> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<price> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<price> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<price> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<price> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<price> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<price> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<price> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<price> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<price> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<price> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<price> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<price> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<price> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<price> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<price> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<price> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<price> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<price> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<price> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<price> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<price> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<price> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<price> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<price> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<price> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<price> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<price> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<price> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<price> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<price> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<price> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<price> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<price> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<price> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<price> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<price> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Best practice suggests the use of controlled vocabulary for the currency attribute, such as the ISO 4217 list of currency designators.

## Declaration

DEVELOPMENT  
VERSION

# <prog>

(program) – MIDI program change.

## Module

[MEI.midi](#)

## Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<prog> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<prog> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<prog> → att.midi.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<prog> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linked → @next

**@num** (*required*) MIDI number in the range set by [data.MIDIVALE](#). Value conforms to [data.MIDIVALE](#).

<prog> → att.midiNumber → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<prog> → att.midi.event → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<prog> → att.midi.event → att.partIdent → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<prog> → att.midi.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<prog> → att.common → att.linkin → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<prog> → att.midi.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<prog> → att.midi.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<prog> → att.midi.event → att.timestamp.ges → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<prog> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<prog> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<prog> → att.common → att.basic → att.id → @xml:id

## Member of

(prog isn't member of any model class)

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<projectDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<projectDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<projectDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<projectDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → att.common → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → att.common → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → att.common → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<projectDesc> → att.common → att.linkng → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<projectDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<projectDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<projectDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<projectDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<projectDesc> → att.lang → @xml:lang

## Member of

[model.encodingPart](#) Groups elements that may appear as part of the description of the encoding process.

## Contained By

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<projectDesc> → elements having projectDesc as direct children → <encodingDesc>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<projectDesc> → model.headLike → <head>

**<p>** One or more text phrases that form a logical prose passage.

<projectDesc> → model.pLike → <p>

## Remarks

The model of this element is based on the [projectDesc](#) element of the Text Encoding Initiative (TEI).

## <propName>

(property name) – Name of a property of the symbol.

### Module

[MEI.usersymbols](#)

### Attributes

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<propName> → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<propName> → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<propName> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<propName> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<propName> → att.linkin → @synch

**@type** (*required*) Characterizes the property name. Allowed values are: "**unicode**" (*A registered Unicode normative or informative property name.*), "**local**" (*A locally defined name.*)

<propName> → direct children → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<propName> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid `xml:id`.

<propName> → att.basic → att.id → @xml:id

## Member of

(propName isn't member of any model class)

## <propValue>

(property value) – A single property value.

### Module

[MEI.usersymbols](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<propValue> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<propValue> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<propValue> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<propValue> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<propValue> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<propValue> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<propValue> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<propValue> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(propValue isn't member of any model class)

## Contained By

**<symProp>** Provides a name and value for some property of the parent symbol.

<propValue> → elements having propValue as direct children → <symProp>

```

## <proport>

(proportion) – Description of note duration as arithmetic ratio.

### Referenced in chapters

5.3 Proportions

### Module

MEI.mensural

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a <symbolDef> element elsewhere in the document. Value conforms to [data.URI](#).

<proport> → att.proport.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<proport> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<proport> → att.proport.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<proport> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<proport> → att.common → att.linked → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<proport> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<proport> → att.common → att.linked → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<proport> → att.proport.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<proport> → att.proport.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<proport> → att.proport.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<proport> → att.proport.vis → att.typography → @fontstyle

**@fontweight** (optional) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<proport> → [att.proport.vis](#) → [att.typography](#) → @fontweight

**@glyph.auth** (optional) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<proport> → [att.proport.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.auth

**@glyph.name** (optional) Glyph name. Value is plain text.

<proport> → [att.proport.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.name

**@glyph.num** (optional) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<proport> → [att.proport.vis](#) → [att.extSym](#) → [att.extSym.names](#) → @glyph.num

**@glyph.uri** (optional) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<proport> → [att.proport.vis](#) → [att.extSym](#) → [att.extSym.auth](#) → @glyph.uri

**@label** (optional) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<proport> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (optional) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<proport> → [att.proport.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (optional) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<proport> → [att.proport.vis](#) → [att.typography](#) → @lineheight

**@loc** (optional) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<proport> → [att.proport.vis](#) → [att.staffLoc](#) → @loc

**@n** (optional) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<proport> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (optional) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.linked](#) → @next

**@num** (optional) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<proport> → [att.proport.log](#) → [att.duration.ratio](#) → @num

**@numbase** (optional) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<proport> → [att.proport.log](#) → [att.duration.ratio](#) → @numbase

**@precedes** (optional) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.linkin](#)g → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.linkin](#)g → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<proport> → [att.common](#) → [att.linkin](#)g → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<proport> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<proport> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<proport> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.eventLike.mensural](#) Groups event elements that occur in the mensural repertoire.

[model.staffDefPart.mensural](#) Groups elements that may appear in the declaration of staff features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<proport> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<proport> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<proport> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<proport> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<proport> → [model.eventLike.mensural](#) → [model.layerPart.mensural](#) → [model.layerPart.mensuralAndNeumes](#) → [model.layerPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <expan>

**<layer>** An independent stream of events on a staff.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<proport> → model.eventLike.mensural → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <sic>

**<staffDef>** Container for staff meta-information.

<proport> → model.staffDefPart.mensural → model.staffDefPart → <staffDef>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<proport> → model.eventLike.mensural → model.layerPart.mensural → model.layerPart.mensuralAndNeumes → model.layerPart → <unclear>

## May Contain

– (<proport> may not have child elements)

## Remarks

The proport element is provided for the encoding of mensural notation. It allows the description of note durations as arithmetic ratios. While mensuration refers to the normal relationships between note durations, proportion affects the relations of the note durations to the tactus.

## Declaration

```

## <provenance>

The record of ownership or custodianship of an item.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<provenance> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<provenance> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<provenance> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<provenance> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<provenance> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<provenance> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<provenance> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<provenance> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<provenance> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<provenance> → [att.common](#) → [att.linkin](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<provenance> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<provenance> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<provenance> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<provenance> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<provenance> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<provenance> → att.common → att.linkin → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<provenance> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<provenance> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<provenance> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<provenance> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<provenance> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<provenance> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<provenance> → att.lang → @xml:lang

## Member of

(provenance isn't member of any model class)

**Contained By**

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<provenance> → elements having provenance as direct children → <history>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<provenance> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<provenance> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<provenance> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<provenance> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<provenance> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<provenance> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<provenance> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<provenance> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<provenance> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<provenance> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<provenance> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<provenance> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<provenance> → direct children → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<provenance> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<provenance> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<provenance> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<provenance> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<provenance> → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<provenance> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<provenance> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<provenance> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<provenance> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<provenance> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<provenance> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<provenance> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<provenance> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<provenance> → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<provenance> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<provenance> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<provenance> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<provenance> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<provenance> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<provenance> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<provenance> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<provenance> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<provenance> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<provenance> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<provenance> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<provenance> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<provenance> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<provenance> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<provenance> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<provenance> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<provenance> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<provenance> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<provenance> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<provenance> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<provenance> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<provenance> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<provenance> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<provenance> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the respective element of the Encoded Archival Description (EAD) and the [provenance](#) element of the Text Encoding Initiative (TEI).

## <ptr>

(pointer) – Defines a traversible pointer to another location, using only attributes to describe the destination.

### Referenced in chapters

[3.4.2.1 Application Information](#), [9.1.2.1 Front Matter](#), [13.2.1 Pointers and References](#), [13.2.2 Specifying Link Elements](#), [13.2.2.3 Define the mimetype of a link element's target](#)

### Module

[MEI.ptrref](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ptr> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.metadataPointing → @decls

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<ptr> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ptr> → att.common → att.labelled → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<ptr> → att.internetMedia → @mimetype

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ptr> → att.common → att.numberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ptr> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<ptr> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<ptr> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<ptr> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<ptr> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<ptr> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<ptr> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ptr> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ptr> → att.common → att.basic → att.id → @xml:id

## Member of

[model.locrefLike](#) Groups elements used for purposes of location and reference.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<application>** Provides information about an application which has acted upon the current document.

<ptr> → model.locrefLike → <application>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<ptr> → model.locrefLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<ptr> → model.locrefLike → <pgDesc>

**<pgFoot>** A running footer.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<ptr> → model.locrefLike → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<ptr> → model.locrefLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<ptr> → model.locrefLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<ptr> → model.locrefLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<ptr> → model.locrefLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ptr> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<ptr> → model.locrefLike → model.textPhraseLike.limited → <width>

## May Contain

- (<ptr> may not have child elements)

## Remarks

Unlike the **<ref>** element, **<ptr>** cannot contain text or sub-elements to describe the referenced object.

The model of this element is based on the **ptr** element of the Encoded Archival Description (EAD) and the **ptr** element of the Text Encoding Initiative (TEI).

## Declaration

```

## <pubPlace>

(publication place) – Name of the place where a bibliographic item was published.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#) [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<pubPlace> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pubPlace> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pubPlace> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pubPlace> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<pubPlace> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<pubPlace> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pubPlace> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pubPlace> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<pubPlace> → [att.lang](#) → @xml:lang

## Member of

[model.imprintPart](#) Groups elements that may appear as part of a bibliographic imprint.

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<pubPlace> → [model.imprintPart](#) → <bibl>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<pubPlace> → [model.imprintPart](#) → <imprint>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<pubPlace> → model.pubStmtPart → <pubStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<pubPlace> → model.imprintPart → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<pubPlace> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<pubPlace> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<pubPlace> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<pubPlace> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<pubPlace> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<pubPlace> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<pubPlace> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<pubPlace> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<pubPlace> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<pubPlace> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<pubPlace> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<pubPlace> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<pubPlace> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<pubPlace> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<pubPlace> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<pubPlace> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<pubPlace> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<pubPlace> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<pubPlace> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<pubPlace> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<pubPlace> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<pubPlace> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<pubPlace> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<pubPlace> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<pubPlace> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<pubPlace> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<pubPlace> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<pubPlace> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<pubPlace> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<pubPlace> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<pubPlace> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<pubPlace> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<pubPlace> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<pubPlace> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<pubPlace> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<pubPlace> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<pubPlace> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<pubPlace> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<pubPlace> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<pubPlace> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [pubPlace](#) element of the Text Encoding Initiative (TEI).

## <pubStmt>

(publication statement) – Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [3.4.1 File Description](#), [3.4.1.3 Publication, Distribution, etc.](#), [3.4.1.5 Notes Statement](#), [3.7 Encoding Sources in MEI](#), [3.8.3 Minimal and Recommended Header Information](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<pubStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<pubStmt> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<pubStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<pubStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<pubStmt> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<pubStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<pubStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<pubStmt> → att.common → att.basic → att.id → @xml:id

## Member of

(pubStmt isn't member of any model class)

## Contained By

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<pubStmt> → elements having pubStmt as direct children → <fileDesc>

## May Contain

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<pubStmt> → model.pubStmtPart → model.addressLike → <address>

**<availability>** Groups elements that describe the availability of and access to a bibliographic item, including an MEI-encoded document.

<pubStmt> → model.pubStmtPart → <availability>

**<date>** A string identifying a point in time or the time period between two such points.

<pubStmt> → model.pubStmtPart → model.dateLike → <date>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<pubStmt> → model.pubStmtPart → <distributor>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<pubStmt> → model.headLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<pubStmt> → model.pubStmtPart → model.identifierLike → <identifier>

**<pubPlace>** Name of the place where a bibliographic item was published.

<pubStmt> → model.pubStmtPart → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<pubStmt> → model.pubStmtPart → <publisher>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<pubStmt> → model.pubStmtPart → <respStmt>

**<unpub>** Used to explicitly indicate that a bibliographic resource is unpublished.

<pubStmt> → direct children → <unpub>

## Remarks

When an item is unpublished, use only the <unpub> sub-element.

The model of this element is based on the publicationStmt element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <publisher>

Name of the organization responsible for the publication of a bibliographic item.

### Referenced in chapters

[3.4.1.3 Publication, Distribution, etc.](#) [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<publisher> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<publisher> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<publisher> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<publisher> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<publisher> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<publisher> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<publisher> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<publisher> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<publisher> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<publisher> → [att.lang](#) → @xml:lang

## Member of

[model.imprintPart](#) Groups elements that may appear as part of a bibliographic imprint.

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<publisher> → [model.imprintPart](#) → <bibl>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<publisher> → [model.imprintPart](#) → <imprint>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<publisher> → model.pubStmtPart → <pubStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<publisher> → model.imprintPart → <titlePage>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<publisher> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<publisher> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<publisher> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<publisher> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<publisher> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<publisher> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<publisher> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<publisher> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicathee>** Entity to whom a creative work is formally offered.

<publisher> → model.textPhraseLike.limited → <dedicathee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<publisher> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<publisher> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<publisher> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<publisher> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<publisher> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<publisher> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<publisher> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<publisher> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<publisher> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<publisher> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<publisher> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<publisher> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<publisher> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<publisher> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<publisher> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<publisher> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<publisher> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<publisher> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<publisher> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<publisher> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<publisher> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<publisher> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<publisher> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<publisher> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<publisher> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<publisher> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<publisher> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<publisher> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<publisher> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<publisher> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<publisher> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<publisher> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<publisher> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<publisher> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<publisher> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<publisher> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<publisher> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<publisher> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<publisher> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [publisher](#) element of the Text Encoding Initiative (TEI).

## <q>

(quoted) – Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use [<quote>](#) for block-level quotations.

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<q> → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<q> → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<q> → att.linked → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<q> → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<q> → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<q> → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<q> → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<q> → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<q> → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<q> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<q> → att.linkin → @sameas

**@synch** (optional) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<q> → att.linkin → @synch

**@translit** (optional) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<q> → att.lang → @translit

**@type** (optional) Allowed values are: "**spoken**" (*Representation of speech.*), "**thought**" (*Representation of thought, , internal monologue.*), "**written**" (*Quotation from a written source.*), "**soCalled**" (*Authorial distance.*), "**foreign**" (*Linguistically distinct.*), "**distinct**" (*Linguistically distinct.*), "**term**" (*Technical term.*), "**emph**" (*Rhetorically emphasized.*), "**mentioned**" (*Referring to itself, not its normal referent.*)

<q> → direct children → @type

**@xml:base** (optional) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<q> → att.basic → @xml:base

**@xml:id** (optional) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<q> → att.basic → att.id → @xml:id

**@xml:lang** (optional) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<q> → att.lang → @xml:lang

## Member of

[model.qLike](#) Groups elements related to highlighting which can appear at the phrase-level.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<q> → model.qLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<q> → model.qLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<q> → model.qLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<q> → model.qLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<q> → model.qLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<q> → model.qLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<q> → model.qLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<q> → model.qLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<q> → model.qLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<q> → model.qLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<q> → model.qLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<q> → model.qLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<q> → model.qLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<q> → model.qLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<q> → model.qLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<q> → model.qLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<q> → model.qLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<q> → model.qLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<q> → model.qLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<q> → model.qLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<q> → model.qLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<q> → model.qLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<q> → model.qLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<q> → model.qLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<q> → model.qLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<q> → model.qLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<q> → model.qLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<q> → model.qLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<q> → model.qLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<q> → model.qLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<q> → model.qLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<q> → model.qLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<q> → model.qLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<q> → model.qLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<q> → model.qLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<q> → model.qLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<q> → model.qLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<q> → model.qLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<q> → model.qLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<q> → model.qLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<q> → model.qLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<q> → model.qLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<q> → model.qLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<q> → model.qLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<q> → model.qLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<q> → model.qLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<q> → model.qLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<q> → model.qLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<q> → model.qLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<q> → model.qLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<q> → model.qLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<q> → model.qLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<q> → model.qLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<q> → model.qLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<q> → model.qLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<q> → model.qLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<q> → model.qLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<q> → model.qLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<q> → model.qLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<q> → model.qLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<q> → model.qLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<q> → model.qLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<q> → model.qLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<q> → model.qLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<q> → model.qLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<q> → model.qLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<q> → model.qLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<q> → model.qLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<q> → model.qLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<q> → model.qLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<q> → model.qLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<q> → model.qLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<q> → model.qLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<q> → model.qLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<q> → model.qLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<q> → model.qLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<q> → model.qLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<q> → model.qLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<q> → model.qLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<q> → model.qLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<q> → model.qLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<q> → model.qLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<pb>** An empty formatting element that forces text to begin on a new page.

<q> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<q> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<q> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

This element may be used for a variety of reasons including, but not limited to: direct speech or thought, technical terms or jargon, authorial distance, quotations from elsewhere, and passages that are mentioned but not used.

Do not confuse this element, used to capture phrase-level quotations, and [<quote>](#), intended for block quotations.

The model of this element is based on the [q](#) element of HTML and the [q](#) element of the Text Encoding Initiative (TEI).

# <quilisma>

Quilisma.

## Referenced in chapters

[6.3 Neume Notation and MEI](#), [6.4.1 Elements](#)

## Module

[MEI.neumes](#)

## Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<quilisma> → [att.quilisma.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<quilisma> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<quilisma> → [att.quilisma.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<quilisma> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<quilisma> → [att.common](#) → [att.linkin](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<quilisma> → [att.quilisma.vis](#) → [att.enclosingChars](#) → @enclose

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<quilisma> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<quilisma> → [att.common](#) → [att.linkin](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<quilisma> → [att.quilisma.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<quilisma> → [att.quilisma.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<quilisma> → att.quilisma.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to data.FONTSTYLE.

<quilisma> → att.quilisma.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to data.FONTWEIGHT.

<quilisma> → att.quilisma.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<quilisma> → att.quilisma.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<quilisma> → att.quilisma.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to data.HEXNUM.

<quilisma> → att.quilisma.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to data.URI.

<quilisma> → att.quilisma.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to data.MEASUREMENTSIGNED.

<quilisma> → att.quilisma.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<quilisma> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to data.MEASUREMENTTYPOGRAPHYSIGNED.

<quilisma> → att.quilisma.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either data.MEASUREMENTTYPOGRAPHYUNSIGNED or data.PERCENT.

<quilisma> → att.quilisma.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to data.STAFFLOC.

<quilisma> → att.quilisma.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<quilisma> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<quilisma> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from data.URI, separated by spaces.

<quilisma> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<quilisma> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<quilisma> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<quilisma> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<quilisma> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<quilisma> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<quilisma> → att.quilisma.vis → att.visibility → @visible

**@waves** (*optional*) Number of "crests" of a wavy line. Value is a positive integer.

<quilisma> → att.quilisma.vis → @waves

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<quilisma> → att.quilisma.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<quilisma> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<quilisma> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<quilisma> → att.quilisma.vis → att.xy → @y

## Member of

[model.neumeComponentModifierLike](#) Groups elements that modify neume components.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<quilisma> → [model.neumeComponentModifierLike](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<quilisma> → [model.neumeComponentModifierLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<quilisma> → [model.neumeComponentModifierLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<quilisma> → [model.neumeComponentModifierLike](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<quilisma> → [model.neumeComponentModifierLike](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<quilisma> → [model.neumeComponentModifierLike](#) → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<quilisma> → [model.neumeComponentModifierLike](#) → <nc>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<quilisma> → [model.neumeComponentModifierLike](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<quilisma> → [model.neumeComponentModifierLike](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<quilisma> → [model.neumeComponentModifierLike](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<quilisma> → [model.neumeComponentModifierLike](#) → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<quilisma> → [model.neumeComponentModifierLike](#) → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<quilisma> → [model.neumeComponentModifierLike](#) → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<quilisma> → [model.neumeComponentModifierLike](#) → <unclear>

## <quote>

(quoted material) – Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

### Referenced in chapters

[3.7.1 Title Pages](#), [9.2.3.1 Figure Captions and Descriptions](#), [9.2.6 Quotation](#)

### Module

[MEI.text](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<quote> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<quote> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<quote> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<quote> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<quote> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<quote> → [att.common](#) → [att.typed](#) → @type

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facsimile](#) attribute. Value is a decimal number.

<quote> → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<quote> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<quote> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<quote> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facsimile](#) attribute. Value is a decimal number.

<quote> → [att.xy](#) → @y

## Member of

[model.quoteLike](#) Groups elements used to directly contain quotations.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <add>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<quote> → model.quoteLike → model.textComponentLike → <annot>

**<argument>** Contains a formal list or prose description of topics addressed.

<quote> → model.quoteLike → model.textComponentLike → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <damage>

**<dedication>** Contains a dedicatory statement.

<quote> → model.quoteLike → model.textComponentLike → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<quote> → model.quoteLike → model.textComponentLike → <div>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<quote> → model.quoteLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <expan>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<quote> → model.quoteLike → model.textComponentLike → <figDesc>

**<history>** Provides a container for information about the history of a resource other than the circumstances of its creation.

<quote> → model.quoteLike → model.textComponentLike → <history>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<quote> → model.quoteLike → model.paracontentPart → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<quote> → model.quoteLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<quote> → model.quoteLike → model.textComponentLike → <li>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<quote> → model.quoteLike → model.paracontentPart → <p>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<quote> → model.quoteLike → model.textComponentLike → <pgDesc>

**<pgFoot>** A running footer.

<quote> → model.quoteLike → model.textComponentLike → <pgFoot>

**<pgHead>** A running header.

<quote> → model.quoteLike → model.textComponentLike → <pgHead>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<quote> → model.quoteLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<quote> → model.quoteLike → model.textComponentLike → model.rdgPart.text → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <sic>

**<sp>** Contains an individual speech in a performance text.

<quote> → model.quoteLike → <sp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <supplied>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<quote> → model.quoteLike → model.textComponentLike → <td>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<quote> → model.quoteLike → model.textComponentLike → <th>

**<titlePage>** Contains a transcription of the title page of a text.

<quote> → model.quoteLike → model.textComponentLike → <titlePage>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<quote> → model.quoteLike → model.textComponentLike → model.editTransPart.text → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<quote> → model.paracontentPart → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<quote> → model.paracontentPart → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<castList>** Contains a single cast list or dramatis personae.

<quote> → model.paracontentPart → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<quote> → model.paracontentPart → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<quote> → model.paracontentPart → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<quote> → model.paracontentPart → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<quote> → model.paracontentPart → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<eventList>** Contains historical information given as a sequence of significant past events.

<quote> → model.paracontentPart → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<quote> → model.paracontentPart → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<quote> → model.paracontentPart → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<quote> → model.paracontentPart → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<quote> → model.paracontentPart → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<quote> → model paracontentPart → model.transcriptionLike → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<quote> → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<quote> → model paracontentPart → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<quote> → model paracontentPart → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<quote> → model paracontentPart → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<quote> → model paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<quote> → model.paracontentPart → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<quote> → model.paracontentPart → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<sp>** Contains an individual speech in a performance text.

<quote> → direct children → <sp>

**<stack>** An inline table with a single column.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<quote> → model.paracontentPart → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<quote> → model.paracontentPart → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<quote> → model.paracontentPart → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<quote> → model.paracontentPart → model.tableLike → <table>

**<term>** Keyword or phrase which describes a resource.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<quote> → model.paracontentPart → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<quote> → model.paracontentPart → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The source for the quote may be included in a <bibl> sub-element.

Do not confuse this element, used to capture block-level quotations, and <q>, intended for inline quotations.

The model of this element is based on the [quote](#) element of the Text Encoding Initiative (TEI) and the [quote](#) element of the Encoded Archival Description (EAD).

## <rdg>

(reading) – Contains a single reading within a textual variation.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [11.1.1 General Usage](#), [11.1.2 Variants in Musical Content](#), [11.1.4 Nesting Apparati](#)

### Module

[MEI.critapp](#)

### Attributes

**@cause** (*optional*) Classifies the cause for the variant reading, according to any appropriate typology of possible origins. Value is a [NMTOKEN](#).

<rdg> → [att.crit](#) → @cause

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<rdg> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<rdg> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<rdg> → [att.common](#) → [att.linkin](#) → @corresp

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<rdg> → [att.targetEval](#) → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<rdg> → [att.common](#) → [att.linkin](#) → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a [<hand>](#) element declared in the header. Value conforms to [data.URI](#).

<rdg> → [att.crit](#) → [att.handIdent](#) → @hand

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<rdg> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<rdg> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.linking → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<rdg> → att.crit → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.crit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<rdg> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<rdg> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<rdg> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<rdg> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<rdg> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<rdg> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<rdg> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<rdg> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<rdg> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(rdg isn't member of any model class)

## Contained By

**<app>** (*apparatus*) – Contains one or more alternative encodings.

<rdg> → elements having rdg as direct children → <app>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<rdg> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<rdg> → [model.layerPart](#) → [model.layerPart.mensuralAndNeumes](#) → [model.noteModifierLike](#) → <accid>

**<add>** Marks an addition to the text.

<rdg> → [model.transcriptionLike](#) → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<rdg> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<rdg> → [model.graphicPrimitiveLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<rdg> → [model.rdgPart](#) → [model.rdgPart.text](#) → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<app>** (*apparatus*) – Contains one or more alternative encodings.

<rdg> → [model.appLike](#) → <app>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<rdg> → [model.rdgPart](#) → [model.rdgPart.music](#) → [model.controlEventLike.cmn](#) → <arpeg>

**<artic>** An indication of how to play a note or chord.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<rdg> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<rdg> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<rdg> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<rdg> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<rdg> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<rdg> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<rdg> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<rdg> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<rdg> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<rdg> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<rdg> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<rdg> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<rdg> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<rdg> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<rdg> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<expansion>** Indicates how a section may be programmatically expanded into its 'through-composed' form.

<rdg> → direct children → <expansion>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<rdg> → model.fLike → <f>

**<ftrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <ftrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<rdg> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName →

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<rdg> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<hispanTick>** Hispanic tick.

<rdg> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keySig>** Written key signature.

<rdg> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<rdg> → model.rdgPart → model.rdgPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<rdg> → model.graphicPrimitiveLike → <line>

**<liquefent>** Liquescent.

<rdg> → model.neumeComponentModifierLike → <liquefent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<rdg> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<rdg> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<rdg> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<rdg> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<rdg> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<rdg> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<rdg> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<rdg> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<rdg> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<rdg> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<rdg> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<rdg> → model.rdgPart → model.rdgPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<rdg> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repo>

**<rest>** A non-sounding event found in the source being transcribed.

<rdg> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<rdg> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<rdg> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<rdg> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<rdg> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<rdg> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<rdg> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<rdg> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.renderLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<rdg> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<rdg> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<rdg> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<rdg> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<rdg> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<rdg> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<rdg> → model.rdgPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<rdg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<rdg> → model.rdgPart → model.rdgPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<rdg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<rdg> → model.rdgPart → model.rdgPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<rdg> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<rdg> → model.rdgPart → model.rdgPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<rdg> → model.rdgPart → model.rdgPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<rdg> → model.rdgPart → model.rdgPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Since a reading can be a multi-measure section, the **<scoreDef>** element is allowed so that a reading may have its own meta-data without incurring the overhead of child **<section>** elements. The **<app>** sub-element is permitted in order to allow nested sub-variants.

In no case should **<rdg>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<rdg>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the [rdg](#) element of the Text Encoding Initiative (TEI).

## <recipient>

The name of the individual(s), institution(s) or organization(s) receiving correspondence.

### Referenced in chapters

[9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<recipient> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<recipient> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<recipient> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<recipient> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<recipient> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<recipient> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<recipient> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<recipient> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<recipient> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<recipient> → [att.lang](#) → @xml:lang

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<recipient> → [model.biblPart](#) → <bibl>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<recipient> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<recipient> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<recipient> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<recipient> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<recipient> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<recipient> → model.textPhraseLike.limited → model.msinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<recipient> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<recipient> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<recipient> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<recipient> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<recipient> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<recipient> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<recipient> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<recipient> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<recipient> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<recipient> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<recipient> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<recipient> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<recipient> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<recipient> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<recipient> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<recipient> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<recipient> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<recipient> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<recipient> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<recipient> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<recipient> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<recipient> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<recipient> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<recipient> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<recipient> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<recipient> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<recipient> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<recipient> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<recipient> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<recipient> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<recipient> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<recipient> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<recipient> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<recipient> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<recipient> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<recipient> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<recipient> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<recipient> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<recipient> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<recipient> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<recipient> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<recipient> → model.textPhraseLike.limited → model.dimLike → <width>

# <recording>

A recorded performance.

## Referenced in chapters

[12.2.1 Overview](#)

## Module

[MEI.performance](#)

## Attributes

**@begin** (*optional*) Specifies a point where the relevant content begins. A numerical value must be less and a time value must be earlier than that given by the end attribute. Value is plain text.

<recording> → [att.mediaBounds](#) → @begin

**@betype** (*optional*) Type of values used in the begin/end attributes. The begin and end attributes can only be interpreted meaningfully in conjunction with this attribute. Value conforms to [data.BETYPE](#).

<recording> → [att.mediaBounds](#) → @betype

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<recording> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<recording> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<recording> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<recording> → [att.dataPointing](#) → @data

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<recording> → [att.metadataPointing](#) → @decls

**@end** (*optional*) Specifies a point where the relevant content ends. If not specified, the end of the content is assumed to be the end point. A numerical value must be greater and a time value must be later than that given by the begin attribute. Value is plain text.

<recording> → [att.mediaBounds](#) → @end

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<recording> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<recording> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<recording> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.linked → @sameas

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<recording> → att.startId → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<recording> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<recording> → att.common → att.type → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<recording> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<recording> → att.common → att.basic → att.id → @xml:id

## Member of

(recording isn't member of any model class)

## Contained By

[<performance>](#) A presentation of one or more musical works.

<recording> → elements having recording as direct children → <performance>

## May Contain

**<avFile>** References an external digital audio or video file.

<recording> → direct children → <avFile>

**<clip>** Defines a time segment of interest within a recording or within a digital audio or video file.

<recording> → direct children → <clip>

**<when>** Indicates a point in time either absolutely (using the absolute attribute), or relative to another when element (using the since, interval and inttype attributes).

<recording> → direct children → <when>

## Remarks

The startid attribute may be used to hold a reference to the first feature occurring in this performance. This element is analogous to the <surface> element in the facsimile module.

## Constraints

When @begin or @end is used, @betype should be present.

## Declaration

## <ref>

(reference) – Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

### Referenced in chapters

[13.2.1 Pointers and References](#), [13.2.2 Specifying Link Elements](#)

### Module

[MEI.ptrref](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<ref> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<ref> → att.metadataPointing → @decls

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<ref> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<ref> → att.common → att.labelled → @label

**@mimetype** (*optional*) Specifies the applicable MIME (multimedia internet mail extension) type. The value should be a valid MIME media type defined by the Internet Engineering Task Force in RFC 2046. Value is plain text.

<ref> → att.internetMedia → @mimetype

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<ref> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<ref> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<ref> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<ref> → att.pointing → @targettype

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<ref> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<ref> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<ref> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<ref> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "new" (*Open in a new window.*), "replace" (*Load the referenced resource in the same window.*), "embed" (*Embed the referenced resource at the point of the link.*), "none" (*Do not permit traversal to the referenced resource.*), "other" (*Behavior other than permitted by the other values of this attribute.*)

<ref> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<ref> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<ref> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<ref> → att.lang → @xml:lang

## Member of

[model.locrefLike](#) Groups elements used for purposes of location and reference.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<ref> → model.locrefLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<ref> → model.locrefLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<ref> → model.locrefLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<application>** Provides information about an application which has acted upon the current document.

<ref> → model.locrefLike → <application>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<ref> → model.locrefLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<ref> → model.locrefLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<ref> → model.locrefLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<ref> → model.locrefLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<ref> → model.locrefLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<ref> → model.locrefLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<ref> → model.locrefLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <contentitem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<ref> → model.locrefLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<ref> → model.locrefLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<ref> → model.locrefLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<ref> → model.locrefLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<ref> → model.locrefLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<ref> → model.locrefLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<ref> → model.locrefLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<ref> → model.locrefLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

**<dynam>** or <repeatMark>.

<ref> → model.locrefLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<ref> → model.locrefLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<ref> → model.locrefLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<ref> → model.locrefLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<ref> → model.locrefLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<ref> → model.locrefLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<ref> → model.locrefLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<ref> → model.locrefLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<ref> → model.locrefLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<ref> → model.locrefLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<ref> → model.locrefLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<ref> → model.locrefLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<ref> → model.locrefLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<ref> → model.locrefLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<ref> → model.locrefLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<ref> → model.locrefLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<ref> → model.locrefLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<ref> → model.locrefLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<ref> → model.locrefLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<ref> → model.locrefLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<ref> → model.locrefLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<ref> → model.locrefLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<ref> → model.locrefLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<ref> → model.locrefLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<ref> → model.locrefLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<ref> → model.locrefLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<ref> → model.locrefLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgDesc>** Contains a brief prose description of the appearance or description of the content of a physical page.

<ref> → model.locrefLike → <pgDesc>

**<pgFoot>** A running footer.

<ref> → model.locrefLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<ref> → model.locrefLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<ref> → model.locrefLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<ref> → model.locrefLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<ref> → model.locrefLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<ref> → model.locrefLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<ref> → model.locrefLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<ref> → model.locrefLike → model.textPhraseLike.limited → <roleDesc>

**< roleName >** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<ref> → model.locrefLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<ref> → model.locrefLike → <series>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<ref> → model.locrefLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<ref> → model.locrefLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<ref> → model.locrefLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<ref> → model.locrefLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<ref> → model.locrefLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<ref> → model.locrefLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<ref> → model.locrefLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<ref> → model.locrefLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<ref> → model.locrefLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<ref> → model.locrefLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<ref> → model.locrefLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<ref> → model.locrefLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<ref> → model.locrefLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<ref> → model.locrefLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<ref> → model.locrefLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicpee>** Entity to whom a creative work is formally offered.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <dedicpee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<pb>** An empty formatting element that forces text to begin on a new page.

<ref> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<ref> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Unlike the **<ptr>** element, **<ref>** may contain text and sub-elements to describe the destination.

The model of this element is based on the **ref** element of the Encoded Archival Description (EAD) and the **ref** element of the Text Encoding Initiative (TEI).

## <refrain>

Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

### Module

[MEI.lyrics](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<refrain> → [att.refrain.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<refrain> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @fontweight

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<refrain> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<refrain> → [att.refrain.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<refrain> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @next

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<refrain> → [att.refrain.vis](#) → [att.placeRelStaff](#) → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<refrain> → [att.common](#) → [att.linked](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<refrain> → [att.refrain.vis](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<refrain> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<refrain> → [att.common](#) → [att.type](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<refrain> → [att.refrain.vis](#) → [att.visualOffset.vo](#) → @vo

**@voltasym** (*optional*) Specifies the symbol used to group lyrics. Allowed values are: "brace" (*Curved symbol, , {,}*), "bracket" (*Square symbol, , [, but with curved/angled top and bottom segments.*), "bracketsq" (*Square symbol, , [, with horizontal top and bottom segments.*), "line" (*Line symbol, , |, (wide) line without top and bottom curved/horizontal segments.*), "none" (*Grouping symbol missing.*))

<refrain> → [att.refrain.vis](#) → [att.voltaGroupingSym](#) → @voltasym

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<refrain> → [att.refrain.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<refrain> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid `xml:id`.

<refrain> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose `id` attribute is the same as the language tag's value. Value is a [language](#).

<refrain> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<refrain> → [att.refrain.vis](#) → [att.xy](#) → @y

## Member of

[model.verseLike](#) Groups elements that contain a lyric verse.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<refrain> → [model.verseLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<refrain> → [model.verseLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<refrain> → [model.verseLike](#) → <chord>

**<corr>** Contains the correct form of an apparent erroneous passage.

<refrain> → [model.verseLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<refrain> → model.verseLike → model.rdgPart.music → model.rdgPart → <lem>

**<note>** A single pitched event.

<refrain> → model.verseLike → <note>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<refrain> → model.verseLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<refrain> → model.verseLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<refrain> → model.verseLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<app>** (apparatus) – Contains one or more alternative encodings.

<refrain> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<refrain> → model.editLike → <choice>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<refrain> → direct children → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<refrain> → direct children → <dynam>

**<lb>** An empty formatting element that forces text to begin on a new line.

<refrain> → `model.lbLike` → <lb>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<refrain> → direct children → <space>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<refrain> → `model.editLike` → <subst>

**<syl>** Individual lyric syllable.

<refrain> → `model.sylLike` → <syl>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<refrain> → direct children → <tempo>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<refrain> → direct children → <volta>

## Remarks

The **<lb>** element is allowed here in order to facilitate karaoke applications. The func attribute on **<lb>** may be used to distinguish true line endings from those of line groups for these applications.

## <reg>

(regularization) – Contains material which has been regularized or normalized in some sense.

### Referenced in chapters

[4.4.3.1 Special Cases](#), [11.2 Editorial Markup](#), [11.2.3 Regularization and Normalization](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<reg> → att.extent → att.ranging → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<reg> → att.extent → att.ranging → @atmost

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<reg> → att.authorized → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<reg> → att.authorized → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<reg> → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.typed → att.classed → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<reg> → att.authorized → att.canonical → @codedval

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<reg> → att.extent → att.ranging → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<reg> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "internal" (*There is evidence within the document to support the intervention.*), "external" (*There is evidence outside the document to support the intervention.*), "conjecture" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<reg> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<reg> → att.extent → @extent

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<reg> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<reg> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<reg> → att.extent → att.ranging → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<reg> → att.common → att.numberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linked → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<reg> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<reg> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<reg> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<reg> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "[byte](#)" (*Byte*.), "[char](#)" (*Character*.), "[cm](#)" (*Centimeter*.), "[deg](#)" (*Degree*.), "[in](#)" (*Inch*.), "[issue](#)" (*Serial issue*.), "[ft](#)" (*Foot*.), "[m](#)" (*Meter*.), "[mm](#)" (*Millimeter*.), "[page](#)" (*Page*.), "[pc](#)" (*Pica*.), "[pt](#)" (*Point*.), "[px](#)" (*Pixel*.), "[rad](#)" (*Radian*.), "[record](#)" (*Record*.), "[vol](#)" (*Serial volume*.), "[vu](#)" (*MEI virtual unit*.)

<reg> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<reg> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<reg> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<reg> → att.lang → @xml:lang

## Member of

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<reg> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<reg> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<reg> → model.transcriptionLike → <addrName>

**<addrLine>** Single line of a postal address.

<reg> → model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<reg> → model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<reg> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<reg> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<reg> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<reg> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<reg> → model.transcriptionLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<reg> → model.choicePart → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<reg> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<reg> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<reg> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<reg> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<reg> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<reg> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<reg> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<reg> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<reg> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<reg> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<reg> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<reg> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<reg> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<reg> → model.transcriptionLike → model.paraccontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<reg> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<reg> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<reg> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<reg> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<reg> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<reg> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<reg> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<reg> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<reg> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<reg> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<reg> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<reg> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<reg> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<reg> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<reg> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<reg> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<reg> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<reg> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<reg> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<reg> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<reg> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<reg> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<reg> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<reg> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<reg> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<reg> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<reg> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<reg> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<reg> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<reg> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<reg> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<reg> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<reg> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<reg> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<reg> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<reg> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<reg> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<reg> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<reg> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<reg> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<reg> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<reg> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<reg> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<reg> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<reg> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<reg> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<reg> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<reg> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<reg> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<reg> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<reg> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<reg> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<reg> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<reg> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<reg> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<reg> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<reg> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<reg> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<reg> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<reg> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<reg> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<reg> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<reg> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<reg> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<reg> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<reg> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<reg> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<reg> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<reg> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<reg> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<reg> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<reg> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<reg> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<reg> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<reg> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<reg> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<reg> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<reg> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<reg> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<reg> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<reg> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<reg> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<reg> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<reg> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<reg> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<reg> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<reg> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<reg> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<reg> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<reg> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<reg> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>,

<dynam> or <repeatMark>.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<reg> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<reg> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<reg> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<reg> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<reg> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.ge

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<reg> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <heraldry>

**<hispanTick>** Hispanic tick.

<reg> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<reg> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<reg> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<reg> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<reg> → model.graphicPrimitiveLike → <line>

**<liqueficient>** Liquescent.

<reg> → model.neumeComponentModifierLike → <liqueficient>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<reg> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<reg> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<reg> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<reg> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<reg> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<reg> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<reg> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<reg> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<reg> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<reg> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<reg> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<reg> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<reg> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike

**<rest>** A non-sounding event found in the source being transcribed.

<reg> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<reg> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<reg> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<reg> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<reg> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

- <settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>
- <sic>** Contains apparently incorrect or inaccurate material.  
<reg> → model.transcriptionLike → <sic>
- <signatures>** Provides a description of the leaf or quire signatures found within a codex.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <signatures>
- <signifLet>** Significantive letter(s).  
<reg> → model.neumeModifierLike → <signifLet>
- <slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.  
<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>
- <sp>** Contains an individual speech in a performance text.  
<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>
- <space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.  
<reg> → model.layerPart → model.eventLike → <space>
- <stack>** An inline table with a single column.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>
- <staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.  
<reg> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>
- <staffDef>** Container for staff meta-information.  
<reg> → model.sectionPart → model.staffDefLike → <staffDef>
- <staffGrp>** A group of bracketed or braced staves.  
<reg> → model.staffGrpLike → <staffGrp>
- <stageDir>** Contains any kind of stage direction within a dramatic text or fragment.  
<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>
- <stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <stamp>
- <street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>
- <strophicus>** Strophicus.  
<reg> → model.neumeComponentModifierLike → <strophicus>
- <styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.  
<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>
- <subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.  
<reg> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<reg> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<reg> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<reg> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<reg> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<reg> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<reg> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<reg> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<reg> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<reg> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<reg> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

It is possible to identify the individual responsible for the regularization, and, using the **<choice>** and **<orig>** elements, to provide both original and regularized readings. The editor(s) responsible for asserting the regularized material may be recorded in the resp attribute. The value of resp must point to one or more identifiers declared in the document header. The cert attribute signifies the degree of certainty ascribed to the regularized reading.

In no case should **<reg>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<reg>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the **reg** element of the Text Encoding Initiative (TEI).

## <region>

Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<region> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<region> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<region> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<region> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<region> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<region> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<region> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<region> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<region> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<region> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<region> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<region> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<region> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<region> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<region> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<region> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<region> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<region> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<region> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<region> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<region> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<region> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<region> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMTOKEN](#), separated by spaces.

<region> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<region> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<region> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<region> → att.lang → @xml:lang

## Member of

[model.geogNamePart](#) Groups elements which form part of a geographic name.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<region> → model.geogNamePart → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<region> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<region> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<region> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<region> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<region> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<region> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<region> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<region> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<region> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<region> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<region> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<region> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<region> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.renderLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<region> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<region> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<region> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<region> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<region> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [region](#) element of the Text Encoding Initiative (TEI).

## <reh>

(rehearsal mark) – In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

### Referenced in chapters

[4.3.9.2 Rehearsal marks](#)

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<reh> → [att.reh.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<reh> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linked](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @fontweight

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<reh> → [att.reh.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<reh> → [att.common](#) → [att.labelled](#) → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPGRAPHYSIGNED](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<reh> → [att.reh.vis](#) → [att.typography](#) → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<reh> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linked](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<reh> → [att.reh.log](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<reh> → [att.reh.log](#) → [att.partIdent](#) → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<reh> → [att.reh.vis](#) → [att.placementRelStaff](#) → @place

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<reh> → [att.reh.log](#) → [att.staffId](#) → @staff

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<reh> → [att.reh.log](#) → [att.startId](#) → @startid

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<reh> → [att.common](#) → [att.linking](#) → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<reh> → [att.reh.vis](#) → [att.visualOffset](#) → [att.visualOffset.to](#) → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<reh> → [att.lang](#) → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<reh> → [att.reh.log](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<reh> → [att.reh.log](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<reh> → [att.reh.log](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<reh> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<reh> → [att.reh.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<reh> → [att.reh.log](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `fac` attribute. Value is a decimal number.

<reh> → [att.reh.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<reh> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<reh> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<reh> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<reh> → [att.reh.vis](#) → [att.xy](#) → @y

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <abbr>

**<add>** Marks an addition to the text.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<reh> → [model.controlEventLike.cmn](#) → [model.rdgPart.music](#) → [model.rdgPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<reh> → [model.controlEventLike.cmn](#) → [model.measurePart](#) → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<reh> → [model.controlEventLike.cmn](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<reh> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<reh> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<reh> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<reh> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<reh> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<reh> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<lb>** An empty formatting element that forces text to begin on a new line.

<reh> → model.lbLike → <lb>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<reh> → model.rendLike → <rend>

**<stack>** An inline table with a single column.

<reh> → model.rendLike → <stack>

## Remarks

It may also be called a "rehearsal figure", or when numbers are used instead of letters, a "rehearsal number". See Read, p. 443. <reh> uses a subset of model.textPhraseLike.limited.

## <relatedItem>

(related item) – Contains or references another bibliographic item which is related to the present one.

### Referenced in chapters

[3.5.4 RelatedItem vs. FRBR](#), [9.2.12 Bibliographic Citations and References](#), [9.2.12.1 Related Items](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<relatedItem> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<relatedItem> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<relatedItem> → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<relatedItem> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<relatedItem> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.linked → @prev

**@rel** (*required*) Describes the relationship between the entity identified by the <relatedItem> element and the resource described in the parent element, i.e., <bibl>, <source> or <relatedItem>. Value conforms to [data.MODSRELATIONSHIP](#).

<relatedItem> → direct children → @rel

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<relatedItem> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<relatedItem> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<relatedItem> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<relatedItem> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<relatedItem> → [att.pointing](#) → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<relatedItem> → [att.pointing](#) → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<relatedItem> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<relatedItem> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<relatedItem> → [model.biblPart](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<relatedItem> → elements having relatedItem as direct children → <biblStruct>

## May Contain

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<relatedItem> → [model.biblLike](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<relatedItem> → [model.biblLike](#) → <biblStruct>

## <relation>

Describes a relationship or linkage amongst entities.

### Referenced in chapters

[3.5.3 FRBR Relationships](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<relation> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<relation> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<relation> → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<relation> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<relation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<relation> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<relation> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<relation> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<relation> → [att.datable](#) → @enddate

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<relation> → att.targetEval → @evaluate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<relation> → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linkin → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<relation> → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<relation> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<relation> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linkin → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<relation> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<relation> → att.datable → @notbefore

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<relation> → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linking → @prev

**@rel** (*required*) Describes the relationship between the entities identified by the plist and target attributes. Value conforms to [data.RELATIONSHIP](#).

<relation> → direct children → @rel

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linking → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<relation> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<relation> → att.common → att.linking → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<relation> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMOKEN](#).

<relation> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<relation> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<relation> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<relation> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<relation> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<relation> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid xml:id.

<relation> → att.common → att.basic → att.id → @xml:id

## Member of

[model.relationLike](#) Collects elements that express a relationship.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<relation> → model.relationLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<relation> → model.relationLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<relation> → model.relationLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<relation> → model.relationLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<relation> → model.relationLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<relation> → model.relationLike → model.textPhraseLike.limited → <author>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<relation> → model.relationLike → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<relation> → model.relationLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<relation> → model.relationLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<relation> → model.relationLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<relation> → model.relationLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<relation> → model.relationLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<relation> → model.relationLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<relation> → model.relationLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<relation> → model.relationLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<relation> → model.relationLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<relation> → model.relationLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<relation> → model.relationLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<relation> → model.relationLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<relation> → model.relationLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<relation> → model.relationLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<relation> → model.relationLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<relation> → model.relationLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<relation> → model.relationLike → model.textPhraseLike.limited → <editor>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<relation> → model.relationLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<relation> → model.relationLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<relation> → model.relationLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<relation> → model.relationLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<relation> → model.relationLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<relation> → model.relationLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

<relation> → model.relationLike → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<relation> → model.relationLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<relation> → model.relationLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<relation> → model.relationLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<relation> → model.relationLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<relation> → model.relationLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<relation> → model.relationLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<relation> → model.relationLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<relation> → model.relationLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<relation> → model.relationLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<relation> → model.relationLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<relation> → model.relationLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<relation> → model.relationLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<relation> → model.relationLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<relation> → model.relationLike → model.textPhraseLike.limited → <lyricist>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<relation> → model.relationLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<relation> → model.relationLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.  
 <relation> → model.relationLike → <oStaff>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<relation> → model.relationLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<relation> → model.relationLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<relation> → model.relationLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<relation> → model.relationLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<relation> → model.relationLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<relation> → model.relationLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<relation> → model.relationLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<relation> → model.relationLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<relation> → model.relationLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<relation> → model.relationLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<relationList>** Gathers relation elements.

<relation> → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<relation> → model.relationLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<relation> → model.relationLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<relation> → model.relationLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<relation> → model.relationLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<relation> → model.relationLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<score>** Full score view of the musical content.

<relation> → model.relationLike → <score>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<relation> → model.relationLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<relation> → model.relationLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <sealDesc>

**<section>** Segment of music data.

<relation> → model.relationLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<relation> → model.relationLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<relation> → model.relationLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<relation> → model.relationLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<relation> → model.relationLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<relation> → model.relationLike → model.textPhraseLike.limited → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<relation> → model.relationLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<relation> → model.relationLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<relation> → model.relationLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<relation> → model.relationLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<relation> → model.relationLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<relation> → model.relationLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<relation> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<relation> → model.relationLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<relation> → model.relationLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<relation> → model.relationLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<relation> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<relation> → model.relationLike → model.textPhraseLike.limited → <width>

## May Contain

– (<relation> may not have child elements)

## Remarks

The plist and target attributes identify the participants in a relationship, while the rel attribute describes the nature of their relationship. A mutual relationship can be described using only the plist attribute – the target attribute is not necessary. In a non-mutual relationship, plist identifies the entities pointed "from", while target specifies the entities pointed "to". If the target attribute is present, but the plist is not, the relationship is presumed to exist between the parent of the current relation element and the entities identified by target.

## Constraints

Within work, expression, source, or item, the value of the rel attribute must match one of the following:  
hasAbridgement, isAbridgementOf, hasAdaptation, isAdaptationOf, hasAlternate, isAlternateOf,  
hasArrangement, isArrangementOf, hasComplement, isComplementOf, hasEmbodiment,  
isEmbodimentOf, hasExemplar, isExemplarOf, hasImitation, isImitationOf, hasPart, isPartOf, hasRealization,  
isRealizationOf, hasReconfiguration, isReconfigurationOf, hasReproduction, isReproductionOf, hasRevision,  
isRevisionOf, hasSuccessor, isSuccessorOf, hasSummarization, isSummarizationOf, hasSupplement,  
isSupplementOf, hasTransformation, isTransformationOf, hasTranslation, isTranslationOf  
Within work, expression, source or item, the target attribute must be present.

## Declaration

## <relationList>

Gathers relation elements.

### Referenced in chapters

[3.5.3 FRBR Relationships](#), [3.6.13 Work Relationships](#), [3.7 Encoding Sources in MEI](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<relationList> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<relationList> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<relationList> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<relationList> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<relationList> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<relationList> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<relationList> → att.common → att.basic → att.id → @xml:id

## Member of

[model.relationLike](#) Collects elements that express a relationship.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<relationList> → model.relationLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<relationList> → model.relationLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<relationList> → model.relationLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<relationList> → model.relationLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<relationList> → model.relationLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<relationList> → model.relationLike → model.textPhraseLike.limited → <author>

**<back>** Contains any appendixes, advertisements, indexes, etc. following the main body of a musical text.

<relationList> → model.relationLike → <back>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<relationList> → model.relationLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<relationList> → model.relationLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<relationList> → model.relationLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<relationList> → model.relationLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<relationList> → model.relationLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<relationList> → model.relationLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<relationList> → model.relationLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<relationList> → model.relationLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<relationList> → model.relationLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<relationList> → model.relationLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<relationList> → model.relationLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<relationList> → model.relationLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<relationList> → model.relationLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<relationList> → model.relationLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<relationList> → model.relationLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<relationList> → model.relationLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<relationList> → model.relationLike → model.textPhraseLike.limited → <editor>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<relationList> → model.relationLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<relationList> → model.relationLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<expression>** Intellectual or artistic realization of a work.

<relationList> → elements having relationList as direct children → <expression>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<relationList> → model.relationLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<relationList> → model.relationLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<relationList> → model.relationLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<relationList> → model.relationLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<front>** Bundles prefatory text found before the start of the musical text.

<relationList> → model.relationLike → <front>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<relationList> → model.relationLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<relationList> → model.relationLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<relationList> → model.relationLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<relationList> → model.relationLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<relationList> → model.relationLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<relationList> → model.relationLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<item>** Single instance or exemplar of a source/manifestation.

<relationList> → elements having relationList as direct children → <item>

**<I>** Contains a single line of text within a line group.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<relationList> → model.relationLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<relationList> → model.relationLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<relationList> → model.relationLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<relationList> → model.relationLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<relationList> → model.relationLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<relationList> → model.relationLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<relationList> → model.relationLike → model.textPhraseLike.limited → <lyricist>

**<manifestation>** A bibliographic description of a physical embodiment of an expression of a work.

<relationList> → elements having relationList as direct children → <manifestation>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<relationList> → model.relationLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<relationList> → model.relationLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<relationList> → model.relationLike → <oStaff>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<relationList> → model.relationLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<relationList> → model.relationLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<relationList> → model.relationLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<relationList> → model.relationLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<relationList> → model.relationLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<relationList> → model.relationLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<relationList> → model.relationLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<relationList>** Gathers relation elements.

<relationList> → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<relationList> → model.relationLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<relationList> → model.relationLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<relationList> → model.relationLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<relationList> → model.relationLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<score>** Full score view of the musical content.

<relationList> → model.relationLike → <score>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<relationList> → model.relationLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <sealDesc>

**<section>** Segment of music data.

<relationList> → model.relationLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<relationList> → model.relationLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<relationList> → model.relationLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<relationList> → model.relationLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<relationList> → model.relationLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<relationList> → model.relationLike → model.textPhraseLike.limited → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<relationList> → model.relationLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<relationList> → model.relationLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<relationList> → model.relationLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<relationList> → model.relationLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<relationList> → model.relationLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<relationList> → model.relationLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<relationList> → model.relationLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<relationList> → model.relationLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<relationList> → model.relationLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<relationList> → model.relationLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<relationList> → model.relationLike → model.textPhraseLike.limited → <width>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<relationList> → elements having relationList as direct children → <work>

### May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<relationList> → model.headLike → <head>

**<relation>** Describes a relationship or linkage amongst entities.

<relationList> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<relationList> → model.relationLike → <relationList>

### Declaration

```
<elementSpec ident="relationList" module="MEI.shared">
  <desc xml:lang="en">Gathers relation elements.</desc>
  <classes>
    <memberOf key="att.common"/>
    <memberOf key="model.relationLike"/>
  </classes>
  <content>
    <rng:zeroOrMore>
      <rng:ref name="model.headLike"/>
    </rng:zeroOrMore>
    <rng:zeroOrMore>
      <rng:ref name="model.relationLike"/>
    </rng:zeroOrMore>
  </content>
</elementSpec>
```

## <rend>

(render) – A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

### Referenced in chapters

[3.7.1 Title Pages](#), [4.3.9.2 Rehearsal marks](#), [9.2.2 Text Rendition](#), [10.2.1.3.1 Figured Bass](#)

### Module

[MEI.shared](#)

### Attributes

**@altrend** (*optional*) Used to extend the values of the rend attribute. One or more values of datatype [NMOKEN](#), separated by spaces.

<rend> → [att.textRendition](#) → @altrend

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<rend> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<rend> → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<rend> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<rend> → [att.common](#) → [att.linked](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<rend> → [att.common](#) → [att.linked](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<rend> → [att.typography](#) → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<rend> → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<rend> → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<rend> → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<rend> → [att.typography](#) → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<rend> → att.extSym.auth → @glyph.auth

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<rend> → att.extSym.auth → @glyph.uri

**@halign** (*optional*) Records horizontal alignment. Value conforms to [data.HORIZONTALALIGNMENT](#).

<rend> → att.horizontalAlign → @halign

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<rend> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<rend> → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<rend> → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<rend> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rend> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<rend> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rend> → att.common → att.linked → @prev

**@rend** (*optional*) Captures the appearance of the element's contents using MEI-defined descriptors. One or more values from [data.TEXTRENDITION](#), separated by spaces.

<rend> → att.textRendition → @rend

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<rend> → att.common → att.responsibility → @resp

**@rotation** (*optional*) A positive value for rotation rotates the text in a counter-clockwise fashion, while negative values produce clockwise rotation. Value conforms to [data.DEGREES](#).

<rend> → direct children → @rotation

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<rend> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<rend> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<rend> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<rend> → [att.common](#) → [att.typed](#) → @type

**@valign** (*optional*) Records vertical alignment. Value conforms to [data.VERTICALALIGNMENT](#).

<rend> → [att.verticalAlign](#) → @valign

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<rend> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<rend> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<rend> → [att.lang](#) → @xml:lang

**@xml:space** (*optional*) Allows one to signal to an application whether an element's white space is "significant". The behavior of xml:space cascades to all descendant elements, but it can be turned off locally by setting the xml:space attribute to the value "default". Allowed values are: "**default**" (*Allows the application to handle white space as necessary. Not including an xml:space attribute produces the same result as using the default value.*), "**preserve**" (*Instructs the application to maintain white space "as-is", suggesting that it might have meaning.*)

<rend> → [att.whitespace](#) → @xml:space

## Member of

[model.renderLike](#) Groups elements that mark typographical features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<rend> → [model.renderLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<rend> → model.renderLike → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<rend> → model.renderLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

<rend> → model.renderLike → <altId>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<rend> → model.renderLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<rend> → model.renderLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<rend> → model.renderLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<rend> → model.renderLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<rend> → model.renderLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<rend> → model.renderLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<rend> → model.renderLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<rend> → model.renderLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<rend> → model.renderLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<rend> → model.renderLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<rend> → model.renderLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<rend> → model.renderLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<rend> → model.renderLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<rend> → model.renderLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<rend> → model.renderLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<rend> → model.renderLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<rend> → model.renderLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<rend> → model.renderLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<rend> → model.renderLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<rend> → model.renderLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<rend> → model.renderLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<rend> → model.renderLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<rend> → model.renderLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<rend> → model.renderLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<rend> → model.renderLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<rend> → model.renderLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<rend> → model.renderLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<rend> → model.renderLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<rend> → model.renderLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<rend> → model.renderLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<rend> → model.renderLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<rend> → model.renderLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<rend> → model.renderLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<rend> → model.renderLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<rend> → model.renderLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<rend> → model.renderLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<rend> → model.renderLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<rend> → model.renderLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<rend> → model.renderLike → model.textPhraseLike.limited → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<rend> → elements having rend as direct children → <locus>

**<lyricist>** Person or organization who is a writer of the text of a song.

<rend> → model.renderLike → model.textPhraseLike.limited → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on <measure> does not adequately capture the appearance or placement of the measure number/label.

<rend> → model.renderLike → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<rend> → model.renderLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<rend> → model.renderLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<rend> → model.renderLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<rend> → model.renderLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<rend> → model.renderLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<rend> → model.renderLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<rend> → model.renderLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<rend> → model.renderLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<rend> → model.renderLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<rend> → model.renderLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<rend> → model.renderLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<rend> → model.renderLike → <reh>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<rend> → model.renderLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<rend> → model.renderLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<rend> → model.renderLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<rend> → model.renderLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<rend> → model.renderLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<rend> → model.renderLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<rend> → model.renderLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<rend> → model.renderLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<rend> → model.renderLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<rend> → model.renderLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<rend> → model.renderLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<rend> → model.renderLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<rend> → model.renderLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<rend> → model.renderLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<rend> → model.renderLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<rend> → model.renderLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<rend> → model.renderLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<rend> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<rend> → model.renderLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<rend> → model.renderLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<rend> → model.renderLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<rend> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<rend> → model.renderLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<rend> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.msnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<rend> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<rend> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<rend> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<rend> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<rend> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<rend> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<rend> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<rend> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<rend> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<rend> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<rend> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<rend> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<rend> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<rend> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<rend> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

When an entire element should be rendered in a special way, a style sheet function should be used instead of the <rend> element. The glyph.auth and glyph.uri attributes may be used to specify an external authority, e.g., SMuFL, to be used for displaying code points in the textual content of the element.

## <repeatMark>

(repetition mark) – An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

### Module

[MEI.cmn](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<repeatMark> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linkin → @corresp

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<repeatMark> → att.repeatMark.log → att.duration.additive → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum **\*\*recip** value. Value is a [token](#).

<repeatMark> → att.repeatMark.ges → att.duration.ges → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<repeatMark> → att.repeatMark.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<repeatMark> → att.repeatMark.log → att.controlEvent → att.targetEval → @evaluate

**@extender** (*optional*) Indicates the presence of an extension symbol, typically a line. Value conforms to [data.BOOLEAN](#).

<repeatMark> → att.repeatMark.vis → att.extender → @extender

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linked → @follows

**@func** (*required*) Indicates the function of the mark, usually implying a corresponding form. Allowed values are: "**coda**" (*Coda (SMuFL E048 or Unicode 1D10C).*), "**segno**" (*Segno (SMuFL E047 or Unicode 1D10B).*), "**dalSegno**" (*Dal segno (SMuFL E045 or Unicode 1D109).*), "**daCapo**" (*Da capo (SMuFL E046 or Unicode 1D10A).*), "**fine**" (*Fine. (text)*)

<repeatMark> → att.repeatMark.log → @func

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*.)

<repeatMark> → att.repeatMark.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<repeatMark> → att.repeatMark.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<repeatMark> → att.repeatMark.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<repeatMark> → att.repeatMark.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<repeatMark> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<repeatMark> → att.repeatMark.log → att.controlEvent → att.layerIdent → @layer

**@lendsym** (*optional*) Symbol rendered at end of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → @lendsym

**@lendsym.size** (*optional*) Holds the relative size of the line-end symbol. Value conforms to [data.FONTSCALE](#).

<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → @lendsym.size

**@lform** (*optional*) Describes the line style of a line. Value conforms to [data.LINEFORM](#).  
<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → att.lineRend.base → @lform

**@lsegs** (*optional*) Describes the number of segments into which a dashed or dotted line may be divided, or the number of "peaks" of a wavy line; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values of datatype **a positive integer no smaller than 2**, separated by a space.

<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → att.lineRend.base → @lsegs

**@lstartsym** (*optional*) Symbol rendered at start of line. Value conforms to [data.LINESTARTENDSYMBOL](#).  
<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → @lstartsym

**@lstartsym.size** (*optional*) Holds the relative size of the line-start symbol. Value conforms to [data.FONTSCALE](#).

<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → @lstartsym.size

**@lwidth** (*optional*) Width of a line. Value conforms to [data.LINEWIDTH](#).  
<repeatMark> → att.repeatMark.vis → att.extender → att.lineRend → att.lineRend.base → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<repeatMark> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<repeatMark> → att.repeatMark.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<repeatMark> → att.repeatMark.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<repeatMark> → att.repeatMark.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.repeatMark.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<repeatMark> → att.repeatMark.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<repeatMark> → att.repeatMark.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<repeatMark> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset → att.visualOffset.to → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<repeatMark> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<repeatMark> → att.repeatMark.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<repeatMark> → att.repeatMark.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<repeatMark> → att.repeatMark.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<repeatMark> → att.repeatMark.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<repeatMark> → att.repeatMark.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<repeatMark> → att.repeatMark.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<repeatMark> → att.common → att.typed → @type

**@vgrp** (*optional*) Provides a label for members of a vertically aligned group. Value is a positive integer.

<repeatMark> → att.repeatMark.vis → att.verticalGroup → @vgrp

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<repeatMark> → att.repeatMark.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<repeatMark> → att.repeatMark.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<repeatMark> → att.repeatMark.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<repeatMark> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<repeatMark> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<repeatMark> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `fac` attribute. Value is a decimal number.

<repeatMark> → att.repeatMark.vis → att.xy → @y

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<repeatMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<repeatMark> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<repeatMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<repeatMark> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<repeatMark> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<repeatMark> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<repeatMark> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<repeatMark> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<repeatMark> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<repeatMark> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<repeatMark> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<repeatMark> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<repeatMark> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<repeatMark> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<repeatMark> → model.textPhraseLike.limited → model.msInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<repeatMark> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<repeatMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<repeatMark> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<repeatMark> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<repeatMark> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<repeatMark> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<repeatMark> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<repeatMark> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<repeatMark> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<repeatMark> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<repeatMark> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<repeatMark> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<repeatMark> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<repeatMark> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<repeatMark> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<repeatMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<repeatMark> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<repeatMark> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<repeatMark> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<repeatMark> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<repeatMark> → model.textPhraseLike.limited → model.lbLike → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<repeatMark> → model.graphicPrimitiveLike → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<repeatMark> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<repeatMark> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<repeatMark> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<repeatMark> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<repeatMark> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<repeatMark> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<repeatMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<repeatMark> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<repeatMark> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<repeatMark> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<repeatMark> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<repeatMark> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<repeatMark> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<repeatMark> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<repeatMark> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<repeatMark> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<repeatMark> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<repeatMark> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<repeatMark> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<repeatMark> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<repeatMark> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<repeatMark> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<repeatMark> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<repeatMark> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<repeatMark> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<repeatMark> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<repeatMark> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<repeatMark> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<repeatMark> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<repeatMark> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<repeatMark> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<repeatMark> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

When only func is provided to describe the function of the repeat mark (i.e., without glyph information and no textual content), then a renderer can rely on it to display the appropriate symbol. When textual content is provided, it will take precedence over the symbol implied by the function. Generic repeat marks where no function can be determined, then generic <dir> elements should be used.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

When @glyph.name or @glyph.num is present, repeatMark must not have content.

## Declaration

```

# <repository>

Institution, agency, or individual which holds a bibliographic item.

## Referenced in chapters

[9.2.12 Bibliographic Citations and References](#)

## Module

[MEI.shared](#)

## Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<repository> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<repository> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<repository> → [att.name](#) → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<repository> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<repository> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<repository> → [att.name](#) → [att.datable](#) → @enddate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<repository> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<repository> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<repository> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<repository> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<repository> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<repository> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<repository> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<repository> → [att.name](#) → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<repository> → [att.name](#) → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<repository> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<repository> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<repository> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<repository> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<repository> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<repository> → [att.lang](#) → @xml:lang

## Member of

[model.repositoryLike](#) Groups elements that denote a corporate entity that holds a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<repository> → [model.repositoryLike](#) → [model.nameLike.place](#) → [model.nameLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editT](#)

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<repository> → [model.repositoryLike](#) → [model.nameLike.place](#) → [model.nameLike](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<repository> → [model.repositoryLike](#) → [model.nameLike.place](#) → [model.nameLike](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<repository> → [model.repositoryLike](#) → [model.nameLike.place](#) → [model.nameLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editT](#)

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<repository> → [model.repositoryLike](#) → [model.nameLike.place](#) → [model.nameLike](#) → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<date>** A string identifying a point in time or the time period between two such points.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<depth>** Description of a measurement taken through a three-dimensional object.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracor

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracor

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart →

**<li>** Single item in a <list>.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracor

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pgHead>

**<physLoc>** Groups information about the current physical location of a bibliographic item, such as the repository in which it is located and its shelf mark(s), and its previous locations.

<repository> → model.repositoryLike → <physLoc>

**<price>** The cost of access to a bibliographic item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracor

**<rdg>** (reading) – Contains a single reading within a textual variation.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart →

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editT

**<role>** Name of a dramatic role, as given in a cast list.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.edit

**<signifLet>** Significantive letter(s).

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.edit

**<supportDesc>** Groups elements describing the physical support material of an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart.unclear → <unclear>

**<width>** Description of the horizontal size of an object.

<repository> → model.repositoryLike → model.nameLike.place → model.nameLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<repository> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<repository> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<repository> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<repository> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<repository> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<repository> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<repository> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<repository> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<repository> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<repository> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<repository> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<repository> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<repository> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<repository> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<repository> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<repository> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<repository> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<repository> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<repository> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<repository> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<repository> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<repository> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<repository> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<repository> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<repository> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<repository> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<repository> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<repository> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<repository> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<repository> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<repository> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<repository> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<repository> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<repository> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<repository> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<repository> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<repository> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<repository> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<repository> → model.textPhraseLike.limited → model.mslInline → <signatures>

**<stack>** An inline table with a single column.

<repository> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<repository> → model.textPhraseLike.limited → model.mslInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<repository> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<repository> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<repository> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<repository> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<repository> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<repository> → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<repository> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Sub-units of the holding institution may be marked with <repository> sub-elements. The name of the list from which a controlled value is taken may be recorded using the auth attribute.

The model of this element is based on the [repository](#) element of the Encoded Archival Description (EAD).

## Declaration

## <resp>

(responsibility) – A phrase describing the nature of intellectual responsibility.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<resp> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<resp> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).

<resp> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<resp> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<resp> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<resp> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<resp> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<resp> → [att.datable](#) → @enddate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<resp> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<resp> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<resp> → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<resp> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<resp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.linked → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<resp> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<resp> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.linked → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<resp> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<resp> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<resp> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<resp> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<resp> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<resp> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<resp> → att.lang → @xml:lang

## Member of

(resp isn't member of any model class)

## Contained By

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<resp> → elements having resp as direct children → <respStmt>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<resp> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<resp> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<resp> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<resp> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<resp> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<resp> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<resp> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<resp> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<resp> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<resp> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<resp> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<resp> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<resp> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<resp> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<resp> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<resp> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<resp> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<resp> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<resp> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<resp> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<resp> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<resp> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<resp> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<resp> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<resp> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<resp> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<resp> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<resp> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<resp> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<resp> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<resp> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<resp> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<resp> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<resp> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<resp> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<resp> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<resp> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<resp> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<resp> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<resp> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<resp> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<resp> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<resp> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<resp> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<resp> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<resp> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<resp> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<resp> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The name of the list from which a controlled value is taken may be recorded using the auth attribute.

The model of this element is based on the [resp](#) element of the Text Encoding Initiative (TEI).

## <respStmt>

(responsibility statement) – Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.3.2 Responsibility Attribution](#), [3.4.1.1 Edition Statement](#), [3.4.1.3 Publication, Distribution, etc.](#), [3.4.1.4 Series Statement](#), [3.4.3 Revision Description](#), [3.8.3 Minimal and Recommended Header Information](#), [9.2.12 Bibliographic Citations and References](#), [11.3.1 Encoding Genetic States](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<respStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<respStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<respStmt> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<respStmt> → [att.common](#) → [att.linkin](#) → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<respStmt> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<respStmt> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<respStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<respStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<respStmt> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<respStmt> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<respStmt> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<respStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<respStmt> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<respStmt> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<respStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<respStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<respStmt> → att.common → att.basic → att.id → @xml:id

## Member of

[model.pubStmtPart](#) Groups elements that may appear as part of the publication statement for a bibliographic item.

[model.respLike](#) Groups elements that are used to indicate intellectual or other significant responsibility, for example within a bibliographic citation.

## Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<respStmt> → elements having respStmt as direct children → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<respStmt> → model.respLike → model.biblPart → <bibl>

**<change>** Individual change within the revision description.

<respStmt> → elements having respStmt as direct children → <change>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<respStmt> → elements having respStmt as direct children → <edition>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<respStmt> → elements having respStmt as direct children → <editionStmt>

**<genState>** Describes a distinctive state in the textual development of a work.

<respStmt> → elements having respStmt as direct children → <genState>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<respStmt> → elements having respStmt as direct children → <imprint>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<respStmt> → elements having respStmt as direct children → <monogr>

**<pubStmt>** Container for information regarding the publication or distribution of a bibliographic item, including the publisher's name and address, the date of publication, and other relevant details.

<respStmt> → [model.pubStmtPart](#) → <pubStmt>

**<series>** Contains information about the serial publication in which a bibliographic item has appeared.

<respStmt> → elements having respStmt as direct children → <series>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<respStmt> → elements having respStmt as direct children → <seriesStmt>

**<titleStmt>** Container for title and responsibility meta-data.

<respStmt> → [model.respLike](#) → <titleStmt>

## May Contain

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<respStmt> → [model.nameLike.agent](#) → <corpName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<respStmt> → [model.headLike](#) → <head>

**<name>** Proper noun or noun phrase.

<respStmt> → direct children → <name>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<respStmt> → [model.nameLike.agent](#) → <persName>

**<resp>** A phrase describing the nature of intellectual responsibility.

<respStmt> → direct children → <resp>

## Remarks

The model of this element is based on the [respStmt](#) element of the Text Encoding Initiative (TEI).

## Constraints

At least one element pair (a resp element and a name-like element) is recommended. Alternatively, each name-like element may have a @role attribute.

## Declaration

```

## <rest>

A non-sounding event found in the source being transcribed.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [2.2.3 Basic Music Events](#), [4.2.5.3 Rests](#), [4.3.4 Tuplets](#), [4.3.5.4 Fermata](#), [5.1 Durations](#), [5.6.4 Dots](#)

### Module

[MEI.shared](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<rest> → att.rest.vis → att.altsym → @altsym`

**@beam** (*optional*) Indicates that this event is "under a beam". One or more values from [data.BEAM](#), separated by spaces.

`<rest> → att.rest.anl → att.rest.anl.cmn → att.beamPresent → @beam`

**@breaksec** (*optional*) Presence of this attribute indicates that the secondary beam should be broken following this note/chord. The value of the attribute records the number of beams which should remain unbroken. Value is a positive integer.

`<rest> → att.rest.vis → att.rest.vis.cmn → att.beamSecondary → @breaksec`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<rest> → att.common → att.typed → att.classed → @class`

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

`<rest> → att.rest.vis → att.color → @color`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<rest> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<rest> → att.common → att.linked → @corresp`

**@cue** (*optional*) Value conforms to [data.BOOLEAN](#).

`<rest> → att.rest.log → att.cue → @cue`

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

`<rest> → att.rest.log → att.augmentDots → @dots`

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

`<rest> → att.rest.ges → att.duration.ges → @dots.ges`

**@dur** (*optional*) Records the duration of a rest using the relative durational values provided by the [data.DURATIONRESTS](#) datatype. Value conforms to [data.DURATIONRESTS](#).

<rest> → [att.rest.log](#) → [att.restduration.log](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<rest> → [att.rest.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<rest> → [att.rest.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<rest> → [att.rest.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<rest> → [att.rest.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<rest> → [att.rest.ges](#) → [att.duration.ges](#) → @dur.recip

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<rest> → [att.rest.vis](#) → [att.enclosingChars](#) → @enclose

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<rest> → [att.facsimile](#) → @facsimile

**@fermata** (*optional*) Indicates the attachment of a fermata to this element. If visual information about the fermata needs to be recorded, then a [<fermata>](#) element should be employed instead. Value conforms to [data.STAFFREL.basic](#).

<rest> → [att.rest.anl](#) → [att.rest.anl.cmn](#) → [att.fermataPresent](#) → @fermata

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<rest> → [att.common](#) → [att.linked](#) → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<rest> → [att.rest.vis](#) → [att.typography](#) → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<rest> → [att.rest.vis](#) → [att.typography](#) → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<rest> → [att.rest.vis](#) → [att.typography](#) → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<rest> → [att.rest.vis](#) → [att.typography](#) → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<rest> → att.rest.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<rest> → att.rest.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<rest> → att.rest.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<rest> → att.rest.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<rest> → att.rest.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<rest> → att.rest.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<rest> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<rest> → att.rest.log → att.event → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<rest> → att.rest.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<rest> → att.rest.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<rest> → att.rest.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<rest> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.linkng → @next

**@num** (*optional*) Along with numbase, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<rest> → att.rest.ges → att.rest.ges.mensural → att.duration.ratio → @num

**@numbase** (*optional*) Along with num, describes duration as a ratio. num is the first value in the ratio, while numbase is the second. Value is a positive integer.

<rest> → att.rest.ges → att.rest.ges.mensural → att.duration.ratio → @numbase

**@oloc** (*optional*) Records staff location in terms of written octave. Value conforms to [data.OCTAVE](#).

<rest> → att.rest.vis → att.staffLoc.pitched → @oloc

**@ploc** (*optional*) Captures staff location in terms of written pitch name. Value conforms to [data.PITCHNAME](#).

<rest> → att.rest.vis → att.staffLoc.pitched → @ploc

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.linking → @sameas

**@spaces** (*optional*) States how many spaces are covered by the rest. Value is a positive integer.

<rest> → att.rest.vis → att.rest.vis.mensural → @spaces

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<rest> → att.rest.log → att.event → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<rest> → att.common → att.linking → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<rest> → att.rest.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<rest> → att.rest.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<rest> → att.rest.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<rest> → att.rest.log → att.event → att.timestamp.ges → @tstamp.real

**@tuplet** (*optional*) Indicates that this feature participates in a tuplet. If visual information about the tuplet needs to be recorded, then a <tuplet> element should be employed. One or more values from [data.TUPLET](#), separated by spaces.

<rest> → [att.rest.anl](#) → [att.rest.anl.cmn](#) → [att.tupletPresent](#) → @tuplet

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<rest> → [att.common](#) → [att.typed](#) → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<rest> → [att.rest.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<rest> → [att.rest.log](#) → [att.event](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<rest> → [att.rest.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<rest> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<rest> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facs](#) attribute. Value is a decimal number.

<rest> → [att.rest.vis](#) → [att.xy](#) → @y

## Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<rest> → [model.eventLike](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<rest> → [model.eventLike](#) → [model.layerPart](#) → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<rest> → [model.eventLike](#) → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<rest> → model.eventLike → model.layerPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<rest> → model.eventLike → model.layerPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<rest> → model.eventLike → model.layerPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<rest> → model.eventLike → model.layerPart → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<rest> → model.eventLike → <graceGrp>

**<layer>** An independent stream of events on a staff.

<rest> → model.eventLike → model.layerPart → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<rest> → model.eventLike → model.layerPart → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<rest> → model.eventLike → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<rest> → model.eventLike → model.layerPart → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<rest> → model.eventLike → model.layerPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<rest> → model.eventLike → model.layerPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<rest> → model.eventLike → model.layerPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<rest> → model.eventLike → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<rest> → model.eventLike → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<rest> → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<rest> → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<rest> → model.eventLike → model.layerPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<rest> → model.transcriptionLike → <add>

**<app>** (apparatus) – Contains one or more alternative encodings.

<rest> → model.appLike → <app>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<rest> → model.editLike → <choice>

**<corr>** Contains the correct form of an apparent erroneous passage.

<rest> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<rest> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<rest> → model.transcriptionLike → <del>

**<dot>** Dot of augmentation or division.

<rest> → direct children → <dot>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<rest> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<rest> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<rest> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<rest> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<rest> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<rest> → model.transcriptionLike → <sic>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<rest> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<rest> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<rest> → model.transcriptionLike → <unclear>

## Remarks

See (Read, p. 96-102). Do not confuse this element with the **<space>** element, which is used as an aid for visual alignment.

## Constraints

The value of @line must be less than or equal to the number of lines on the staff.

### Declaration

## <restore>

Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

### Referenced in chapters

[11.2.4.3 Substitutions, Restorations, and Handshifts](#), [11.3.3 Encoding Metatexts](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<restore> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<restore> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<restore> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<restore> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<restore> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<restore> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<restore> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<restore> → [att.trans](#) → [att.metadataPointing](#) → @decls

**@desc** (*optional*) Provides a description of the means of restoration, stet or strike-down, for example. Value is plain text.

<restore> → direct children → @desc

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)  
<restore> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<restore> → att.extent → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<restore> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linking → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a [@hand](#) element declared in the header. Value conforms to [data.URI](#).

<restore> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to [data.BOOLEAN](#) or [unknown](#).

<restore> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<restore> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<restore> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<restore> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<restore> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linkin → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<restore> → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<restore> → att.edit → att.source → @source

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<restore> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<restore> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<restore> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<restore> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<restore> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<restore> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<restore> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<restore> → [att.lang](#) → @xml:lang

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<restore> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<restore> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<restore> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<restore> → [model.transcriptionLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<restore> → [model.transcriptionLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<restore> → [model.transcriptionLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<restore> → [model.transcriptionLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<restore> → [model.transcriptionLike](#) → <beam>

**<bifolium>** Describes a folded sheet of paper.

<restore> → elements having restore as direct children → <bifolium>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<restore> → [model.transcriptionLike](#) → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<restore> → [model.transcriptionLike](#) → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<restore> → [model.transcriptionLike](#) → <chord>

**<contentItem>** Contains a single entry within a content description element.

<restore> → [model.transcriptionLike](#) → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<restore> → [model.transcriptionLike](#) → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<restore> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<restore> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<restore> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<restore> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<restore> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<restore> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<restore> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<restore> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<restore> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<restore> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<restore> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<restore> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<restore> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<restore> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<restore> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<restore> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<restore> → model.transcriptionLike → <fingGrp>

**<foliaDesc>** Describes the order of folia and bifolia making up the text block of a manuscript or print.

<restore> → elements having restore as direct children → <foliaDesc>

**<foreName>** Contains a forename, given or baptismal name.

<restore> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<restore> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<restore> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<restore> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<restore> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<restore> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<restore> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<restore> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<restore> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<restore> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<restore> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<restore> → model.transcriptionLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<restore> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<restore> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<restore> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<restore> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<restore> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<restore> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<restore> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<restore> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<restore> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<restore> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<restore> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<restore> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<restore> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<restore> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<restore> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<restore> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<restore> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<restore> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<restore> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<restore> → model.transcriptionLike → model.paraccontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<restore> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<restore> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<restore> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<restore> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<restore> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<restore> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<restore> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<restore> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<restore> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<restore> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<restore> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<restore> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<restore> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<restore> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<restore> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<restore> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<restore> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<restore> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<restore> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<restore> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<restore> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<restore> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<restore> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<restore> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<restore> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<restore> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<restore> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<restore> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<restore> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<restore> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<restore> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<restore> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<restore> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<restore> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<restore> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<restore> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<restore> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<restore> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<restore> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<restore> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<restore> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<restore> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<restore> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<restore> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<restore> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<restore> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<restore> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<restore> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<restore> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<restore> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line.

Sometimes called a "direct".

<restore> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<restore> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<restore> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<restore> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<restore> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<restore> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<restore> → model.fLike → <f>

**<fTrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <fTrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<restore> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLik

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<restore> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <heraldry>

**<hispanTick>** Hispanic tick.

<restore> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<restore> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<restore> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<restore> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<restore> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<restore> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<restore> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<restore> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<restore> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<restore> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<restore> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<restore> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<restore> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<restore> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<restore> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<restore> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<restore> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<restore> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<restore> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repository

**<rest>** A non-sounding event found in the source being transcribed.

<restore> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<restore> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<restore> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<restore> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<restore> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<restore> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<restore> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<restore> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<restore> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<restore> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<restore> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<restore> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<restore> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<restore> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<restore> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<restore> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<restore> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<restore> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuples, especially useful for tuples that extend across bar lines.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<restore> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<restore> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<restore> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<restore> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<restore> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

In no case should **<restore>** contain elements that would not otherwise be permitted to occur within the parent of its own **<app>** ancestor. For example, when used as a descendent of **<verse>**, **<restore>** should only contain those elements allowed within **<verse>**.

The model of this element is based on the **restore** element of the Text Encoding Initiative (TEI).

## <revisionDesc>

(revision description) – Container for information about alterations that have been made to an MEI file.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.4.3 Revision Description](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<revisionDesc> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.typed](#) → [att.classe](#)d → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<revisionDesc> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<revisionDesc> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<revisionDesc> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<revisionDesc> → [att.common](#) → [att.linking](#) → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<revisionDesc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<revisionDesc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<revisionDesc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(revisionDesc isn't member of any model class)

## Contained By

**<meiHead>** Supplies the descriptive and declarative metadata prefixed to every MEI-conformant text.

<revisionDesc> → elements having revisionDesc as direct children → <meiHead>

## May Contain

**<change>** Individual change within the revision description.

<revisionDesc> → direct children → <change>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<revisionDesc> → [model.headLike](#) → <head>

## Remarks

It is recommended that changes be recorded in reverse chronological order, with the most recent alteration first.

The model of this element is based on the [revisionDesc](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="revisionDesc" module="MEI.header">

## <role>

Name of a dramatic role, as given in a cast list.

### Referenced in chapters

[3.6.2 Incipits](#), [3.6.7.1 Cast Lists](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<role> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.linkin → @corresp

**@facsc** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<role> → att.facsimile → @facsc

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<role> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<role> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<role> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<role> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<role> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<role> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<role> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<role> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<role> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<role> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<role> → [att.lang](#) → @xml:lang

## Member of

(role isn't member of any model class)

## Contained By

**<castItem>** Contains a single entry within a cast list, describing either a single role or a list of non-speaking roles.

<role> → elements having role as direct children → <castItem>

**<incip>** The opening music and/or words of a musical or textual work.

<role> → elements having role as direct children → <incip>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<role> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<role> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<role> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<role> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<role> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<role> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<role> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<role> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<role> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<role> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<role> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<role> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<role> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<role> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<role> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<role> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<role> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<role> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<role> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<role> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<role> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<role> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<role> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<role> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<role> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<role> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<role> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<role> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<role> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<role> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<role> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<role> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<role> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<role> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<role> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<role> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<role> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<role> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<role> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<role> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<role> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<role> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<role> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<role> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<role> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<role> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<role> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<role> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the `role` element of the Text Encoding Initiative (TEI).

## Declaration

```

<roleDesc> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<roleDesc> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<roleDesc> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<roleDesc> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<roleDesc> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<roleDesc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<roleDesc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<roleDesc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<roleDesc> → [att.lang](#) → @xml:lang

## Member of

(roleDesc isn't member of any model class)

## Contained By

**<castGrp>** Groups one or more individual castItem elements within a cast list.

<roleDesc> → elements having roleDesc as direct children → <castGrp>

**<castItem>** Contains a single entry within a cast list, describing either a single role or a list of non-speaking roles.

<roleDesc> → elements having roleDesc as direct children → <castItem>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<roleDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<roleDesc> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<roleDesc> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<roleDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<roleDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<roleDesc> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<roleDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<roleDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<roleDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<roleDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<roleDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<roleDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<roleDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<roleDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<roleDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<roleDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<roleDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<roleDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<roleDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<roleDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<roleDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<roleDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<roleDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<roleDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<roleDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<roleDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<roleDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<roleDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<roleDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<roleDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<roleDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<roleDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<roleDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<roleDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<roleDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<roleDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<roleDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<roleDesc> → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<roleDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [roleDesc](#) element of the Text Encoding Initiative (TEI).

## Declaration

```

## <roleName>

(role name) – Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<roleName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<roleName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<roleName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<roleName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<roleName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<roleName> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<roleName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<roleName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.linking](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<roleName> → [att.name](#) → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<roleName> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<roleName> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.linking](#) → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<roleName> → [att.name](#) → [att.filing](#) → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<roleName> → [att.name](#) → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<roleName> → [att.name](#) → [att.datable](#) → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<roleName> → [att.name](#) → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<roleName> → [att.common](#) → [att.responsibility](#) → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<roleName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<roleName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<roleName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<roleName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<roleName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<roleName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<roleName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<roleName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<roleName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<roleName> → att.lang → @xml:lang

## Member of

[model.persNamePart](#) Groups elements which form part of a personal name.

## Contained By

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<roleName> → [model.persNamePart](#) → <persName>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<roleName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<roleName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<roleName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<roleName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<roleName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<roleName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<roleName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<roleName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<roleName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<roleName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<roleName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<roleName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<roleName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<roleName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<roleName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<roleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [roleName](#) element of the Text Encoding Initiative (TEI).

## <rubric>

Contains a string of words through which a manuscript signals the beginning or end of a text division, often with an assertion as to its author and title, which is in some way set off from the text itself, usually in red ink, or by use of different size or type of script, or some other such visual device.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<rubric> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<rubric> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<rubric> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<rubric> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<rubric> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<rubric> → [att.common](#) → [att.linkin](#) → @follows

**@func** Allowed values are: "**initial**" (*Signals beginning of a text division.*), "**final**" (*Marks the end of a text division.*)

<rubric> → direct children → @func

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<rubric> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<rubric> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rubric> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<rubric> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<rubric> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<rubric> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<rubric> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<rubric> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<rubric> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<rubric> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<rubric> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<rubric> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<rubric> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<rubric> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<rubric> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<rubric> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<rubric> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<rubric> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

DEVELOPMENT  
VERSION

## <samplingDecl>

(sampling declaration) – Contains a prose description of the rationale and methods used in sampling texts in the creation of a corpus or collection.

### Referenced in chapters

[3.4.2 Encoding Description](#), [3.4.2.4 Sampling Declaration](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<samplingDecl> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<samplingDecl> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<samplingDecl> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<samplingDecl> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<samplingDecl> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<samplingDecl> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<samplingDecl> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<samplingDecl> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<samplingDecl> → [att.lang](#) → @xml:lang

## Member of

[model.encodingPart](#) Groups elements that may appear as part of the description of the encoding process.

## Contained By

**<encodingDesc>** Documents the relationship between an electronic file and the source or sources from which it was derived as well as applications used in the encoding/editing process.

<samplingDecl> → elements having samplingDecl as direct children → <encodingDesc>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<samplingDecl> → [model.headLike](#) → <head>

**<p>** One or more text phrases that form a logical prose passage.

<samplingDecl> → [model.pLike](#) → <p>

## Remarks

The model of this element is based on the [samplingDecl](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="samplingDecl" module="MEI.header">
  <gloss versionDate="2022-05-18" xml:lang="en">sampling declaration</gloss>

## <sb>

(system beginning) – An empty formatting element that forces musical notation to begin on a new line.

### Referenced in chapters

[2.1.3 Document Layout Elements](#)

### Module

[MEI.shared](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [`<symbolDef>`](#) element elsewhere in the document. Value conforms to [data.URI](#).

`<sb> → att.sb.vis → att.altSym → @altsym`

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

`<sb> → att.common → att.typed → att.classed → @class`

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

`<sb> → att.common → att.linked → @copyof`

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

`<sb> → att.common → att.linked → @corresp`

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

`<sb> → att.facsimile → @facs`

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

`<sb> → att.common → att.linked → @follows`

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

`<sb> → att.sb.vis → att.typography → @fontfam`

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

`<sb> → att.sb.vis → att.typography → @fontname`

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

`<sb> → att.sb.vis → att.typography → @fontsize`

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

`<sb> → att.sb.vis → att.typography → @fontstyle`

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

`<sb> → att.sb.vis → att.typography → @fontweight`

**@form** (*optional*) Indicates whether hash marks should be rendered between systems. See Read, p. 436, ex. 26-3. Allowed values are: "hash" (*Display hash marks between systems.*)

<sb> → att.sb.vis → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout.*)

<sb> → att.sb.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<sb> → att.sb.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<sb> → att.sb.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<sb> → att.sb.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sb> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<sb> → att.sb.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<sb> → att.sb.vis → att.typography → @lineheight

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sb> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.linkin → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sb> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<sb> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<sb> → att.sb.log → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sb> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sb> → att.common → att.basic → att.id → @xml:id

## Member of

[model.milestoneLike.music](#) Groups milestone-style elements found in music notation.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sb> → [model.milestoneLike.music](#) → <abbr>

**<add>** Marks an addition to the text.

<sb> → [model.milestoneLike.music](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<sb> → [model.milestoneLike.music](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<sb> → [model.milestoneLike.music](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<sb> → [model.milestoneLike.music](#) → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<sb> → [model.milestoneLike.music](#) → <ending>

**<expan>** Contains the expansion of an abbreviation.

<sb> → model.milestoneLike.music → <expan>

**<layer>** An independent stream of events on a staff.

<sb> → model.milestoneLike.music → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<sb> → model.milestoneLike.music → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<sb> → model.milestoneLike.music → <measure>

**<oLayer>** A layer that contains an alternative to material in another layer.

<sb> → model.milestoneLike.music → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<sb> → model.milestoneLike.music → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<sb> → model.milestoneLike.music → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<sb> → model.milestoneLike.music → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<sb> → model.milestoneLike.music → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<sb> → model.milestoneLike.music → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<sb> → model.milestoneLike.music → <restore>

**<score>** Full score view of the musical content.

<sb> → model.milestoneLike.music → <score>

**<section>** Segment of music data.

<sb> → model.milestoneLike.music → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<sb> → model.milestoneLike.music → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<sb> → model.milestoneLike.music → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<sb> → model.milestoneLike.music → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<sb> → model.milestoneLike.music → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<sb> → model.milestoneLike.music → <unclear>

## May Contain

– (<sb> may not have child elements)

## Remarks

Do not confuse this element with the <lb> element, which performs a similar function in prose.

## Declaration

```

<elementSpec ident="sb" module="MEI.shared">

## <score>

Full score view of the musical content.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [2.2.1 Score and Parts](#), [3.6.2 Incipits](#), [4.2.2 Defining Score Parameters for CMN](#), [4.2.4 Re-definition of Score Parameters](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<score> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<score> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<score> → [att.common](#) → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<score> → [att.metadataPointing](#) → @decls

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<score> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<score> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<score> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<score> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<score> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<score> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<score> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<score> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<score> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<score> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<score> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<score> → att.common → att.basic → att.id → @xml:id

## Member of

[model.scoreLike](#) Groups elements that represent a score.

## Contained By

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<score> → [model.scoreLike](#) → <fig>

**<incip>** The opening music and/or words of a musical or textual work.

<score> → [model.scoreLike](#) → <incip>

**<mdiv>** Contains a subdivision of the body of a musical text.

<score> → [model.scoreLike](#) → <mdiv>

## May Contain

**<add>** Marks an addition to the text.

<score> → [model.transcriptionLike](#) → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<score> → [model.graphicPrimitiveLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<score> → [model.annotLike](#) → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<score> → model.appLike → <app>

**<cb>** An empty formatting element that forces text to begin in a new column.

<score> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<score> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<score> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<score> → model.transcriptionLike → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<score> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<score> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<score> → model.transcriptionLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<score> → model.divLike → <div>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<score> → model.scorePart → model.endingLike → <ending>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<score> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<score> → model.transcriptionLike → <handShift>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<score> → model.graphicPrimitiveLike → <line>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<score> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<score> → model.milestoneLike.music → model.pbLike → <pb>

**<reg>** Contains material which has been regularized or normalized in some sense.

<score> → model.transcriptionLike → <reg>

**<relation>** Describes a relationship or linkage amongst entities.

<score> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<score> → model.relationLike → <relationList>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<score> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<score> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<score> → model.scoreDefLike → <scoreDef>

**<section>** Segment of music data.

<score> → model.scorePart → model.sectionLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<score> → model.transcriptionLike → <sic>

**<staffDef>** Container for staff meta-information.

<score> → model.staffDefLike → <staffDef>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<score> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<score> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<score> → model.transcriptionLike → <unclear>

## Remarks

Since the **<measure>** element is optional, a score may consist entirely of page beginnings, each of which points to a page image. **<div>** elements are allowed preceding and following sections of music data in order to accommodate blocks of explanatory text.

## Declaration

### Module

[MEI.shared](#)

### Attributes

**@aboveorder** Describes vertical order of items printed above a staff, from closest to farthest away from the staff. One or more values from [data.STAFFITEM](#), separated by spaces.

<scoreDef> → [att.scoreDef.vis](#) → [att.staffItems](#) → @aboveorder

**@bar.len (optional)** States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

<scoreDef> → [att.scoreDef.vis](#) → [att.barring](#) → @bar.len

**@bar.method (optional)** Records the method of barring. Value conforms to [data.BARMETHOD](#).

<scoreDef> → [att.scoreDef.vis](#) → [att.barring](#) → @bar.method

**@bar.place (optional)** Denotes the staff location of bar lines, if the length is non-standard; that is, not equal to 2 times (the number of staff lines - 1). Value conforms to [data.STAFFLOC](#).

<scoreDef> → [att.scoreDef.vis](#) → [att.barring](#) → @bar.place

**@beam.color (optional)** Color of beams, including those associated with tuplets. Value conforms to [data.COLOR](#).

<scoreDef> → [att.scoreDef.vis](#) → [att.scoreDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.color

**@beam.group (optional)** Provides an example of how automated beaming (including secondary beams) is to be performed. Value is plain text.

<scoreDef> → [att.scoreDef.log](#) → [att.scoreDef.log.cmn](#) → [att.beaming.log](#) → @beam.group

**@beam.rend (optional)** Encodes whether a beam is "feathered" and in which direction. Allowed values are: "**acc**" (*Beam lines grow farther apart from left to right.*), "**rit**" (*Beam lines grow closer together from left to right.*), "**norm**" (*Beam lines are equally-spaced over the entire length of the beam.*)

<scoreDef> → [att.scoreDef.vis](#) → [att.scoreDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.rend

**@beam.rests (optional)** Indicates whether automatically-drawn beams should include rests shorter than a quarter note duration. Value conforms to [data.BOOLEAN](#).

<scoreDef> → [att.scoreDef.log](#) → [att.scoreDef.log.cmn](#) → [att.beaming.log](#) → @beam.rests

**@beam.slope (optional)** Captures beam slope. Value is a decimal number.

<scoreDef> → [att.scoreDef.vis](#) → [att.scoreDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.slope

**@beloworder** Describes vertical order of items printed below a staff, from closest to farthest away from the staff. One or more values from [data.STAFFITEM](#), separated by spaces.

<scoreDef> → att.scoreDef.vis → att.staffItems → @beloworder

**@betweenorder** Describes vertical order of items printed between staves, from top to bottom. One or more values from [data.STAFFITEM](#), separated by spaces.

<scoreDef> → att.scoreDef.vis → att.staffItems → @betweenorder

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.typed → att.classed → @class

**@clef.color** (*optional*) Describes the color of the clef. Value conforms to [data.COLOR](#).

<scoreDef> → att.scoreDef.vis → att.cleffing.vis → @clef.color

**@clef.dis** (*optional*) Records the amount of octave displacement to be applied to the clef. Value conforms to [data.OCTAVE.DIS](#).

<scoreDef> → att.scoreDef.log → att.cleffing.log → @clef.dis

**@clef.dis.place** (*optional*) Records the direction of octave displacement to be applied to the clef. Value conforms to [data.STAFFREL.basic](#).

<scoreDef> → att.scoreDef.log → att.cleffing.log → @clef.dis.place

**@clef.line** (*optional*) Contains a default value for the position of the clef. The value must be in the range between 1 and the number of lines on the staff. The numbering of lines starts with the lowest line of the staff. Value conforms to [data.CLEFLINE](#).

<scoreDef> → att.scoreDef.log → att.cleffing.log → @clef.line

**@clef.shape** (*optional*) Encodes a value for the clef symbol. Value conforms to [data.CLEFSHAPE](#).

<scoreDef> → att.scoreDef.log → att.cleffing.log → @clef.shape

**@clef.visible** (*optional*) Determines whether the clef is to be displayed. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.cleffing.vis → @clef.visible

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<scoreDef> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linked → @corresp

**@dir.dist** (*optional*) Records the default distance from the staff for directives. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.distances → @dir.dist

**@divisio** (*optional*) Describes the divisions of the breve in use in 14th-century Italy. Value conforms to [data.DIVISIO](#).

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → att.mensural.shared → @divisio

**@dur.default** (*optional*) Contains a default duration in those situations when the first note, rest, chord, etc. in a measure does not have a duration specified. Value conforms to [data.DURATION](#).

<scoreDef> → att.scoreDef.log → att.duration.default → @dur.default

**@dynam.dist** (*optional*) Records the default distance from the staff for dynamic marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.distances → @dynam.dist

**@ending.rend** (*optional*) Describes where ending marks should be displayed. Allowed values are: "**top**" (*Ending rendered only above top staff.*), "**barred**" (*Ending rendered above staves that have bar lines drawn across them.*), "**grouped**" (*Endings rendered above staff groups.*)

<scoreDef> → att.scoreDef.vis → att.endings → @ending.rend

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linkin → @follows

**@grid.show** (*optional*) Determines whether to display guitar chord grids. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → @grid.show

**@harm.dist** (*optional*) Records the default distance from the staff of harmonic indications, such as guitar chord grids or functional labels. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.distances → @harm.dist

**@key.accid** (*optional*) Contains an accidental for the tonic key, if one is required, e.g., if key.pname equals c and key.accid equals s, then a tonic of C# is indicated. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<scoreDef> → att.scoreDef.anl → att.keySigDefault.anl → @key.accid

**@key.mode** (*optional*) Indicates major, minor, or other tonality. Value conforms to [data.MODE](#).

<scoreDef> → att.scoreDef.anl → att.keySigDefault.anl → @key.mode

**@key.pname** (*optional*) Holds the pitch name of the tonic key, e.g., c for the key of C. Value conforms to [data.PITCHNAME](#).

<scoreDef> → att.scoreDef.anl → att.keySigDefault.anl → @key.pname

**@keysig** (*optional*) Written key signature. One or more values from [data.KEYFIFTHS](#), separated by spaces.

<scoreDef> → att.scoreDef.log → att.keySigDefault.log → @keysig

**@keysig.cancelaccid** (*optional*) Determines where cautionary accidentals should be displayed at a key change. Value conforms to [data.CANCELACCID](#).

<scoreDef> → att.scoreDef.vis → att.keySigDefault.vis → @keysig.cancelaccid

**@keysig.visible** (*optional*) Determines whether the key signature is to be displayed. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.keySigDefault.vis → @keysig.visible

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<scoreDef> → att.common → att.labelled → @label

**@lyric.align** (*optional*) Describes the alignment of lyric syllables associated with a note or chord. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.align

**@lyric.fam** (*optional*) Sets the font family default value for lyrics. Value conforms to [data.FONTFAMILY](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.fam

**@lyric.name** (*optional*) Sets the font name default value for lyrics. Value conforms to [data.FONTNAME](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.name

**@lyric.size** (*optional*) Sets the default font size value for lyrics. Value conforms to [data.FONTSIZE](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.size

**@lyric.style** (*optional*) Sets the default font style value for lyrics. Value conforms to [data.FONTSTYLE](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.style

**@lyric.weight** (*optional*) Sets the default font weight value for lyrics. Value conforms to [data.FONTWEIGHT](#).

<scoreDef> → att.scoreDef.vis → att.lyricStyle → @lyric.weight

**@mensur.color** (*optional*) Records the color of the mensuration sign. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.color

**@mensur.dot** (*optional*) Determines if a dot is to be added to the base symbol. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.dot

**@mensur.form** (*optional*) Indicates whether the base symbol is written vertically or horizontally. Allowed values are: "**horizontal**" (*Horizontally oriented.*), "**vertical**" (*Vertically oriented.*)

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.form

**@mensur.loc** (*optional*) Holds the staff location of the mensuration sign. Value conforms to [data.STAFFLOC](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.loc

**@mensur.orient** (*optional*) Describes the rotation or reflection of the base symbol. Value conforms to [data.ORIENTATION](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.orient

**@mensur.sign** (*optional*) The base symbol in the mensuration sign/time signature of mensural notation. Value conforms to [data.MENSURATIONSIGN](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.sign

**@mensur.size** (*optional*) Describes the relative size of the mensuration sign. Value conforms to [data.FONTSIZE](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.size

**@mensur.slash** (*optional*) Indicates the number lines added to the mensuration sign. For example, one slash is added for what we now call 'alla breve'. Value is a positive integer.

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.mensural → att.mensural.vis → @mensur.slash

**@meter.count** (*optional*) Captures the number of beats in a measure, that is, the top number of the meter signature. It must contain a decimal number or an expression that evaluates to a decimal number, such as 2+3 or 3\*2. Value is plain text.

<scoreDef> → att.scoreDef.log → att.meterSigDefault.log → @meter.count

**@meter.form** (*optional*) Contains an indication of how the meter signature should be rendered. Value conforms to [data.METERFORM](#).

<scoreDef> → att.scoreDef.vis → att.meterSigDefault.vis → @meter.form

**@meter.showchange** (*optional*) Determines whether the old meter signature should be displayed when the meter signature changes. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.meterSigDefault.vis → @meter.showchange

**@meter.sym** (*optional*) Indicates the use of a meter symbol instead of a numeric meter signature, that is, 'C' for common time or 'C' with a slash for cut time. Value conforms to [data.METERSIGN](#).

<scoreDef> → att.scoreDef.log → att.meterSigDefault.log → @meter.sym

**@meter.unit** (*optional*) Contains the number indicating the beat unit, that is, the bottom number of the meter signature. Value is a decimal number.

<scoreDef> → att.scoreDef.log → att.meterSigDefault.log → @meter.unit

**@meter.visible** (*optional*) Determines whether the meter signature is to be displayed. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.meterSigDefault.vis → @meter.visible

**@midi.bpm** (*optional*) Captures the number of \*quarter notes\* per minute. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. Value conforms to [data.MIDIBPM](#).

<scoreDef> → att.scoreDef.ges → att.midiTempo → @midi.bpm

**@midi.channel** (*optional*) Records a MIDI channel value. Value conforms to [data.MIDICHANNEL](#).

<scoreDef> → att.scoreDef.ges → att.channelized → @midi.channel

**@midi.duty** (*optional*) Specifies the 'on' part of the duty cycle as a percentage of a note's duration. Value conforms to [data.PERCENT.LIMITED](#).

<scoreDef> → att.scoreDef.ges → att.channelized → @midi.duty

**@midi.mspb** (*optional*) Records the number of microseconds per \*quarter note\*. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. At 120 quarter notes per minute, each quarter note will last 500,000 microseconds. Value conforms to [data.MIDIMSPB](#).

<scoreDef> → att.scoreDef.ges → att.midiTempo → @midi.mspb

**@midi.port** (*optional*) Sets the MIDI port value. Value conforms to [data.MIDIVALUE\\_NAME](#).

<scoreDef> → att.scoreDef.ges → att.channelized → @midi.port

**@midi.track** (*optional*) Sets the MIDI track. Value is a positive integer.

<scoreDef> → att.scoreDef.ges → att.channelized → @midi.track

**@mm** (*optional*) Used to describe tempo in terms of beats (often the meter signature denominator) per minute, ala M.M. (Maelzel's Metronome). Do not confuse this attribute with midi.bpm or midi.mspb. In MIDI, a beat is always defined as a quarter note, \*not the numerator of the time signature or the metronomic indication\*. Value conforms to [data.TEMPOVALUE](#).

<scoreDef> → att.scoreDef.ges → att.mmTempo → @mm

**@mm.dots** (*optional*) Records the number of augmentation dots required by a dotted metronome unit. Value conforms to [data.AUGMENTDOT](#).

<scoreDef> → att.scoreDef.ges → att.mmTempo → @mm.dots

**@mm.unit** (*optional*) Captures the metronomic unit. Value conforms to [data.DURATION](#).

<scoreDef> → att.scoreDef.ges → att.mmTempo → @mm.unit

**@mnum.visible** (*optional*) Indicates whether measure numbers should be displayed. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.measureNumbers → @mnum.visible

**@modusmaior** (*optional*) Describes the maxima-long relationship. Value conforms to [data.MODUSMAIOR](#).

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → att.mensural.shared → @modusmaior

**@modusminor** (*optional*) Describes the long-breve relationship. Value conforms to [data.MODUSMINOR](#).

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → att.mensural.shared → @modusminor

**@multi.number** (*optional*) Indicates whether programmatically calculated counts of multiple measures of rest (mRest) and whole measure repeats (mRpt) in parts should be rendered. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.multinumMeasures → @multi.number

**@music.name** (*optional*) Sets the default music font name. Value conforms to [data.MUSICFONT](#).

<scoreDef> → att.scoreDef.vis → att.notationStyle → @music.name

**@music.size** (*optional*) Sets the default music font size. Value conforms to [data.FONTSIZE](#).

<scoreDef> → att.scoreDef.vis → att.notationStyle → @music.size

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<scoreDef> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linked → @next

**@num.default** (*optional*) Along with numbase.default, describes the default duration as a ratio. num.default is the first value in the ratio. Value is a positive integer.

<scoreDef> → att.scoreDef.log → att.duration.default → @num.default

**@numbase.default** (*optional*) Along with num.default, describes the default duration as a ratio. numbase.default is the second value in the ratio. Value is a positive integer.

<scoreDef> → att.scoreDef.log → att.duration.default → @numbase.default

**@oct.default** (*optional*) Contains a default octave specification for use when the first note, rest, chord, etc. in a measure does not have an octave value specified. Value conforms to [data.OCTAVE](#).

<scoreDef> → att.scoreDef.log → att.octaveDefault → @oct.default

**@ontheline** (*optional*) Determines the placement of notes on a 1-line staff. A value of 'true' places all notes on the line, while a value of 'false' places stems-up notes above the line and stems-down notes below the line. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.oneLineStaff → @ontheline

**@optimize** (*optional*) Indicates whether staves without notes, rests, etc. should be displayed. When the value is 'true', empty staves are displayed. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.optimization → @optimize

**@page.botmar** (*optional*) Indicates the amount of whitespace at the bottom of a page. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.botmar

**@page.height** (*optional*) Specifies the height of the page; may be expressed in real-world units or staff steps. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.height

**@page.leftmar** (*optional*) Indicates the amount of whitespace at the left side of a page. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.leftmar

**@page.panels** (*optional*) Indicates the number of logical pages to be rendered on a single physical page. Value conforms to [data.PAGE.PANELS](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.panels

**@page.rightmar** (*optional*) Indicates the amount of whitespace at the right side of a page. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.rightmar

**@page.scale** (*optional*) Indicates how the page should be scaled when rendered. Value conforms to [data.PGSCALE](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.scale

**@page.topmar** (*optional*) Indicates the amount of whitespace at the top of a page. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.topmar

**@page.width** (*optional*) Describes the width of the page; may be expressed in real-world units or staff steps. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.pages → @page.width

**@pedal.style** (*optional*) Determines whether piano pedal marks should be rendered as lines or as terms. Value conforms to [data.PEDALSTYLE](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.pianoPedals → @pedal.style

**@ppq** (*optional*) Indicates the number of pulses (sometimes referred to as ticks or divisions) per quarter note. Unlike MIDI, MEI permits different values for a score and individual staves. Value is a positive integer.

<scoreDef> → att.scoreDef.ges → att.timeBase → @ppq

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linked → @prev

**@prolatio** (*optional*) Describes the semibreve-minim relationship. Value conforms to [data.PROLATIO](#).

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → att.mensural.shared → @prolatio

**@proport.num** (*optional*) Together, proport.num and proport.numbase specify a proportional change as a ratio, e.g., 1:3. Proport.num is for the first value in the ratio. Value is a positive integer.

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → @proport.num

**@proport.numbase** (*optional*) Together, proport.num and proport.numbase specify a proportional change as a ratio, e.g., 1:3. Proport.numbase is for the second value in the ratio. Value is a positive integer.

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → @proport.numbase

**@reh.dist** (*optional*) Records the default distance from the staff for rehearsal marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.distances → @reh.dist

**@reh.enclose** (*optional*) Describes the enclosing shape for rehearsal marks. Allowed values are: "**box**" (Enclosed by box.), "**circle**" (Enclosed by circle.), "**none**" (No enclosing shape.)

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.rehearsal → @reh.enclose

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linking → @sameas

**@slur.lform** Value conforms to [data.LINEFORM](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.slurRend → @slur.lform

**@slur.lwidth** Value conforms to [data.LINEWIDTH](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.slurRend → @slur.lwidth

**@spacing.packexp** (*optional*) Describes a note's spacing relative to its time value. Value is a decimal number.

<scoreDef> → att.scoreDef.vis → att.spacing → @spacing.packexp

**@spacing.packfact** (*optional*) Describes the note spacing of output. Value is a decimal number.

<scoreDef> → att.scoreDef.vis → att.spacing → @spacing.packfact

**@spacing.staff** (*optional*) Specifies the minimum amount of space between adjacent staves in the same system; measured from the bottom line of the staff above to the top line of the staff below. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.spacing → @spacing.staff

**@spacing.system** (*optional*) Describes the space between adjacent systems; a pair of space-separated values (minimum and maximum, respectively) provides a range between which a rendering system-supplied value may fall, while a single value indicates a fixed amount of space; that is, the minimum and maximum values are equal. One or two values from [data.MEASUREMENTSIGNED](#), separated by a space.

<scoreDef> → att.scoreDef.vis → att.spacing → @spacing.system

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<scoreDef> → att.common → att.linking → @synch

**@system.leftline** (*optional*) Indicates whether the system starts with a continuous line connecting all staves, including single-staff systems. Do not confuse this with the heavy vertical line used as a grouping symbol. Value conforms to [data.BOOLEAN](#).

<scoreDef> → att.scoreDef.vis → att.systems → @system.leftline

**@system.leftmar** (*optional*) Describes the amount of whitespace at the left system margin relative to page.leftmar. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.systems → @system.leftmar

**@system.rightmar** (*optional*) Describes the amount of whitespace at the right system margin relative to page.rightmar. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.systems → @system.rightmar

**@system.topmar** (*optional*) Describes the distance from page's top edge to the first system; used for first page only. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.systems → @system.topmar

**@tempo.dist** (*optional*) Records the default distance from the staff for tempo marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<scoreDef> → att.scoreDef.vis → att.distances → @tempo.dist

**@tempus** (*optional*) Describes the breve-semibreve relationship. Value conforms to [data.TEMPUS](#).

<scoreDef> → att.scoreDef.log → att.scoreDef.log.mensural → att.mensural.log → att.mensural.shared → @tempus

**@text.fam** (*optional*) Provides a default value for the font family name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTFAMILY](#).

<scoreDef> → att.scoreDef.vis → att.textStyle → @text.fam

**@text.name** (*optional*) Provides a default value for the font name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTNAME](#).

<scoreDef> → att.scoreDef.vis → att.textStyle → @text.name

**@text.size** (*optional*) Provides a default value for the font size of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSIZE](#).

<scoreDef> → att.scoreDef.vis → att.textStyle → @text.size

**@text.style** (*optional*) Provides a default value for the font style of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSTYLE](#).

<scoreDef> → att.scoreDef.vis → att.textStyle → @text.style

**@text.weight** (*optional*) Provides a default value for the font weight for text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTWEIGHT](#).

<scoreDef> → att.scoreDef.vis → att.textStyle → @text.weight

**@tie.lform** Value conforms to [data.LINEFORM](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.tieRend → @tie.lform

**@tie.lwidth** Value conforms to [data.LINEWIDTH](#).

<scoreDef> → att.scoreDef.vis → att.scoreDef.vis.cmn → att.tieRend → @tie.lwidth

**@trans.diat** (*optional*) Records the amount of diatonic pitch shift, e.g., C to C♯ = 0, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<scoreDef> → att.scoreDef.log → att.transposition → @trans.diat

**@trans.semi** (*optional*) Records the amount of pitch shift in semitones, e.g., C to C♯ = 1, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<scoreDef> → att.scoreDef.log → att.transposition → @trans.semi

**@tune.Hz** (*optional*) Holds a value for cycles per second, i.e., Hertz, for a tuning reference pitch. Value is a decimal number.

<scoreDef> → att.scoreDef.ges → att.tuning → @tune.Hz

**@tune.pname** (*optional*) Holds the pitch name of a tuning reference pitch, i.e., the central tone of a tuning system. Value conforms to [data.PITCHNAME](#).

<scoreDef> → att.scoreDef.ges → att.tuning → @tune.pname

**@tune.temper** (*optional*) Provides an indication of the tuning system, just, for example. Value conforms to [data.TEMPERAMENT](#).

<scoreDef> → att.scoreDef.ges → att.tuning → @tune.temper

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<scoreDef> → att.common → att.typed → @type

**@vu.height** (*optional*) Defines the height of a "virtual unit" (vu) in terms of real-world units. A single vu is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. Value is a [token](#).

<scoreDef> → att.scoreDef.vis → @vu.height

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<scoreDef> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<scoreDef> → att.common → att.basic → att.id → @xml:id

## Member of

[model.scoreDefLike](#) Groups elements that provide score meta-information.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<scoreDef> → model.scoreDefLike → model.sectionPart → <abbr>

**<add>** Marks an addition to the text.

<scoreDef> → model.scoreDefLike → model.sectionPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<scoreDef> → model.scoreDefLike → model.sectionPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<scoreDef> → model.scoreDefLike → model.sectionPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<scoreDef> → model.scoreDefLike → model.sectionPart → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<scoreDef> → model.scoreDefLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

<scoreDef> → model.scoreDefLike → model.sectionPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<scoreDef> → model.scoreDefLike → model.sectionPart → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<scoreDef> → model.scoreDefLike → model.sectionPart → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<scoreDef> → model.scoreDefLike → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<scoreDef> → model.scoreDefLike → model.sectionPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<scoreDef> → model.scoreDefLike → model.sectionPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<scoreDef> → model.scoreDefLike → model.sectionPart → <restore>

**<score>** Full score view of the musical content.

<scoreDef> → model.scoreDefLike → <score>

**<section>** Segment of music data.

<scoreDef> → model.scoreDefLike → model.sectionPart → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<scoreDef> → model.scoreDefLike → model.sectionPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<scoreDef> → model.scoreDefLike → model.sectionPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<scoreDef> → model.scoreDefLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<scoreDef> → model.scoreDefLike → model.sectionPart → <unclear>

## May Contain

**<ambitus>** Range of a voice, instrument or piece.

<scoreDef> → direct children → <ambitus>

**<chordTable>** Chord/tablature look-up table.

<scoreDef> → model.chordTableLike → <chordTable>

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

<scoreDef> → direct children → <grpSym>

**<instrGrp>** Collects MIDI instrument definitions.

<scoreDef> → direct children → <instrGrp>

**<keySig>** Written key signature.

<scoreDef> → model.keySigLike → <keySig>

**<meterSig>** Written meter signature.

<scoreDef> → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<scoreDef> → model.meterSigLike → <meterSigGrp>

**<pgFoot>** A running footer.

<scoreDef> → direct children → <pgFoot>

**<pgHead>** A running header.

<scoreDef> → direct children → <pgHead>

**<staffGrp>** A group of bracketed or braced staves.

<scoreDef> → model.staffGrpLike → <staffGrp>

**<symbolTable>** Contains a set of user-defined symbols.

<scoreDef> → model.symbolTableLike → <symbolTable>

DEVELOPMENT  
VERSION

## <scoreFormat>

Describes the type of score used to represent a musical composition (e.g., short score, full score, condensed score, close score, etc.).

### Referenced in chapters

[3.5.1 FRBR Entities in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<scoreFormat> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<scoreFormat> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<scoreFormat> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → [att.common](#) → [att.typed](#) → [att.classe](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<scoreFormat> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<scoreFormat> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<scoreFormat> → [att.common](#) → [att.labell](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<scoreFormat> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<scoreFormat> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<scoreFormat> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<scoreFormat> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<scoreFormat> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<scoreFormat> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<scoreFormat> → att.lang → @xml:lang

## Member of

**model.physDescPart** Groups elements that may appear as part of the physical description of a bibliographic item.

#### Contained By

**<expression>** Intellectual or artistic realization of a work.

<scoreFormat> → elements having scoreFormat as direct children → <expression>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<scoreFormat> → model.physDescPart → <physDesc>

#### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<scoreFormat> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<scoreFormat> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<scoreFormat> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<scoreFormat> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<scoreFormat> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## <scriptDesc>

(script description) – Contains a description of the letters or characters used in an autographic item.

### Module

MEI.msDesc

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<scriptDesc> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<scriptDesc> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<scriptDesc> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<scriptDesc> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<scriptDesc> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<scriptDesc> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<scriptDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<scriptDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<scriptDesc> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<scriptDesc> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<scriptDesc> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<scriptDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<scriptDesc> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<scriptDesc> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<scriptDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<scriptDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<scriptDesc> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<scriptDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<scriptDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<scriptDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<scriptDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<scriptDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<scriptDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<scriptDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<scriptDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<scriptDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<scriptDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<scriptDesc> → model.textPhraseLike.limited → model.mslInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<scriptDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<scriptDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<scriptDesc> → model.textPhraseLike.limited → model.mslInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<scriptDesc> → model.textPhraseLike.limited → model.mslInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<scriptDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<scriptDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<scriptDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<scriptDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<scriptDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<scriptDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<scriptDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<scriptDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<scriptNote>** Describes a particular script distinguished within the description of an autographic item.

<scriptDesc> → direct children → <scriptNote>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<scriptDesc> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<scriptDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<scriptDesc> → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<scriptDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<scriptDesc> → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<scriptDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<scriptDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<scriptDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<scriptDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<scriptDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<scriptDesc> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<scriptDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the `scriptDesc` element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <scriptNote>

(script note) – Describes a particular script distinguished within the description of an autographic item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<scriptNote> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<scriptNote> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<scriptNote> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<scriptNote> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<scriptNote> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<scriptNote> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<scriptNote> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<scriptNote> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<scriptNote> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<scriptNote> → att.lang → @xml:lang

## Member of

(scriptNote isn't member of any model class)

## Contained By

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<scriptNote> → elements having scriptNote as direct children → <scriptDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<scriptNote> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<scriptNote> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<scriptNote> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<scriptNote> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<scriptNote> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [scriptNote](#) element of the Text Encoding Initiative (TEI).

</elementSpec>
```

## <seal>

A single seal or similar attachment.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<seal> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<seal> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@contemporary** Value conforms to [data.BOOLEAN](#).

<seal> → direct children → @contemporary

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<seal> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<seal> → [att.common](#) → [att.linkin](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<seal> → [att.datable](#) → @enddate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<seal> → [att.common](#) → [att.linkin](#) → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<seal> → [att.datable](#) → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<seal> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<seal> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seal> → [att.common](#) → [att.linkin](#) → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<seal> → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<seal> → att.datable → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<seal> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seal> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<seal> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<seal> → att.common → att.linkin → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<seal> → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<seal> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<seal> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<seal> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<seal> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<seal> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<seal> → att.lang → @xml:lang

## Member of

(seal isn't member of any model class)

### Contained By

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<seal> → elements having seal as direct children → <sealDesc>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<seal> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<seal> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<seal> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<seal> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<seal> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<seal> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<seal> → direct children → <condition>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<seal> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<seal> → model.textPhraseLike.limited → model.dateLike → <date>

**<decoNote>** Contains a description of one or more decorative features of an item.

<seal> → direct children → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<seal> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<seal> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<seal> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<seal> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<seal> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<seal> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<seal> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<seal> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<seal> → direct children → <head>

**<height>** Description of the vertical size of an object.

<seal> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<seal> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<seal> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<seal> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<seal> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<seal> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<seal> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<seal> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<seal> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<seal> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<seal> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<seal> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<seal> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<seal> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<seal> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<seal> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<seal> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<seal> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<seal> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<seal> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<seal> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<seal> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<seal> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<seal> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<seal> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<seal> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<seal> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<seal> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<seal> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<seal> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<seal> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<seal> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<seal> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **seal** element of the Text Encoding Initiative (TEI).

## <sealDesc>

(seal description) – Describes the seals or similar external attachments applied to an item.

### Module

MEI.msDesc

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<sealDesc> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sealDesc> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.linkin → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sealDesc> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sealDesc> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sealDesc> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<sealDesc> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<sealDesc> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sealDesc> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sealDesc> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<sealDesc> → [att.lang](#) → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<sealDesc> → [model.physDescPart](#) → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sealDesc> → [model.textPhraseLike.limited](#) → [model.editorialLike](#) → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<sealDesc> → [model.textPhraseLike.limited](#) → [model.addressLike](#) → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<sealDesc> → [model.textPhraseLike.limited](#) → [model.annotLike](#) → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<sealDesc> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<sealDesc> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<condition>** The physical condition of an item, particularly any variances between the physical make-up of the item and that of other copies of the same item (e.g., missing pages or plates, brittleness, faded images, etc.).

<sealDesc> → direct children → <condition>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<sealDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<sealDesc> → model.textPhraseLike.limited → model.dateLike → <date>

**<decoNote>** Contains a description of one or more decorative features of an item.

<sealDesc> → direct children → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<sealDesc> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<sealDesc> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<sealDesc> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<sealDesc> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<sealDesc> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<sealDesc> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<sealDesc> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<sealDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<sealDesc> → direct children → <head>

**<height>** Description of the vertical size of an object.

<sealDesc> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<sealDesc> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<sealDesc> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<sealDesc> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<sealDesc> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<sealDesc> → direct children → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<sealDesc> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<sealDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<sealDesc> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<sealDesc> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<sealDesc> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<sealDesc> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<sealDesc> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sealDesc> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<sealDesc> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<seal>** A single seal or similar attachment.

<sealDesc> → direct children → <seal>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sealDesc> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<sealDesc> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<sealDesc> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sealDesc> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sealDesc> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<sealDesc> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<sealDesc> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<sealDesc> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<sealDesc> → model.textPhraseLike.limited → model.mslInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<sealDesc> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the `sealDesc` element of the Text Encoding Initiative (TEI).

## <secFolio>

(second folio) – Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<secFolio> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<secFolio> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<secFolio> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<secFolio> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<secFolio> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<secFolio> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<secFolio> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<secFolio> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<secFolio> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<secFolio> → [att.lang](#) → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<secFolio> → [model.msInline](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<secFolio> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<secFolio> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<secFolio> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<secFolio> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<secFolio> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<secFolio> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<secFolio> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<secFolio> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<secFolio> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<secFolio> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<secFolio> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<secFolio> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<secFolio> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<secFolio> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<secFolio> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<secFolio> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<secFolio> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<secFolio> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<secFolio> → model.msInLine → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → model.paracContentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<secFolio> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<secFolio> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<secFolio> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<secFolio> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<secFolio> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<secFolio> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<secFolio> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<secFolio> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<secFolio> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<secFolio> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<secFolio> → model.msInLine → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<secFolio> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<secFolio> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<secFolio> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<secFolio> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<secFolio> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<secFolio> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<secFolio> → model.msInline → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<secFolio> → model.msInline → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<secFolio> → model.msInline → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<secFolio> → model.msInline → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<secFolio> → model.msInline → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<secFolio> → model.msInline → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<secFolio> → model.msInline → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<secFolio> → model.msInline → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<secFolio> → model.msInline → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<secFolio> → model.msInline → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<secFolio> → model.msInline → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<secFolio> → model.msInline → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<secFolio> → model.msInline → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<secFolio> → model.msInline → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<secFolio> → model.msInline → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<secFolio> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<secFolio> → model.msInline → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<secFolio> → macro.struc-  
unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<secFolio> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<secFolio> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<secFolio> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [secFol](#) element of the Text Encoding Initiative (TEI).

## Constraints

The secFolio element may only appear as a descendant of the physDesc element.

## <section>

Segment of music data.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [2.2.1 Score and Parts](#), [4.2.1 The Role of the Measure Element](#), [4.2.4 Re-definition of Score Parameters](#), [4.3.9.1 Tempo changes and other directives](#), [4.3.10.1 Structural Repetition](#), [5.5 Music Data Organization](#)

### Module

[MEI.shared](#)

### Attributes

**@attacca** Indicates that the performance of the next section should begin immediately following this one. Value conforms to [data.BOOLEAN](#).

<section> → [att.section.ges](#) → @attacca

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<section> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<section> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<section> → [att.common](#) → [att.linking](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<section> → [att.metadataPointing](#) → @decls

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<section> → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<section> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<section> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<section> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<section> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.responsibility → @resp

**@restart** (*optional*) Indicates that staves begin again with this section. Value conforms to [data.BOOLEAN](#).

<section> → att.section.vis → @restart

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<section> → att.common → att.linked → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<section> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<section> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<section> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<section> → att.section.log → att.alignment → @when

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "onLoad" (*Load the target resource(s) immediately.*), "onRequest" (*Load the target resource(s) upon user request.*), "none" (*Do not permit loading of the target resource(s).*), "other" (*Behavior other than allowed by the other values of this attribute.*)

<section> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<section> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "new" (*Open in a new window.*), "replace" (*Load the referenced resource in the same window.*), "embed" (*Embed the referenced resource at the point of the link.*), "none" (*Do not permit traversal to the referenced resource.*), "other" (*Behavior other than permitted by the other values of this attribute.*)

<section> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<section> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<section> → att.common → att.basic → att.id → @xml:id

## Member of

[model.sectionLike](#) Groups elements that represent a segment of music notation.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<section> → model.sectionLike → model.sectionPart → <abbr>

**<add>** Marks an addition to the text.

<section> → model.sectionLike → model.sectionPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<section> → model.sectionLike → model.sectionPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<section> → model.sectionLike → model.sectionPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<section> → model.sectionLike → model.sectionPart → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<section> → model.sectionLike → <ending>

**<expan>** Contains the expansion of an abbreviation.

<section> → model.sectionLike → model.sectionPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<section> → model.sectionLike → model.sectionPart → <lem>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<section> → `model.sectionLike` → **<metaMark>**

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<section> → `model.sectionLike` → `model.sectionPart` → **<orig>**

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<section> → `model.sectionLike` → `model.scorePart` → **<part>**

**<rdg>** (reading) – Contains a single reading within a textual variation.

<section> → `model.sectionLike` → `model.sectionPart` → **<rdg>**

**<reg>** Contains material which has been regularized or normalized in some sense.

<section> → `model.sectionLike` → `model.sectionPart` → **<reg>**

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<section> → `model.sectionLike` → `model.sectionPart` → **<restore>**

**<score>** Full score view of the musical content.

<section> → `model.sectionLike` → `model.scorePart` → **<score>**

**<section>** Segment of music data.

<section> → `model.sectionLike` → `model.sectionPart` → **<section>**

**<sic>** Contains apparently incorrect or inaccurate material.

<section> → `model.sectionLike` → `model.sectionPart` → **<sic>**

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<section> → `model.sectionLike` → `model.sectionPart` → **<supplied>**

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<section> → `model.sectionLike` → `model.sectionPart` → **<unclear>**

## May Contain

**<add>** Marks an addition to the text.

<section> → `model.transcriptionLike` → **<add>**

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<section> → `model.graphicPrimitiveLike` → **<anchoredText>**

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<section> → `model.annotLike` → **<annot>**

**<app>** (apparatus) – Contains one or more alternative encodings.

<section> → `model.appLike` → **<app>**

**<cb>** An empty formatting element that forces text to begin in a new column.

<section> → `model.milestoneLike.music` → **<cb>**

**<choice>** Groups a number of alternative encodings for the same point in a text.

<section> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<section> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<section> → model.transcriptionLike → <corr>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<section> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<section> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<section> → model.transcriptionLike → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<section> → model.divLike → <div>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<section> → model.sectionPart → model.endingLike → <ending>

**<expansion>** Indicates how a section may be programmatically expanded into its 'through-composed' form.

<section> → direct children → <expansion>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<section> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<section> → model.transcriptionLike → <handShift>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<section> → model.graphicPrimitiveLike → <line>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<section> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<section> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<section> → model.milestoneLike.music → model.pbLike → <pb>

**<reg>** Contains material which has been regularized or normalized in some sense.

<section> → model.transcriptionLike → <reg>

**<relation>** Describes a relationship or linkage amongst entities.

<section> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<section> → model.relationLike → <relationList>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<section> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<section> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<section> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<section>** Segment of music data.

<section> → model.sectionPart → model.sectionLike → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<section> → model.transcriptionLike → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<section> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<section> → model.sectionPart → model.staffDefLike → <staffDef>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<section> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<section> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<section> → model.transcriptionLike → <unclear>

## Remarks

This element functions as a container for actual music data. Pointing attributes make it possible to connect this element to other internal or external entities, such as media objects or annotations.

## Constraints

A section containing an expansion element must have descendant section, ending, or rdg elements.

## Declaration

## <seg>

(arbitrary segment) represents any segmentation of text below the "text component" level.

### Module

MEI.text

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<seg> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.linkin → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<seg> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<seg> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<seg> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<seg> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<seg> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<seg> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<seg> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<seg> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<seg> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<seg> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<seg> → [att.lang](#) → @xml:lang

## Member of

[model.textPhraseLike.limited](#) Groups textual elements that occur at the level of individual words or phrases. This class is equivalent to the [model.textPhraseLike](#) class without the pb element.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<seg> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<seg> → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<seg> → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<seg> → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<seg> → [model.textPhraseLike.limited](#) → [model.textPhraseLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<seg> → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<seg> → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<seg> → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<seg> → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<seg> → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<seg> → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<seg> → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<seg> → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<seg> → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<seg> → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<seg> → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<seg> → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<seg> → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<seg> → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<seg> → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<seg> → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<seg> → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<seg> → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<seg> → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<seg> → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<seg> → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<seg> → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<seg> → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<seg> → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<seg> → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<seg> → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<seg> → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<seg> → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<seg> → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<seg> → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<seg> → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<seg> → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<seg> → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<seg> → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<seg> → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<seg> → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<seg> → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<seg> → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<seg> → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<seg> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<seg> → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<seg> → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<seg> → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<seg> → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<seg> → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<seg> → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<seg> → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<seg> → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<seg> → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<seg> → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<seg> → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<seg> → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<seg> → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<seg> → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<seg> → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<seg> → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<seg> → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<seg> → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<seg> → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<seg> → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<seg> → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<seg> → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<seg> → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<seg> → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<seg> → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<seg> → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<seg> → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<seg> → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<seg> → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<seg> → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<seg> → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<seg> → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<seg> → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<seg> → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<seg> → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<seg> → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<seg> → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<seg> → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<seg> → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<seg> → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<seg> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<seg> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<seg> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<seg> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<seg> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<seg> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<seg> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<seg> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<seg> → model.textPhraseLike → model.pblike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<seg> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<seg> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<seg> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<seg> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<seg> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<seg> → model.sylLike → <syl>

**<symbol>** A reference to a previously defined symbol.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<seg> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<seg> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [seg](#) element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <segmentation>

Describes the principles according to which the musical text has been segmented, for example into movements, sections, etc.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<segmentation> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<segmentation> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<segmentation> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<segmentation> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<segmentation> → [att.common](#) → [att.linkin](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<segmentation> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<segmentation> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<segmentation> → att.common → att.linked → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<segmentation> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<segmentation> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<segmentation> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<segmentation> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<segmentation> → att.lang → @xml:lang

## Member of

[model.editorialDeclPart](#) Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

## Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<segmentation> → [model.editorialDeclPart](#) → <editorialDecl>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<segmentation> → [model.headLike](#) → <head>

**<p>** One or more text phrases that form a logical prose passage.

<segmentation> → [model.pLike](#) → <p>

## Remarks

The model of this element is based on the [segmentation](#) element of the Text Encoding Initiative (TEI).

## Declaration

```
<elementSpec ident="segmentation" module="MEI.header">
  <desc xml:lang="en">Describes the principles according to which the musical text has been
  segmented, for example into movements, sections, etc.</desc>
  <classes>

    Initiative (TEI).</p>
  </remarks>
</elementSpec>
```

## <seqNum>

(sequence number) – MIDI sequence number.

### Module

MEI.midi

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<seqNum> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linked](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<seqNum> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<seqNum> → [att.midi.event](#) → [att.layerIdent](#) → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<seqNum> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linked](#) → @next

**@num** (*required*) Number in the range 0-65535. Value is a positive integer, including 0.

<seqNum> → direct children → @num

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\i][\c]+)"**, separated by spaces.

<seqNum> → [att.midi.event](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<seqNum> → [att.midi.event](#) → [att.partIdent](#) → @partstaff

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linking](#) → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<seqNum> → [att.midi.event](#) → [att.staffId](#) → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<seqNum> → [att.common](#) → [att.linking](#) → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<seqNum> → [att.midi.event](#) → [att.timestamp.log](#) → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<seqNum> → [att.midi.event](#) → [att.timestamp.ges](#) → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<seqNum> → [att.midi.event](#) → [att.timestamp.ges](#) → @tstamp.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<seqNum> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<seqNum> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<seqNum> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

(seqNum isn't member of any model class)

**Contained By**

**<midi>** Container for elements that contain information useful when generating MIDI output.  
<seqNum> → elements having seqNum as direct children → <midi>

**May Contain**

- (<seqNum> *may not have child elements*)

**Declaration**

```
<elementSpec ident="seqNum" module="MEI.midi">

          <rng:param name="maxInclusive">65535</rng:param>
        </rng:data>
      </datatype>
    </attDef>
  </attList>
</elementSpec>
```

## <series>

Contains information about the serial publication in which a bibliographic item has appeared.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<series> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<series> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<series> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<series> → [att.common](#) → [att.linkin](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<series> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<series> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<series> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<series> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<series> → [att.common](#) → [att.linkin](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<series> → [att.common](#) → [att.linkin](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<series> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<series> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<series> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<series> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<series> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<series> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<series> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<series> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<series> → att.lang → @xml:lang

## Member of

[model.biblPart](#) Groups elements that may appear as part of a bibliographic description.

[model.titlePagePart](#) Groups elements that may appear as part of a title page transcription.

## Contained By

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<series> → [model.biblPart](#) → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<series> → elements having series as direct children → <biblStruct>

**<titlePage>** Contains a transcription of the title page of a text.

<series> → model.titlePagePart → <titlePage>

## May Contain

**<cb>** An empty formatting element that forces text to begin in a new column.

<series> → model.milestoneLike.text → <cb>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<series> → model.milestoneLike.text → <colLayout>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<series> → direct children → <editor>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<series> → direct children → <extent>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<series> → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<series> → model.milestoneLike.text → model.lbLike → <lb>

**<pb>** An empty formatting element that forces text to begin on a new page.

<series> → model.milestoneLike.text → model.pbLike → <pb>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<series> → model.locrefLike → <ptr>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<series> → model.locrefLike → <ref>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<series> → direct children → <respStmt>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<series> → direct children → <textLang>

**<title>** Title of a bibliographic entity.

<series> → model.titleLike → <title>

## Remarks

The model of this element is based on the [series](#) element of the Text Encoding Initiative (TEI).

## <seriesStmt>

(series statement) – Groups information about the series, if any, to which a publication belongs.

### Referenced in chapters

[3.3.2 Responsibility Attribution](#), [3.4.1 File Description](#), [3.4.1.4 Series Statement](#), [3.7 Encoding Sources in MEI](#), [3.8.3 Minimal and Recommended Header Information](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<seriesStmt> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<seriesStmt> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<seriesStmt> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<seriesStmt> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<seriesStmt> → att.common → att.linking → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<seriesStmt> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<seriesStmt> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<seriesStmt> → att.common → att.basic → att.id → @xml:id

## Member of

(seriesStmt isn't member of any model class)

## Contained By

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<seriesStmt> → elements having seriesStmt as direct children → <fileDesc>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<seriesStmt> → elements having seriesStmt as direct children → <seriesStmt>

## May Contain

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<seriesStmt> → model.respLikePart → <arranger>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<seriesStmt> → model.respLikePart → <author>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<seriesStmt> → direct children → <biblScope>

**<composer>** The name of the creator of the intellectual content of a musical work.

<seriesStmt> → model.respLikePart → <composer>

**<contents>** List of the material contained within a resource.

<seriesStmt> → direct children → <contents>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<seriesStmt> → model.respLikePart → <contributor>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<seriesStmt> → model.respLikePart → <editor>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<seriesStmt> → model.respLikePart → <funder>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<seriesStmt> → model.headLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<seriesStmt> → model.identifierLike → <identifier>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<seriesStmt> → model.respLikePart → <librettist>

**<lyricist>** Person or organization who is a writer of the text of a song.

<seriesStmt> → model.respLikePart → <lyricist>

**<respStmt>** Transcription of text that names one or more individuals, groups, or in rare cases, mechanical processes, responsible for creation, realization, production, funding, or distribution of the intellectual or artistic content.

<seriesStmt> → direct children → <respStmt>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<seriesStmt> → direct children → <seriesStmt>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<seriesStmt> → model.respLikePart → <sponsor>

**<title>** Title of a bibliographic entity.

<seriesStmt> → model.titleLike → <title>

## Remarks

The <title> sub-element records the series title, the <respStmt> element records the person or group responsible for the series, and the <identifier> element contains a series identifier. The <contents> element should be used when it is necessary to enumerate the content of the series, but not describe each component. The <seriesStmt> element is provided within seriesStmt for the description of a sub-series.

The model of this element is based on the [seriesStmt](#) element of the Text Encoding Initiative (TEI).

DEVELOPMENT  
VERSION

## <settlement>

Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<settlement> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<settlement> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<settlement> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<settlement> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<settlement> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<settlement> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<settlement> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<settlement> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<settlement> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<settlement> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<settlement> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<settlement> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<settlement> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<settlement> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<settlement> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<settlement> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<settlement> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<settlement> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<settlement> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<settlement> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<settlement> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<settlement> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<settlement> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<settlement> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<settlement> → att.lang → @xml:lang

## Member of

[model.geogNamePart](#) Groups elements which form part of a geographic name.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<settlement> → model.geogNamePart → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<|>** Contains a single line of text within a line group.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<settlement> → model.geogNamePart → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<settlement> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<settlement> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<settlement> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<settlement> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<settlement> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<settlement> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<settlement> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<settlement> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<settlement> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<settlement> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<settlement> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<settlement> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<settlement> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<settlement> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<settlement> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<settlement> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **settlement** element of the Text Encoding Initiative (TEI).

## <sic>

Contains apparently incorrect or inaccurate material.

### Referenced in chapters

[11.2 Editorial Markup](#), [11.2.2 Apparent Errors](#)

### Module

[MEI.edittrans](#)

### Attributes

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<sic> → att.extent → att.ranging → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<sic> → att.extent → att.ranging → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<sic> → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.typed → att.classed → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<sic> → att.extent → att.ranging → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sic> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linkin → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<sic> → att.edit → att.evidence → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<sic> → att.extent → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<sic> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sic> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<sic> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<sic> → att.extent → att.ranging → @min

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sic> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<sic> → att.edit → att.source → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sic> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<sic> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<sic> → att.common → att.typed → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.)

<sic> → att.extent → att.measurement → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sic> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sic> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<sic> → att.lang → @xml:lang

## Member of

[model.choicePart](#) Groups elements that may appear as part of the content of a choice element.

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sic> → model.transcriptionLike → <abbr>

**<add>** Marks an addition to the text.

<sic> → model.transcriptionLike → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<sic> → model.transcriptionLike → <addName>

**<addrLine>** Single line of a postal address.

<sic> → model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<sic> → model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<sic> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<sic> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<sic> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<sic> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<sic> → model.transcriptionLike → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<sic> → model.choicePart → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<sic> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<sic> → model.transcriptionLike → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<sic> → model.transcriptionLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<sic> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<sic> → model.transcriptionLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<sic> → model.transcriptionLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<sic> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<sic> → model.transcriptionLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<sic> → model.transcriptionLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<sic> → model.transcriptionLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<sic> → model.transcriptionLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<sic> → model.transcriptionLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<sic> → model.transcriptionLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<sic> → model.transcriptionLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<sic> → model.transcriptionLike → <expan>

**<f>** Single element of a figured bass indication.

<sic> → model.transcriptionLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<sic> → model.transcriptionLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<sic> → model.transcriptionLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<sic> → model.transcriptionLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<sic> → model.transcriptionLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<sic> → model.transcriptionLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<sic> → model.transcriptionLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<sic> → model.transcriptionLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<sic> → model.transcriptionLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<sic> → model.transcriptionLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<sic> → model.transcriptionLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<sic> → model.transcriptionLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<sic> → model.transcriptionLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<sic> → model.transcriptionLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<sic> → model.transcriptionLike → <imprint>

**<keySig>** Written key signature.

<sic> → model.transcriptionLike → <keySig>

**<l>** Contains a single line of text within a line group.

<sic> → model.transcriptionLike → <|>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<sic> → model.transcriptionLike → <label>

**<labelAbbr>** A label on the pages following the first.

<sic> → model.transcriptionLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<sic> → model.transcriptionLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<sic> → model.transcriptionLike → <lem>

**<li>** Single item in a <list>.

<sic> → model.transcriptionLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<sic> → model.transcriptionLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<sic> → model.transcriptionLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<sic> → model.transcriptionLike → <metaMark>

**<name>** Proper noun or noun phrase.

<sic> → model.transcriptionLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<sic> → model.transcriptionLike → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<sic> → model.transcriptionLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<sic> → model.transcriptionLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<sic> → model.transcriptionLike → <neume>

**<note>** A single pitched event.

<sic> → model.transcriptionLike → <note>

**<num>** Numeric information in any form.

<sic> → model.transcriptionLike → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<sic> → model.transcriptionLike → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<sic> → model.transcriptionLike → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<sic> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<sic> → model.transcriptionLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<sic> → model.transcriptionLike → model.paracontentPart → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<sic> → model.transcriptionLike → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<sic> → model.transcriptionLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<sic> → model.transcriptionLike → <persName>

**<pgFoot>** A running footer.

<sic> → model.transcriptionLike → <pgFoot>

**<pgHead>** A running header.

<sic> → model.transcriptionLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<sic> → model.transcriptionLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<sic> → model.transcriptionLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<sic> → model.transcriptionLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<sic> → model.transcriptionLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<sic> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<sic> → model.transcriptionLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sic> → model.transcriptionLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<sic> → model.transcriptionLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<sic> → model.transcriptionLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<sic> → model.transcriptionLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<sic> → model.transcriptionLike → <roleName>

**<score>** Full score view of the musical content.

<sic> → model.transcriptionLike → <score>

**<section>** Segment of music data.

<sic> → model.transcriptionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sic> → model.transcriptionLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sic> → model.transcriptionLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<sic> → model.transcriptionLike → <sic>

**<signifLet>** Significantive letter(s).

<sic> → model.transcriptionLike → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<sic> → model.transcriptionLike → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<sic> → model.transcriptionLike → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<sic> → model.transcriptionLike → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sic> → model.transcriptionLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sic> → model.transcriptionLike → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<sic> → model.transcriptionLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<sic> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<sic> → model.transcriptionLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<sic> → model.transcriptionLike → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<sic> → model.transcriptionLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<sic> → model.transcriptionLike → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<sic> → model.transcriptionLike → <th>

**<title>** Title of a bibliographic entity.

<sic> → model.transcriptionLike → <title>

**<titlePage>** Contains a transcription of the title page of a text.

<sic> → model.transcriptionLike → <titlePage>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<sic> → model.transcriptionLike → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<sic> → model.transcriptionLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<sic> → model.transcriptionLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<accid>** Records a temporary alteration to the pitch of a note.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <accid>

**<add>** Marks an addition to the text.

<sic> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<sic> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.annotLike → <annot>

**<arpeg>** Indicates that the notes of a chord are to be performed successively rather than simultaneously, usually from lowest to highest. Sometimes called a "roll".

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <arpeg>

**<artic>** An indication of how to play a note or chord.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <artic>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <attacca>

**<bTrem>** A rapid alternation on a single pitch or chord.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <bTrem>

**<barLine>** Vertical line drawn through one or more staves that divides musical notation into metrical units.

<sic> → model.layerPart → model.eventLike → <barLine>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beam>

**<beamSpan>** Alternative element for explicitly encoding beams, particularly those which extend across bar lines.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <beamSpan>

**<beatRpt>** An indication that material on a preceding beat should be repeated.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <beatRpt>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <bend>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblList>** List of bibliographic references.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <biblList>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <bracketSpan>

**<breath>** An indication of a point at which the performer on an instrument requiring breath (including the voice) may breathe.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <breath>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <caesura>

**<castList>** Contains a single cast list or dramatis personae.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <castList>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<cb>** An empty formatting element that forces text to begin in a new column.

<sic> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<sic> → model.editLike → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<sic> → model.layerPart → model.eventLike → <chord>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<sic> → model.layerPart → model.eventLike → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<sic> → model.layerPart → model.eventLike → <clefGrp>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<sic> → model.milestoneLike.music → <colLayout>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<sic> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<sic> → model.graphicPrimitiveLike → <curve>

**<custos>** Symbol placed at the end of a line of music to indicate the first note of the next line. Sometimes called a "direct".

<sic> → model.layerPart → model.eventLike → <custos>

**<damage>** Contains an area of damage to the physical medium.

<sic> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<sic> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <dimensions>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<div>** Major structural division of text, such as a preface, chapter or section.

<sic> → model.divLike → <div>

**<divLine>** Represents a division (divisio) in neume notation. Divisions indicate short, medium, or long pauses similar to breath marks in modern notation.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <divLine>

**<dot>** Dot of augmentation or division.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <dot>

**<dot>** Dot of augmentation or division.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.noteModifierLike → <dot>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<sic> → model.sectionPart → model.endingLike → <ending>

**<episema>** Episema.

<sic> → model.neumeModifierLike → <episema>

**<eventList>** Contains historical information given as a sequence of significant past events.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <eventList>

**<expan>** Contains the expansion of an abbreviation.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<sic> → model.fLike → <f>

**<ftrem>** A rapid alternation between a pair of notes (or chords or perhaps between a note and a chord) that are (usually) farther apart than a major second.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <ftrem>

**<fermata>** An indication placed over a note or rest to indicate that it should be held longer than its written value. May also occur over a bar line to indicate the end of a phrase or section. Sometimes called a 'hold' or 'pause'.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <fermata>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.figureLike → <fig>

**<fing>** finger – An individual finger in a fingering indication.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)- A group of individual fingers in a fingering indication.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<sic> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geo

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <gliss>

**<graceGrp>** A container for a sequence of grace notes.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <graceGrp>

**<hairpin>** Indicates continuous dynamics expressed on the score as wedge-shaped graphics, e.g., < and >.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <hairpin>

**<halfmRpt>** A half-measure repeat in any meter.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <halfmRpt>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<sic> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.controlEventLike.harmony → model.harmLike → <harm>

**<harpPedal>** Harp pedal diagram.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <harpPedal>

**<height>** Description of the vertical size of an object.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<hispanTick>** Hispanic tick.

<sic> → model.neumeModifierLike → <hispanTick>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<keyAccid>** Accidental in a key signature.

<sic> → model.keyAccidLike → <keyAccid>

**<keySig>** Written key signature.

<sic> → model.layerPart → model.eventLike → model.keySigLike → <keySig>

**<layer>** An independent stream of events on a staff.

<sic> → model.editTransPart → model.editTransPart.music → model.layerLike → <layer>

**<lb>** An empty formatting element that forces text to begin on a new line.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.lgLike → <lg>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <ligature>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<sic> → model.graphicPrimitiveLike → <line>

**<liquecent>** Liquescent.

<sic> → model.neumeComponentModifierLike → <liquecent>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.listLike → <list>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<lv>** A "tie-like" indication that a note should ring beyond its written duration.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <lv>

**<mRest>** Complete measure rest in any meter.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRest>

**<mRpt>** An indication that the previous measure should be repeated.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt>

**<mRpt2>** An indication that the previous two measures should be repeated.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mRpt2>

**<mSpace>** A measure containing only empty space in any meter.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <mSpace>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<sic> → model.sectionPart → model.sectionPart.cmn → model.measureLike → <measure>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <mensur>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <metaMark>

**<meterSig>** Written meter signature.

<sic> → model.layerPart → model.eventLike → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<sic> → model.layerPart → model.eventLike → model.meterSigLike → <meterSigGrp>

**<midi>** Container for elements that contain information useful when generating MIDI output.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.midiLike → <midi>

**<mordent>** An ornament indicating rapid alternation of the main note with a secondary note, usually a step below, but sometimes a step above.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <mordent>

**<multiRest>** Multiple measures of rest compressed into a single symbol, frequently found in performer parts.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRest>

**<multiRpt>** Multiple repeated measures.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.measureFilling → <multiRpt>

**<name>** Proper noun or noun phrase.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → <name>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<sic> → model.neumePart → <nc>

**<ncGrp>** Collection of one or more neume components.

<sic> → model.neumePart → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.eventLike.neumes → <neume>

**<note>** A single pitched event.

<sic> → model.layerPart → model.eventLike → <note>

**<num>** Numeric information in any form.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<sic> → model.transcriptionLike → <orig>

**<oriscus>** Oriscus.

<sic> → model.neumeComponentModifierLike → <oriscus>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.pLike → <p>

**<pad>** An indication of extra visual space between notational elements.

<sic> → model.layerPart → model.eventLike → <pad>

**<pb>** An empty formatting element that forces text to begin on a new page.

<sic> → model.milestoneLike.music → model.pbLike → <pb>

**<pedal>** Piano pedal mark.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <pedal>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <phrase>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <postCode>

**<proport>** Description of note duration as arithmetic ratio.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.mensural → model.eventLike.mensural → <proport>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.qLike → <q>

**<quilisma>** Quilisma.

<sic> → model.neumeComponentModifierLike → <quilisma>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.quoteLike → <quote>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.locrefLike → <ref>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<sic> → model.editTransPart → model.editTransPart.music → model.verseLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<sic> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <reh>

**<relation>** Describes a relationship or linkage amongst entities.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike

**<rest>** A non-sounding event found in the source being transcribed.

<sic> → model.layerPart → model.eventLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<sic> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<sic> → model.milestoneLike.music → <sb>

**<scoreDef>** Container for score meta-information.

<sic> → model.sectionPart → model.scoreDefLike → <scoreDef>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <secFolio>

**<section>** Segment of music data.

<sic> → model.sectionPart → model.sectionLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<sic> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInline → <signatures>

**<signifLet>** Significantive letter(s).

<sic> → model.neumeModifierLike → <signifLet>

**<slur>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <slur>

**<sp>** Contains an individual speech in a performance text.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <sp>

**<space>** A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

<sic> → model.layerPart → model.eventLike → <space>

**<stack>** An inline table with a single column.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.rendLike → <stack>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<sic> → model.sectionPart → model.sectionPart.mensuralAndNeumes → model.staffLike → <staff>

**<staffDef>** Container for staff meta-information.

<sic> → model.sectionPart → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<sic> → model.staffGrpLike → <staffGrp>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → model.stageDirLike → <stageDir>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.addressPart → <street>

**<strophicus>** Strophicus.

<sic> → model.neumeComponentModifierLike → <strophicus>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<sic> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<sic> → model.transcriptionLike → <supplied>

**<syl>** Individual lyric syllable.

<sic> → model.editTransPart → model.sylLike → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<sic> → model.layerPart → model.layerPart.mensuralAndNeumes → model.layerPart.neumes → model.syllableLike → <syllable>

**<symbol>** A reference to a previously defined symbol.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <symbol>

**<table>** Contains text displayed in tabular form.

<sic> → model.editTransPart → model.editTransPart.text → model.textComponentLike → model.tableLike → <table>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike → <tempo>

**<term>** Keyword or phrase which describes a resource.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → <term>

**<tie>** An indication that two notes of the same pitch form a single note with their combined rhythmic values.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tie>

**<title>** Title of a bibliographic entity.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.titleLike → <title>

**<trill>** Rapid alternation of a note with another (usually at the interval of a second above).

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <trill>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<sic> → model.layerPart → model.layerPart.cmn → model.eventLike.cmn → <tuplet>

**<tupletSpan>** Alternative element for encoding tuplets, especially useful for tuplets that extend across bar lines.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → <tupletSpan>

**<turn>** An ornament consisting of four notes — the upper neighbor of the written note, the written note, the lower neighbor, and the written note.

<sic> → model.editTransPart → model.editTransPart.music → model.controlEventLike.cmn → model.ornamentLike.cmn → <turn>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<sic> → model.transcriptionLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<sic> → model.editTransPart → model.editTransPart.music → model.verseLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<sic> → model.editTransPart → model.editTransPart.music → <volta>

**<watermark>** Contains a description of a watermark or similar device.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<sic> → model.editTransPart → model.editTransPart.text → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

A correction for the apparent error may be given in an accompanying child or sibling **<corr>** element.

In no case should <[sic](#)> contain elements that would not otherwise be permitted to occur within the parent of its own <[app](#)> ancestor. For example, when used as a descendent of <[verse](#)>, <[sic](#)> should only contain those elements allowed within <[verse](#)>.

The model of this element is based on the [sic](#) element of the Text Encoding Initiative (TEI).

## <signatures>

Provides a description of the leaf or quire signatures found within a codex.

### Module

[MEI.msDesc](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<signatures> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<signatures> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<signatures> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<signatures> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linkin](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<signatures> → [att.common](#) → [att.linkin](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<signatures> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<signatures> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<signatures> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<signatures> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<signatures> → [att.lang](#) → @xml:lang

## Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<signatures> → [model.msInline](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<signatures> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<signatures> → [model.msInline](#) → [model.textPhraseLike.limited](#) → <actor>

**<add>** Marks an addition to the text.

<signatures> → [model.msInline](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<signatures> → model.msInline → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<signatures> → model.msInline → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<signatures> → model.msInline → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<signatures> → model.msInline → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<signatures> → model.msInline → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<signatures> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<signatures> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<signatures> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<signatures> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<signatures> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<signatures> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<signatures> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<signatures> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<signatures> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<signatures> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<signatures> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<signatures> → model.msInline → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<signatures> → model.msInline → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<signatures> → model.msInline → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<signatures> → model.msInline → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<signatures> → model.msInline → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<signatures> → model.msInline → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<signatures> → model.msInline → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<signatures> → model.msInline → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<signatures> → model.msInline → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<signatures> → model.msInline → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<signatures> → model.msInline → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<signatures> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<signatures> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<signatures> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<signatures> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<signatures> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<l>** Contains a single line of text within a line group.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <l>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<signatures> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<signatures> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<signatures> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<signatures> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<signatures> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<signatures> → model.msInline → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<signatures> → model.msInline → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<signatures> → model.msInline → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<signatures> → model.msInline → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<signatures> → model.msInline → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<signatures> → model.msInline → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<signatures> → model.msInline → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<signatures> → model.msInline → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<signatures> → model.msInline → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<signatures> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<signatures> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<signatures> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<signatures> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<signatures> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<signatures> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<signatures> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<signatures> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<signatures> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<signatures> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<signatures> → model.msInline → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<signatures> → model.msInline → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<signatures> → model.msInline → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<signatures> → model.msInline → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<signatures> → model.msInline → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<signatures> → model.msInline → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<signatures> → model.msInline → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<signatures> → model.msInline → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<signatures> → model.msInline → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<signatures> → model.msInline → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<signatures> → model.msInline → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<signatures> → model.msInline → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<signatures> → model.msInline → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<signatures> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<signatures> → model.msInline → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<signatures> → model.msInline → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<signatures> → model.msInline → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<signatures> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<signatures> → model.msInline → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic peacee>** Entity to whom a creative work is formally offered.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic peacee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<signatures> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<signatures> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<signatures> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<signatures> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<signatures> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [signatures](#) element of the Text Encoding Initiative (TEI).

## Constraints

The signatures element may only appear as a descendant of the physDesc element.

# <signifLet>

Significantive letter(s).

## Referenced in chapters

[6.4.1 Elements](#)

## Module

[MEI.neumes](#)

## Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<signifLet> → [att.signifLet.vis](#) → [att.altSym](#) → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<signifLet> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<signifLet> → [att.signifLet.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<signifLet> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<signifLet> → [att.common](#) → [att.linkin](#) → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<signifLet> → [att.signifLet.vis](#) → [att.enclosingChars](#) → @enclose

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<signifLet> → [att.signifLet.log](#) → [att.targetEval](#) → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<signifLet> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<signifLet> → [att.common](#) → [att.linkin](#) → @follows

**@fontfam** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<signifLet> → att.signifLet.vis → att.typography → @fontfam

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<signifLet> → att.signifLet.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<signifLet> → att.signifLet.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<signifLet> → att.signifLet.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<signifLet> → att.signifLet.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Allowed values are: "**smufl**" (*Standard Music Font Layout*).

<signifLet> → att.signifLet.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<signifLet> → att.signifLet.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<signifLet> → att.signifLet.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<signifLet> → att.signifLet.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<signifLet> → att.signifLet.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<signifLet> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<signifLet> → att.signifLet.log → att.layerIdent → @layer

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<signifLet> → att.signifLet.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<signifLet> → att.signifLet.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<signifLet> → att.signifLet.vis → att.staffLoc → @loc

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<signifLet> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<signifLet> → att.signifLet.log → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<signifLet> → att.signifLet.log → att.partIdent → @partstaff

**@place** (*recommended*) Captures the placement of the sequence of characters with respect to the neume or neume component with which it is associated. Value conforms to [data.EVENTREL](#).

<signifLet> → att.signifLet.vis → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.signifLet.log → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<signifLet> → att.signifLet.log → att.staffIdent → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<signifLet> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<signifLet> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<signifLet> → att.signifLet.vis → att.visibility → @visible

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<signifLet> → att.signifLet.log → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<signifLet> → att.signifLet.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<signifLet> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<signifLet> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<signifLet> → att.signifLet.vis → att.xy → @y

## Member of

[model.neumeModifierLike](#) Groups elements that modify neume-like features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<signifLet> → [model.neumeModifierLike](#) → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<signifLet> → [model.neumeModifierLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<signifLet> → [model.neumeModifierLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<signifLet> → [model.neumeModifierLike](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<signifLet> → [model.neumeModifierLike](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<signifLet> → model.neumeModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<signifLet> → model.neumeModifierLike → <nc>

**<ncGrp>** Collection of one or more neume components.

<signifLet> → model.neumeModifierLike → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<signifLet> → model.neumeModifierLike → <neume>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<signifLet> → model.neumeModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<signifLet> → model.neumeModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<signifLet> → model.neumeModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<signifLet> → model.neumeModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<signifLet> → model.neumeModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<signifLet> → model.neumeModifierLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<signifLet> → model.neumeModifierLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<signifLet> → model.neumeModifierLike → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<signifLet> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<signifLet> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<signifLet> → model.textPhraseLike.limited → model.addressLike → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<signifLet> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<signifLet> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<signifLet> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<signifLet> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<signifLet> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<signifLet> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<signifLet> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<signifLet> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<signifLet> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<signifLet> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<signifLet> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<signifLet> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<signifLet> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<signifLet> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<signifLet> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<signifLet> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<signifLet> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<signifLet> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<signifLet> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<signifLet> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<signifLet> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<signifLet> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<signifLet> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<signifLet> → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<signifLet> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<signifLet> → model.textPhraseLike.limited → model.lbLike → <lb>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<signifLet> → model.graphicPrimitiveLike → <line>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<signifLet> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<signifLet> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<signifLet> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<signifLet> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<signifLet> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<signifLet> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<signifLet> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<signifLet> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<signifLet> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<signifLet> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<signifLet> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<signifLet> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<signifLet> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<signifLet> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<signifLet> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<signifLet> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<signifLet> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<signifLet> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<signifLet> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<signifLet> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<signifLet> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<signifLet> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<signifLet> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<signifLet> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<signifLet> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<signifLet> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<signifLet> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<signifLet> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<signifLet> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<signifLet> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<signifLet> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<signifLet> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<signifLet> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<signifLet> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<signifLet> → model.textPhraseLike.limited → model.dimLike → <width>

## <slur>

Indication of 1) a "unified melodic idea" or 2) performance technique.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [1.2.3 Timestamps in MEI](#), [2.2.5.4 Phrase Marks](#), [4.3.2 Ties, Slurs and Phrase Marks](#), [4.3.3 Dynamics in CMN](#)

### Module

[MEI.cmnn](#)

### Attributes

**@bezier** (*optional*) Records the placement of Bezier control points as a series of pairs of space-separated values; e.g., 19 45 -32 118. One or more values, each consisting of a sequence of **decimal** and **decimal** sub-values.

<slur> → [att.slur.vis](#) → [att.curvature](#) → @bezier

**@bulge** (*optional*) Describes a curve as one or more pairs of values with respect to an imaginary line connecting the starting and ending points of the curve. The first value captures a distance to the left (positive value) or right (negative value) of the line, expressed in virtual units. The second value of each pair represents a point along the line, expressed as a percentage of the line's length. N.B. An MEI virtual unit (vu) is half the distance between adjacent staff lines where the interline space is measured from the middle of a staff line. One or more of **decimal**.

<slur> → [att.slur.vis](#) → [att.curvature](#) → @bulge

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<slur> → [att.slur.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<slur> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.common](#) → [att.linkin](#) → @corresp

**@curvedir** (*optional*) Describes a curve with a generic term indicating the direction of curvature. Allowed values are: "**above**" (*Upward curve*), "**below**" (*Downward curve*), "**mixed**" (A "meandering" curve, both above and below the items it pertains to.)

<slur> → [att.slur.vis](#) → [att.curvature](#) → @curvedir

**@dots ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) When a duration cannot be represented as a single power-of-two value, multiple space-separated values that add up to the total duration may be used. One or more values from [data.DURATION](#), separated by spaces.

<slur> → [att.slur.log](#) → [att.duration.additive](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dur.ppq

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted [Humdrum \\*\\*recip value](#). Value is a [token](#).

<slur> → [att.slur.ges](#) → [att.duration.ges](#) → @dur.recip

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → [att.slur.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.ho](#) → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<slur> → [att.slur.log](#) → [att.startEndId](#) → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<slur> → [att.slur.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.to](#) → @endto

**@endvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → [att.slur.vis](#) → [att.visualOffset2](#) → [att.visualOffset2.vo](#) → @endvo

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<slur> → [att.slur.log](#) → [att.controlEvent](#) → [att.targetEval](#) → @evaluate

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.common](#) → [att.linked](#) → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → [att.slur.vis](#) → [att.visualOffset](#) → [att.visualOffset.ho](#) → @ho

**@join** (*optional*) Used for linking visually separate entities that form a single logical entity, for example, multiple slurs broken across a system break that form a single musical phrase. Also used to indicate a measure which metrically completes the current one. Record the identifiers of the separately encoded components, excluding the one carrying the attribute. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.slur.anl](#) → [att.joined](#) → @join

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<slur> → [att.common](#) → [att.labelled](#) → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<slur> → [att.slur.log](#) → [att.controlEvent](#) → [att.layerIdent](#) → @layer

**@lform** (*optional*) Describes the line style of a curve. Value conforms to [data.LINEFORM](#).

<slur> → [att.slur.vis](#) → [att.curveRend](#) → @lform

**@lwidth** (*optional*) Width of a curved line. Value conforms to [data.LINEWIDTH](#).

<slur> → [att.slur.vis](#) → [att.curveRend](#) → @lwidth

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<slur> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.common](#) → [att.linkng](#) → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\ij][\c]+)"**, separated by spaces.

<slur> → [att.slur.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<slur> → [att.slur.log](#) → [att.controlEvent](#) → [att.partIdent](#) → @partstaff

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.slur.log](#) → [att.controlEvent](#) → [att.plist](#) → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<slur> → [att.common](#) → [att.linkng](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<slur> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<slur> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<slur> → att.common → att.linkin → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<slur> → att.slur.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → att.slur.vis → att.visualOffset2 → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<slur> → att.slur.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<slur> → att.slur.vis → att.visualOffset2 → att.visualOffset2.to → @startto

**@startvo** (*optional*) Records a vertical adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → att.slur.vis → att.visualOffset2 → att.visualOffset2.vo → @startvo

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<slur> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<slur> → att.slur.vis → att.visualOffset → att.visualOffset.to → @to

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<slur> → att.slur.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<slur> → att.slur.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<slur> → att.slur.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<slur> → att.slur.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<slur> → att.slur.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<slur> → att.slur.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<slur> → att.common → att.typed → @type

**@v0** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<slur> → att.slur.vis → att.visualOffset → att.visualOffset.v0 → @v0

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a [<when>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<slur> → att.slur.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<slur> → att.slur.vis → att.xy → @x

**@x2** (*optional*) Encodes the optional 2nd x coordinate. Value is a decimal number.

<slur> → att.slur.vis → att.xy2 → @x2

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<slur> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<slur> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<slur> → att.slur.vis → att.xy → @y

**@y2** (*optional*) Encodes the optional 2nd y coordinate. Value is a decimal number.

<slur> → att.slur.vis → att.xy2 → @y2

## Member of

[model.controlEventLike.cmn](#) Groups control events that appear in CMN.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <del>

**<expan>** Contains the expansion of an abbreviation.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<slur> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<slur> → model.controlEventLike.cmn → model.measurePart → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<slur> → model.controlEventLike.cmn → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<slur> → model.controlEventLike.cmn → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<slur> → direct children → <curve>

## Remarks

Historically, the term "slur" indicated two notes performed legato, while the term "phrase" was used for a "unified melodic idea". Nowadays, however, "slur" often has the same meaning as "phrase" (See Read, p. 265-266), since the visual rendition of the two concepts is the same. MEI provides two distinct elements so that those users wishing to maintain a distinction for historical reasons may do so. If the user does not want to maintain the distinction, then the more generic `<slur>` element should be employed. The starting point of the phrase/slur may be indicated by either a startid, tstamp, tstamp.ges, or tstamp.real attribute, while the ending point may be recorded by either a dur, dur.ges, endid, or tstamp2 attribute. It is a semantic error not to specify one starting and one ending type of attribute. Either place, bulge, or bezier attributes may be used to record the curvature of the phrase/slur. The `<slur>` and `<tie>` elements may be used instead of the slur.\* and tie.\* attributes provided on `<chord>` and `<note>` elements when 1) they are required by software, or 2) multiple, alternative slurs are needed.

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must have one of the attributes: dur, dur.ges, endid, or tstamp2.

The visual attributes of the slur (@bezier, @bulge, @curvedir, @lform, @lwidth, @ho, @startho, @endho, @to, @startto, @endto, @vo, @startvo, @endvo, @x, @y, @x2, and @y2) will be overridden by visual attributes of the contained curve elements.

        <att>startid</att>, <att>tstamp</att>, <att>tstamp.ges</att>, or <att>tstamp.real</att>
        attribute, while the ending point may be recorded by either a <att>dur</att>,
        <att>dur.ges</att>, <att>endid</att>, or <att>tstamp2</att> attribute. It is a semantic
        error not to specify one starting and one ending type of attribute. Either
        <att>place</att>, <att>bulge</att>, or <att>bezier</att> attributes may be used to record
        the curvature of the phrase/slur. The <gi scheme="MEI">slur</gi> and <gi
        scheme="MEI">tie</gi> elements may be used instead of the slur.* and tie.* attributes
        provided on <gi scheme="MEI">chord</gi> and <gi scheme="MEI">note</gi> elements when 1)
        they are required by software, or 2) multiple, alternative slurs are needed.</p>
    </remarks>
</elementSpec>

```

## <soundChan>

(sound channels) – Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<soundChan> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<soundChan> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<soundChan> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<soundChan> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<soundChan> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<soundChan> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<soundChan> → [att.common](#) → [att.linkin](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<soundChan> → [att.common](#) → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<soundChan> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<soundChan> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.linkin → @next

**@num** (*optional*) Records the channel configuration in numeric form. Value is a positive integer.

<soundChan> → direct children → @num

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<soundChan> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<soundChan> → att.common → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<soundChan> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<soundChan> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<soundChan> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<soundChan> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

**Contained By**

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<soundChan> → model.physDescPart → <physDesc>

**May Contain**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<soundChan> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<soundChan> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<soundChan> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<soundChan> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<soundChan> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<soundChan> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<soundChan> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<soundChan> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<soundChan> → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<soundChan> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<soundChan> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<soundChan> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<soundChan> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<soundChan> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<soundChan> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<soundChan> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<soundChan> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<soundChan> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<soundChan> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<soundChan> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<soundChan> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<soundChan> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<soundChan> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<soundChan> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<soundChan> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<soundChan> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<soundChan> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<soundChan> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<soundChan> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<soundChan> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<soundChan> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<soundChan> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<soundChan> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<soundChan> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<soundChan> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<soundChan> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<soundChan> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<soundChan> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<soundChan> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<soundChan> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<soundChan> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<soundChan> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<soundChan> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<soundChan> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<soundChan> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<soundChan> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<soundChan> → model.textPhraseLike.limited → model.mslnline → <watermark>

**<width>** Description of the horizontal size of an object.

<soundChan> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The number of apparent playback channels can differ from the number of physical channels of the recording medium, i.e., 2-track monophonic recordings. In this example, the soundChan element should record the fact that there is a single output channel, while the <trackConfig> element should capture the existence of two physical tracks. This element is analogous to MARC field 344 subfield g.

## Declaration

## <source>

A bibliographic description of a source used in the creation of the electronic file.

### Referenced in chapters

[3.2 Structure of the MEI Header](#), [3.4.1.6 Source Description](#), [3.5.1 FRBR Entities in MEI](#), [3.7 Encoding Sources in MEI](#), [3.8.3 Minimal and Recommended Header Information](#), [12.1.1 Elements of the Facsimile Module](#)

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<source> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<source> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<source> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<source> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<source> → [att.authorized](#) → [att.canonical](#) → @codedval

**@comptype** (*optional*) Allowed values are: "**constituent**" (*A physical and logical part of entity.*), "**boundwith**" (*A physical, but not logical component of the entity, usually included as part of the binding process.*), "**separated**" (*A logical component of the entity physically held elsewhere.*)

<source> → [att.componentType](#) → @comptype

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<source> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<source> → [att.common](#) → [att.linkin](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<source> → [att.dataPointing](#) → @data

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<source> → att.targetEval → @evaluate

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<source> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<source> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @prev

**@recordtype** Allowed values are: "**a**" (*Language material.*), "**c**" (*Notated music.*), "**d**" (*Manuscript notated music.*), "**e**" (*Non-manuscript cartographic material.*), "**f**" (*Manuscript cartographic material.*), "**g**" (*Projected medium.*), "**i**" (*Nonmusical sound recording.*), "**j**" (*Musical sound recording.*), "**k**" (*Two-dimensional nonprojectable graphic.*), "**m**" (*Computer file.*), "**o**" (*Kit.*), "**p**" (*Mixed materials.*), "**r**" (*Three-dimensional artifact or naturally occurring object.*), "**t**" (*Manuscript language material.*)

<source> → att.recordType → @recordtype

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<source> → att.common → att.linkin → @synch

**@target** (*optional*) Identifies passive participants in a relationship; that is, the entities pointed "to". One or more values from [data.URI](#), separated by spaces.

<source> → att.pointing → @target

**@targettype** (*optional*) Characterization of target resource(s) using any convenient classification scheme or typology. Value is a [NMTOKEN](#).

<source> → att.pointing → @targettype

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<source> → att.common → att.typed → @type

**@xlink:actuate** (*optional*) Defines whether a link occurs automatically or must be requested by the user. Allowed values are: "**onLoad**" (*Load the target resource(s) immediately.*), "**onRequest**" (*Load the target resource(s) upon user request.*), "**none**" (*Do not permit loading of the target resource(s).*), "**other**" (*Behavior other than allowed by the other values of this attribute.*)

<source> → att.pointing → @xlink:actuate

**@xlink:role** (*optional*) Characterization of the relationship between resources. The value of the role attribute must be a URI. Value conforms to [data.URI](#).

<source> → att.pointing → @xlink:role

**@xlink:show** (*optional*) Defines how a remote resource is rendered. Allowed values are: "**new**" (*Open in a new window.*), "**replace**" (*Load the referenced resource in the same window.*), "**embed**" (*Embed the referenced resource at the point of the link.*), "**none**" (*Do not permit traversal to the referenced resource.*), "**other**" (*Behavior other than permitted by the other values of this attribute.*)

<source> → att.pointing → @xlink:show

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<source> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<source> → att.common → att.basic → att.id → @xml:id

## Member of

(source isn't member of any model class)

## Contained By

**<sourceDesc>** A container for the descriptions of the source(s) used in the creation of the electronic file.

<source> → elements having source as direct children → <sourceDesc>

## May Contain

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<source> → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<source> → model.biblLike → <biblStruct>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<source> → model.headLike → <head>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<source> → direct children → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<source> → direct children → <locusGrp>

## Remarks

This element contains, or references via its target attribute, a description of a source used in the creation of the electronic file. For description of a physical embodiment of an expression of a work use the <manifestation> element.

The data attribute may be used to reference one or more musical features found in the content of this particular source.

The model of this element is based on the [source](#) element of the Text Encoding Initiative (TEI) and the [source](#) element of the Encoded Archival Description (EAD).

## Constraints

@target attribute should have content.

Each value in @target should correspond to the @xml:id attribute of a source or manifestation element or be an external URI.

## <sourceDesc>

(source description) – A container for the descriptions of the source(s) used in the creation of the electronic file.

### Referenced in chapters

[3.4.1 File Description](#), [3.4.1.5 Notes Statement](#), [3.4.1.6 Source Description](#), [3.5.1 FRBR Entities in MEI](#)

### Module

[MEI.header](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sourceDesc> → att.common → att.linking → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linking → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sourceDesc> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sourceDesc> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sourceDesc> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<sourceDesc> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sourceDesc> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sourceDesc> → att.common → att.basic → att.id → @xml:id

## Member of

(sourceDesc isn't member of any model class)

## Contained By

**<fileDesc>** Contains a full bibliographic description of the MEI file.

<sourceDesc> → elements having sourceDesc as direct children → <fileDesc>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<sourceDesc> → model.headLike → <head>

**<source>** A bibliographic description of a source used in the creation of the electronic file.

<sourceDesc> → direct children → <source>

## Remarks

This element is recommended where the MEI file is a transcription of existing music, but is not required when the data is originally created in MEI form.

## Declaration

```
<elementSpec ident="sourceDesc" module="MEI.header">
  <gloss versionDate="2022-05-18" xml:lang="en">source description</gloss>
  <desc xml:lang="en">A container for the descriptions of the source(s) used in the creation
  of the electronic file.</desc>
  <classes>
    <memberOf key="att.common"/>
  </classes>

</remarks>
</elementSpec>
```

## <sp>

(speech) – Contains an individual speech in a performance text.

### Module

MEI.drama

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sp> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @corresp

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<sp> → att.sp.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<sp> → att.sp.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<sp> → att.sp.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<sp> → att.sp.log → att.controlEvent → att.targetEval → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<sp> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<sp> → att.sp.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sp> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<sp> → att.sp.log → att.controlEvent → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n\r][\c]+)"**, separated by spaces.

<sp> → att.sp.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<sp> → att.sp.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<sp> → att.sp.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<sp> → att.sp.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linked → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<sp> → att.sp.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<sp> → att.sp.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<sp> → att.sp.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<sp> → att.sp.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sp> → att.common → att.linkin → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<sp> → att.sp.vis → att.visualOffset → att.visualOffset.to → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<sp> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<sp> → att.sp.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<sp> → att.sp.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<sp> → att.sp.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<sp> → att.sp.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<sp> → att.sp.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<sp> → att.sp.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<sp> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<sp> → att.sp.vis → att.visualOffset → att.visualOffset.vo → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<sp> → att.sp.log → att.controlEvent → att.alignment → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<sp> → att.sp.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sp> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sp> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<sp> → att.lang → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the facets attribute. Value is a decimal number.

<sp> → att.sp.vis → att.xy → @y

## Member of

[model.controlEventLike](#) Groups elements, such as dynamics, ties, phrase marks, pedal marks, etc., which depend upon other events, such as notes or rests, for their existence.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <abbr>

**<add>** Marks an addition to the text.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <add>

**<argument>** Contains a formal list or prose description of topics addressed.

<sp> → elements having sp as direct children → <argument>

**<corr>** Contains the correct form of an apparent erroneous passage.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <corr>

**<damage>** Contains an area of damage to the physical medium.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<div>** Major structural division of text, such as a preface, chapter or section.

<sp> → elements having sp as direct children → <div>

**<expan>** Contains the expansion of an abbreviation.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<sp> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<sp> → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<sp> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<sp> → elements having sp as direct children → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<sp> → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<sp> → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<sp> → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<sp> → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<sp> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<sp> → model.appLike → <app>

**<cb>** An empty formatting element that forces text to begin in a new column.

<sp> → model.milestoneLike.text → <cb>

**<collLayout>** An empty formatting element that signals the start of columnar layout.

<sp> → model.milestoneLike.text → <collLayout>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<sp> → model.figureLike → <fig>

**<l>** Contains a single line of text within a line group.

<sp> → model.lLike → <l>

**<lb>** An empty formatting element that forces text to begin on a new line.

<sp> → model.milestoneLike.text → model.lbLike → <lb>

**<lg>** May be used for any section of text that is organized as a group of lines; however, it is most often used for a group of verse lines functioning as a formal unit, e.g., a stanza, refrain, verse paragraph, etc.

<sp> → model.lgLike → <lg>

**<list>** A formatting element that contains a series of items separated from one another and arranged in a linear, often vertical, sequence.

<sp> → direct children → <list>

**<p>** One or more text phrases that form a logical prose passage.

<sp> → model.pLike → <p>

**<pb>** An empty formatting element that forces text to begin on a new page.

<sp> → model.milestoneLike.text → model.pbLike → <pb>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<sp> → model.quoteLike → <quote>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<sp> → direct children → <speaker>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<sp> → model.stageDirLike → <stageDir>

## Remarks

In a musical context <sp> must have a start-type attribute when it's not a descendant of <sp>. In a textual content <sp> must NOT have any musical attributes.

The model of this element is based on the sp element of the Text Encoding Initiative (TEI).

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must not have any of the attributes: startid, endid, tstamp, tstamp2, tstamp.ges, tstamp.real, startho, endho, to, startto, endto, staff, layer, place, or plist.

```

## <space>

A placeholder used to fill an incomplete measure, layer, etc. most often so that the combined duration of the events equals the number of beats in the measure.

### Referenced in chapters

[2.2.4.5 Event Spacing](#), [4.2.5.2.2 Stem Modifications](#), [4.2.5.3.3 Empty Measures](#), [4.3.1 Beams](#), [4.3.4 Tuples](#), [11.2.1.1 Instructions](#)

### Module

[MEI.shared](#)

### Attributes

**@beam** (*optional*) Indicates that this event is "under a beam". One or more values from [data.BEAM](#), separated by spaces.

<space> → [att.space.anl](#) → [att.space.anl.cmn](#) → [att.beamPresent](#) → @beam

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<space> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@compressable** (*optional*) Indicates whether a space is 'compressible', i.e., if it may be removed at the discretion of processing software. Value conforms to [data.BOOLEAN](#).

<space> → [att.space.vis](#) → @compressable

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<space> → [att.common](#) → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<space> → [att.common](#) → [att.linkin](#) → @corresp

**@cutout** (*optional*) "Cut-out" style. Allowed values are: "**cutout**" (*The staff lines should not be drawn.*)

<space> → [att.space.vis](#) → [att.cutout](#) → @cutout

**@dots** (*optional*) Records the number of augmentation dots required by a written dotted duration. Value conforms to [data.AUGMENTDOT](#).

<space> → [att.space.log](#) → [att.augmentDots](#) → @dots

**@dots.ges** (*optional*) Number of dots required for a gestural duration when different from that of the written duration. Value conforms to [data.AUGMENTDOT](#).

<space> → [att.space.ges](#) → [att.duration.ges](#) → @dots.ges

**@dur** (*optional*) Records the duration of a feature using the relative durational values provided by the [data.DURATION](#) datatype. Value conforms to [data.DURATION](#).

<space> → [att.space.log](#) → [att.duration.log](#) → @dur

**@dur.ges** (*optional*) Records performed duration information that differs from the written duration. Value conforms to [data.DURATION.GESTURAL](#).

<space> → [att.space.ges](#) → [att.duration.ges](#) → @dur.ges

**@dur.metrical** (*optional*) Duration as a count of units provided in the time signature denominator. Value is a decimal number.

<space> → att.space.ges → att.duration.ges → @dur.metrical

**@dur.ppq** (*optional*) Duration recorded as pulses-per-quarter note, e.g., MIDI clicks or MusicXML divisions. Value is a positive integer, including 0.

<space> → att.space.ges → att.duration.ges → @dur.ppq

**@dur.quality** (*recommended*) Encodes the durational quality of a mensural note using the values provided by the data.DURQUALITY.mensural datatype (i.e., the perfect / imperfect / altered / major / minor / duplex quality of a note). Value conforms to data.DURQUALITY.mensural.

<space> → att.duration.quality → @dur.quality

**@dur.real** (*optional*) Duration in seconds, e.g., 1.732. Value is a decimal number.

<space> → att.space.ges → att.duration.ges → @dur.real

**@dur.recip** (*optional*) Duration as an optionally dotted Humdrum \*\*recip value. Value is a token.

<space> → att.space.ges → att.duration.ges → @dur.recip

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from data.URI, separated by spaces.

<space> → att.facsimile → @facs

**@fermata** (*optional*) Indicates the attachment of a fermata to this element. If visual information about the fermata needs to be recorded, then a <fermata> element should be employed instead. Value conforms to data.STAFFREL.basic.

<space> → att.space.anl → att.space.anl.cmn → att.fermataPresent → @fermata

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from data.URI, separated by spaces.

<space> → att.common → att.linking → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<space> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<space> → att.space.log → att.event → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to data.WORD.

<space> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<space> → att.common → att.linking → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from data.URI, separated by spaces.

<space> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from data.URI, separated by spaces.

<space> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<space> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<space> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<space> → att.space.log → att.event → att.staffid → @staff

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<space> → att.common → att.linking → @synch

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<space> → att.space.log → att.event → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<space> → att.space.log → att.event → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<space> → att.space.log → att.event → att.timestamp.ges → @tstamp.real

**@tuplet** (*optional*) Indicates that this feature participates in a tuplet. If visual information about the tuplet needs to be recorded, then a <tuplet> element should be employed. One or more values from [data.TUPLET](#), separated by spaces.

<space> → att.space.anl → att.space.anl.cmn → att.tupletPresent → @tuplet

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<space> → att.common → att.typed → @type

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <when> element elsewhere in the document. Value conforms to [data.URI](#).

<space> → att.space.log → att.event → att.alignment → @when

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<space> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<space> → att.common → att.basic → att.id → @xml:id

## Member of

[model.eventLike](#) Groups event elements that occur in all notational repertoires.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<space> → [model.eventLike](#) → [model.layerPart](#) → <abbr>

**<add>** Marks an addition to the text.

<space> → [model.eventLike](#) → [model.layerPart](#) → <add>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<space> → [model.eventLike](#) → <beam>

**<corr>** Contains the correct form of an apparent erroneous passage.

<space> → [model.eventLike](#) → [model.layerPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<space> → [model.eventLike](#) → [model.layerPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<space> → [model.eventLike](#) → [model.layerPart](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<space> → [model.eventLike](#) → [model.layerPart](#) → <expan>

**<graceGrp>** A container for a sequence of grace notes.

<space> → [model.eventLike](#) → <graceGrp>

**<layer>** An independent stream of events on a staff.

<space> → [model.eventLike](#) → [model.layerPart](#) → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<space> → [model.eventLike](#) → [model.layerPart](#) → <lem>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<space> → [model.eventLike](#) → <ligature>

**<oLayer>** A layer that contains an alternative to material in another layer.

<space> → [model.eventLike](#) → [model.layerPart](#) → <oLayer>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<space> → [model.eventLike](#) → [model.layerPart](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<space> → [model.eventLike](#) → [model.layerPart](#) → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<space> → elements having space as direct children → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<space> → [model.eventLike](#) → [model.layerPart](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<space> → model.eventLike → model.layerPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<space> → model.eventLike → model.layerPart → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<space> → model.eventLike → model.layerPart → <supplied>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<space> → model.eventLike → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<space> → model.eventLike → model.layerPart → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<space> → elements having space as direct children → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<space> → elements having space as direct children → <volta>

## May Contain

– (<space> may not have child elements)

## <speaker>

Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<speaker> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.linking](#) → @corresp

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<speaker> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<speaker> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<speaker> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<speaker> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<speaker> → att.common → att.linking → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<speaker> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<speaker> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<speaker> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<speaker> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<speaker> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<speaker> → att.lang → @xml:lang

## Member of

(speaker isn't member of any model class)

## Contained By

**<sp>** Contains an individual speech in a performance text.

<speaker> → elements having speaker as direct children → <sp>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<speaker> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<speaker> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<speaker> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<speaker> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<speaker> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<speaker> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<speaker> → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<speaker> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<speaker> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<speaker> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<speaker> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<speaker> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedictee>** Entity to whom a creative work is formally offered.

<speaker> → model.textPhraseLike.limited → <dedictee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<speaker> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<speaker> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<speaker> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<speaker> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<speaker> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<speaker> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<speaker> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<speaker> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<speaker> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<speaker> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<speaker> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<speaker> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<speaker> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<speaker> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<speaker> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<speaker> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<speaker> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<speaker> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<speaker> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<speaker> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<speaker> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<speaker> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<speaker> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<speaker> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<speaker> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<speaker> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<speaker> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<speaker> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<speaker> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<speaker> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<speaker> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<speaker> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<speaker> → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<speaker> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<speaker> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<speaker> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<speaker> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<speaker> → model.textPhraseLike.limited → model.renderLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<speaker> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<speaker> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<speaker> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<speaker> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<speaker> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<speaker> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<speaker> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<speaker> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<speaker> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<speaker> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<speaker> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **speaker** element of the Text Encoding Initiative (TEI).

## Declaration

```

## <specRepro>

(special reproduction characteristic) – The equalization system, noise reduction system, etc. used in making the recording (e.g., NAB, DBX, Dolby, etc.).

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<specRepro> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<specRepro> → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
<specRepro> → [att.authorized](#) → @auth.uri

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<specRepro> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<specRepro> → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<specRepro> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<specRepro> → [att.common](#) → [att.linking](#) → @corresp

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<specRepro> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<specRepro> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<specRepro> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<specRepro> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<specRepro> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<specRepro> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<specRepro> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<specRepro> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<specRepro> → att.lang → @xml:lang

## Member of

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

## Contained By

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<specRepro> → model.physDescPart → <physDesc>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslnline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<specRepro> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<specRepro> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<specRepro> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<specRepro> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msinline → <watermark>

**<width>** Description of the horizontal size of an object.

<specRepro> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## <sponsor>

Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

### Referenced in chapters

[3.3.1 Title Statement](#), [3.6.1 Work Identification](#), [9.2.12 Bibliographic Citations and References](#)

### Module

[MEI.shared](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<sponsor> → [att.bibl](#) → @analog

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<sponsor> → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<sponsor> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linking](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

**"conjecture"** (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<sponsor> → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<sponsor> → [att.common](#) → [att.labelled](#) → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<sponsor> → [att.common](#) → [att.nNumberLike](#) → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linked](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linked](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<sponsor> → [att.common](#) → [att.linked](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<sponsor> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<sponsor> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<sponsor> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<sponsor> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<sponsor> → [att.lang](#) → @xml:lang

## Member of

**model.respLikePart** Groups elements that delineate particular responsibilities as opposed to the respStmt element that provides for generic statements of responsibility.

### Contained By

**<analytic>** Contains bibliographic elements describing an item (e.g., an article or poem) published within a monograph or journal and not as an independent publication.

<sponsor> → model.respLikePart → <analytic>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<sponsor> → model.respLikePart → model.respLike → model.biblPart → <bibl>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<sponsor> → model.respLikePart → <byline>

**<editionStmt>** Container for meta-data pertaining to a particular edition of the material being described.

<sponsor> → model.respLikePart → <editionStmt>

**<expression>** Intellectual or artistic realization of a work.

<sponsor> → model.respLikePart → <expression>

**<monogr>** Contains bibliographic elements describing an item, for example, a published book or journal, score, recording, or an unpublished manuscript.

<sponsor> → model.respLikePart → <monogr>

**<seriesStmt>** Groups information about the series, if any, to which a publication belongs.

<sponsor> → model.respLikePart → <seriesStmt>

**<titlePage>** Contains a transcription of the title page of a text.

<sponsor> → model.respLikePart → model.titlePagePart → <titlePage>

**<titleStmt>** Container for title and responsibility meta-data.

<sponsor> → model.respLikePart → model.respLike → <titleStmt>

**<work>** Provides a detailed description of a work — a distinct intellectual or artistic creation — specifically its history, language use, and high-level musical attributes (e.g., key, tempo, meter, medium of performance, and intended duration).

<sponsor> → model.respLikePart → <work>

### May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<sponsor> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<sponsor> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<sponsor> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<sponsor> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<sponsor> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<sponsor> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<sponsor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<sponsor> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<sponsor> → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<sponsor> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<sponsor> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<sponsor> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<sponsor> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<sponsor> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<sponsor> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<sponsor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<sponsor> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<sponsor> → model.textPhraseLike.limited → model.msInLine → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<sponsor> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<sponsor> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<sponsor> → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<sponsor> → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<sponsor> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<sponsor> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<sponsor> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<sponsor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<sponsor> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<sponsor> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<sponsor> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<sponsor> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<sponsor> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<sponsor> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<sponsor> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<sponsor> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<sponsor> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<sponsor> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<sponsor> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<sponsor> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<sponsor> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<sponsor> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<sponsor> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<sponsor> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<sponsor> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<sponsor> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<sponsor> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<sponsor> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<sponsor> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<sponsor> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the [sponsor](#) element of the Text Encoding Initiative (TEI) and the [sponsor](#) element of the Encoded Archival Description (EAD).

## Declaration

```

## <stack>

(stacked text) – An inline table with a single column.

### Module

[MEI.shared](#)

### Attributes

**@align** (*optional*) Specifies how the stacked text components should be aligned. Allowed values are: "left" (*Left justified.*), "right" (*Right justified.*), "center" (*Centered.*), "rightdigit" (*Aligned on right-most digit.*)  
<stack> → direct children → @align

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).  
<stack> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.common](#) → [att.linked](#) → @corresp

**@delim** (*optional*) Indicates the delimiter used to mark the portions of text that are to be stacked. Value is plain text.  
<stack> → direct children → @delim

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.facsimile](#) → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.common](#) → [att.linked](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.  
<stack> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).  
<stack> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.common](#) → [att.linked](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.  
<stack> → [att.common](#) → [att.linked](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stack> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<stack> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<stack> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<stack> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<stack> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<stack> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<stack> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<stack> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<stack> → [att.lang](#) → @xml:lang

## Member of

[model.rendLike](#) Groups elements that mark typographical features.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stack> → [model.rendLike](#) → [model.textPhraseLike.limited](#) → [model.editTransPart.text](#) → [model.editTransPart](#) → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<stack> → [model.rendLike](#) → [model.textPhraseLike.limited](#) → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<stack> → model.renderLike → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<stack> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<altId>** May contain a bibliographic identifier that does not fit within the meiHead element's id attribute, for example because the identifier does not fit the definition of an XML id or because multiple identifiers are needed.

<stack> → model.renderLike → <altId>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<stack> → model.renderLike → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<stack> → model.renderLike → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<stack> → model.renderLike → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<stack> → model.renderLike → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<stack> → model.renderLike → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<stack> → model.renderLike → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<stack> → model.renderLike → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<stack> → model.renderLike → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<stack> → model.renderLike → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<stack> → model.renderLike → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<stack> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<stack> → model.renderLike → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<stack> → model.renderLike → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<stack> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<stack> → model.renderLike → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<stack> → model.renderLike → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<stack> → model.renderLike → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<stack> → model.renderLike → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<stack> → model.renderLike → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<stack> → model.renderLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<stack> → model.renderLike → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<stack> → model.renderLike → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<stack> → model.rendLike → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<stack> → model.rendLike → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<stack> → model.rendLike → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<stack> → model.rendLike → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<stack> → model.rendLike → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<stack> → model.rendLike → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<stack> → model.rendLike → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<stack> → model.rendLike → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<stack> → model.rendLike → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<stack> → model.rendLike → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<stack> → model.rendLike → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<stack> → model.rendLike → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<stack> → model.rendLike → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<stack> → model.rendLike → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<stack> → model.rendLike → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<stack> → model.rendLike → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<stack> → model.rendLike → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<stack> → model.rendLike → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<stack> → model.rendLike → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<stack> → model.rendLike → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<stack> → model.rendLike → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<stack> → model.rendLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<stack> → model.rendLike → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<stack> → model.rendLike → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<stack> → model.rendLike → model.textPhraseLike.limited → <lyricist>

**<mNum>** Designation, name, or label for a measure, often but not always consisting of digits. Use this element when the n attribute on <measure> does not adequately capture the appearance or placement of the measure number/label.

<stack> → model.rendLike → <mNum>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<stack> → model.rendLike → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<stack> → model.rendLike → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<stack> → model.rendLike → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<stack> → model.rendLike → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<stack> → model.rendLike → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<stack> → model.rendLike → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<stack> → model.rendLike → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<stack> → model.rendLike → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<stack> → model.rendLike → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<stack> → model.rendLike → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<stack> → model.rendLike → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<stack> → model.rendLike → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<reh>** In an orchestral score and its corresponding parts, a mark indicating a convenient point from which to resume rehearsal after a break.

<stack> → model.rendLike → <reh>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<stack> → model.rendLike → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<stack> → model.rendLike → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<stack> → model.rendLike → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<stack> → model.rendLike → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<stack> → model.rendLike → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<stack> → model.rendLike → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<stack> → model.rendLike → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<stack> → model.rendLike → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<stack> → model.rendLike → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<stack> → model.rendLike → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<stack> → model.rendLike → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<stack> → model.rendLike → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<stack> → model.rendLike → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<stack> → model.rendLike → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<stack> → model.rendLike → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<stack> → model.rendLike → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<stack> → model.rendLike → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<stack> → model.rendLike → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<stack> → model.rendLike → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<stack> → model.rendLike → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<stack> → model.rendLike → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<stack> → model.rendLike → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<stack> → model.rendLike → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<stack> → model.rendLike → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<stack> → model.rendLike → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stack> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<stack> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<stack> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<stack> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<stack> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<stack> → model.textPhraseLike.limited → model.mslInline → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<stack> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<stack> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedic平ee>** Entity to whom a creative work is formally offered.

<stack> → model.textPhraseLike.limited → <dedic平ee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<stack> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<stack> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<stack> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<stack> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<stack> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<stack> → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<stack> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<height>** Description of the vertical size of an object.

<stack> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<stack> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<stack> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<stack> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<stack> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<stack> → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<stack> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<stack> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<stack> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<stack> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<stack> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<stack> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<stack> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<stack> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<stack> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<stack> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<stack> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<stack> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<stack> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<stack> → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<stack> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<stack> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<stack> → model.textPhraseLike.limited → model.mslinline → <signatures>

**<stack>** An inline table with a single column.

<stack> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<stack> → model.textPhraseLike.limited → model.mslinline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<stack> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<stack> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<stack> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<stack> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<stack> → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<stack> → model.textPhraseLike.limited → model.mslinline → <watermark>

**<width>** Description of the horizontal size of an object.

<stack> → model.textPhraseLike.limited → model.dimLike → <width>

DEVELOPMENT  
VERSION

## <staff>

A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

### Referenced in chapters

[1.2.2 Events and Controlevents](#), [2.1.2.2 Content of Musical Divisions](#), [2.2.1 Score and Parts](#), [2.2.2 Staves and Layers](#), [2.4.3.3 Positioning](#), [4.2.1 The Role of the Measure Element](#), [4.2.2 Defining Score Parameters for CMN](#), [4.3.1 Beams](#), [4.3.3 Dynamics in CMN](#), [4.3.4 Tuples](#), [4.3.6.2 Harp Pedals](#), [4.3.7 Ossia](#), [4.3.9.1 Tempo changes and other directives](#), [4.4.1 Encoding Common To All Ornaments](#), [5.5 Music Data Organization](#), [6.4.10 Basic Encoding – Syllable](#), [10.1.1 General Relationships Between Elements](#), [10.1.3 Metrical Conformance](#), [11.1.3 Variants in Score Definitions](#), [11.2.4.3 Substitutions, Restorations, and Handshifts](#)

### Module

[MEI.shared](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<staff> → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<staff> → [att.linkin](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<staff> → [att.linkin](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<staff> → [att.metadataPointing](#) → @decls

**@def** (*optional*) Provides a mechanism for linking the staff to a staffDef element. Value conforms to [data.URI](#).

<staff> → [att.staff.log](#) → @def

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<staff> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<staff> → [att.linkin](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<staff> → att.labelled → @label

**@metcon** (*optional*) Indicates the relationship between the content of a staff or layer and the prevailing meter. Allowed values are: "**c**" (*Complete*; , *conformant with the prevailing meter.*), "**i**" (*Incomplete*; , *not enough beats.*), "**o**" (*Overfull*; , *too many beats.*)

<staff> → att.staff.log → att.meterConformance → @metcon

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<staff> → att.nInteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staff> → att.linkng → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<staff> → att.linkng → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staff> → att.linkng → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<staff> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<staff> → att.linkng → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<staff> → att.linkng → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<staff> → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<staff> → att.staff.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<staff> → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<staff> → att.basic → att.id → @xml:id

## Member of

`model.staffLike` Groups elements that function like staves.

### Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <abbr>

**<add>** Marks an addition to the text.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <corr>

**<damage>** Contains an area of damage to the physical medium.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → <ending>

**<expan>** Contains the expansion of an abbreviation.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<staff> → `model.staffLike` → `model.measurePart` → <measure>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <orig>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<staff> → `model.staffLike` → <ossia>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <restore>

**<section>** Segment of music data.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<staff> → `model.staffLike` → `model.sectionPart.mensuralAndNeumes` → `model.sectionPart` → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<staff> → model.staffLike → model.sectionPart.mensuralAndNeumes → model.sectionPart → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<staff> → model.staffLike → model.sectionPart.mensuralAndNeumes → model.sectionPart → <unclear>

## May Contain

**<add>** Marks an addition to the text.

<staff> → model.transcriptionLike → <add>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<staff> → model.graphicPrimitiveLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<staff> → model.annotLike → <annot>

**<app>** (apparatus) – Contains one or more alternative encodings.

<staff> → model.appLike → <app>

**<bend>** A variation in pitch (often micro-tonal) upwards or downwards during the course of a note.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <bend>

**<caesura>** Break, pause, or interruption in the normal tempo of a composition. Typically indicated by "railroad tracks", i.e., two diagonal slashes.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <caesura>

**<cb>** An empty formatting element that forces text to begin in a new column.

<staff> → model.milestoneLike.music → <cb>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<staff> → model.editLike → <choice>

**<colLayout>** An empty formatting element that signals the start of columnar layout.

<staff> → model.milestoneLike.music → <colLayout>

**<corr>** Contains the correct form of an apparent erroneous passage.

<staff> → model.transcriptionLike → <corr>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <cpMark>

**<curve>** A curved line that cannot be represented by a more specific element, such as a slur.

<staff> → model.graphicPrimitiveLike → <curve>

**<damage>** Contains an area of damage to the physical medium.

<staff> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<staff> → model.transcriptionLike → <del>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <dir>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <dynam>

**<fing>** finger – An individual finger in a fingering indication.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.fingeringLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.fingeringLike → <fingGrp>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<staff> → model.transcriptionLike → <gap>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <gliss>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<staff> → model.transcriptionLike → <handShift>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.controlEventLike.harmony

**<layer>** An independent stream of events on a staff.

<staff> → model.staffPart → model.layerLike → <layer>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<staff> → model.graphicPrimitiveLike → <line>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <metaMark>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<staff> → model.transcriptionLike → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <ornam>

**<ossia>** Captures original notation and a differently notated version **\*present in the source being transcribed\***.

<staff> → model.staffPart → model.ossiaLike → <ossia>

**<pb>** An empty formatting element that forces text to begin on a new page.

<staff> → model.milestoneLike.music → model.pbLike → <pb>

**<phrase>** Indication of 1) a "unified melodic idea" or 2) performance technique.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <phrase>

**<reg>** Contains material which has been regularized or normalized in some sense.

<staff> → model.transcriptionLike → <reg>

**<relation>** Describes a relationship or linkage amongst entities.

<staff> → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<staff> → model.relationLike → <relationList>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <repeatMark>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<staff> → model.transcriptionLike → <restore>

**<sb>** An empty formatting element that forces musical notation to begin on a new line.

<staff> → model.milestoneLike.music → <sb>

**<sic>** Contains apparently incorrect or inaccurate material.

<staff> → model.transcriptionLike → <sic>

**<sp>** Contains an individual speech in a performance text.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <sp>

**<staffDef>** Container for staff meta-information.

<staff> → model.staffDefLike → <staffDef>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → model.stageDirLike → <stageDir>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<staff> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<staff> → model.transcriptionLike → <supplied>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<staff> → model.staffPart → model.staffPart.mensuralAndNeumes → model.staffPart.mensural → model.controlEventLike → <tempo>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<staff> → model.transcriptionLike → <unclear>

## Remarks

The def attribute may be used to create a connection with a <staffDef> element where logical and visual information about the staff is recorded. Alternatively, the n attribute may be used as a reference to a <staffDef> element with the same value in its n attribute or the staff may contain a staffDef element that defines it. If neither def nor n attributes are present, then the encoding order of the staves is presumed to match the encoding order of the staff definitions.

## Constraints

There must be a preceding staffDef with a matching value of @n, a preceding staff with a matching @n value containing a staffDef, or a staffDef child element.

## Declaration

```

<elementSpec ident="staff" module="MEI.shared">
  <desc xml:lang="en">A group of equidistant horizontal lines on which notes are placed in
  order to represent pitch or a grouping element for individual 'strands' of notes, rests,

### Module

[MEI.shared](#)

### Attributes

**@aboveorder** Describes vertical order of items printed above a staff, from closest to farthest away from the staff. One or more values from [data.STAFFITEM](#), separated by spaces.

<staffDef> → [att.staffDef.vis](#) → [att.staffItems](#) → @aboveorder

**@bar.len** (*optional*) States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

<staffDef> → [att.staffDef.vis](#) → [att.barring](#) → @bar.len

**@bar.method** (*optional*) Records the method of barring. Value conforms to [data.BARMETHOD](#).

<staffDef> → [att.staffDef.vis](#) → [att.barring](#) → @bar.method

**@bar.place** (*optional*) Denotes the staff location of bar lines, if the length is non-standard; that is, not equal to 2 times (the number of staff lines - 1). Value conforms to [data.STAFFLOC](#).

<staffDef> → [att.staffDef.vis](#) → [att.barring](#) → @bar.place

**@beam.color** (*optional*) Color of beams, including those associated with tuplets. Value conforms to [data.COLOR](#).

<staffDef> → [att.staffDef.vis](#) → [att.staffDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.color

**@beam.group** (*optional*) Provides an example of how automated beaming (including secondary beams) is to be performed. Value is plain text.

<staffDef> → [att.staffDef.log](#) → [att.staffDef.log.cmn](#) → [att.beaming.log](#) → @beam.group

**@beam.rend** (*optional*) Encodes whether a beam is "feathered" and in which direction. Allowed values are: "**acc**" (*Beam lines grow farther apart from left to right.*), "**rit**" (*Beam lines grow closer together from left to right.*), "**norm**" (*Beam lines are equally-spaced over the entire length of the beam.*)

<staffDef> → [att.staffDef.vis](#) → [att.staffDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.rend

**@beam.rests** (*optional*) Indicates whether automatically-drawn beams should include rests shorter than a quarter note duration. Value conforms to [data.BOOLEAN](#).

<staffDef> → [att.staffDef.log](#) → [att.staffDef.log.cmn](#) → [att.beaming.log](#) → @beam.rests

**@beam.slope** (*optional*) Captures beam slope. Value is a decimal number.

<staffDef> → [att.staffDef.vis](#) → [att.staffDef.vis.cmn](#) → [att.beaming.vis](#) → @beam.slope

**@beloworder** Describes vertical order of items printed below a staff, from closest to farthest away from the staff. One or more values from [data.STAFFITEM](#), separated by spaces.

<staffDef> → att.staffDef.vis → att.staffItems → @beloworder

**@betweenorder** Describes vertical order of items printed between staves, from top to bottom. One or more values from [data.STAFFITEM](#), separated by spaces.

<staffDef> → att.staffDef.vis → att.staffItems → @betweenorder

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.typed → att.classed → @class

**@clef.color** (*optional*) Describes the color of the clef. Value conforms to [data.COLOR](#).

<staffDef> → att.staffDef.vis → att.cleffing.vis → @clef.color

**@clef.dis** (*optional*) Records the amount of octave displacement to be applied to the clef. Value conforms to [data.OCTAVE.DIS](#).

<staffDef> → att.staffDef.log → att.cleffing.log → @clef.dis

**@clef.dis.place** (*optional*) Records the direction of octave displacement to be applied to the clef. Value conforms to [data.STAFFREL.basic](#).

<staffDef> → att.staffDef.log → att.cleffing.log → @clef.dis.place

**@clef.line** (*optional*) Contains a default value for the position of the clef. The value must be in the range between 1 and the number of lines on the staff. The numbering of lines starts with the lowest line of the staff. Value conforms to [data.CLEFLINE](#).

<staffDef> → att.staffDef.log → att.cleffing.log → @clef.line

**@clef.shape** (*optional*) Encodes a value for the clef symbol. Value conforms to [data.CLEFSHAPE](#).

<staffDef> → att.staffDef.log → att.cleffing.log → @clef.shape

**@clef.visible** (*optional*) Determines whether the clef is to be displayed. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.cleffing.vis → @clef.visible

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<staffDef> → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linked → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.metadataPointing → @decls

**@dir.dist** (*optional*) Records the default distance from the staff for directives. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.distances → @dir.dist

**@divisio** (*optional*) Describes the divisions of the breve in use in 14th-century Italy. Value conforms to [data.DIVISIO](#).

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → att.mensural.shared → @divisio

**@dur.default** (*optional*) Contains a default duration in those situations when the first note, rest, chord, etc. in a measure does not have a duration specified. Value conforms to [data.DURATION](#).

<staffDef> → att.staffDef.log → att.duration.default → @dur.default

**@dynam.dist** (*optional*) Records the default distance from the staff for dynamic marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.distances → @dynam.dist

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linked → @follows

**@grid.show** (*optional*) Determines whether to display guitar chord grids. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → @grid.show

**@harm.dist** (*optional*) Records the default distance from the staff of harmonic indications, such as guitar chord grids or functional labels. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.distances → @harm.dist

**@instr** (*optional*) Provides a way of pointing to a MIDI instrument definition. It must contain the ID of an [instrDef](#) element elsewhere in the document. Value conforms to [data.URI](#).

<staffDef> → att.staffDef.ges → att.instrumentIdent → @instr

**@key.accid** (*optional*) Contains an accidental for the tonic key, if one is required, e.g., if key.pname equals c and key.accid equals s, then a tonic of C# is indicated. Value conforms to [data.ACIDENTAL.GESTURAL](#).

<staffDef> → att.staffDef.anl → att.keySigDefault.anl → @key.accid

**@key.mode** (*optional*) Indicates major, minor, or other tonality. Value conforms to [data.MODE](#).

<staffDef> → att.staffDef.anl → att.keySigDefault.anl → @key.mode

**@key.pname** (*optional*) Holds the pitch name of the tonic key, e.g., c for the key of C. Value conforms to [data.PITCHNAME](#).

<staffDef> → att.staffDef.anl → att.keySigDefault.anl → @key.pname

**@keysig** (*optional*) Written key signature. One or more values from [data.KEYFIFTHS](#), separated by spaces.

<staffDef> → att.staffDef.log → att.keySigDefault.log → @keysig

**@keysig.cancelaccid** (*optional*) Determines where cautionary accidentals should be displayed at a key change. Value conforms to [data.CANCELACCID](#).

<staffDef> → att.staffDef.vis → att.keySigDefault.vis → @keysig.cancelaccid

**@keysig.visible** (*optional*) Determines whether the key signature is to be displayed. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.keySigDefault.vis → @keysig.visible

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<staffDef> → att.labelled → @label

**@layerscheme** (*optional*) Indicates the number of layers and their stem directions. Value conforms to [data.LAYERSSCHEME](#).

<staffDef> → att.staffDef.vis → @layerscheme

**@lines** (*optional*) Indicates the number of staff lines. Value is a positive integer.

<staffDef> → att.staffDef.log → @lines

**@lines.color** (*optional*) Captures the colors of the staff lines. One or more values from [data.COLOR](#), separated by spaces.

<staffDef> → att.staffDef.vis → @lines.color

**@lines.visible** (*optional*) Records whether all staff lines are visible. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → @lines.visible

**@lyric.align** (*optional*) Describes the alignment of lyric syllables associated with a note or chord. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.align

**@lyric.fam** (*optional*) Sets the font family default value for lyrics. Value conforms to [data.FONTFAMILY](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.fam

**@lyric.name** (*optional*) Sets the font name default value for lyrics. Value conforms to [data.FONTNAME](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.name

**@lyric.size** (*optional*) Sets the default font size value for lyrics. Value conforms to [data.FONTSIZE](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.size

**@lyric.style** (*optional*) Sets the default font style value for lyrics. Value conforms to [data.FONTSTYLE](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.style

**@lyric.weight** (*optional*) Sets the default font weight value for lyrics. Value conforms to [data.FONTWEIGHT](#).

<staffDef> → att.staffDef.vis → att.lyricStyle → @lyric.weight

**@mensur.color** (*optional*) Records the color of the mensuration sign. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.color

**@mensur.dot** (*optional*) Determines if a dot is to be added to the base symbol. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.dot

**@mensur.form** (*optional*) Indicates whether the base symbol is written vertically or horizontally. Allowed values are: "**horizontal**" (*Horizontally oriented.*), "**vertical**" (*Vertically oriented.*)

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.form

**@mensur.loc** (*optional*) Holds the staff location of the mensuration sign. Value conforms to [data.STAFFLOC](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.loc

**@mensur.orient** (*optional*) Describes the rotation or reflection of the base symbol. Value conforms to [data.ORIENTATION](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.orient

**@mensur.sign** (*optional*) The base symbol in the mensuration sign/time signature of mensural notation. Value conforms to [data.MENSURATIONSIGN](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.sign

**@mensur.size** (*optional*) Describes the relative size of the mensuration sign. Value conforms to [data.FONTSIZE](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.size

**@mensur.slash** (*optional*) Indicates the number lines added to the mensuration sign. For example, one slash is added for what we now call 'alla breve'. Value is a positive integer.

<staffDef> → att.staffDef.vis → att.staffDef.vis.mensural → att.mensural.vis → @mensur.slash

**@meter.count** (*optional*) Captures the number of beats in a measure, that is, the top number of the meter signature. It must contain a decimal number or an expression that evaluates to a decimal number, such as 2+3 or 3\*2. Value is plain text.

<staffDef> → att.staffDef.log → att.meterSigDefault.log → @meter.count

**@meter.form** (*optional*) Contains an indication of how the meter signature should be rendered. Value conforms to [data.METERFORM](#).

<staffDef> → att.staffDef.vis → att.meterSigDefault.vis → @meter.form

**@meter.showchange** (*optional*) Determines whether the old meter signature should be displayed when the meter signature changes. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.meterSigDefault.vis → @meter.showchange

**@meter.sym** (*optional*) Indicates the use of a meter symbol instead of a numeric meter signature, that is, 'C' for common time or 'C' with a slash for cut time. Value conforms to [data.METERSIGN](#).

<staffDef> → att.staffDef.log → att.meterSigDefault.log → @meter.sym

**@meter.unit** (*optional*) Contains the number indicating the beat unit, that is, the bottom number of the meter signature. Value is a decimal number.

<staffDef> → att.staffDef.log → att.meterSigDefault.log → @meter.unit

**@meter.visible** (*optional*) Determines whether the meter signature is to be displayed. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.meterSigDefault.vis → @meter.visible

**@modusmaior** (*optional*) Describes the maxima-long relationship. Value conforms to [data.MODUSMAIOR](#).

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → att.mensural.shared → @modusmaior

**@modusminor** (*optional*) Describes the long-breve relationship. Value conforms to [data.MODUSMINOR](#).

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → att.mensural.shared → @modusminor

**@multi.number** (*optional*) Indicates whether programmatically calculated counts of multiple measures of rest (mRest) and whole measure repeats (mRpt) in parts should be rendered. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.multinumMeasures → @multi.number

**@music.name** (*optional*) Sets the default music font name. Value conforms to [data.MUSICFONT](#).

<staffDef> → att.staffDef.vis → att.notationStyle → @music.name

**@music.size** (*optional*) Sets the default music font size. Value conforms to [data.FONTSIZE](#).

<staffDef> → att.staffDef.vis → att.notationStyle → @music.size

**@n** (*optional*) Provides a numeric designation that indicates an element's position in a sequence of similar elements. Its value must be a non-negative integer. Value is a positive integer, including 0.

<staffDef> → att.nInteger → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linked → @next

**@notationsubtype** (*optional*) Provides any sub-classification of the notation contained or described by the element, additional to that given by its notationtype attribute. Value is a [NMTOKEN](#).

<staffDef> → att.staffDef.log → att.notationType → @notationsubtype

**@notationtype** (*optional*) Contains classification of the notation contained or described by the element bearing this attribute. Value conforms to [data.NOTATIONTYPE](#).

<staffDef> → att.staffDef.log → att.notationType → @notationtype

**@num.default** (*optional*) Along with numbase.default, describes the default duration as a ratio. num.default is the first value in the ratio. Value is a positive integer.

<staffDef> → att.staffDef.log → att.duration.default → @num.default

**@numbase.default** (*optional*) Along with num.default, describes the default duration as a ratio. numbase.default is the second value in the ratio. Value is a positive integer.

<staffDef> → att.staffDef.log → att.duration.default → @numbase.default

**@oct.default** (*optional*) Contains a default octave specification for use when the first note, rest, chord, etc. in a measure does not have an octave value specified. Value conforms to [data.OCTAVE](#).

<staffDef> → att.staffDef.log → att.octaveDefault → @oct.default

**@ontheline** (*optional*) Determines the placement of notes on a 1-line staff. A value of 'true' places all notes on the line, while a value of 'false' places stems-up notes above the line and stems-down notes below the line. Value conforms to [data.BOOLEAN](#).

<staffDef> → att.staffDef.vis → att.oneLineStaff → @ontheline

**@pedal.style** (*optional*) Determines whether piano pedal marks should be rendered as lines or as terms. Value conforms to [data.PEDALSTYLE](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.cmn → att.pianoPedals → @pedal.style

**@ppq** (*optional*) Indicates the number of pulses (sometimes referred to as ticks or divisions) per quarter note. Unlike MIDI, MEI permits different values for a score and individual staves. Value is a positive integer.

<staffDef> → att.staffDef.ges → att.timeBase → @ppq

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linked → @prev

**@prolatio** (*optional*) Describes the semibreve-minim relationship. Value conforms to [data.PROLATIO](#).

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → att.mensural.shared → @prolatio

**@proport.num** (*optional*) Together, proport.num and proport.numbase specify a proportional change as a ratio, e.g., 1:3. Proport.num is for the first value in the ratio. Value is a positive integer.

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → @proport.num

**@proport.numbase** (*optional*) Together, proport.num and proport.numbase specify a proportional change as a ratio, e.g., 1:3. Proport.numbase is for the second value in the ratio. Value is a positive integer.

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → @proport.numbase

**@reh.dist** (*optional*) Records the default distance from the staff for rehearsal marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.distances → @reh.dist

**@reh.enclose** (*optional*) Describes the enclosing shape for rehearsal marks. Allowed values are: "**box**" (*Enclosed by box.*), "**circle**" (*Enclosed by circle.*), "**none**" (*No enclosing shape.*)

<staffDef> → att.staffDef.vis → att.staffDef.vis.cmn → att.rehearsal → @reh.enclose

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linking → @sameas

**@scale** (*optional*) Scale factor to be applied to the feature to make it the desired display size. Value conforms to [data.PERCENT](#).

<staffDef> → att.staffDef.vis → att.scalable → @scale

**@slur.lform** Value conforms to [data.LINEFORM](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.cmn → att.slurRend → @slur.lform

**@slur.lwidth** Value conforms to [data.LINEWIDTH](#).

<staffDef> → att.staffDef.vis → att.staffDef.vis.cmn → att.slurRend → @slur.lwidth

**@spacing** (*optional*) Records the absolute distance (as opposed to the relative distances recorded in [<scoreDef>](#) elements) between this staff and the preceding one in the same system. This value is meaningless for the first staff in a system since the [spacing.system](#) attribute indicates the spacing between systems. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → @spacing

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<staffDef> → att.linking → @synch

**@tab.strings** (*optional*) Provides a \*written\* pitch and octave for each open string or course of strings. One or more values conforming to the pattern "[a-

g][0-9](s|f|ss|x|ff|xs|sx|ts|tf|n|nf|ns|su|sd|fu|fd|nu|nd|1qf|3qf|1qs|3qs)?([a-g][0-9](s|f|ss|x|ff|xs|sx|ts|tf|n|nf|ns|su|sd|fu|fd|nu|nd|1qf|3qf|1qs|3qs)?)\*".

<staffDef> → att.staffDef.ges → att.stringtab.tuning → @tab.strings

**@tempo.dist** (*optional*) Records the default distance from the staff for tempo marks. Value conforms to [data.MEASUREMENTSIGNED](#).

<staffDef> → att.staffDef.vis → att.distances → @tempo.dist

**@tempus** (*optional*) Describes the breve-semibreve relationship. Value conforms to [data.TEMPUS](#).

<staffDef> → att.staffDef.log → att.staffDef.log.mensural → att.mensural.log → att.mensural.shared → @tempus

**@text.fam** (*optional*) Provides a default value for the font family name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTFAMILY](#).

<staffDef> → att.staffDef.vis → att.textStyle → @text.fam

**@text.name** (*optional*) Provides a default value for the font name of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTNAME](#).

<staffDef> → att.staffDef.vis → att.textStyle → @text.name

**@text.size** (*optional*) Provides a default value for the font size of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSIZE](#).

<staffDef> → [att.staffDef.vis](#) → [att.textStyle](#) → @text.size

**@text.style** (*optional*) Provides a default value for the font style of text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTSTYLE](#).

<staffDef> → [att.staffDef.vis](#) → [att.textStyle](#) → @text.style

**@text.weight** (*optional*) Provides a default value for the font weight for text (other than lyrics) when this information is not provided on the individual elements. Value conforms to [data.FONTWEIGHT](#).

<staffDef> → [att.staffDef.vis](#) → [att.textStyle](#) → @text.weight

**@tie.lform** Value conforms to [data.LINEFORM](#).

<staffDef> → [att.staffDef.vis](#) → [att.staffDef.vis.cmn](#) → [att.tieRend](#) → @tie.lform

**@tie.lwidth** Value conforms to [data.LINEWIDTH](#).

<staffDef> → [att.staffDef.vis](#) → [att.staffDef.vis.cmn](#) → [att.tieRend](#) → @tie.lwidth

**@trans.diat** (*optional*) Records the amount of diatonic pitch shift, e.g., C to C♯ = 0, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<staffDef> → [att.staffDef.log](#) → [att.transposition](#) → @trans.diat

**@trans.semi** (*optional*) Records the amount of pitch shift in semitones, e.g., C to C♯ = 1, C to D♭ = 1, necessary to calculate the sounded pitch from the written one. Value is an integer.

<staffDef> → [att.staffDef.log](#) → [att.transposition](#) → @trans.semi

**@tune.Hz** (*optional*) Holds a value for cycles per second, i.e., Hertz, for a tuning reference pitch. Value is a decimal number.

<staffDef> → [att.staffDef.ges](#) → [att.tuning](#) → @tune.Hz

**@tune.pname** (*optional*) Holds the pitch name of a tuning reference pitch, i.e., the central tone of a tuning system. Value conforms to [data.PITCHNAME](#).

<staffDef> → [att.staffDef.ges](#) → [att.tuning](#) → @tune.pname

**@tune.temper** (*optional*) Provides an indication of the tuning system, just, for example. Value conforms to [data.TEMPERAMENT](#).

<staffDef> → [att.staffDef.ges](#) → [att.tuning](#) → @tune.temper

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<staffDef> → [att.typed](#) → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<staffDef> → [att.staffDef.vis](#) → [att.visibility](#) → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<staffDef> → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<staffDef> → [att.basic](#) → [att.id](#) → @xml:id

**Member of**

[model.staffDefLike](#) Groups elements that permit declaration of staff properties.

**Contained By**

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <abbr>

**<add>** Marks an addition to the text.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <del>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<staffDef> → [model.staffDefLike](#) → <ending>

**<expan>** Contains the expansion of an abbreviation.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<staffDef> → [model.staffDefLike](#) → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<staffDef> → [model.staffDefLike](#) → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <orig>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<staffDef> → [model.staffDefLike](#) → <part>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<staffDef> → [model.staffDefLike](#) → [model.sectionPart](#) → <restore>

**<score>** Full score view of the musical content.

<staffDef> → [model.staffDefLike](#) → <score>

**<section>** Segment of music data.

<staffDef> → model.staffDefLike → model.sectionPart → <section>

**<sic>** Contains apparently incorrect or inaccurate material.

<staffDef> → model.staffDefLike → model.sectionPart → <sic>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<staffDef> → model.staffDefLike → <staff>

**<staffGrp>** A group of bracketed or braced staves.

<staffDef> → model.staffDefLike → <staffGrp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<staffDef> → model.staffDefLike → model.sectionPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<staffDef> → model.staffDefLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<staffDef> → model.staffDefLike → model.sectionPart → <unclear>

## May Contain

**<ambitus>** Range of a voice, instrument or piece.

<staffDef> → direct children → <ambitus>

**<clef>** Indication of the exact location of a particular note on the staff and, therefore, the other notes as well.

<staffDef> → model.staffDefPart → <clef>

**<clefGrp>** A set of simultaneously-occurring clefs.

<staffDef> → model.staffDefPart → <clefGrp>

**<instrDef>** MIDI instrument declaration.

<staffDef> → model.instrDefLike → <instrDef>

**<keySig>** Written key signature.

<staffDef> → model.staffDefPart → model.keySigLike → <keySig>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<staffDef> → model.labelLike → <label>

**<labelAbbr>** A label on the pages following the first.

<staffDef> → model.labelLike → <labelAbbr>

**<layerDef>** Container for layer meta-information.

<staffDef> → model.layerDefLike → <layerDef>

**<mensur>** Collects information about the metrical relationship between a note value and the next smaller value; that is, either triple or duple.

<staffDef> → model.staffDefPart → model.staffDefPart.mensural → <mensur>

**<meterSig>** Written meter signature.

<staffDef> → model.staffDefPart → model.meterSigLike → <meterSig>

**<meterSigGrp>** Used to capture alternating, interchanging, mixed or other non-standard meter signatures.

<staffDef> → model.staffDefPart → model.meterSigLike → <meterSigGrp>

**<proport>** Description of note duration as arithmetic ratio.

<staffDef> → model.staffDefPart → model.staffDefPart.mensural → <proport>

## Constraints

StaffDef must have an n attribute.

Either @lines must be present or a preceding staffDef with the same value for @n and @lines must exist.  
Only one clef or clefGrp is permitted.

@n must have the same value as the current staff.

Either @lines must be present or a preceding staffDef with matching @n value and @lines must exist.

The clef position must be less than or equal to the number of lines on the staff.

The clef position must be less than or equal to the number of lines on the staff.

The tab.strings attribute must have the same number of values as there are staff lines.

The tab.strings attribute must have the same number of values as there are staff lines.

The lines.color attribute must have either 1) a single value or 2) the same number of values as there are staff lines.

The lines.color attribute must have either 1) a single value or 2) the same number of values as there are staff lines.

The value of ppq must be a factor of the value of ppq on an ancestor scoreDef.

The value of ppq must be a factor of the value of ppq on a preceding scoreDef.

## <staffGrp>

(staff group) – A group of bracketed or braced staves.

### Referenced in chapters

[2.1.2.2 Content of Musical Divisions](#), [2.2.1 Score and Parts](#), [4.2.2 Defining Score Parameters for CMN](#), [4.2.4 Re-definition of Score Parameters](#)

### Module

[MEI.shared](#)

### Attributes

**@bar.len** (*optional*) States the length of bar lines in virtual units. The value must be greater than 0 and is typically equal to 2 times (the number of staff lines - 1); e.g., a value of 8 for a 5-line staff. Value is a decimal number.

<staffGrp> → [att.staffGrp.vis](#) → [att.barring](#) → @bar.len

**@bar.method** (*optional*) Records the method of barring. Value conforms to [data.BARMETHOD](#).

<staffGrp> → [att.staffGrp.vis](#) → [att.barring](#) → @bar.method

**@bar.place** (*optional*) Denotes the staff location of bar lines, if the length is non-standard; that is, not equal to 2 times (the number of staff lines - 1). Value conforms to [data.STAFFLOC](#).

<staffGrp> → [att.staffGrp.vis](#) → [att.barring](#) → @bar.place

**@bar.thru** (*optional*) Indicates whether bar lines go across the space between staves (true) or are only drawn across the lines of each staff (false). Value conforms to [data.BOOLEAN](#).

<staffGrp> → [att.staffGrp.vis](#) → @bar.thru

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<staffGrp> → [att.common](#) → [att.linked](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → [att.common](#) → [att.linked](#) → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → [att.metadataPointing](#) → @decls

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → [att.facsimile](#) → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → [att.common](#) → [att.linked](#) → @follows

**@instr** (*optional*) Provides a way of pointing to a MIDI instrument definition. It must contain the ID of an <instrDef> element elsewhere in the document. Value conforms to [data.URI](#).

<staffGrp> → att.staffGrp.ges → att.instrumentIdent → @instr

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<staffGrp> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<staffGrp> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.linked → @sameas

**@symbol** (*optional*) Specifies the symbol used to group a set of staves. Allowed values are: "**brace**" (*Curved symbol, , {,}*), "**bracket**" (*Square symbol, , [, but with curved/angled top and bottom segments.*), "**bracketsq**" (*Square symbol, , [, with horizontal top and bottom segments.*), "**line**" (*Line symbol, , |, (wide) line without top and bottom curved/horizontal segments.*), "**none**" (*Grouping symbol missing.*)

<staffGrp> → att.staffGrp.vis → att.staffGroupingSym → @symbol

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<staffGrp> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<staffGrp> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<staffGrp> → att.staffGrp.vis → att.visibility → @visible

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<staffGrp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<staffGrp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.staffGrpLike](#) Groups elements that permit declaration of staff group properties.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<staffGrp> → [model.staffGrpLike](#) → <abbr>

**<add>** Marks an addition to the text.

<staffGrp> → [model.staffGrpLike](#) → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<staffGrp> → [model.staffGrpLike](#) → <corr>

**<damage>** Contains an area of damage to the physical medium.

<staffGrp> → [model.staffGrpLike](#) → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<staffGrp> → [model.staffGrpLike](#) → <del>

**<expan>** Contains the expansion of an abbreviation.

<staffGrp> → [model.staffGrpLike](#) → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<staffGrp> → [model.staffGrpLike](#) → <lem>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<staffGrp> → [model.staffGrpLike](#) → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<staffGrp> → [model.staffGrpLike](#) → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<staffGrp> → [model.staffGrpLike](#) → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<staffGrp> → [model.staffGrpLike](#) → <restore>

**<scoreDef>** Container for score meta-information.

<staffGrp> → [model.staffGrpLike](#) → <scoreDef>

**<sic>** Contains apparently incorrect or inaccurate material.

<staffGrp> → [model.staffGrpLike](#) → <sic>

**<staffGrp>** A group of bracketed or braced staves.

<staffGrp> → model.staffGrpLike → <staffGrp>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<staffGrp> → model.staffGrpLike → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<staffGrp> → model.staffGrpLike → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<staffGrp> → model.staffGrpLike → <unclear>

## May Contain

**<grpSym>** A brace or bracket used to group two or more staves of a score or part.

<staffGrp> → direct children → <grpSym>

**<instrDef>** MIDI instrument declaration.

<staffGrp> → model.instrDefLike → <instrDef>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<staffGrp> → model.labelLike → <label>

**<labelAbbr>** A label on the pages following the first.

<staffGrp> → model.labelAbbrLike → <labelAbbr>

**<staffDef>** Container for staff meta-information.

<staffGrp> → model.staffDefLike → <staffDef>

**<staffGrp>** A group of bracketed or braced staves.

<staffGrp> → model.staffGrpLike → <staffGrp>

## Remarks

System is the more proper name for this concept (Read, p. 37-38). Bracketed staff groups may contain other bracketed or braced staff groups or single staves. See Read, p. 35-38, examples p. 434, 438.

## Constraints

Each staffDef must have a unique value for the n attribute.

## <stageDir>

(stage direction) – Contains any kind of stage direction within a dramatic text or fragment.

### Module

[MEI.drama](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<stageDir> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linked → @corresp

**@endho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined end point. Value conforms to [data.MEASUREMENTSIGNED](#).

<stageDir> → att.stageDir.vis → att.visualOffset2.ho → @endho

**@endid** (*optional*) Indicates the final element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<stageDir> → att.stageDir.log → att.startEndId → @endid

**@endto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined end point. Value conforms to [data.TSTAMPOFFSET](#).

<stageDir> → att.stageDir.vis → att.visualOffset2.to → @endto

**@evaluate** (*optional*) Specifies the intended meaning when a participant in a relationship is itself a pointer. Allowed values are: "**all**" (*If an element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.*), "**one**" (*If an element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.*), "**none**" (*No further evaluation of targets is carried out beyond that needed to find the element(s) specified in plist or target attribute.*)

<stageDir> → att.stageDir.log → att.controlEvent → att.targetEval → @evaluate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linked → @follows

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<stageDir> → att.stageDir.vis → att.visualOffset → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<stageDir> → att.common → att.labelled → @label

**@layer** (*optional*) Identifies the layer to which a feature applies. One or more values of datatype **positiveInteger**, separated by spaces.

<stageDir> → att.stageDir.log → att.controlEvent → att.layerIdent → @layer

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<stageDir> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linking → @next

**@part** (*optional*) Indicates the part in which the current feature should appear. Use '%all' when the feature should occur in every part. One or more values of datatype **a string matching the following regular expression: "(%all|#[\n][\c]+)"**, separated by spaces.

<stageDir> → att.stageDir.log → att.controlEvent → att.partIdent → @part

**@partstaff** (*optional*) Signifies the part staff on which a notated feature occurs. Use '%all' when the feature should occur on every staff. One or more values of datatype **a string matching the following regular expression: "(%all|\d+(-\d+)?)"**, separated by spaces.

<stageDir> → att.stageDir.log → att.controlEvent → att.partIdent → @partstaff

**@place** (*optional*) Captures the placement of the item with respect to the staff with which it is associated. Value conforms to [data.STAFFREL](#).

<stageDir> → att.stageDir.vis → att.placementRelStaff → @place

**@plist** (*optional*) When the target attribute is present, plist identifies the active participants; that is, those entities pointed "from", in a relationship with the specified target(s). When the target attribute is not present, it identifies participants in a mutual relationship. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.stageDir.log → att.controlEvent → att.plist → @plist

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linking → @sameas

**@staff** (*recommended*) Signifies the staff on which a notated event occurs or to which a control event applies. Mandatory when applicable. One or more values of datatype **positiveInteger**, separated by spaces.

<stageDir> → att.stageDir.log → att.controlEvent → att.staffId → @staff

**@startho** (*optional*) Records the horizontal adjustment of a feature's programmatically-determined start point. Value conforms to [data.MEASUREMENTSIGNED](#).

<stageDir> → att.stageDir.vis → att.visualOffset2.ho → @startho

**@startid** (*optional*) Holds a reference to the first element in a sequence of events to which the feature applies. Value conforms to [data.URI](#).

<stageDir> → att.stageDir.log → att.startEndId → att.startId → @startid

**@startto** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined start point. Value conforms to [data.TSTAMPOFFSET](#).

<stageDir> → att.stageDir.vis → att.visualOffset2.to → @startto

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<stageDir> → att.common → att.linked → @synch

**@to** (*optional*) Records a timestamp adjustment of a feature's programmatically-determined location in terms of musical time; that is, beats. Value conforms to [data.TSTAMPOFFSET](#).

<stageDir> → att.stageDir.vis → att.visualOffset → att.visualOffset.to → @to

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<stageDir> → att.lang → @translit

**@tstamp** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<stageDir> → att.stageDir.log → att.controlEvent → att.timestamp.log → @tstamp

**@tstamp.ges** (*optional*) Encodes the onset time in terms of musical time, i.e., beats[.fractional beat part], as expressed in the written time signature. Value conforms to [data.BEAT](#).

<stageDir> → att.stageDir.log → att.controlEvent → att.timestamp.ges → @tstamp.ges

**@tstamp.real** (*optional*) Records the onset time in terms of ISO time. Value conforms to [data.ISOTIME](#).

<stageDir> → att.stageDir.log → att.controlEvent → att.timestamp.ges → @tstamp.real

**@tstamp2** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<stageDir> → att.stageDir.log → att.timestamp2.log → @tstamp2

**@tstamp2.ges** (*optional*) Encodes the ending point of an event, i.e., a count of measures plus a beat location in the ending measure. Value conforms to [data.MEASUREBEAT](#).

<stageDir> → att.stageDir.ges → att.timestamp2.ges → @tstamp2.ges

**@tstamp2.real** (*optional*) Records the ending point of an event in terms of ISO time. Value conforms to [data.ISOTIME](#).

<stageDir> → att.stageDir.ges → att.timestamp2.ges → @tstamp2.real

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<stageDir> → att.common → att.typed → @type

**@vo** (*optional*) Records the vertical adjustment of a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<stageDir> → [att.stageDir.vis](#) → [att.visualOffset](#) → [att.visualOffset.vo](#) → @vo

**@when** (*optional*) Indicates the point of occurrence of this feature along a time line. Its value must be the ID of a <[when](#)> element elsewhere in the document. Value conforms to [data.URI](#).

<stageDir> → [att.stageDir.log](#) → [att.controlEvent](#) → [att.alignment](#) → @when

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facsimile](#) attribute. Value is a decimal number.

<stageDir> → [att.stageDir.vis](#) → [att.xy](#) → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<stageDir> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<stageDir> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<stageDir> → [att.lang](#) → @xml:lang

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the [facsimile](#) attribute. Value is a decimal number.

<stageDir> → [att.stageDir.vis](#) → [att.xy](#) → @y

## Member of

[model.stageDirLike](#) Groups elements containing stage directions in performance texts.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stageDir> → [model.stageDirLike](#) → [model.controlEventLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <[abbr](#)>

**<add>** Marks an addition to the text.

<stageDir> → [model.stageDirLike](#) → [model.controlEventLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <[add](#)>

**<corr>** Contains the correct form of an apparent erroneous passage.

<stageDir> → [model.stageDirLike](#) → [model.controlEventLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <[corr](#)>

**<damage>** Contains an area of damage to the physical medium.

<stageDir> → [model.stageDirLike](#) → [model.controlEventLike](#) → [model.editTransPart.music](#) → [model.editTransPart](#) → <[damage](#)>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <del>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<stageDir> → model.stageDirLike → model.metaContentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <expan>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<stageDir> → model.stageDirLike → model.metaContentPart → <imprimatur>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<stageDir> → model.stageDirLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <lem>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<stageDir> → model.stageDirLike → model.controlEventLike → model.measurePart → <measure>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<stageDir> → model.stageDirLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <orig>

**<p>** One or more text phrases that form a logical prose passage.

<stageDir> → model.stageDirLike → model.metaContentPart → <p>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<stageDir> → model.stageDirLike → model.metaContentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<stageDir> → model.stageDirLike → model.controlEventLike → model.rdgPart.music → model.rdgPart → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <sic>

**<sp>** Contains an individual speech in a performance text.

<stageDir> → model.stageDirLike → <sp>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<stageDir> → model.stageDirLike → model.controlEventLike → model.staffPart.mensural → model.staffPart.mensuralAndNeumes → model.staffPart → <staff>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <supplied>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<stageDir> → model.stageDirLike → model.controlEventLike → model.syllablePart → <syllable>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<stageDir> → model.stageDirLike → model.controlEventLike → model.editTransPart.music → model.editTransPart → <unclear>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stageDir> → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<stageDir> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<stageDir> → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<stageDir> → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<stageDir> → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<stageDir> → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<stageDir> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<stageDir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<stageDir> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<stageDir> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<stageDir> → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<stageDir> → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<stageDir> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<stageDir> → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<stageDir> → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<stageDir> → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<stageDir> → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<stageDir> → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<stageDir> → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<stageDir> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<stageDir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<stageDir> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<stageDir> → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<stageDir> → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<stageDir> → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<stageDir> → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<stageDir> → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <locusGrp>

**<name>** Proper noun or noun phrase.

<stageDir> → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<stageDir> → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<stageDir> → model.transcriptionLike → <orig>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<stageDir> → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<stageDir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<stageDir> → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<stageDir> → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<stageDir> → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<stageDir> → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<stageDir> → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<stageDir> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<stageDir> → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<stageDir> → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<stageDir> → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<stageDir> → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<stageDir> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<stageDir> → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<stageDir> → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<stageDir> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <signatures>

**<stack>** An inline table with a single column.

<stageDir> → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<stageDir> → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<stageDir> → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<stageDir> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<stageDir> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<stageDir> → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<stageDir> → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<stageDir> → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<stageDir> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<stageDir> → model.textPhraseLike.limited → model.msInLine → <watermark>

**<width>** Description of the horizontal size of an object.

<stageDir> → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

In a musical context <stageDir> must have a start-type attribute when it's not a descendant of <sp>. In a textual content <stageDir> must NOT have any musical attributes.

The model of this element is based on the [stage](#) element of the Text Encoding Initiative (TEI).

## Constraints

Must have one of the attributes: startid, tstamp, tstamp.ges or tstamp.real.

Must not have any of the attributes: startid, endid, tstamp, tstamp2, tstamp.ges, tstamp.real, startho, endho, to, startto, endto, staff, layer, place, or plist.

## <stamp>

Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

### Module

MEI.msDesc

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<stamp> → att.bibl → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<stamp> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<stamp> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<stamp> → att.common → att.linkin → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<stamp> → att.datable → @enddate

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<stamp> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<stamp> → att.common → att.linkin → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<stamp> → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<stamp> → att.common → att.labelled → @label

**@on** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<stamp> → att.common → att.nNumberLike → @on

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stamp> → att.common → att.linkin → @next

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<stamp> → [att.datable](#) → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<stamp> → [att.datable](#) → @notbefore

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<stamp> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stamp> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<stamp> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<stamp> → [att.common](#) → [att.linking](#) → @sameas

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<stamp> → [att.datable](#) → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<stamp> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<stamp> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<stamp> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<stamp> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<stamp> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<stamp> → att.lang → @xml:lang

### Member of

[model.msInline](#) Groups elements that may appear inline when the msdesc module is active.

[model.physDescPart](#) Groups elements that may appear as part of the physical description of a bibliographic item.

### Contained By

[\*\*<abbr>\*\*](#) A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

[\*\*<acquisition>\*\*](#) Records information concerning the process by which an item was acquired by the holding institution.

<stamp> → model.msInline → model.textPhraseLike.limited → <acquisition>

[\*\*<actor>\*\*](#) Name of an actor appearing within a cast list.

<stamp> → model.msInline → model.textPhraseLike.limited → <actor>

[\*\*<add>\*\*](#) Marks an addition to the text.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

[\*\*<addName>\*\*](#) Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addName>

[\*\*<addrLine>\*\*](#) Single line of a postal address.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

[\*\*<anchoredText>\*\*](#) Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<stamp> → model.msInline → model.textPhraseLike.limited → <anchoredText>

[\*\*<annot>\*\*](#) Provides a statement explaining the text or indicating the basis for an assertion.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <annot>

[\*\*<arranger>\*\*](#) A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<stamp> → model.msInline → model.textPhraseLike.limited → <arranger>

[\*\*<attacca>\*\*](#) An instruction to begin the next section or movement of a composition without pause.

<stamp> → model.msInline → model.textPhraseLike.limited → <attacca>

[\*\*<author>\*\*](#) The name of the creator of the intellectual content of a non-musical, literary work.

<stamp> → model.msInline → model.textPhraseLike.limited → <author>

[\*\*<bibl>\*\*](#) Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

[\*\*<biblScope>\*\*](#) Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<stamp> → model.msInline → model.textPhraseLike.limited → <biblScope>

[\*\*<bindingDesc>\*\*](#) Describes the present and former bindings of an item.

<stamp> → model.msInline → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<stamp> → model.msInline → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<stamp> → model.msInline → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<stamp> → model.msInline → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<stamp> → model.msInline → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<stamp> → model.msInline → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<stamp> → model.msInline → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<stamp> → model.msInline → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<stamp> → model.msInline → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<stamp> → model.msInline → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<stamp> → model.msInline → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<stamp> → model.msInline → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<stamp> → model.msInline → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<stamp> → model.msInline → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<stamp> → model.msInline → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<stamp> → model.msInline → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<stamp> → model.msInline → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<stamp> → model.msInline → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<stamp> → model.msInline → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paraContentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<stamp> → model.msInline → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<stamp> → model.msInline → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<stamp> → model.msInline → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<stamp> → model.msInline → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<stamp> → model.msInline → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<stamp> → model.msInline → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<stamp> → model.msInline → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<stamp> → model.msInline → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<stamp> → model.msInline → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<stamp> → model.msInline → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<stamp> → model.msInline → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<stamp> → model.msInline → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<stamp> → model.msInline → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<stamp> → model.msInline → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<stamp> → model.msInline → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<stamp> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<stamp> → model.msInline → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<stamp> → model.msInline → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<stamp> → model.msInline → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<stamp> → model.msInline → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<stamp> → model.msInline → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<stamp> → model.msInline → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<stamp> → model.msInline → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<stamp> → model.msInline → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<stamp> → model.msInline → model.textPhraseLike.limited → <pgHead>

**<physDesc>** Container for information about the appearance, construction, or handling of physical materials, such as their dimension, quantity, color, style, and technique of creation.

<stamp> → model.physDescPart → <physDesc>

**<price>** The cost of access to a bibliographic item.

<stamp> → model.msInline → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<stamp> → model.msInline → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<stamp> → model.msInline → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<stamp> → model.msInline → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraselike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraselike → model.paraccontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<stamp> → model.msInline → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<stamp> → model.msInline → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<stamp> → model.msInline → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<stamp> → model.msInline → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<stamp> → model.msInline → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<stamp> → model.msInline → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<stamp> → model.msInline → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<stamp> → model.msInline → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<stamp> → model.msInline → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<stamp> → model.msInline → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<stamp> → model.msInline → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<stamp> → model.msInline → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significative letter(s).

<stamp> → model.msInline → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<stamp> → model.msInline → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<stamp> → model.msInline → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<stamp> → model.msInLine → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<stamp> → model.msInLine → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<stamp> → model.msInLine → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<stamp> → model.msInLine → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<stamp> → model.msInLine → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<stamp> → model.msInLine → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<stamp> → model.msInLine → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<stamp> → model.msInLine → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<stamp> → model.msInLine → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<stamp> → model.msInLine → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<stamp> → model.msInLine → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<stamp> → model.msInLine → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<stamp> → model.msInLine → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInLine → <catchwords>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<date>** A string identifying a point in time or the time period between two such points.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dedicatee>

**<depth>** Description of a measurement taken through a three-dimensional object.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.figureLike → <fig>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<stamp> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<stamp> → macro.struc-unstrucContent → model.headLike → <head>

**<height>** Description of the vertical size of an object.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<p>** One or more text phrases that form a logical prose passage.

<stamp> → macro.struc-unstrucContent → model.pLike → <p>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.locrefLike → <ref>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<stamp> → macro.struc-

unstrucContent → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<symbol>** A reference to a previously defined symbol.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.titleLike → <title>

**<watermark>** Contains a description of a watermark or similar device.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<stamp> → macro.struc-unstrucContent → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **stamp** element of the Text Encoding Initiative (TEI).

## Declaration

```

## <stdVals>

(standard values) – Specifies the format used when standardized date or number values are supplied.

### Module

[MEI.header](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<stdVals> → [att.bibl](#) → @analog

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<stdVals> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @corresp

**@data** (*optional*) Used to link metadata elements to one or more data-containing elements. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.dataPointing](#) → @data

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<stdVals> → [att.common](#) → [att.labelled](#) → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<stdVals> → [att.common](#) → [att.nNumberLike](#) → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.responsibility](#) → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<stdVals> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<stdVals> → [att.common](#) → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMOKEN**, separated by spaces.

<stdVals> → [att.common](#) → [att.typed](#) → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<stdVals> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<stdVals> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<stdVals> → [att.lang](#) → @xml:lang

## Member of

[model.editorialDeclPart](#) Groups elements that may appear as part of a description of the editorial process applied to the encoding of notation.

## Contained By

**<editorialDecl>** Used to provide details of editorial principles and practices applied during the encoding of musical text.

<stdVals> → [model.editorialDeclPart](#) → <editorialDecl>

## May Contain

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<stdVals> → [model.headLike](#) → <head>

**<p>** One or more text phrases that form a logical prose passage.

<stdVals> → [model.pLike](#) → <p>

## Remarks

The model of this element is based on the [stdVals](#) element of the Text Encoding Initiative (TEI).

## Declaration

## <stem>

A stem element.

### Referenced in chapters

[5.6.2 Stems](#)

### Module

[MEI.mensural](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<stem> → [att.common](#) → [att.typed](#) → [att.classe](#) → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<stem> → [att.stem.vis](#) → [att.color](#) → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<stem> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<stem> → [att.common](#) → [att.linking](#) → @corresp

**@dir** (*optional*) Describes the direction of a stem. Value conforms to [data.STEMDIRECTION](#).

<stem> → [att.stem.vis](#) → @dir

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<stem> → [att.facsimile](#) → @facs

**@flag.form** (*optional*) Encodes the form of the flag using the values provided by the [data.FLAGFORM.mensural](#) datatype. Value conforms to [data.FLAGFORM.mensural](#).

<stem> → [att.stem.vis](#) → @flag.form

**@flag.pos** (*optional*) Records the position of the flag using the values provided by the [data.FLAGPOS.mensural](#) datatype. Value conforms to [data.FLAGPOS.mensural](#).

<stem> → [att.stem.vis](#) → @flag.pos

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<stem> → [att.common](#) → [att.linking](#) → @follows

**@form** (*optional*) Encodes the form of the stem using the values provided by the [data.STEMFORM.mensural](#) datatype. Value conforms to [data.STEMFORM.mensural](#).

<stem> → [att.stem.vis](#) → @form

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of [glyph.name](#) or [glyph.num](#) is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<stem> → att.stem.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<stem> → att.stem.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000".

N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<stem> → att.stem.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of `glyph.name` or `glyph.num` is taken, or the textual content of the element. Value conforms to [data.URI](#).

<stem> → att.stem.vis → att.extSym → att.extSym.auth → @glyph.uri

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<stem> → att.common → att.labelled → @label

**@len** (*optional*) Encodes the stem length. Value conforms to [data.MEASUREMENTUNSIGNED](#).

<stem> → att.stem.vis → @len

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<stem> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.linked → @next

**@pos** (*optional*) Records the position of the stem in relation to the note head(s). Value conforms to [data.STEMPOSITION](#).

<stem> → att.stem.vis → @pos

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.linked → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<stem> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<stem> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<stem> → att.stem.vis → att.visibility → @visible

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<stem> → att.stem.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<stem> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<stem> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<stem> → att.stem.vis → att.xy → @y

## Member of

(stem isn't member of any model class)

## Contained By

**<note>** A single pitched event.

<stem> → elements having stem as direct children → <note>

## May Contain

– (<stem> may not have child elements)

## Remarks

Mensural notes can have multiple stems and these may have various forms, directions, and types of flags. Multiple stem elements can be encoded as children of a single note. The attributes `pos`, `length`, `form`, and `dir` allow to encode different positions, lengths, forms, and directions for each these stems. The attributes `flag.pos` and `flag.form` also allow to encode different types of flags for each of the stems.

## Constraints

A note with nested stem elements must not have `@stem.*` attributes.

## Declaration

```
<elementSpec ident="stem" module="MEI.mensural">
  <desc xml:lang="en">A stem element.</desc>

    different types of flags for each of the stems.</p>
  </remarks>
</elementSpec>
```

## <street>

full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

### Module

[MEI.namesdates](#)

### Attributes

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<street> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @corresp

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<street> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<street> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<street> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<street> → att.common → att.linkin → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMOKEN](#).

<street> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMOKEN](#), separated by spaces.

<street> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<street> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<street> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<street> → att.lang → @xml:lang

## Member of

[model.addressPart](#) Groups elements used as part of a physical address.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<street> → model.addressPart → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<street> → model.addressPart → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<street> → model.addressPart → <address>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<street> → model.addressPart → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<street> → model.addressPart → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<street> → model.addressPart → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<street> → model.addressPart → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<street> → model.addressPart → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<street> → model.addressPart → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<street> → model.addressPart → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<street> → model.addressPart → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<street> → model.addressPart → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<street> → model.addressPart → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<street> → model.addressPart → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<street> → model.addressPart → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<street> → model.addressPart → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<street> → model.addressPart → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<street> → model.addressPart → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<street> → model.addressPart → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<street> → model.addressPart → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<street> → model.addressPart → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<street> → model.addressPart → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<street> → model.addressPart → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<street> → model.addressPart → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<street> → model.addressPart → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<street> → model.addressPart → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<street> → model.addressPart → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<street> → model.addressPart → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<street> → model.addressPart → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<street> → model.addressPart → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<street> → model.addressPart → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<street> → model.addressPart → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<street> → model.addressPart → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<street> → model.addressPart → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<street> → model.addressPart → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<street> → model.addressPart → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<street> → model.addressPart → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<street> → model.addressPart → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<street> → model.addressPart → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<street> → model.addressPart → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<street> → model.addressPart → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<street> → model.addressPart → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<street> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<street> → model.addressPart → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<street> → model.addressPart → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<street> → model.addressPart → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<street> → model.addressPart → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<street> → model.addressPart → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<street> → model.addressPart → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<street> → model.addressPart → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<street> → model.addressPart → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<street> → model.addressPart → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<street> → model.addressPart → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<street> → model.addressPart → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<street> → model.addressPart → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<street> → model.addressPart → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<street> → model.addressPart → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<street> → model.addressPart → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<street> → model.addressPart → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<street> → model.addressPart → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<street> → model.addressPart → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<street> → model.addressPart → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<street> → model.addressPart → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<street> → model.addressPart → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<street> → model.addressPart → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<street> → model.addressPart → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<street> → model.addressPart → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<street> → model.addressPart → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<street> → model.addressPart → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<street> → model.addressPart → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<street> → model.addressPart → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<street> → model.addressPart → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<street> → model.addressPart → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<street> → model.addressPart → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<street> → model.addressPart → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<street> → model.addressPart → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<street> → model.addressPart → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<street> → model.addressPart → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<street> → model.addressPart → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<street> → model.addressPart → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<street> → model.addressPart → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<street> → model.addressPart → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<street> → model.addressPart → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<street> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<street> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<street> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<street> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<street> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<street> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<street> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <locusGrp>

**<name>** Proper noun or noun phrase.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<street> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<street> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use <quote> for block-level quotations.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<street> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<street> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<street> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<street> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<street> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<street> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<street> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInline → <watermark>

**<width>** Description of the horizontal size of an object.

<street> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

The model of this element is based on the **street** element of the Text Encoding Initiative (TEI).

## <strophicus>

Strophicus.

### Referenced in chapters

[6.4.1 Elements](#), [6.4.2 Neume component attributes](#)

### Module

[MEI.neumes](#)

### Attributes

**@altsym** (*optional*) Provides a way of pointing to a user-defined symbol. It must contain a reference to an ID of a [<symbolDef>](#) element elsewhere in the document. Value conforms to [data.URI](#).

<strophicus> → att.strophicus.vis → att.altSym → @altsym

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.typed → att.classed → @class

**@color** (*optional*) Used to indicate visual appearance. Do not confuse this with the musical term 'color' as used in pre-CMN notation. Value conforms to [data.COLOR](#).

<strophicus> → att.strophicus.vis → att.color → @color

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<strophicus> → att.common → att.linked → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linked → @corresp

**@enclose** (*optional*) Records the characters often used to mark accidentals, articulations, and sometimes notes as having a cautionary or editorial function. For an example of cautionary accidentals enclosed in parentheses, see Read, p. 131, ex. 9-14. Value conforms to [data.ENCLOSURE](#).

<strophicus> → att.strophicus.vis → att.enclosingChars → @enclose

**@facsimile** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.facsimile → @facsimile

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linked → @follows

**@fontfamily** (*optional*) Contains the name of a font-family. Value conforms to [data.FONTFAMILY](#).

<strophicus> → att.strophicus.vis → att.typography → @fontfamily

**@fontname** (*optional*) Holds the name of a font. Value conforms to [data.FONTNAME](#).

<strophicus> → att.strophicus.vis → att.typography → @fontname

**@fontsize** (*optional*) Indicates the size of a font expressed in printers' points, i.e., 1/72nd of an inch, relative terms, e.g., small, larger, etc., or percentage values relative to normal size, e.g., 125%. Value conforms to [data.FONTSIZE](#).

<strophicus> → att.strophicus.vis → att.typography → @fontsize

**@fontstyle** (*optional*) Records the style of a font, i.e., italic, oblique, or normal. Value conforms to [data.FONTSTYLE](#).

<strophicus> → att.strophicus.vis → att.typography → @fontstyle

**@fontweight** (*optional*) Used to indicate bold type. Value conforms to [data.FONTWEIGHT](#).

<strophicus> → att.strophicus.vis → att.typography → @fontweight

**@glyph.auth** (*optional*) A name or label associated with the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Allowed values are: "smufl" (*Standard Music Font Layout*.)

<strophicus> → att.strophicus.vis → att.extSym → att.extSym.auth → @glyph.auth

**@glyph.name** (*optional*) Glyph name. Value is plain text.

<strophicus> → att.strophicus.vis → att.extSym → att.extSym.names → @glyph.name

**@glyph.num** (*optional*) Numeric glyph reference in hexadecimal notation, e.g., "#xE000" or "U+E000". N.B. SMuFL version 1.18 uses the range U+E000 - U+ECBF. Value conforms to [data.HEXNUM](#).

<strophicus> → att.strophicus.vis → att.extSym → att.extSym.names → @glyph.num

**@glyph.uri** (*optional*) The web-accessible location of the controlled vocabulary from which the value of glyph.name or glyph.num is taken, or the textual content of the element. Value conforms to [data.URI](#).

<strophicus> → att.strophicus.vis → att.extSym → att.extSym.auth → @glyph.uri

**@ho** (*optional*) Records a horizontal adjustment to a feature's programmatically-determined location in terms of staff interline distance; that is, in units of 1/2 the distance between adjacent staff lines. Value conforms to [data.MEASUREMENTSIGNED](#).

<strophicus> → att.strophicus.vis → att.visualOffset.ho → @ho

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<strophicus> → att.common → att.labelled → @label

**@letterspacing** (*optional*) Indicates letter spacing (aka tracking) in analogy to the CSS letter-spacing property. Value conforms to [data.MEASUREMENTTYPOGRAPHYSIGNED](#).

<strophicus> → att.strophicus.vis → att.typography → @letterspacing

**@lineheight** (*optional*) Indicates line height in analogy to the CSS line-height property. Value conforms to either [data.MEASUREMENTTYPOGRAPHYUNSIGNED](#) or [data.PERCENT](#).

<strophicus> → att.strophicus.vis → att.typography → @lineheight

**@loc** (*optional*) Holds the staff location of the feature. Value conforms to [data.STAFFLOC](#).

<strophicus> → att.strophicus.vis → att.staffLoc → @loc

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<strophicus> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linkin → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linkin → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linkin → @sameas

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<strophicus> → att.common → att.linkin → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype **NMTOKEN**, separated by spaces.

<strophicus> → att.common → att.typed → @type

**@visible** (*optional*) Indicates if a feature should be rendered when the notation is presented graphically or sounded when it is presented in an aural form. Value conforms to [data.BOOLEAN](#).

<strophicus> → att.strophicus.vis → att.visibility → @visible

**@x** (*optional*) Encodes an x coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<strophicus> → att.strophicus.vis → att.xy → @x

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<strophicus> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each `id` attribute within a document must have a unique value. Value is a valid [xml:id](#).

<strophicus> → att.common → att.basic → att.id → @xml:id

**@y** (*optional*) Encodes a y coordinate for a feature in an output coordinate system. When it is necessary to record the placement of a feature in a facsimile image, use the `facs` attribute. Value is a decimal number.

<strophicus> → att.strophicus.vis → att.xy → @y

## Member of

[model.neumeComponentModifierLike](#) Groups elements that modify neume components.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<strophicus> → model.neumeComponentModifierLike → <abbr>

**<corr>** Contains the correct form of an apparent erroneous passage.

<strophicus> → model.neumeComponentModifierLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<strophicus> → model.neumeComponentModifierLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<strophicus> → model.neumeComponentModifierLike → <del>

**<expan>** Contains the expansion of an abbreviation.

<strophicus> → model.neumeComponentModifierLike → <expan>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<strophicus> → model.neumeComponentModifierLike → <lem>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<strophicus> → model.neumeComponentModifierLike → <nc>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<strophicus> → model.neumeComponentModifierLike → <orig>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<strophicus> → model.neumeComponentModifierLike → <rdg>

**<reg>** Contains material which has been regularized or normalized in some sense.

<strophicus> → model.neumeComponentModifierLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<strophicus> → model.neumeComponentModifierLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<strophicus> → model.neumeComponentModifierLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<strophicus> → model.neumeComponentModifierLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<strophicus> → model.neumeComponentModifierLike → <unclear>

DEVELOPMENT  
VERSION

## <styleName>

(style name) – A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

### Module

[MEI.namesdates](#)

### Attributes

**@analog** (*optional*) Contains a reference to a field or element in another descriptive encoding system to which this MEI element is comparable. Value is plain text.

<styleName> → [att.bibl](#) → @analog

**@auth** (*optional*) A name or label associated with a controlled vocabulary or other authoritative source for this element or its content. Value is plain text.

<styleName> → [att.name](#) → [att.authorized](#) → @auth

**@auth.uri** (*optional*) A web-accessible location of the controlled vocabulary or other authoritative source of identification or definition for this element or its content. This attribute may contain a complete URI or a partial URI which is completed by the value of the codedval attribute. Value conforms to [data.URI](#).  
 <styleName> → [att.name](#) → [att.authorized](#) → @auth.uri

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<styleName> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<styleName> → [att.common](#) → [att.typed](#) → [att.classed](#) → @class

**@codedval** (*optional*) A value that represents or identifies other data. Often, it is a primary key in the database or a unique value in the coded list identified by the auth or auth.uri attributes. One or more values of datatype **NMTOKEN**, separated by spaces.

<styleName> → [att.name](#) → [att.authorized](#) → [att.canonical](#) → @codedval

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<styleName> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<styleName> → [att.common](#) → [att.linking](#) → @corresp

**@enddate** (*optional*) Contains the end point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<styleName> → [att.name](#) → [att.datable](#) → @enddate

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

"**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<styleName> → [att.edit](#) → [att.evidence](#) → @evidence

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @follows

**@isodate** (*optional*) Provides the value of a textual date in standard ISO form. Value conforms to [data.ISODATE](#).

<styleName> → att.name → att.datable → @isodate

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<styleName> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<styleName> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @next

**@nonfiling** (*optional*) Holds the number of initial characters (such as those constituting an article or preposition) that should not be used for sorting a title or name. Value is a positive integer.

<styleName> → att.name → att.filing → @nonfiling

**@notafter** (*optional*) Contains an upper boundary for an uncertain date in standard ISO form. Value conforms to [data.ISODATE](#).

<styleName> → att.name → att.datable → @notafter

**@notbefore** (*optional*) Contains a lower boundary, in standard ISO form, for an uncertain date. Value conforms to [data.ISODATE](#).

<styleName> → att.name → att.datable → @notbefore

**@nymref** (*optional*) Used to record a pointer to the regularized form of the name elsewhere in the document. Value conforms to [data.URI](#).

<styleName> → att.name → @nymref

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.responsibility → @resp

**@role** (*optional*) Used to specify further information about the entity referenced by this name, for example, the occupation of a person or the status of a place. Value is plain text.

<styleName> → att.name → @role

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <source> or <manifestation> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.edit → att.source → @source

**@startdate** (*optional*) Contains the starting point of a date range in standard ISO form. Value conforms to [data.ISODATE](#).

<styleName> → att.name → att.datable → @startdate

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<styleName> → att.common → att.linking → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<styleName> → att.lang → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

[NMTOKEN](#), separated by spaces.

<styleName> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<styleName> → att.common → att.basic → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<styleName> → att.common → att.basic → att.id → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<styleName> → att.lang → @xml:lang

## Member of

[model.nameLike.label](#) Groups elements that serve as stylistic labels.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <abbr>

**<acquisition>** Records information concerning the process by which an item was acquired by the holding institution.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <acquisition>

**<actor>** Name of an actor appearing within a cast list.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <actor>

**<add>** Marks an addition to the text.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <addName>

**<addrLine>** Single line of a postal address.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <annot>

**<arranger>** A person or organization who transcribes a musical composition, usually for a different medium from that of the original; in an arrangement the musical substance remains essentially unchanged.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <arranger>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <attacca>

**<author>** The name of the creator of the intellectual content of a non-musical, literary work.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <author>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <bibl>

**<biblScope>** Defines the scope of a bibliographic reference, for example as a list of page numbers, or a named subdivision of a larger work.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <biblScope>

**<bindingDesc>** Describes the present and former bindings of an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <bindingDesc>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <bloc>

**<bracketSpan>** Marks a sequence of notational events grouped by a bracket.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <bracketSpan>

**<byline>** Contains the primary statement of responsibility given for a work on its title page.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <byline>

**<caption>** A label which accompanies an illustration or a table.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <caption>

**<composer>** The name of the creator of the intellectual content of a musical work.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <composer>

**<contentItem>** Contains a single entry within a content description element.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <contentItem>

**<contributor>** Names of individuals, institutions, or organizations responsible for contributions to the intellectual content of a work, where the specialized elements for authors, editors, etc. do not suffice or do not apply.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <contributor>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <cpMark>

**<creation>** Non-bibliographic details of the creation of an intellectual entity, in narrative form, such as the date, place, and circumstances of its composition. More detailed information may be captured within the history element.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <creation>

**<damage>** Contains an area of damage to the physical medium.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <date>

**<decoDesc>** Contains a description of the decoration of an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <decoDesc>

**<decoNote>** Contains a description of one or more decorative features of an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <decoNote>

**<dedicatee>** Entity to whom a creative work is formally offered.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <dedicatee>

**<dedication>** Contains a dedicatory statement.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <dedication>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <depth>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <desc>

**<dim>** Any single dimensional specification.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <dim>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like **<tempo>**, **<dynam>** or **<repeatMark>**.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <dir>

**<distributor>** Person or agency, other than a publisher, from which access (including electronic access) to a bibliographic entity may be obtained.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <distributor>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <dynam>

**<edition>** A word or text phrase that indicates a difference in either content or form between the item being described and a related item previously issued by the same publisher/distributor (e.g., 2nd edition, version 2.0, etc.), or simultaneously issued by either the same publisher/distributor or another publisher/distributor (e.g., large print edition, British edition, etc.).

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <edition>

**<editor>** The name of the individual(s), institution(s) or organization(s) acting in an editorial capacity.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <editor>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <epigraph>

**<exhibHist>** A record of public exhibitions, including dates, venues, etc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <exhibHist>

**<expan>** Contains the expansion of an abbreviation.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <extent>

**<f>** Single element of a figured bass indication.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <famName>

**<figDesc>** Contains a brief prose description of the appearance or content of a graphic figure, for use when documenting an image without displaying it.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <figDesc>

**<fing>** finger – An individual finger in a fingering indication.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <fing>

**<foreName>** Contains a forename, given or baptismal name.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <foreName>

**<funder>** Names of individuals, institutions, or organizations responsible for funding. Funders provide financial support for a project; they are distinct from sponsors, who provide intellectual support and authority.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <funder>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <genName>

**<genre>** Term or terms that designate a category characterizing a particular style, form, or content.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <genre>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <geogName>

**<gliss>** A continuous or sliding movement from one pitch to another, usually indicated by a straight or wavy line.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <gliss>

**<hand>** Defines a distinct scribe or handwriting style.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <hand>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <head>

**<height>** Description of the vertical size of an object.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <height>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <imprimatur>

**<imprint>** Information relating to the publication or distribution of a bibliographic item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <imprint>

**<I>** Contains a single line of text within a line group.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <label>

**<labelAbbr>** A label on the pages following the first.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <labelAbbr>

**<language>** Description of a language used in the document.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <language>

**<layoutDesc>** Collects layout descriptions.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <layoutDesc>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <lem>

**<li>** Single item in a <list>.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <li>

**<librettist>** Person or organization who is a writer of the text of an opera, oratorio, etc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <librettist>

**<line>** A visual line that cannot be represented by a more specific; i.e., semantic, element.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <line>

**<lyricist>** Person or organization who is a writer of the text of a song.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <lyricist>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as <add>, <del>, etc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <metaMark>

**<name>** Proper noun or noun phrase.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <nameLink>

**<num>** Numeric information in any form.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <num>

**<octave>** An indication that a passage should be performed one or more octaves above or below its written pitch.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <octave>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paraccontentPart → <p>

**<perfRes>** Name of an instrument on which a performer plays, a performer's voice range, or a standard performing ensemble designation.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <perfRes>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <persName>

**<pgFoot>** A running footer.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <pgFoot>

**<pgHead>** A running header.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <pgHead>

**<price>** The cost of access to a bibliographic item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <price>

**<provenance>** The record of ownership or custodianship of an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <provenance>

**<pubPlace>** Name of the place where a bibliographic item was published.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <pubPlace>

**<publisher>** Name of the organization responsible for the publication of a bibliographic item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <publisher>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <q>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.rdgPart.text → model.rdgPart → <rdg>

**<recipient>** The name of the individual(s), institution(s) or organization(s) receiving correspondence.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <recipient>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <repeatMark>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <repository>

**<resp>** A phrase describing the nature of intellectual responsibility.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <resp>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <restore>

**<role>** Name of a dramatic role, as given in a cast list.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <role>

**<roleDesc>** Describes a character's role in a drama.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <roleDesc>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <roleName>

**<scriptDesc>** Contains a description of the letters or characters used in an autographic item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <scriptDesc>

**<seal>** A single seal or similar attachment.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <seal>

**<sealDesc>** Describes the seals or similar external attachments applied to an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <sealDesc>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <sic>

**<signifLet>** Significantive letter(s).

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <signifLet>

**<soundChan>** Reflects the number of apparent sound channels in the playback of a recording (monaural, stereophonic, quadraphonic, etc.).

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <soundChan>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <speaker>

**<sponsor>** Names of sponsoring individuals, organizations or institutions. Sponsors give their intellectual authority to a project; they are to be distinguished from funders, who provide the funding but do not necessarily take intellectual responsibility.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <sponsor>

**<stack>** An inline table with a single column.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <stack>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <supplied>

**<supportDesc>** Groups elements describing the physical support material of an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <supportDesc>

**<syl>** Individual lyric syllable.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <syl>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60".

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <tempo>

**<term>** Keyword or phrase which describes a resource.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <term>

**<textLang>** Identifies the languages and writing systems within the work described by a bibliographic description, not the language of the description.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <textLang>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.textPhraseLike → <th>

**<treatHist>** A record of the treatment the item has undergone (e.g., de-acidification, restoration, etc.).

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <treatHist>

**<treatSched>** Scheduled treatment, e.g., de-acidification, restoration, etc., for an item.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <treatSched>

**<typeDesc>** Contains a description of the typefaces or other aspects of the printing of a printed source.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <typeDesc>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → model.editTransPart.text → model.editTransPart → <unclear>

**<width>** Description of the horizontal size of an object.

<styleName> → model.nameLike.label → model.textPhraseLike.limited → <width>

## May Contain

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <abbr>

**<add>** Marks an addition to the text.

<styleName> → model.transcriptionLike → <add>

**<address>** Contains a postal address, for example of a publisher, an organization, or an individual.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressLike → <address>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.annotLike → <annot>

**<bibl>** Provides a loosely-structured bibliographic citation in which the sub-components may or may not be explicitly marked.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <bibl>

**<biblStruct>** Contains a bibliographic citation in which bibliographic sub-elements must appear in a specified order.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.biblLike → <biblStruct>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <bloc>

**<catchwords>** Describes the system used to ensure correct ordering of the quires making up an item, typically by means of annotations at the foot of the page.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslInLine → <catchwords>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<styleName> → model.editLike → <choice>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<styleName> → model.transcriptionLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <country>

**<damage>** Contains an area of damage to the physical medium.

<styleName> → model.transcriptionLike → <damage>

**<date>** A string identifying a point in time or the time period between two such points.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dateLike → <date>

**<dedicatee>** Entity to whom a creative work is formally offered.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <dedicatee>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<styleName> → model.transcriptionLike → <del>

**<depth>** Description of a measurement taken through a three-dimensional object.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <depth>

**<dim>** Any single dimensional specification.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <dim>

**<dimensions>** Information about the physical size of an entity; usually includes numerical data.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <dimensions>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <district>

**<expan>** Contains the expansion of an abbreviation.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.editorialLike → <expan>

**<extent>** Used to express size in terms other than physical dimensions, such as number of pages, records, bytes, physical components, etc.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <extent>

**<fig>** Groups elements representing or containing graphic information such as an illustration or figure.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.figureLike → <fig>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<styleName> → model.transcriptionLike → <gap>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.nameLike.geogName → <geogName>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<styleName> → model.transcriptionLike → <handShift>

**<height>** Description of the vertical size of an object.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <height>

**<heraldry>** Contains a heraldic formula or phrase, typically found as part of a blazon, coat of arms, etc.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <heraldry>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.identifierLike → <identifier>

**<lb>** An empty formatting element that forces text to begin on a new line.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.lbLike → <lb>

**<locus>** Defines a location within a manuscript or manuscript component, usually as a (possibly discontinuous) sequence of folio references.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locus>

**<locusGrp>** Groups locations which together form a distinct but discontinuous item within a manuscript or manuscript part, according to a specific foliation.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <locusGrp>

**<name>** Proper noun or noun phrase.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → <name>

**<num>** Numeric information in any form.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.measurementLike → model.numLike → <num>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<styleName> → model.transcriptionLike → <orig>

**<pb>** An empty formatting element that forces text to begin on a new page.

<styleName> → model.textPhraseLike → model.pbLike → <pb>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.agent → <persName>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <postCode>

**<ptr>** Defines a traversible pointer to another location, using only attributes to describe the destination.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ptr>

**<q>** Contains material which is distinguished from the surrounding phrase-level text using quotation marks or a similar method. Use **<quote>** for block-level quotations.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.qLike → <q>

**<ref>** Defines a traversible reference to another location. May contain text and sub-elements that describe the destination.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.locrefLike → <ref>

**<reg>** Contains material which has been regularized or normalized in some sense.

<styleName> → model.transcriptionLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <region>

**<relation>** Describes a relationship or linkage amongst entities.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relation>

**<relationList>** Gathers relation elements.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.relationLike → <relationList>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <rend>

**<repository>** Institution, agency, or individual which holds a bibliographic item.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike → model.nameLike.place → model.repositoryLike → <repository>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<styleName> → model.transcriptionLike → <restore>

**<secFolio>** Marks the word or words taken from a fixed point in a codex (typically the beginning of the second leaf) in order to provide a unique identifier for the item.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.mslinline → <secFolio>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → model.geogNamePart → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<styleName> → model.transcriptionLike → <sic>

**<signatures>** Provides a description of the leaf or quire signatures found within a codex.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <signatures>

**<stack>** An inline table with a single column.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.rendLike → <stack>

**<stamp>** Contains a word or phrase describing an official mark indicating ownership, genuineness, validity, etc.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <stamp>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.addressPart → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.nameLike.label → <styleName>

**<subst>** Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

<styleName> → model.editLike → <subst>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<styleName> → model.transcriptionLike → <supplied>

**<symbol>** A reference to a previously defined symbol.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <symbol>

**<term>** Keyword or phrase which describes a resource.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → <term>

**<title>** Title of a bibliographic entity.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.titleLike → <title>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<styleName> → model.transcriptionLike → <unclear>

**<watermark>** Contains a description of a watermark or similar device.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.msInline → <watermark>

**<width>** Description of the horizontal size of an object.

<styleName> → model.textPhraseLike → model.textPhraseLike.limited → model.dimLike → <width>

## Remarks

Do not confuse this element with the <periodName> element. The name of the list from which a controlled value is taken may be recorded using the auth attribute.

## Declaration

## <subst>

(substitution) – Groups transcriptional elements when the combination is to be regarded as a single intervention in the text.

### Referenced in chapters

[11.2 Editorial Markup](#), [11.2.4.1 Omissions, Unclear Readings, Damage, and Supplied Readings](#), [11.2.4.3 Substitutions, Restorations, and Handshifts](#)

### Module

[MEI.edittrans](#)

### Attributes

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<subst> → att.edit → att.evidence → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.typed → att.classed → @class

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<subst> → att.common → att.linkin → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linkin → @corresp

**@decls** (*optional*) Identifies one or more metadata elements (other than classification terms) within the header, which are understood to apply to the element bearing this attribute and its content. One or more values from [data.URI](#), separated by spaces.

<subst> → att.trans → att.metadataPointing → @decls

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*), "**conjecture**" (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<subst> → att.edit → att.evidence → @evidence

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linkin → @follows

**@hand** (*optional*) Signifies the hand responsible for an action. The value must be the ID of a <hand> element declared in the header. Value conforms to [data.URI](#).

<subst> → att.trans → att.handIdent → @hand

**@instant** The @instant attribute is syntactic sugar for classifying a scribal intervention as an ad-hoc modification; that is, one which does not interrupt the writing process. Value must conform to [data.BOOLEAN](#) or [unknown](#).

<subst> → att.trans → att.geneticState → @instant

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<subst> → att.common → att.labelled → @label

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<subst> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linked → @prev

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linked → @sameas

**@seq** (*optional*) Used to assign a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Value is a positive integer.

<subst> → att.trans → att.sequence → @seq

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a [<source>](#) or [<manifestation>](#) element located in the document header. One or more values from [data.URI](#), separated by spaces.

<subst> → att.edit → att.source → @source

**@state** Points to the genetic state that results from this modification. One or more values from [data.URI](#), separated by spaces.

<subst> → att.trans → att.geneticState → @state

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<subst> → att.common → att.linked → @synch

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype

**NMTOKEN**, separated by spaces.

<subst> → att.common → att.typed → @type

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<subst> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<subst> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

## Member of

[model.editLike](#) Groups elements for editorial interventions that may be useful both in transcribing and in authoring processes.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<subst> → [model.editLike](#) → <abbr>

**<add>** Marks an addition to the text.

<subst> → [model.editLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<subst> → [model.editLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<subst> → [model.editLike](#) → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<subst> → [model.editLike](#) → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<subst> → [model.editLike](#) → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<subst> → [model.editLike](#) → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<subst> → [model.editLike](#) → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<subst> → [model.editLike](#) → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<subst> → [model.editLike](#) → <caption>

**<choice>** Groups a number of alternative encodings for the same point in a text.

<subst> → [model.editLike](#) → [model.choicePart](#) → <choice>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<subst> → [model.editLike](#) → <chord>

**<contentItem>** Contains a single entry within a content description element.

<subst> → [model.editLike](#) → <contentItem>

**<corpName>** Identifies an organization or group of people that acts as a single entity.

<subst> → model.editLike → <corpName>

**<corr>** Contains the correct form of an apparent erroneous passage.

<subst> → model.editLike → <corr>

**<country>** Contains the name of a geopolitical unit, such as a nation, country, colony, or commonwealth, larger than or administratively superior to a region and smaller than a bloc.

<subst> → model.editLike → <country>

**<cpMark>** A verbal or graphical indication to copy musical material written elsewhere.

<subst> → model.editLike → <cpMark>

**<damage>** Contains an area of damage to the physical medium.

<subst> → model.editLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<subst> → model.editLike → <del>

**<desc>** Container for text that briefly describes the feature to which it is attached, including its intended usage, purpose, or application as appropriate.

<subst> → model.editLike → <desc>

**<dir>** An instruction expressed as a combination of text and symbols, typically above, below, or between staves, but not on the staff — that is not encoded elsewhere in more specific elements, like <tempo>, <dynam> or <repeatMark>.

<subst> → model.editLike → <dir>

**<district>** Contains the name of any kind of subdivision of a settlement, such as a parish, ward, or other administrative or geographic unit.

<subst> → model.editLike → <district>

**<dynam>** Indication of the volume of a note, phrase, or section of music.

<subst> → model.editLike → <dynam>

**<ending>** Alternative ending for a repeated passage of music; i.e., prima volta, seconda volta, etc.

<subst> → model.editLike → <ending>

**<epigraph>** Contains a quotation, anonymous or attributed, appearing on a title page.

<subst> → model.editLike → model.paracontentPart → <epigraph>

**<expan>** Contains the expansion of an abbreviation.

<subst> → model.editLike → <expan>

**<f>** Single element of a figured bass indication.

<subst> → model.editLike → <f>

**<famName>** Contains a family (inherited) name, as opposed to a given, baptismal, or nick name.

<subst> → model.editLike → <famName>

**<fb>** Symbols added to a bass line that indicate harmony. Used to improvise a chordal accompaniment. Sometimes called Generalbass, thoroughbass, or basso continuo.

<subst> → model.editLike → <fb>

**<fing>** finger – An individual finger in a fingering indication.

<subst> → model.editLike → <fing>

**<fingGrp>** (finger group)– A group of individual fingers in a fingering indication.

<subst> → model.editLike → <fingGrp>

**<foreName>** Contains a forename, given or baptismal name.

<subst> → model.editLike → <foreName>

**<genName>** Contains a name component used to distinguish otherwise similar names on the basis of the relative ages or generations of the persons named.

<subst> → model.editLike → <genName>

**<geogFeat>** Contains a common noun identifying a geographical feature.

<subst> → model.editLike → <geogFeat>

**<geogName>** The proper noun designation for a place, natural feature, or political jurisdiction.

<subst> → model.editLike → <geogName>

**<graceGrp>** A container for a sequence of grace notes.

<subst> → model.editLike → <graceGrp>

**<harm>** An indication of harmony, e.g., chord names, tablature grids, harmonic analysis, figured bass.

<subst> → model.editLike → <harm>

**<head>** Contains any heading, for example, the title of a section of text, or the heading of a list.

<subst> → model.editLike → <head>

**<identifier>** An alpha-numeric string that establishes the identity of the described material.

<subst> → model.editLike → <identifier>

**<imprimatur>** Contains a formal statement authorizing the publication of a work, sometimes required to appear on a title page or its verso.

<subst> → model.editLike → model.paracontentPart → <imprimatur>

**<I>** Contains a single line of text within a line group.

<subst> → model.editLike → <I>

**<label>** A container for document text that identifies the feature to which it is attached. For a "tool tip" or other generated label, use the label attribute.

<subst> → model.editLike → <label>

**<labelAbbr>** A label on the pages following the first.

<subst> → model.editLike → <labelAbbr>

**<layer>** An independent stream of events on a staff.

<subst> → model.editLike → <layer>

**<lem>** (lemma) – Contains the lemma, or base text, of a textual variation.

<subst> → model.editLike → <lem>

**<li>** Single item in a <list>.

<subst> → model.editLike → <li>

**<ligature>** A mensural notation symbol that combines two or more notes into a single sign.

<subst> → model.editLike → <ligature>

**<measure>** Unit of musical time consisting of a fixed number of note values of a given type, as determined by the prevailing meter, and delimited in musical notation by bar lines.

<subst> → model.editLike → <measure>

**<metaMark>** A graphical or textual statement with additional / explanatory information about the musical text. The textual consequences of this intervention are encoded independently via other means; that is, with elements such as **<add>**, **<del>**, etc.

<subst> → [model.editLike](#) → <metaMark>

**<name>** Proper noun or noun phrase.

<subst> → [model.editLike](#) → <name>

**<nameLink>** Contains a connecting phrase or link used within a name but not regarded as part of it, such as "van der" or "of", "from", etc.

<subst> → [model.editLike](#) → <nameLink>

**<nc>** Sign representing a single pitched event, although the exact pitch may not be known.

<subst> → [model.editLike](#) → <nc>

**<ncGrp>** Collection of one or more neume components.

<subst> → [model.editLike](#) → <ncGrp>

**<neume>** Sign representing one or more musical pitches.

<subst> → [model.editLike](#) → <neume>

**<note>** A single pitched event.

<subst> → [model.editLike](#) → <note>

**<num>** Numeric information in any form.

<subst> → [model.editLike](#) → <num>

**<oLayer>** A layer that contains an alternative to material in another layer.

<subst> → [model.editLike](#) → <oLayer>

**<oStaff>** A staff that holds an alternative passage which may be played instead of the original material.

<subst> → [model.editLike](#) → <oStaff>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<subst> → [model.editLike](#) → <orig>

**<ornam>** An element indicating an ornament that is not a mordent, turn, or trill.

<subst> → [model.editLike](#) → <ornam>

**<p>** One or more text phrases that form a logical prose passage.

<subst> → [model.editLike](#) → [model.paracontentPart](#) → <p>

**<part>** An alternative visual rendition of the score from the point of view of a particular performer (or group of performers).

<subst> → [model.editLike](#) → <part>

**<periodName>** A label that describes a period of time, such as 'Baroque' or '3rd Style period'.

<subst> → [model.editLike](#) → <periodName>

**<persName>** Designation for an individual, including any or all of that individual's forenames, surnames, honorific titles, and added names.

<subst> → [model.editLike](#) → <persName>

**<pgFoot>** A running footer.

<subst> → [model.editLike](#) → <pgFoot>

**<pgHead>** A running header.

<subst> → model.editLike → <pgHead>

**<postBox>** (postal box or post office box) contains a number or other identifier for some postal delivery point other than a street address.

<subst> → model.editLike → <postBox>

**<postCode>** (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail.

<subst> → model.editLike → <postCode>

**<quote>** Contains a paragraph-like block of text attributed to an external source, normally set off from the surrounding text by spacing or other typographic distinction.

<subst> → model.editLike → model.paracontentPart → <quote>

**<rdg>** (reading) – Contains a single reading within a textual variation.

<subst> → model.editLike → <rdg>

**<refrain>** Recurring lyrics, especially at the end of each verse or stanza of a poem or song lyrics; a chorus.

<subst> → model.editLike → <refrain>

**<reg>** Contains material which has been regularized or normalized in some sense.

<subst> → model.editLike → <reg>

**<region>** Contains the name of an administrative unit such as a state, province, or county, larger than a settlement, but smaller than a country.

<subst> → model.editLike → <region>

**<rend>** A formatting element indicating special visual rendering, e.g., bold or italicized, of a text word or phrase.

<subst> → model.editLike → <rend>

**<repeatMark>** An instruction expressed as a combination of text and symbols – segno and coda – typically above, below, or between staves, but not on the staff.

<subst> → model.editLike → <repeatMark>

**<rest>** A non-sounding event found in the source being transcribed.

<subst> → model.editLike → <rest>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<subst> → model.editLike → <restore>

**<roleName>** Contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank.

<subst> → model.editLike → <roleName>

**<score>** Full score view of the musical content.

<subst> → model.editLike → <score>

**<section>** Segment of music data.

<subst> → model.editLike → <section>

**<seg>** (arbitrary segment) represents any segmentation of text below the "text component" level.

<subst> → model.editLike → <seg>

**<settlement>** Contains the name of a settlement such as a city, town, or village identified as a single geopolitical or administrative unit.

<subst> → [model.editLike](#) → <settlement>

**<sic>** Contains apparently incorrect or inaccurate material.

<subst> → [model.editLike](#) → <sic>

**<signifLet>** Significantive letter(s).

<subst> → [model.editLike](#) → <signifLet>

**<speaker>** Contains a specialized form of heading or label, giving the name of one or more speakers in a dramatic text or fragment.

<subst> → [model.editLike](#) → <speaker>

**<staff>** A group of equidistant horizontal lines on which notes are placed in order to represent pitch or a grouping element for individual 'strands' of notes, rests, etc. that may or may not actually be rendered on staff lines; that is, both diastematic and non-diastematic signs.

<subst> → [model.editLike](#) → <staff>

**<stageDir>** Contains any kind of stage direction within a dramatic text or fragment.

<subst> → [model.editLike](#) → <stageDir>

**<street>** full street address including any name or number identifying a building as well as the name of the street or route on which it is located.

<subst> → [model.editLike](#) → <street>

**<styleName>** A label for a characteristic style of writing or performance, such as 'bebop' or 'rock-n-roll'.

<subst> → [model.editLike](#) → <styleName>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<subst> → [model.editLike](#) → <supplied>

**<syl>** Individual lyric syllable.

<subst> → [model.editLike](#) → <syl>

**<syllable>** Neume notation can be thought of as "neumed text". Therefore, the syllable element provides high-level organization in this repertoire.

<subst> → [model.editLike](#) → <syllable>

**<td>** Designates a table cell that contains data as opposed to a cell that contains column or row heading information.

<subst> → [model.editLike](#) → <td>

**<tempo>** Text and symbols descriptive of tempo, mood, or style, e.g., "allarg.", "a tempo", "cantabile", "Moderato", "J=60", "Moderato J =60").

<subst> → [model.editLike](#) → <tempo>

**<th>** Designates a table cell containing column or row heading information as opposed to one containing data.

<subst> → [model.editLike](#) → <th>

**<title>** Title of a bibliographic entity.

<subst> → [model.editLike](#) → <title>

**<titlePart>** Contains a subsection or division of the title of a bibliographic entity.

<subst> → [model.editLike](#) → <titlePart>

**<tuplet>** A group of notes with "irregular" (sometimes called "irrational") rhythmic values, for example, three notes in the time normally occupied by two or nine in the time of five.

<subst> → [model.editLike](#) → <tuplet>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<subst> → model.editLike → <unclear>

**<verse>** Division of a poem or song lyrics, sometimes having a fixed length, meter or rhyme scheme; a stanza.

<subst> → model.editLike → <verse>

**<volta>** Sung text for a specific iteration of a repeated section of music.

<subst> → model.editLike → <volta>

## May Contain

**<add>** Marks an addition to the text.

<subst> → model.transcriptionLike → <add>

**<corr>** Contains the correct form of an apparent erroneous passage.

<subst> → model.transcriptionLike → <corr>

**<damage>** Contains an area of damage to the physical medium.

<subst> → model.transcriptionLike → <damage>

**<del>** Contains information deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, annotator, or corrector.

<subst> → model.transcriptionLike → <del>

**<gap>** Indicates a point where material has been omitted in a transcription, whether as part of sampling practice or for editorial reasons described in the MEI header.

<subst> → model.transcriptionLike → <gap>

**<handShift>** Marks the beginning of a passage written in a new hand, or of a change in the scribe, writing style, ink or character of the document hand.

<subst> → model.transcriptionLike → <handShift>

**<orig>** Contains material which is marked as following the original, rather than being normalized or corrected.

<subst> → model.transcriptionLike → <orig>

**<reg>** Contains material which has been regularized or normalized in some sense.

<subst> → model.transcriptionLike → <reg>

**<restore>** Indicates restoration of material to an earlier state by cancellation of an editorial or authorial marking or instruction.

<subst> → model.transcriptionLike → <restore>

**<sic>** Contains apparently incorrect or inaccurate material.

<subst> → model.transcriptionLike → <sic>

**<supplied>** Contains material supplied by the transcriber or editor for any reason.

<subst> → model.transcriptionLike → <supplied>

**<unclear>** Contains material that cannot be transcribed with certainty because it is illegible or inaudible in the source.

<subst> → model.transcriptionLike → <unclear>

## Remarks

The model of this element is based on the `subst` element of the Text Encoding Initiative (TEI).

## <supplied>

Contains material supplied by the transcriber or editor for any reason.

### Referenced in chapters

[11.2.2 Apparent Errors](#), [11.2.4.1 Omissions, Unclear Readings, Damage, and Supplied Readings](#), [11.2.4.2 Additions and Deletions](#)

### Module

[MEI.edittrans](#)

### Attributes

**@agent** (*optional*) Signifies the causative agent of damage, illegibility, or other loss of original text. Value is plain text.

<supplied> → [att.agentIdent](#) → @agent

**@atleast** (*optional*) Gives a minimum estimated value for an approximate measurement. Value is a decimal number.

<supplied> → [att.extent](#) → [att.ranging](#) → @atleast

**@atmost** (*optional*) Gives a maximum estimated value for an approximate measurement. Value is a decimal number.

<supplied> → [att.extent](#) → [att.ranging](#) → @atmost

**@cert** (*optional*) Signifies the degree of certainty or precision associated with a feature. Value conforms to [data.CERTAINTY](#).

<supplied> → [att.edit](#) → [att.evidence](#) → @cert

**@class** (*optional*) Contains one or more URIs which denote classification terms that apply to the entity bearing this attribute. One or more values from [data.URI](#), separated by spaces.

<supplied> → [att.common](#) → [att.typed](#) → [att.classest](#) → @class

**@confidence** (*optional*) Specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by min and max, or the proportion of observed values that fall within that range. Value conforms to [data.CONFIDENCE](#).

<supplied> → [att.extent](#) → [att.ranging](#) → @confidence

**@copyof** (*optional*) Points to an element of which the current element is a copy. Value conforms to [data.URI](#).

<supplied> → [att.common](#) → [att.linking](#) → @copyof

**@corresp** (*optional*) Used to point to other elements that correspond to this one in a generic fashion. One or more values from [data.URI](#), separated by spaces.

<supplied> → [att.common](#) → [att.linking](#) → @corresp

**@evidence** (*optional*) Indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation. Allowed values are: "**internal**" (*There is evidence within the document to support the intervention.*), "**external**" (*There is evidence outside the document to support the intervention.*),

**"conjecture"** (*The assertion has been made by the editor, cataloguer, or scholar on the basis of their expertise.*)

<supplied> → [att.edit](#) → [att.evidence](#) → @evidence

**@extent** (*optional*) Captures a measurement, count, or description. When extent contains a numeric value, use the unit attribute to indicate the measurement unit. Value is plain text.

<supplied> → att.extent → @extent

**@facs** (*optional*) Points to one or more images, portions of an image, or surfaces which correspond to the current element. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.facsimile → @facs

**@follows** (*optional*) points to one or more events in a user-defined collection that are known to be predecessors of the current element. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.linked → @follows

**@label** (*optional*) Captures text to be used to generate a label for the element to which it's attached, a "tool tip" or prefatory text, for example. Should not be used to record document content. Value is plain text.

<supplied> → att.common → att.labelled → @label

**@max** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the maximum value observed. Value is a decimal number.

<supplied> → att.extent → att.ranging → @max

**@min** (*optional*) Where the measurement summarizes more than one observation or a range of values, supplies the minimum value observed. Value is a decimal number.

<supplied> → att.extent → att.ranging → @min

**@n** (*optional*) Provides a number-like designation that indicates an element's position in a sequence of similar elements. May not contain space characters. Value conforms to [data.WORD](#).

<supplied> → att.common → att.nNumberLike → @n

**@next** (*optional*) Used to point to the next event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.linked → @next

**@precedes** (*optional*) Points to one or more events in a user-defined collection that are known to be successors of the current element. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.linked → @precedes

**@prev** (*optional*) Points to the previous event(s) in a user-defined collection. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.linked → @prev

**@reason** (*optional*) Holds a short phrase describing the reason for missing textual material (gap), why material is supplied (supplied), or why transcription is difficult (unclear). Value is plain text.

<supplied> → att.reasonIdent → @reason

**@resp** (*optional*) Indicates the agent(s) responsible for some aspect of the text's transcription, editing, or encoding. Its value must point to one or more identifiers declared in the document header. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.responsibility → @resp

**@sameas** (*optional*) Points to an element that is the same as the current element but is not a literal copy of the current element. One or more values from [data.URI](#), separated by spaces.

<supplied> → att.common → att.linked → @sameas

**@source** (*optional*) Contains a list of one or more pointers indicating the sources which attest to a given reading. Each value should correspond to the ID of a <[source](#)> or <[manifestation](#)> element located in the document header. One or more values from [data.URI](#), separated by spaces.

<supplied> → [att.edit](#) → [att.source](#) → @source

**@synch** (*optional*) Points to elements that are synchronous with the current element. One or more values from [data.URI](#), separated by spaces.

<supplied> → [att.common](#) → [att.linking](#) → @synch

**@translit** (*optional*) Specifies the transliteration technique used. Value is a [NMTOKEN](#).

<supplied> → [att.lang](#) → @translit

**@type** (*optional*) Designation which characterizes the element in some sense, using any convenient classification scheme or typology that employs single-token labels. One or more values of datatype [NMTOKEN](#), separated by spaces.

<supplied> → [att.common](#) → [att.typed](#) → @type

**@unit** (*optional*) Indicates the unit of measurement. Allowed values are: "byte" (Byte.), "char" (Character.), "cm" (Centimeter.), "deg" (Degree.), "in" (Inch.), "issue" (Serial issue.), "ft" (Foot.), "m" (Meter.), "mm" (Millimeter.), "page" (Page.), "pc" (Pica.), "pt" (Point.), "px" (Pixel.), "rad" (Radian.), "record" (Record.), "vol" (Serial volume.), "vu" (MEI virtual unit.).

<supplied> → [att.extent](#) → [att.measurement](#) → @unit

**@xml:base** (*optional*) Provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Value conforms to [data.URI](#).

<supplied> → [att.common](#) → [att.basic](#) → @xml:base

**@xml:id** (*optional*) Regularizes the naming of an element and thus facilitates building links between it and other resources. Each id attribute within a document must have a unique value. Value is a valid [xml:id](#).

<supplied> → [att.common](#) → [att.basic](#) → [att.id](#) → @xml:id

**@xml:lang** (*optional*) Identifies the language of the element's content. The values for this attribute are language 'tags' as defined in BCP 47. All language tags that make use of private use sub-tags must be documented in a corresponding language element in the MEI header whose id attribute is the same as the language tag's value. Value is a [language](#).

<supplied> → [att.lang](#) → @xml:lang

## Member of

[model.transcriptionLike](#) Groups elements used for editorial transcription of pre-existing source materials.

## Contained By

**<abbr>** A generic element for 1) a shortened form of a word, including an acronym or 2) a shorthand notation.

<supplied> → [model.transcriptionLike](#) → <abbr>

**<add>** Marks an addition to the text.

<supplied> → [model.transcriptionLike](#) → <add>

**<addName>** Contains an additional name component, such as a nickname, epithet, or alias, or any other descriptive phrase used within a personal name.

<supplied> → [model.transcriptionLike](#) → <addName>

**<addrLine>** Single line of a postal address.

<supplied> → model.transcriptionLike → <addrLine>

**<anchoredText>** Container for text that is fixed to a particular page location, regardless of changes made to the layout of the measures around it.

<supplied> → model.transcriptionLike → <anchoredText>

**<annot>** Provides a statement explaining the text or indicating the basis for an assertion.

<supplied> → model.transcriptionLike → <annot>

**<attacca>** An instruction to begin the next section or movement of a composition without pause.

<supplied> → model.transcriptionLike → <attacca>

**<beam>** A container for a series of explicitly beamed events that begins and ends entirely within a measure.

<supplied> → model.transcriptionLike → <beam>

**<bloc>** Contains the name of a geopolitical unit consisting of two or more nation states or countries.

<supplied> → model.transcriptionLike → <bloc>

**<caption>** A label which accompanies an illustration or a table.

<supplied> → model.transcriptionLike → <caption>

**<chord>** A simultaneous sounding of two or more notes in the same layer \*with the same duration\*.

<supplied> → model.transcriptionLike → <chord>

**<contentItem>** Contains a single entry within a content description element.

<supplied> → model.transcriptionLike → <contentItem>
